and of neighbouring posts, are well exhibited in the accompanying illustration. In this service Cosacks chiefly are employed, and, though that remarkable quickness of ear by which they can catch the slightest sounds, at almost incredible distances may fit them well for it, it certainly must be a service altogether un congenial to their nature and habits. The Cosack is almost always on horseback, and is in his element when scouring the open fields. Here he can elope up within a narrow space, and dare not venture 100 yards beyond it, without exposing himself to the deadly aim of a Circassian. No more cautious is this mode of life, so different from that which he had been accustomed to lead, that the Cosack often abandons himself to despair and disappoints the Circassians by becoming his own murderer.

COSBAL, par Eng. Notts; 720 sq. Pop. 808
COSBAL, a tn. kingdom of Italy Piedmont, prov. Biella, 42 m. N.E. Turin on a hill. It has some trade in wine. Pop. 2500

COSSE-LE-VIVRE (anc. Cosmanus) a tn. France, dep. Mayenne, 11 m. S.W. Laval. It has six annual fairs 1 sep. 1899

COSSEY or **COSSEY**, par Eng. Norfolk 3040 sq. Pop. 1025

COSSEIR a tn. Egypt. See KOSSEIR.

COSIMBAZAR, a tn. Hindoostan, prov. Bengal dist. of and 1 m. S. Mooshatel, l. bank, Bagmati, the most sacred temple of the Ganges; lat. 24° 10' N.; lon. 85° 16' E. It has an extensive traffic, and, during the rainy season, has a great variety and extent of water-courses, but for two or three months of the year the river is not navigable. The quantity of silk consumed here annually by the natives, is the

manufacture of copra, palm silk bonnets and other stuffs, is very great, while there is also a large exportation to Europe, and to nearly every part of India. Cattle-breeding has been long and is a very important industry, which are well-bred and highly prized. Thus towns like the station of a second sort, comprising the adjoining districts of Bagpore, Dimgar, Bagpore, Purneah, Rajshahi, and Birbhum. Formerly the French and Dutch had factories here. Pop. 25,000.

COMBINGTON two para Reg.—1 Leicester 1561 ac. Pop. 241—2 Somerset 1830 ac. Pop. 258.

COMBIVAY, a town and district, British East India Co. 9 m. N.W. Lanes. It is old sea on a rising ground, and its houses are generally well built. It has an old church, an hospital, and on a neighbouring height the ruins of a castle. The inhabitants are engaged in agriculture and cattle-rearing and are mostly in easy circumstances. Pop. of in 850 dist. about 10,000.

COSTA RICA, the most S. state of the Republic of Central America, bounded N. by Nicaragua, from which it is separated N.E. by the river San Juan. E. and N. by the Caribbean Sea. E. and S. by New Granada, from which it is separated E. by the river Escondido, and S. by the cordillera de Cabaceros and S. and S.W. by the Pacific between lat. 8° and 11° 30' N. lon. 83° and 85° W. Area about 16,450 sq. m. The country is intersected diagonally by the primary range of the Isthmus which throws off numerous spurs on either side, giving to the surface a continued alternation of abrupt heights and sudden depressions. The principal ranges contain several lofty mountains, and volcanoes, both active and extinct or dormant, including those of Uruca, Volcan, and Cartago; from the summit of the last of which both the Pacific and Atlantic can be distinctly seen. The N.W. districts are more rugged and mountainous than the S.W. but along the coast of the Pacific, especially around the Bay of Nicoya, the country has a most beautiful and picturesque appearance being diversified by valleys, and intersected by numerous streams. Costa Rica contains some of the richest gold mines in the portion of America, whence the origin of its name these mines however are now not at all, or very little wrought. Silver and copper are also found but they are in like manner receive little notice. In all parts of the state, with exception of the hills, the climate is mild and temperate, never subject to excessive heats or colds, and rarely experiencing any other vicissitudes than those from the dry to the rainy season. It is therefore, extremely well adapted to agricultural purposes, and capable of bringing to maturity many European plants, as well as most of those peculiar to the tropics. The soil is remarkably fertile, especially on the white lands, and in the valleys between the mountains. Among its agricultural productions are coffee, cacao, Indian corn, tobacco, sugar and a little wheat, which last not being an article of general consumption is not much attended to. The horses of Costa Rica are of an inferior description but the mules are greatly esteemed and cattle, sheep, goats, and hogs are reared in great numbers, and of excellent quality. The wild animals include the cougar, wolf, tapir, wild boar, feline deer, hare, alpaca and squirrel. The wooded coasts of the Pacific are much infested by dangerous reptiles and great devastation is frequently caused by locusts. The birds, which include vultures, pelicans, parrots, pigeons, ducks, quails, etc., exhibit the gayest and most beautiful plumage.

The woods of Costa Rica are valuable, comprising mahogany, cedar, Brazil and various other kinds of timber and on the coast of Nicoya, some pearls, and large quantities of mother-of-pearl shells are found. Coffee, however, forms the most important product of the state. Its cultivation though only introduced about the year 1820 has increased so rapidly that 5000 to 6000 tons of the seeds are now exported annually to Europe, which is of excellent quality is a Government monopoly, and is sent chiefly to Nicaragua, though some of it finds its way to the British market. The other exports are gold, sugar, Brazil wood, and mother-of-pearl. The imports consist chiefly of manufactured goods. Total exports, 1845, \$130,840 imports, 227,500.

Costa Rica is divided into 8 departments—the E., the W. and that of Nicoya. Each of these is again subdivided into parishes or districts. The principal cities are San José, the capital, Cartago, Heredia, Espartero, and Uruca. The two established ports of entry are Puntacosta, on the

Gulf of Nicoya, and Matias, on the Caribbean Sea. The Government of Costa Rica was established in 1821 and is accounted the best and most liberal in Central America. It has a representative Legislature and the executive is invested in a supreme chief. The religion is R. Catholic. The annual net revenue of the state averages about £25,400. The inhabitants are extremely industrious and orderly and are making rapid strides in wealth and improvement. They were formerly subjected to great poverty and it is only of late years, and since the cultivation of coffee on an extensive scale began to be encouraged, that they have attained to anything like their present prosperity.

In 1848-50, the Government granted to Mr. G. Lahand, the French consul-general a tract of land, from the Gulf of Dulce on the Pacific, to the Moca del Torro, on the Caribbean Sea, for the purpose of opening a route between the two oceans. The route across the Isthmus by the San Juan river along part of the frontier of Costa Rica, is so far opened, that steamers now ply on the river in connection with others on the lake of Nicaragua. Pop. 150,000 of whom 25,000 are Indians.—[Dunlop's *Travels in Central America*. Bell's *Central American Bull.* See *Gen. Pers. Klopfer's Map of the Republics of Central America*.]

COSTIGLLOLE two towns, kingdom of Italy Piedmont.—1 (di Salmo) div. of and 12 m. N.W. NW Costi R. bank Varca. It contains a communal college, has iron forges and silk mills. In the neighbourhood a good mount wine is made. Pop. 2850.—2 (di Ase) div. Ase, cap. mandamento, 125 m. W. S.W. Alessandria. Pop. 1500.

COSTROMA, gov. and to Rasia. See KOSTROMA. COTAGAITA, a river and in Bolivia. The river rises on the N. slope of the Bolson Andes about lat. 21° N. and after a direct N. course of 187 m. falls into the Pichumayo in lat. 20° 48' E. lon. 66° 28' W.—The town is situated 1 bank of the river 88 m. S.E. Potosi.

COTABAMBA, a dist. Peru, Intendency of Cusco, between the Apurimac and Puno, intersected S. to N. by the Oroya, an affluent of the Apurimac. It is 78 m. long and 60 broad almost entirely covered with mountains which are clad with snow during the greater part of the year Grain is produced in the valleys. Pop. 15,284 of whom 18,287 are Indians.

COTARINGAN or COTARINEN BORNEO. See KOTTA WARINEN.

CÔTE D'OR, an inland S.W. dep. France esp. Dijon, formerly part of prov. Burgundy having K. depe Aube and Haute-Marne E. Haute-Saône and Jura. S. Salmo-et-Loire W. Yonne and Yonne, between lat. 46° 45' and 48° N. lon. 4° 5' and 5° 55' E. It derives its name from a chain of hills extending S.W. from Dijon, called Côte-d'Or, or hill of gold, on account of the excellence of its wine. Area, 8854 sq. m.—The department belongs to the basin of the Seine, the Loire and the Rhone, but chiefly to those of the first and last. It is watered, N.W. by the Seine, which has here its source, and its affluents, the Aube, Oure, Arnouzon, and Serein. E. by the Saône, and S.E. by the Arroux an affluent of the Loire. It is also intersected S.E. to N.W. by the Burgundy Canal. The surface is rather elevated, presenting some plains to the E. and N.W. but generally covered by effects of the little mountain range of the Côte-d'Or which crosses the department R. to N. height, 1476 to 1640 ft. uniting the Cevennes mountains to the plateau of Langres, and forming part of the watershed between the basin of the Mediterranean and that of the ocean. In the S. the soil is rich and fertile, elsewhere it is generally stony. The climate is, in general, mild, and rather dry than moist, the air pure, clear, and salubrious. Grass of various kinds is generally and successfully cultivated the produce exceeding the consumption. France breeds (horrible) pines, hemp, rape, and beetroot are raised in considerable quantities. There are extensive forests, chiefly of poplar wood. The vineyards of the E. slopes of the Côte-d'Or called the Côte-de-Nuits and the Côte-de-Beaune, produce, in abundance, the celebrated

wines of Upper Burgundy both red and white among the former may be named *Rouge-Gout, Chambertin, Vouge, and Nuits* and among the latter, *Fully, Red and white sparkling wines* are also made. Excellent wines, good sheep, and cattle, and hives in large numbers, are extensively raised. The iron ore extracted supplies 60 iron-works, containing 43 furnaces, 115 forges, and four steel-works. The produce of pig and bar iron is 12,000,000 stons (2480,000). There are two mines of anthracite, and quarries of lime, gypsum, marble, lithographic stones, millstones, &c. Large quantities of tiles are made, and earthenware of good quality, paper, cloth, leather, beet sugar, hair, grain, &c. The trade of the department is much facilitated by the *Saône and Burgundy Canal*. The principal articles of commerce are wine, brandy, vinegar, wool, madder, &c. which Dijon is particularly celebrated for. Leather, wool, hemp, iron, steel, nails, grindstones and timber. The department possesses one normal, 19 superior and 680 elementary schools; with 18 establishments for secondary instruction, one royal and seven communal colleges; it is divided into four arrondissements, subdivided into 36 cantons, and 728 communes. Pop. (1848) 386,264.

COTE-ST ANDRE (La) a co. France, dep. Isère, 37 m. N.W. Grenoble, agreeably situated at the foot of a hill on the *Proche*. It was once fortified, and figured much in the religious wars, during which it suffered severely and its fortifications were raised. It has manufactures of pyrotechnics and wax-candles and tapes, leather, glass, and liquors, which under the name of *Reaux-de-la-Côte*, are much esteemed. Good wheat wine is grown in the neighbourhood. Pop. 3600.

COTEAL or **PAANIAN**, an elevated region or swell in the prairies of N. America, separating the basin of the Mississippi from that of the Missouri. It commences about the parallel of 46° N., and between the meridians of 95° and 99° W., and extends S.E. 200 m., to the head of the *Bliss* River where it gradually falls to the level of the surrounding country.

COTE-D'AU NOIR, a maritime dep. N. coast, France forming part of ancient Brittany cap. Brest, having N. the English Channel, S. dep. Ille et Vilaine, S. Morbihan, W. Finistère. It comprehends several small islands in the channel, the principal of which are *Brest* and the *Seven Islands*. Area, 472,198 ac.; 1967 sq. m. To the N it is watered by a number of small streams, which fall into the English Channel and to the S. by several which fall into the Vilaine and Anio. From E. to W. it is traversed by a chain of hills, called the *Montagnes Noires* the culminating point of which is *Mont Hant*, 1112 ft. above sea level. The coast extends about 160 m. and is much indented. It presents a series of granite cliffs, at the foot of which is a strand of considerable breadth in some localities. There are several tolerable ports at the mouths of the small rivers. The only good land is found in the vicinity of the coast. The rest is inferior a large portion being sand and stones, and a considerable breadth covered with heath. Agriculture is in a very backward state, but the produce of grain is sufficient for the consumption. Cider is produced in large quantities. Hemp, flax, hay, peas, beet root, &c. are extensively grown. One of the main branches of industry is the rearing of cattle and horses the latter held in high estimation. Sheep are comparatively scarce, and of inferior quality. Bees are very numerous. Excepting linen, which is wrought up to a small extent, the minerals of the department are unimportant. There are salt-works, employing 150 workmen and granite, of very fine quality is abundant, but not much used. On the coast, the herring, pilchard, and mackerel fishery is pursued with activity. The principal branch of manufacturing industry and that for which the department is celebrated, is the spinning of flax and hemp and the weaving of linen and sailcloth, most principally to the S. American market. The department contains numerous tanneries, paper-works, manufactures of woollen yarn, common woollen goods, shoes for the troops, beet sugar earthenware, &c. The only navigable rivers are the *Rance* and *Blavet* a few of the others, however, are accessible at high water. Two canals, that between *Montebell* and *Brest*, and that of the *Ille* and *Rance*, traverse the department. The language commonly spoken is the *Bas-Breton*. The people are rough, rude, passionate, and indolent, but very hospitable, and make excellent soldiers and seamen. The department is

divided into 5 arrondissements, subdivided into 46 cantons, and 876 communes. Pop. (1848) 634,334.

COTERLO, or **COTERLO**, a range of hills, England, or Gloucester which they traverse N. to S. the upwards of 50 m. extreme elevation, near *Cheltenham* 1134 ft. They are divided into the *Upper* and *Lower Cotswolds*; the western, which descend from the W. declivity after a short course, fall into the Severn.

COTIGNAC, a tn. France, dep. Var 8 m. N. N. E. Brignoles. It stands at the base of a steep rock, whose precipitous overhang, and seem to threaten the houses beneath, contains a public library of 4000 volumes; and has many features of silk and leather a trade in wine, silk, and eggs and eight annual fairs. In the neighbourhood on a height, stands the church of *Mère-Dame de Grâce*, founded in 1619 and long famous throughout France for the pilgrimages which used to be made to it. Pop. 3397.

COTINDIRA or **COMENDIRA**, a river Brazil, which rises in the N. side of *Mount Itabiana*, flows almost due E. first in an impetuous torrent over a rocky bed, and afterwards in a wide, but shallow channel. It falls into the Atlantic near the ruins of the old town of *S. Christoval*, 18 m. N. N. E. *S. Baptista d'El Rei* after a course of about 90 m. It is navigable for large barges by the help of the tide, but the water over its bar never exceeds from 6 to 8 ft. Its chief affluent is the *Purari*.

COTOPAXI a volcano, S. America, Ecuador in the Andes of Quito, about 80 m. N. E. the mountain of *Chimborazo*, and 30 m. S. E. Quito lat 0° 48' S. lon. 78° 40' W.

It is the loftiest volcano in America that has been active in modern times, being 18,575 ft. high, and though almost under the equator its top is covered with perpetual snow. In form it is a remarkably regular truncated cone. The conical lava and rocky fragments which are the produce of its eruptions—the most frequent and disastrous that occur on the plateau of Quito—cover an area of more 50 or 60 sq. m. and if heaped together would form of themselves a large and lofty mountain. Its first recorded eruption occurred about the time of Pizarro's invasion of S. America, and is said to have facilitated not a little the subjugation of that country by rousing the superstitious fears of the Peruvians, and paralyzing all their efforts at self-protection. In 1608, an eruption destroyed the city of *Tacunga*. In 1738, the flames rose 3000 ft. above the brink of the crater, and in 1743, the fire burst forth from several new apertures near the summit, followed by profuse torrents of water which flooded and desolated the whole plain below. For three entire days this torrent continued to flow and then gradually subsided, but flames issued for many days subsequently accompanied by frequent and loud reports. In the May also of the following year 1744, the internal fire opened for itself new passages on the mountain-sides, and the explosions were heard at a distance of not less than 500 m. Again in April 1768, the smoke and ashes were so dense, and caused such darkness, that many of the inhabitants of the province of Quito, especially in the towns of *Huancabamba* and *Tacunga* were compelled to go about with lanterns during almost the whole day. In 1808 another eruption occurred, after an apparently complete state of quiescence during 20 years. In the January of that year the mounds began suddenly to melt, and in a single night, the internal fire became so active, that at day-dawn the entire walls of the cone were seen to be quite bare, and of a dark brown hue, like vitrified granite or lava. At the port of *Guayaquil*, which is 120 m. distant in a straight line, Humboldt heard, day and night, the roaring and explosions of this volcano, like continued discharge of a battery of artillery, and distinguished these tremendous sounds even when sailing on the Pacific Ocean.

COTRONE [anc. *Crotone*] a seaport, N. Naples, prov. Calabria Ulterior II. on the Ionian Sea, at the mouth of the *Esaro*, 86 m. E. N. E. from *Cassano*; lat (mean) 39° 7' 30" N.; lon. 17° 9' E. (v.) It is fortified, and defended by a

strong citadel, surrounded by a ditch, and communicating with the town by a drawbridge. The streets are narrow and winding, and the houses of the poorest description. The harbour is protected by a mole, and by the tongue of land on which the town is built, but it admits only small vessels, and is of little commercial importance. Crotona is the seat of a bishopric suffragan to Reggio, and contains a cathedral, five other churches, two convents a seminary an hospital, a military hospital and several houses of refuge. Corn, wine, oil, carpenter, and silk are produced in the neighbourhood, and form the articles of export. The ancient Crotona, one of the richest and most populous cities of Magna Græcia, is said to have been founded by a colony from Greece seven centuries before the Christian era. It was sacked by Agesilaus B.C. 399 and taken by the Romans B.C. 377. Its inhabitants were renowned for their strength and dexterity in wrestling, and so great was their superiority that the last wrestler of Crotona was proverbially said to be the first of the other Greeks. The famous Milo, and many other distinguished athletes who appeared at the Olympic games, were Crotonians. Pythagoras resided here after leaving Samos, and founded an extensive school besides instructing the inhabitants in the principles of philosophy generally. Pop. 4650.

COTRONE a tn. Naples, prov. Calabria Ultra II 21 m N.E. Catanzaro. Pop. 1978.

COTTA a vil. Caylen 6 m. E. Colombo, formerly one of the capitals of the Kings of Caylen. It consists of one long street, bordered on either side by plantations of coco-nut, areca, coffee and junk trees, entwined with pepper and betel vines. There is here a Christian institution, under the church missionaries in which a number of Singhales and Malabar youths receive instruction in the Hebrew, Greek, Latin, and English languages, mathematics, and theology. The building is neat and handsome. There are here also a chapel and a printing-office. (Ceylon Gaz.)

COTTLES, or **COTTRUS**, a tn. Prussia, prov. Brandenburg gov. Frankfurt, dep. circle of same name, 1 bank Spree, 70 m. S.E. Berlin. It has three suburbs, is surrounded with walls, has four churches, a gymnasium a library an orphan asylum two hospitals, and an old castle with four towers. It is the seat of the Government for the circle, of a municipal council and of a local assembly. It has a manufacture of linen and woollen stuffs, tobacco, leather and paper. Cottbus is one of the oldest towns in Prussia. It was ceded to Prussia by the Congress of Vienna having previously belonged to Saxony. Pop. 6727. — The **COTRUS**, area, 256 sq. m. is flat, tolerably fertile, and has a pop. of 50 817.

COTTENHAM a par and vil. England, co. Cambridge 7107 ac. The **VILLAGE**, situate 6½ m N Cambridge, has a handsome parish church, with a lofty tower a English meeting-house an endowed free school some almshouses and several charities. In 1876, it was nearly destroyed by an accidental fire. — The **PARK** is famed for the excellence of its cheese. Pop. 2814.

COULAN or **COULON** a seaport in Hindostan, prov. Travancore lat. 8° 65' N. lon. 76° 09' E. It has a considerable trade in cotton, pepper ginger and other spices; there is also abundance of excellent fish, tortoise, rice, bananas, pine-apples, and other fruits. The Brahmins have here a temple dedicated to Siva and the R. Catholics three churches. It was taken by the British from the Dutch, and its fortifications dismantled.

COULPA a tn. in N.W. Africa. See **KOUZOU**.

COULL, par Scot. Aberdeen 6 m. by 3 m. Pop. 734.

COULMAN an isl. Antarctic Ocean lat. 73° 56' S. lon. 110° 0' E. Discovered by Sir James Ross on January 17 1841. it was covered with snow.

COULMMIERS, a tn. France, dep. Seine-et-Marne 14 m. S.E. Meaux r. bank, Grand Morn. It is built but sitsuate in a picturesque and fertile country. It has a considerable trade in grain flour Brin cheese, mutton, wool, leather horses, and cattle with numerous tanneries, tanneries and an extensive paper work. Pop. 3008.

COURDON par Eng. Surrey 4408 ac. Pop. 718.

COURSTON (Haw) par Eng. Wilt. 868 ac. Pop. 101.

COUNCIL BLUFFS, a military station, U. States, Iowa, r. bank Missouri, 86 m. above the confluence of the Platte. It rises 150 ft. above the level of the river and, in a military point of view is almost impregnable. In April 1847, the Mormons who had been violently expelled from this place, consisting of 145 men, two women and two children took a hither unexplored direction to the N.W. and formed the pioneers of the new Mormon settlement of Utah.

COUND par Eng. Salop 5680 ac. Pop. 836.

COUNFISBURY par Eng. Devon, 5512 ac. Pop. 174.

COUPANG a tn. in Timor. See **Couvaue**.

COURBEVOIE, a vil. France dep. Seine, 6 m. N.W. Paris, 1 bank, Seine having numerous well-built cotton houses, nearly all supplied with gardens. The barracks, built here by Louis XV. for the Swiss regiment, are the most extensive in the neighbourhood of Paris. It manufactures white lead printed cottons, brandy and potato flour and has an establishment for washing wool with a trade in wood, wine, brandy and vinegar. There is a river port on the Seine, and an entrepot for goods. Pop. 2870.

COURBIELE, a vil. and com. Belgium prov. Hanant, 6 m. N.W. Charleroi. Here are some manufactures of linen and wool, a brewery a flour and a falling mill. Pop. 4049.

COURNON a tn. France dep. Puy-de-Dôme, 8 m. E. E. Clermont, near l. bank, Allier. It has an annual fair which lasts three days, Sept. 5-7.

COURRIÈRE a tn. France, dep. Puy-de-Dôme 22 m. E. Clermont, l. bank Dore. It manufactures lace, woollen hat, cravates, glass, pottery and stoneware. Pop. 1471.

COURRIÈRE a tn. France, dep. Pas-de-Calais, 16 m. E. St. Remy. Pop. 1,333.

COUTILLE a tn. France, dep. Northampton 1830 ac. l. op. 145.

COUTILLY a tn. France, dep. Javel 55 m. E. Orléans, l. bank, Loire. Its old castle was formerly the residence of the Courtenay family one of whose ancestors was a son of Louis le Gros. It has a trade in wood and charcoal. Pop. 1984.

COUTILLY a tn. France dep. Vancluse, 10 m. N. E. It is known on a branch of the Rhône. It is agreeably situated in a fertile district, near some salt marshes, which were formerly a salt lake. It manufactures mulder and has some silk spinning-mills. Pop. 703.

COURLAND a Pomeranian town (German *Kurland*) a city, Rostock, 10 m. W. by iron road and the Gulf of Riga, W. the Baltic, W. Lina, and E. Libau, greatest length N. W. to S. E. 31 m. breadth varying from 150 to 70 m. at its widest from W. to E. till it terminates almost in a point area about 11,000 sq. m. In the neighbourhood of Mitau the capital the surface is diversified by hills of very moderate height—Husenbergs and Kilsberg the highest not exceeding 200 ft. but elsewhere and particularly towards the coast it is flat and contains extensive sandy tracts.

The ground with basins and meadows. About two-fifths of it, which is a great part, is covered by wood and there are no fewer than 200 lakes, many of small extent, but I mention the largest has a surface of 94 m. in many places 12 fathoms deep and all is with fish. The principal rivers are the Anz and the Wiedau. The latter is above 150 yds. wide at its mouth, is 11 m. course of the river connected with the Anz by a canal communication. The extent of the surface occupied by swamps and lake produces frequent mists, render the air in damp and cold but the climate, notwithstanding I said not to be unhealthy. Agriculture turns the chief occupation of the inhabitants, as it is in a more advanced state than in one of the most, allowing no ornament though the land is generally of light soil but requires to be frequently and heavily manured. The best soil is on the frontiers of Livonia and yields large crops of barley and oats, but very little wheat. In the same neighbourhood a little rump and flax are grown. The grain produced exceeds the consumption. Fruit trees that are tolerably well but the produce is indifferent. Tobacco, too, is grown but only in patches. The timber of the forest consists of birch, alder, beech, pine and oak, but is not considered fit for shipbuilding. There is no cattle and sheep are generally of inferior breeds but attempts have been made to improve the last by the introduction of the merino. The sheep particularly along the coast, is of an average annual value of about £2000. The minerals are confined to a little sea limestone, and amber. The manufactures are insignificant with exception perhaps of tiles which are made to a considerable extent. Distilleries, also, are numerous. About a half of the inhabitants are Latvians. They chiefly occupy the rural districts, and in 1820 were divided into peasants and slaves. At present they are free, but do not possess any property. The prevailing religion is Lutheran—the Greek church, notwithstanding the proselytizing attempts of the Russians, barely on the 17,000 adherents. Pop. (1850) 564,000.

having handsome and spacious streets and a fine Grande Place with several other squares. The principal edifices are, the town-hall of Gothic architecture, with such remarkable in its exterior but adorned within by two remarkable sculptured chimney-pieces; the ancient market-hall, with a facade surmounted by five elegant towers, one of them topped by a flying Mercury of gilded bronze the church of St. Martin, founded by St. Elmo, about 650 with a majestic portico from which ascends a graceful tower (one of the loftiest in Belgium) and adorned within by a fine Crucifixion by Vandike; the church of St. Michael a large and regular edifice, and containing an image of the Virgin the object of great veneration and numerous pilgrimages and Broeken Tower two colossal towers built for defence of the town, in 1413 and 1485 and with walls above 8 ft. thick. Coutances has a court of first resort a court of commerce a merchants exchange and entrepôt for goods. It contains a college, an ecclesiastical seminary an academy of painting a museum of medals, a public library of 12,000 vols. &c. It is the seat of an extensive manufacture of table linen in high repute cotton and muslin has spinners of flax and cotton wool large hutchers for linens distinguished as *laines de Coutances* but which are, for the most part, sent to London and the neighbouring commerce. It contains dyeworks and bleacheries, the former famed for the brilliancy of the colours produced. Coutances lace is celebrated as well as its thread blonde its cotton cambrics, gingams and flannels, are largely exported. In August a fair is held in the town for ten days. The first Flemish cloth manufacture was established here in 1700. The 10 gives Coutances water communication with the principal towns of Flanders and the department Nord of France, while railways connect it with Cherbourg and the French frontier towards Lille. Coutances is of early origin in Roman times it was called *Coutancorum*. The Normans took and fortified it in 890 the locality was made a countship in 983. The (first) battle of the Spurs was fought close to the town July 11 1302 between the Flemings and French in which the latter were defeated with immense loss, including the 8000 *gilt spurs* of the killed or vanquished French knights that gave name to the fight. In 1382 the French took and sacked the town for feodally to revenge this ancient defeat. In 1845 Count I. de Harcy erected new fortifications, and strengthened the town as did the French in 1847 the latter took the town again in 193. Coutances under their republic and empire became chief town of an arrondissement of the department of the Lys. In 1814 it reverted to the Netherlands. Pop. 19 129.

COUTANCES (L. Isl. Vn.) one of the Laccadives, lat. 10° 51' N. lon. 72° 45' E. 2½ m. long and 1 m. broad. It abounds good water and two species of excellent coconuts. A steep coral reef encompasses the bay and W sides of the island, projecting 2 m. in some parts. The E side is also steep and rocky. The proper entrance is at the N. end, of the island but the boats of the natives pass through other parts of the reef.

COUTANCES a tn. Africa. See COUTANCES.

COUTANCES a tn. Africa. See COUTANCES.

COUTANCES (anc. *Coutances*) a tn. France, dep. Manche 18 m. W. St. Lo at the confluence of the Sirey and Buisson. It is built on a hill 4 m. from the sea, with which it communicates by a canal. The streets, formerly crooked and ill laid out, have been improved. On the summit of the hill is the cathedral one of the finest churches in Normandy in the early pointed style, with two lofty towers terminating in spires and serving as a landmark for ships navigating the channel. The church of St. Pierre is also a fine edifice of the 16th century. The valley bounding the town to the W. is crossed by an ancient aqueduct, could it by of five perfect arches and 15 piers. Coutances is the seat of the ancient court for the department tribunal of first resort, of commerce and of a bishopric. It has two seminaries, an academy and communal college a prison theatre, and small public library; marble-works, glass-works, and manufactures of parchment, thread druggists, muslins, &c. A considerable trade is carried on in grain and farm produce,

horses, cattle, thread, wool, quilts, hemp, &c. Couthuine is an ancient town, and had a bishop in 480. It was afterwards fortified, and became the capital of the district of Couthuine. The fortifications have almost entirely disappeared. P 7442

COUTHUIN REPPE a vil. and com. Belgium prov. Liège, 1 bank Meuse 4 m. W. Huy. Both coal and iron are worked, and there are also lunekins a brewery and an establishment for preparing the masons well known by the name of Dutch walls. Pop 3430

COULTRAE a tn. France, dep. Gironde, 27 m. N. E. Bordeaux, 1 bank Dronne, in a district that produces red wine of fair quality. It has several mills, and a trade in flour with which it supplies Bordeaux. In 1087 Henry IV then King of Navarre, defeated the League before its walls. Pop 1395

COUVES, two small isls. Brazil off the coast of prov. São Paulo, about 12 m. E. the bay of Ubatuba, lat. 23° 25' S. lon 44° 55' W. The larger is well supplied with wood and water and has a commodious bay opposite to the mainland.

COUVET a large vil. Switzerland, can. of and 144 m. S. W. Neuchâtel. beautifully situated in the Val de Travers, 1 bank, Renne. It has many well-built houses, and is the chief seat of the lace manufacture of the canton.

COUVIN a com. and to Helsum prov. of and 33 m. S. W. Hamdr. It has a church with a fine tower of early though unknown date. The district possesses extensive iron mines, and is an important seat of iron manufactures having several blast furnaces, millable iron works, steel works, foundries and steam-engine factories. Pop 2578

COVE, or COVA or COUX a tn. Ireland. See QUERIN's towns its name.

COVFLONG a tn. and fort, Hindoostan. Carnate, on the Carmichael coast. prod. of and 52 m. S. Madras, lat. 12° 48' N. lon 80° 18' E. The Imperial East India Company of Ostend had here their chief factory. In 1750 it was taken by the French but in 1752 surrendered to the British, by whom the fortifications were destroyed

COVENTRY a city. England. co. Warwick 85 m. N. W. London 54 m. N. E. Warwick and a station on the London and N. W. Railway. It is situate partly on a gentle eminence rising in a valley, and partly on a hill falling away gradually on each side—the whole stretching E. to W. for nearly 3 m. and bounded on the N. E. by the river Sherbourne and the brook at Radford. The more modern parts of the town are regularly and well built, but a few irregular and narrow streets still remain lined with houses in the style of the 15th and 16th centuries, composed of heavy wooden beams, filled in between with brick and plaster and often having their peaked upper stories projecting far into the street over the under ones, so as in many instances nearly to meet thereby greatly obscuring the light of the street. Still however unaltered to modern notions, these houses are often richly picturesque. Several new streets have been formed of late years a number of new and handsome houses built, and a great and general improvement effected in the appearance of the town. The whole is well paved, and lighted with gas and the inhabitants are abundantly supplied with water from the corporation water-works. Amongst the more remarkable buildings are St. Michael's church, a masterpiece of the lighter Gothic style, and having numerous windows of ancient coloured glass, and a beautiful spire, 303 ft. high. Trinity church with a spire 237 ft. high. St. John's church, a plain cruciform structure, of the time of Edward III. (but church) a handsome modern building, attached to the elegant spire of the Greyfriars monastery. St. Mary's hall erected in the time of Henry VI and esteemed one of the finest specimens of the ornamental architecture of the 15th century in England. The interior decorations are of a corresponding magnificence, rendering the whole an object of the greatest interest. The hall the roof of which is of finely carved oak is now used for civic purposes and occasionally for public entertainments. To these buildings may be added

the theatre, a neat and commodious house the town-hall the drapers hall the jail, barracks, and several other handsome public structures. During the monastic ages, Coventry had a large and magnificent cathedral, which was destroyed at the Reformation. Besides the six churches belonging to the Establishment it has a handsome Gothic R. Catholic chapel and places of worship belonging to Independents, Baptists, Methodists, Unitarians, and the Society of Friends. The charitable institutions are numerous and well endowed, the principal of which are San Thomas Wido's charity founded in the reign of Henry VIII. with an annual income of between £2000 and £3000 the Bebbako men's hospital income about £1500 and the Bebbako boys' hospital with an income of about £2040. Besides these, there are various other considerable charities, and several minor ones. The scholastic foundations are the free grammar school a richly endowed institution with exhibitions and fellowships attached several other charity schools, a school of design and a number of well conducted private academies. There are also a library, a mechanics institute, a society for the diffusion of religious and useful knowledge several dispensaries an hospital and a beautifully laid out cemetery planned by Mr. Paxton

Coventry was celebrated for its manufactures of cloth, naps and bonnets as early as the 10th century and also for a kind of blue thread called Coventry true blue. These were succeeded by the manufacture of woollen broadcloths of various descriptions which continued long the staple trade of the town till superseded in turn by weaving now together with watch-making the staple business of the place. Gases and ribbons of all descriptions are made and fringe-making and silk dyeing carried on. Coventry is the greatest port for ribbons in England and watch-making introduced at a very remote period has so much increased, especially within the last 40 or 50 years, that a greater number of watches is now made here than in London, and of equal quality. Coventry was formerly surrounded with lofty walls in which were 15 gates. Its pageants and processions were of the most magnificent description and pageants were here created in a style nowhere else equalled. The old prodigality of the people of Coventry for gorgeous pageantry is still manifested by the triumphal procession shown in honour of the Countess of Ulster who unwiltingly tempted Peeping Tom of Coventry into the indiscretion which obtained for him the sobriquet by which he has been immortalized. This procession still within the last few years was commonly graced by the presence of the mayor and corporation in their official robes but since the passing of the Municipal Reform Act the presence of the civic body has been discontinued. The origin and meaning of the well known figurative phrase of sending to Coventry has been variously given but is still uncertain. Coventry sends two members to the House of Commons as it has done so since 1453. Registered electors (1856) 4189. The municipal government is vested in a mayor 10 aldermen and 30 councillors. Market days, Wednesdays and Fridays. Various fairs the principal one held on the first Friday after Trinity Sunday (lasting eight days) and the others in March May August, and November. Pop. (1841) 30 745 (1851) 36,912.—(See Correspondent)

COLYTON par Scot. Afr. 11,515 in. Pop. 1543
COTTY par Wales, Glamorgan 4371 sq. Pop. 2804.
COZUMEL an Isl. Caribbean Sea, off the coast of Yucatan lat. 20° 34' N lon. 86° 44' W. It is 80 m long by about 8 m broad and is low flat and covered with trees. It is fertile, and abounds in fruit and cattle. Numerous interesting remains of ancient buildings have been discovered on it. When visited, in 1815, by Juan de Grijalva, it contained a numerous population and was much resorted to as a place of peculiar sanctity by the Indians of the neighbouring continent.

CRAH ISLAND—1 An Isl. 10 m. off W coast, Madagascar lat. 21° 4' S—2 An Isl. British Guiana, lat. 6° 21' N lon. 57° 33' W—3 An Isl. W Indies. See Bonaire.

CRAKOW or **KRAKOW** (German and Polish, *Krakus*) formerly a part of the old kingdom of Poland and more recently an independent republic, lying between lat. 49° 35' and 50° 17' N and lon. 19° 7' and 20° 17' E about 48 m. in length and 14 m. wide throughout the broadest portion area, 500 sq. m. It is now extinct, having been incorporated with the Austrian dominions in 1845. The surface consists of an undulating plain. The climate is moderate, and the soil rich producing corn, pulses, flax, some fruits, and honey. Cattle, sheep, and swine abound as do also fish and game. The minerals are coal, iron, marble, freestone, clay &c. By the Partition treaty of 1795 Cracow fell to the share of Austria and in 1809 formed with Western Galicia, the Grand Duchy of Warsaw. At the Congress of Vienna in 1815 it was formed into an independent republic by the allies but was subsequently as above stated, again incorporated with Austria, and is now included in the government or grand duchy of Cracow, the most W. division of Galicia.

CRAKOW a city formerly cap. of above republic and recently of Poland now comprised in the Austrian empire in a beautiful valley 1 bank of the Vistula, 160 m S.S.W. Warsaw lat. 50° 3' 59" N lon. 19° 51' 50" E. It is a fine suburb, and is surrounded by pr. meadows. It is irregularly built, but clean, and has a spacious square. The houses are in general large but most of them are in a state of decay as are also a great number of its churches. It contains many ancient and interesting edifices the principal of which is the cathedral where were formerly deposited the Crown Jewels

THE CATHEDRAL CRAKOW

and regalia and where lie the remains of many of the ancient kings of Poland. It was also the place prescribed by the constitution for their coronation. It has 50 altars, and above 20 chapels. The castle, called the *Königsburg*, founded about A.D. 700 is a spacious structure. The other remarkable edifices are the episcopal palace and the old town hall. The city contains a university, a college, a school of arts, an academy of painting, a public library &c.—the latter having 80,000 printed volumes, and 4500 MSS. This city was founded in the 13th century and is said to have been at one time very flourishing, having had an extensive commerce and a large population. The wealthier classes in Cracow are Germans; those in the suburbs mostly Jews. Pop. 43,000

CRACATOA a small and mountainous Isl. Indian Archipelago Straits of Banda, between Sumatra and Java. It has one elevated peak and on the N side a convenient watering place, near which is a Malay village where fruits and vegetables may be had.

CRADLEY—1 A par. England Hereford 5968 ac. Pop. 1641—2 A vill. and chapelry England Worcester. The village, situate 8 m W by S Birmingham consists of one street, well kept. It has an Established church four Dissenting chapels, a sd two national schools. There are old-established iron works at Cradley and the manufacture of nails and what is carried on extensively. Pop. 1383.

CRADDOCK a dist. and tn. in the E part of Cape Colony. The district lies N of that of Somerset area about 5000 sq. m. but as no regular survey has yet been made of it, it is impossible to state its precise extent. Its principal streams are the Great Fish, the Brak, and the Tarka rivers. In some parts this district is encumbered with bush, while in others there is scarcely a bush to be seen and it is altogether destitute of timber. The soil, however, is in general very fertile, suitable alike for grain and for the production of all the various fruits peculiar to other parts of the colony. Many of the inhabitants are in opulent circumstances, possessing large herds of cattle and flocks of sheep. They have also a breed of hardy valuable horses. The farm-buildings are generally extensive and commodious, the roads, for the most part, tolerably good, and in some parts excellent.—The town cap. of the district occupies a narrow valley 1 bank Great Fish river about 480 m N.W.E. Cape Town lat. 3° 20' S lon. 18° 55' E. The main street towards the river is planted with various fruit trees. It has a church several chapels belonging to Independents and Wesleyans several good schools and a number of substantial stores, well stocked with British manufactures. In the immediate vicinity of the town are cold and tepid chalybeate springs. Pop. dist. estimated at 7537.

CRADDOG a do. of S.W. Africa, coast of Guinea, right of Bann. Kingdom Jabo at the junction of the 1st and 2nd rivers with the lake or lagoon of Cradock lat. 6° 33' N lon. 18° 56' E. It is a well known mart for the Jabo cloths which are to be had in great abundance and of fine quality. The lake of Cradock on the N bank of which the town is situated, is of a crescent form about 60 m in length and 6 m breadth in the centre. It communicates with the sea by a narrow channel at its W end called Lagoon River. By this outlet the lake or lagoon pours out, about half-fb. such a volume of surging foam, of a deep brown tint and of a mellow odour as to spread over a sweep of 31. the edge of which is marked by a well-defined margin as it rolls forward on the deep blue water at the offing—(See *De Verre*).

CRAIKIE par Eng. Durham 2779 ac. Pop. 603.

CRAIL an ancient royal bur. and par. Scotland co. Fife. The town 6½ m S.E. St. Andrews consists principally of two parallel streets extending along the shore. Many of the houses are large and of a dignified appearance, the former importance of the place—Crail having been a town of some note as early as the 9th century. The streets are spacious, well lighted and kept clean. On an elevation within the town are some vestiges of what was anciently a royal residence which had been inhabited by several Scottish monarchs successively one of whom was David I. It has Established, Free, and U. Presbyterian churches. Crail was once a great herring fishing station but the herring having almost deserted the coast, this branch of business is not now so flourishing as it formerly was. It used also to send large quantities of lobsters to the London market but the number now sent is comparatively limited. The harbour is small unsafe and difficult of access.—The PARISH, 7 m by 8 m.

in extent, contains the promontory of *Fife Ness*, commonly called the East Neuk or Fife. Pop. bor 1847; par., including bor 1908

CRAWLING par Scot. Berwick; 4 sq m. Pop. 784.

CRAILHEIM a tn. W. Switzerland, about Jura, capital of same name; R. bank Jura, 18 m. N. E. of Geneva. It contains an old Gothic palace now used as a court-house, a ducal and another church, a large townhouse, a well-endowed hospital and has manufactures of cotton leather, delfware, and tobacco, a print- and a powder and several other mills as an annual general and cattle market. In the neighbourhood is a mineral spring with a bathing establishment. P. 8087. Area of dist. 189 sq m. P. 23,457.

CRAMBE, par Eng. York (N. Riding) 778 ac. P. 617.

CRANON par Scot. Edinburgh 6 m by 2 m. Pop. 2547.

CRANBORNE a par and market in England, co. Dorset 18,780 ac. The town pleasantly situated in an open country 27 m. N. E. Dorchester is irregularly built, but has a fine old church, with a Gothic tower. It has several small churches. The weaving of ribbons was formerly carried on here but is now nearly extinct. The town is surrounded by a chase, famous in ancient times for the sport it afforded, and still tenanted by large herds of deer. This parish is alleged to have been the scene of the battle between the British under Badocia, and the Romans, and the discovery of the cross bones and urns, and the remains of a circular fortification of great extent would seem to favour the supposition. Pop. 7737.

CRANBROOK a par and market in England, co. Kent 9662 ac. The town 40 m. S. E. London, on a brook called the Crane, is neatly built, and partially paved and lighted with gas. It has a beautiful church near the centre of the town, various dissenting chapels, and a grammar school, endowed by Queen Elizabeth. The first woollen manufactory attempted in England was established here by the Flemings, in the reign of Edward III. The trade, however, has long since disappeared and traffic in hops has become the chief business. Pop. 4020.—(Local Correspondent.)

CRACON a tn. France, dep. Mayenne, 19 m. S. by W. Laval, 1 bank Oudon. It was formerly a place of some importance, and was several times besieged during the wars of religion. It has a fine modern chateau. Coarse woollen goods are manufactured here and there is a considerable trade in grain & yarn linen &c. Pop. 2155.

CRAPONNE, a tn. France, dep. Haute-Loire, 30 m. N. La Fay. It was once surrounded by walls, of which only a single square tower now remains; contains an ancient church has manufactures of lace and bonnets and three annual fairs. Pop. 1760.

CRATFIELD par Eng. Suffolk 2085 ac. Pop. 673.

CRATVIE and **BRACHAN**, par Scotland, Aberdeen 159,686 ac. Pop. 1789.

CRATI, a river, Naples prov. Calabria Citra. It rises in the forest of Bile, and flows N. past Cosenza, then E. and enters the Gulf of Taranto after a course of about 40 m. and receiving several streams, the chief of which are Cosente and Biondo.

CRATO (VILLA) a tn. Brazil prov. Ceara, 379 m. W. by N. Pernambuco lat. 6° 30' S.; lon 38° 40' W. It is a small, miserable, irregularly-built town, with two churches, one of which has never been finished. It has a jail, in a ruinous condition, a townhouse, a Latin, and two primary schools. The inhabitants are either Indians or their mixed descendants, with a few Brazilians who for the most part are shopkeepers. The state of morality in the place is very low—hard-playing being the principal occupation of all classes during the day-time. Very few of the better classes live with their wives a few years after their marriage they generally turn them out to live separately and replace them by young women. In the species of immorality the people seem to follow the example of their parents, who openly live with mistresses that are sometimes married women. In the vicinity of Crato rapadura (coarse sugar) is manufactured, and the sugar cane, manioc, rice, and tobacco are cultivated and all the usual tropical fruits are plentiful. Pop. 8000. The dist. which is extensive, has a population of 10,000—(Gardner's Travels in Brazil, 1896-1897. Recife, de Imp. Brazil.)

CRATO [not Crato] a tn. and par. Portugal prov. Alentejo, 11 m. W. N. W. Portalegre, on a height near the Estrela. It is surrounded by walls was defended by a citadel now in ruins and contains a collegiate church, convent almshouse, and hospital. The grand prior of the knights of Malta resided here. Pop. 1360.

CRAT (LAL. See ROCHES-DE-ROCHE).

CRECY or **CREZNY** a small tn. France, dep. Somme, 18 m. N. Abbeville, on the Male, which empties itself into the estuary of the Somme. Crecy is an ancient place and had a royal pleasure house in the seventh century. It has some manufactures of soap and trade in wood. It is, however, chiefly remarkable for the signal defeat by the English, under Edward III., August 26 1346 of a large French army

under Philippe de Valois when 80,000 French were slain. Pop. 1840.

CRECY-EN-BAZES, a tn. France dep. Aisne 9 m. N. Laon. It was once defended by a strong castle, and suffered much during the early French wars. It has a trade in horses and cattle; a monthly, and two annual fairs. Pop. 2044.

CREATON (Glasty) par and vil Eng Northampton 790 ac. Pop. 549.

CREDES HILL, a par Eng Kent, Maidford, 1224 ac. Pop. 320.

CREDITION a par and in England, co. Devon, 12,909 ac. The town near the Credeney 8 m. N.W. Exeter is about 1 m. in length and is formed chiefly of one broad street, between two hills and consists of two parts, the E and W towns the latter of which was twice destroyed by fire in the last century. It has a church in the later pointed style, with a noble tower rising from the intersection of the nave several dissenting chapels, 13 schools including the free grammar-school founded by Edward VI. two ancient almshouses and several minor charities. There were formerly extensive serge and woollen manufactories here, but the trade has now fallen into decay. Near the town is a pretty large flax-mill and some large flour-mills. Pop. of tn and par 6000.

CREE a river Scotland, forming the boundary between the co. of Kirkcubright and Wigton. It rises in the S. of Ayrshire, flows S. by E. forms Loch Cree an expansion of the river about 8 m. long passes Newton-Stewart, and falls into Wigtown Bay at Credenore. Total course about 30 m.

CRECH (St. Michael) a par and vil England, co. Somerset 2104 ac. The village, 5 m. N.E. Taunton, on the Tons, consists of one principal street which is also the high road between Taunton and Bridgewater. It has a handsome parish church, of the time of Charles I. and a small Baptist chapel. Agriculture is the chief employment. The Orchard and Bridgewater Canal as also the Bristol and Exeter Railway pass through the village. Pop. 1219.

CREED par Eng Cornwall 2996 ac. Pop. 765.

CREES a tribe of N. American Indians, formerly occupying a large portion of Georgia and Alabama, but now inhabiting a part of the territory W. of the Mississippi assigned to the Indian nations by treaty with the U. States Government. Their country is bounded N. and E. by that of the Cherokees and S. by the Canadian river which separates it from the country of the Choctaws and Chickasaws. They are industrious, and have supplied themselves with comfortable houses with many of the necessaries and several of the comforts of life. They have good gardens and orchards but Indian corn is their principal crop. They are making considerable progress in the arts of civilized life, and four missionary stations have been occupied among them by different Christian bodies. Their number is estimated at about 25,000.

CREILL (anc. *Credilian Bellesorum*) a tn. France, dep. Oise, 6 m. N.W. Senlis, pleasantly situated, 1 bank Oise, here crossed by a remarkable bridge. It was formerly defended by a strong castle, of which only a few vestiges remain; contains a parish church, with a handsome spire and has important manufactures of porcelain and stoneware a trade in flour coal, and cattle and an annual fair. Pop. 2151.

CREMA a city kingdom of Italy, deleg. Lodi and Crema, on a beautiful plain, r. bank Serio, 35 m. E.S.E. Milan. It is well built, and is surrounded by a brick wall and ditch. It has an old castle, a cathedral and a number of other churches a picture gallery, a gymnasium, two hospitals, two theatres, and a *museo-dei-piedi*, with several other public edifices. It has manufactures of silk, hats, lace, and linen and carries on a considerable trade in wax, fish, honey &c. The adjoining country is fertile, producing wine, grain, and flax the latter of superior quality. Numbers of cattle are reared in the vicinity of the town. Crema was founded by some Longobards, who fled from the cruelties of Alboin the first Lombard King of Italy. During the wars of the Guelphs and Ghibellines, it took the part of the former and was destroyed by Frederick I. in 1160 but was soon after rebuilt. In 1797 it was taken by the French. Pop. 9*00.

CREMIEUX (anc. *Cremacon*) a tn. France, dep. Isère 15 m. N. by W. La Tour-du-Pin. It was anciently the residence of the Dauphins of Viennois, who had here a castle, of which some vestiges still remain, and has a trade in coarse linen and poultry some silk mills, and numerous fairs. Pop. 1985.

CREMNI a city Hungary. See **KASOVIA**.

CREMONA a deleg. kingdom of Italy, bounded N. by the Oglio, which separates it from *Verona*, S. by the Po which separates it from the duchy of Parma W. deleg. Lodi, and E. Bergamo area, 458 sq. m. It is divided into 9 districts, and 198 parishes. The surface is throughout, a rich alluvial flat, watered besides the Po and Oglio, already mentioned by the Adde and Serio. It is very little wooded but produces in abundance far beyond its own consumption corn rice wine, and hay. Excellent flax also is grown and an immense quantity of mulberry trees great numbers of silk worms. The dairy is much attended to, and excellent Parmesan cheeses are made. There are manufactures of cotton and flax in many places, but none of them to any great extent. Pop. 180,000.

CREMONA a city kingdom of Italy cap. deleg. of same name on a plain, 1 bank Po, 47 m. S.E. by E Milan and 39 m. N.W. Parma. It is regularly built, but extremely dull, and contains few objects of interest. It is surrounded by walls and wet ditches, and defended by a citadel and is occupied with the opposite bank of the river by a bridge defended by a fort. The most remarkable edifice is the cathedral, begun in 1107 and completed about 1491. It exhibits little harmony of parts but has a venerable and imposing appearance, and its interior decorations are of the most costly description. Close by and connected with the cathedral, is the Torrazzo, the loftiest and most beautiful tower in Italy. It is built of brick 572 ft. high, having 490 steps to the bell story. There are other 40 churches, but none of them remarkable though many of them contain good paintings. They are mostly built of dark red brick, and usually Gothic. Some of the ancient palaces of Cremona are beautiful specimens of architecture. There were formerly many convents here, but most of them are now demolished.

Cremona is the seat of a bishopric, and has civil criminal and commercial tribunals. It has a lyceum, gymnasium, a public library several institutions for the education of poor children, some collections of objects of art, various charitable institutions, two theatres, a barracks, a bridge, and a *museo-dei-piedi*. It has considerable manufactures of linen, silk, earthenware, colours, and mustard, the latter of which is much esteemed in Italy. It was at one time celebrated for its violins, but its reputation for these instruments has now much declined. Their manufacture was almost wholly confined, for nearly 100 years, to a family of the name of Amati. The first of this family who distinguished himself as a violin-maker was Hieronymus Amati, who became famous about the beginning of the 17th century. Antonius Stradivarius, and Joseph Guarnerius were also celebrated violin-makers of Cremona. The former was a contemporary of the last two

Anatolia the latter flourished at the commencement of the 18th century. Instruments by these makers are now scarce, and bring a high price.

Cremona was colonized by the Romans, and became a populous and flourishing town. In the war between Vitellius and Vespasian it was plundered and burnt by the troops of the latter but was subsequently rebuilt by Vespasian. After the fall of the empire, it shared the fate of the other cities of Lombardy and eventually fell under the dominion of the Visconti of Milan, whose will time it has continued to form a part of the Milanese state. In 1706, it was taken possession of by the French. Yida, bishop of Albi, the celebrated Latin poet, was born here in 1490. Pop. (1848) 25,525.

CRENDON (Lousy) par Eng. Books; 5120 sq. m. Pop. 1700. CRET or CRESSON VALON, a tn. France, dep. Oise, 4 m. E. by S. Beauvais. It was formerly the capital of the province of Valois, and had two castles, five monasteries, five churches, and considerable fortifications of the latter, some ruined walls only and of the churches but one exist. The town is surrounded by promontories planted with trees has a good square manufactures of cotton, and agricultural implements and a considerable trade in grain, wood, coarse linen and thread. Pop. 2607.

CRELAN LONI an isle of the S. W. coast, Scotland, co. Argyll, opposite Lamlair, and extending S.E. from Loch Linnhe.

CRESCENT an isl., N. Pacific in the low archipelago lat (S. point) 23° 20' 30" S. lon 134° 35' W (2).

CRESCENTINO a kingdom of Italy prov. Verelli 2° sq. N. E. Turin, near the confluence of the Dora Baltea with the Po, in a marshy and unhealthy district. It has an abbey founded in the eighth century. Pop. 4800.

CRESLOW par Eng. Books 620 sq. Pop. 10.

CRESPANO a tn. Austria Italy gov. Venice, prov. of and about 32 m. N. W. Treviso. It lies at the foot of a hill contains a parish and five auxiliary churches and has manufactures of linen, flannel, and broad cloth. Pop. 5025.

CRESTINO a tn. Austria Italy gov. Vi. gov. of, and 40 m. N. W. Venice, cap. dist. of same name. It has an active trade in linen, silk, bricks, firewood, and in the agricultural produce of the vicinity. Pop. 4000.

CRESSINGHAM par Eng. Books. 255 sq. m. Pop. 599. CRESSINGHAM two pars. Eng. Norfolk.—1 (Great) 2424 sq. m. Pop. 383.—2 (Little) 1824 sq. m. Pop. 252.

CRESSY a tn. France. See CRECY.

CREST a tn. France, dep. Drôme, 13 m. S. E. Valence, 1 m. Drôme. It is commanded by an old castle, which defended the passage of the river and rendered Crest one of the strongest places in the Valentinois. Of this castle, a large tower is all that remains in a habitable state. It was formerly a prison but now serves as a house of correction. There are here manufactures of cloth serge, cotton goods, blankets, handkerchiefs, and turnery ware. It has also several silk, cotton, and felling mills, paper-works, dyeworks, sugar refineries, tanneries, potworks, tile-works, and brickkilns. A considerable trade is carried on in cloth, cottons, silk and silk goods, &c. Truffles are abundant, and form a considerable article of commerce. Pop. 3357.

CRETE, or CANDIA (French, Crète; anc. Crete), an isl. Mediterranean, the largest and most E. of the Grecian archipelago, and belonging to Turkey. It has about 65 m. S. E. Cape Males or San Angelo, in the Mornas, and 149 m. N. E. Cape Orio, in Anatolia or Asia Minor, between lat. 25° and 36° N. and lon. 25° and 27° E. Length, E. to W. about 158 m. breadth, varying from 8 to 88 m. It is extremely mountainous, being traversed throughout its whole length by a lofty range running close to, and parallel with the S. coast. There are other ranges dispersed over and over covering the whole island. In the course of the island in Mount Pelicci (anc. Pelicci) 7800 ft. high; the other loftiest summits are towards the W., in the Peloponnesus or White Mountains, so called from their summits being covered with snow

for eight or nine months in the year. The highest elevations attained here are about 6000 ft. The greater part of these mountains are clothed with forests of olive, chestnut, walnut, and pine trees, oaks, and cypresses. They contain a number of remarkable caverns and grottoes including the famous labyrinth of antiquity an extensive and intricate natural excavation at the foot of Mount Ida. The N. coast, with numerous indentations, forms, W. to E. the Capes of Bona, Spada, Moleka, Radimo, Saso, St. John, Eldero, and the Bays or Gulfs of Ksamos, Camos or Khamia, Sada, Armyro, Retamo, and Mirabel. The S. coast is lofty bordered by mountains, presenting few indentations so that only one marked promontory is formed, Cape Matala or Theodia, and an extensive bay that of Messara, W. of that promontory. About 6 m. S. however of Cape Matala, are some small bays, the most interesting of which is that in which the vessel bearing the Apostle Paul to Rome took refuge, on her way to Malta or Malta, and still called by the Greeks Fair Haven, on our

THE FAIR HAVEN, CRETE.—From Captain's Voyage of the Pearl

ships Calomina (from Greek *kalos* *kalos* and described in old sailing directions as a fair bay with good anchorage. There are few plants, and no rivers or lakes of any importance. The climate is, in general, mild and healthy the heats of summer being tempered by a N. wind, called by the natives *en'at*, which blows throughout the greater part of the day. Rains occur generally in the spring and autumn very little falling in summer when the want is supplied by heavy dews. Unfortunately some of the most fertile valleys are the most unhealthy especially those that have rivulets running through them, *fevers* being prevalent in these from June to the end of September. There are no mines in the island, though many ancient writers assert that iron was first discovered here. The only useful minerals known to exist, are gypsum, lime, slate, and whetstones. Vegetation is extremely luxuriant in favourable situations although a great portion of the soil is dry and stony and not well adapted for the production of grain. In many places, however, fruits and vegetables grow spontaneously myrtles and rose-hawthorns cover the banks of the rivulets, and the plains and pastures are encumbered with the most beautiful and fragrant flowers. The fig, pomegranate, almond, and orange grow spontaneously, and *Cistus creticus* producing gum balsam, is found; but the tragacanth plant does not grow here. Dates, cotton, and tobacco are cultivated but the staple productions of the country are wine, oil, and fruits, amongst the latter, the Malvaceous *raim*, which are much esteemed. Silk is produced, but in small quantities. Of cereals, about 5000 tons are produced annually in the provinces of Candia and Retimo. Sufficient corn barley oats, beans, &c. are grown to supply eight or nine months consumption the deficiency is imported from Egypt and Barin. The wheat and barley are of superior quality. Of horned cattle there are about 50,000 used principally for ploughing; but no improvements whatever have been made in agriculture for centuries. Almost every peasant has his own farm, and

the few who have not, indicates those of the Aga, who furnish the furniture, the seed, and all the necessities of husbandry. The produce, after deducting the seventh paid to Government, and the seed furnished by the Aga, is divided in equal portions between him and the cultivator. Olive trees are not included in this arrangement. Sheep and goats are fed on the mountains; their milk is made into cheese, a preparation existing against cow's milk.

The manufactures of the island are inconsiderable. Soap is the principal article, there being, in all 23 manufactories of that commodity nine at Candia, six at Rethimo, and eight at Chania, which produce, together about 6000 tons of soap annually. The quality is highly esteemed all through the Levant, especially that made at Candia, which obtains the highest price of the market. The peasantry generally manufacture their own clothing, which, on working days, usually consists of coarse white cotton or linen cloth, manufactured from the raw material by their wives and children, who also manufacture wool into cloaks, coverlets, and socks the latter for combining the soap exported from the island. The principal articles of export are oil soap, honey wax almonds, oranges, lemons, figs, cherries, carobs, and raisins. The principal imports are cotton, manufactured goods, hides, leather, plants, and building timber called *fat*, *soda* wheat, beans and rice. The exports go mostly to Egypt, Turkey and Greece the imports, with exception of the cotton manufactures, which, as already stated, are from England, are chiefly from the two last mentioned places and Austria. The following Table exhibits the state of the commerce of Crete, as indicated by the shipping and exports and imports of the three principal ports of the island, for the years 1844 to 1847—

	Tonnage				Value			
	Imports.	Exports.	Transit to Candia.	In Ballast.	Imports.	Exports.	Transit to Candia.	In Ballast.
1844	10,000	10,000	10,000	10,000	10,000	10,000	10,000	10,000
1845	10,000	10,000	10,000	10,000	10,000	10,000	10,000	10,000
1846	10,000	10,000	10,000	10,000	10,000	10,000	10,000	10,000
1847	10,000	10,000	10,000	10,000	10,000	10,000	10,000	10,000

The coin of the country is the same as that of Constantinople, but a good deal of foreign coin also circulates, principally English sovereigns, and Spanish and Imperial dollars. Besides the three principal ports above named, there are other three good ports, Suda, the best harbour in the island, Spinalonga, and a little S. of it, the small port Ayia Nikola, all on the N. side of the island.

Except in the immediate neighbourhood of the three cities, Candia, Rethimo, and Chania, the roads are in the most wretched condition. In many places only mules and asses can venture; and, although very sure footed, it is dangerous to remain on their backs. When they descend the hills, the peasants almost invariably alight. The bridges are, most of them broken down, so that the travellers, caused by the winter rains, frequently detain travellers two or three days on the banks of what are, during the summer, insignificant rivulets.

Crete, with the adjacent islands of Gouzo, Anti Gouzo, Sigadia, &c. forms a peninsula of Turkey in Europe and is divided into the three sanjaks of Candia, Rethimo, and Chania. The capital is Candia.

The island contains eight bishoprics, and 30 monasteries the latter possessing immense landed property. The patriarch of Constantinople receives annually from the island 250,000 piastres, or about £1000. The majority of the clergy are wholly uneducated many of them being unable to write; and the peasantry, generally are in the lowest state of ignorance. There are but few schools, and in most of these the system of tuition is extremely bad.

The native male population are tall, well proportioned, and muscular but are neither so intelligent nor so active as the Greeks of the other islands. They are frugal and hospitable, and much attached to their children their principal vices are lying and stealing; in the former respect, still preserving the character given them by the Apostle Paul, Tit. 1. 12. The Greeks are always lazy. These circumstances are attending the steps of the different villages and monasteries, where they dance and play upon a small instrument resembling a guitar which they accompany with their voices. They have about 100

Vol. 2.

holidays in the year, including Sundays. Their food consists of barley-bread, cheese, and olive, and beans, pulse, and vegetables, cooked with abundance of oil, of which the poorest families consume about 40 gallons a year.

Crete, the cradle of the civilization brought to Europe by the Phoenicians and Egyptians, received its name from Crete, the first of its monarchs, of whom, and his measures, but very little is known, and that little is so intermingled with fable, as to be hardly any historical value. Among the monarchs were two of the name of Jupiter and two of the name of Minos, one of whom was esteemed the wisest legislator of antiquity. His laws were engraven on tablets of brass, and were adopted by the Greeks. In the time of Homer, Crete was crowded with inhabitants, and contained a great number of flourishing cities. The original or true Creteans, were called Eteoeretes, to distinguish them from the foreign settlers, and inhabited the S. division of the island. The last King of Crete was Idomeneus, whose exploits are recorded by Homer. For 10 centuries, Crete repelled all foreign aggression, but was at length subdued by the Romans, who subsequently ceded it to the Marquis of Montserrat, by whom it was sold to the Venetians in 1704, when it obtained the name of Candia. It was afterwards taken by the Turks, in whom possession it remained till 1830 when it was ceded to Mahomet Ali Viceroy of Egypt, who, in turn was obliged in 1841 to restore it to Turkey. Besides the classical interest which attaches to Crete from its heroic and mythological associations, and from its having been a chosen seat of the arts and sciences, is the higher interest which arises from its having been one of the first places in the world favoured with the light of the gospel. The Christian faith was introduced into the island by St. Paul, whose disciples, Titus, became first bishop of Crete. Pop. about 150,000 of these 100,000 are Greeks, 27,000 Turks and the remainder foreigners and black slaves.

CREFTINGHAM, par. Eng. Bedford 1638 sq. Pop 423

CREUSE (Latin, *Creusio*) a river France which rises at Mont-d'Artois, on the N. frontier of dep. Creuse; flows centrally in a N. N. W. direction, through that department, to which it gives its name enters dep. Indre, and still maintains the same direction till it passes Argenton where it proceeds, first, almost due W., then N. N. W. forming the boundary between dep. Vienne and Indre-et-Loire, and joins r. bank. Vienne a little above Puits-de-Fleur. Total course, about 190 m. of which only about 4 m. are navigable. The principal towns which it passes are Aubusson, Argenton, La Basse, and La Haye. Its principal affluents are, r. bank, the Petite Creuse, Roanne, Bourne, and Orlais; l. bank, the Sédelle and Gartempe, of which the first is the only one admitting even of flotation.

CREUSE an inland dep. France, having N. dep. Indre and Cher. E. Allier and Puy-de-Dôme, S. Corrèze and V. Haute-Vienne between lat. 45° 40' and 48° 55' N. and lon. 1° 22' and 2° 32' E. It was formed in 1790, from parts of the provinces of Poitou, Marche, Bourbonnais, Limousin, and Berry and derives its name from the river Creuse Area, 2188 sq. m. cap. Guéret. Creuse is traversed by several mountain ranges connected with those of Auvergne they lie generally S. E. to N. W. though some others, in the N. E. of the department, do not follow this direction. There are few plains of any extent, but numerous valleys, through which flow many streams, of which the principal are the Creuse, Cher, Thion, Gartempe, &c. some of which are navigable within the department. Grains, coal gypsum and potter's-clay, are wrought to a limited extent. The higher slopes of the hills are generally planted with chestnut trees; the lower slopes are meadows—the low lands alone being tilled. The climate is variable, cold and damp, with frequent storms of wind and heavy rain. Snow remains on the mountains during several months. Soil in general poor, light, and unproductive. The only good land is found towards the N. E. Agriculture is on a backward state, and the quantity of grain produced is insufficient for the consumption. Rapes and hemp are grown to a large extent. Fruit is abundant—almost all the fruit trees that grow in central France being cultivated with success. The sheep are small, and

Spanish good section, but the wool is inferior. The cattle are of a good kind, and easily fattened. Hens are reared, thrive well, and furnish excellent honey. The minerals are unimportant. The only manufactures of importance are of carpets and tapestry at Aubusson and Felletin, which rank after the manufactures of the Gobelins and Beauvais. Some coarse woollen goods, leather a few cottons, paper, glass, and porcelain, are also made. The exports consist of fat cattle and pigs, wool, carpets and tapestry honey, wax, and hemp; the imports of wine, wheat, iron, salt, colonial produce, silk, &c. The inhabitants are generally intelligent, industrious, and persevering. From 20,000 to 24,000 emigrate during nine months of the year from March to Christmas, in search of work. They are principally masons, paviors, sawyers, tilers, hump and wool combers. They travel in small bands, under a master who undertakes jobs, and settles with the men. The proceeds of their labour are generally laid out on land on their return. Hago says that a good deal of the labour falls upon the women who are sought by the young men, rather for their beauty nor personal attractions, but because they are good strong workers, and careful in the management of the loom. Crime is divided into four arrondissements, and divided into 85 cantons, and 982 communes. Pop. (1846) 285,890.

CREUSE (Cano de) the most E point of Spain, forming a rugged, but not very lofty promontory N.E. coast of Catalonia lat 42° 19' 12" N. lon. 3° 50' E. (N.) crowned by a watch tower which forms a very conspicuous object. The lofty mountains rising behind it may be seen 25 m. or 30 m. off at sea. It is the W entrance to the Gulf of Lyons, and lying in the line of navigation, requires a good berth to be given it, as a rock lies out from its E end.

CREVECOEUR, two places, France.—1. Crèvecoeur (anc. Crèvecoeur) a tn. dep. Nord, 7 m. S. Cambrai & bank, Scheldt. It is famous for a battle fought in 717 in which Clotaire II was defeated by Charles Martel and has manufactures of plate-glass, brickwork, lincolns, and an annual fair. Pop. 1875.—Crèvecoeur-le-Grand, a tn. dep. Oise, 23 m. N. W. Clermont. It contains a parish church, and a large castle, both of brick and flanked with towers, with a fine park and gardens situated and has manufactures of woollens and silk stuffs, and also extensive nurseries, sometimes de laune, wood, and coal. Pop. 1125.

CREVECOEUR fort, Holland, prov. N. Brabant, 1 bank, Maa, 44 m. N. Haringhboech. This fort having been destroyed by the French, in 1673 was left in ruins until 1735, when the Dutch government restored and made it stronger than ever. The Dunes, which flowed past the W side was then made to pass through the fortress, so that, by damming it when necessary the whole country may be laid under water. There is a church within the fort for the inhabitants, who are almost all Reformed.

CREVILLENE, a tn. Spain, Valencia, prov. of, and 18 m. S.W. by S. Alcaniz, at the E. base of the hills which form the boundary of prov. Murcia. It possesses a parish church, two chapels, town-hall, prison, five schools, and a cemetery. The inhabitants are chiefly engaged in weaving, agriculture, the preparation of soap, and expressing oil and wine. P. 7255.

GREWE, a market tn. England, on Chester 52 m. S.E. Liverpool, and a central point from which diverge various branches of the London and N.W. Railway including the main line from Birmingham to Warrington, the branch to Manchester, and that to Chester, and also the junction of the N. Stafford Railway. The town, which has sprung into existence within these few years, is chiefly inhabited by persons connected with the railway. The houses are remarkably neat, and all have gardens. There are a church, R. Catholic chapel, new-room, assembly-room, library, and baths. Besides the large number engaged in the various duties connected with this extensive railway station, and the numerous trains constantly arriving and departing, many are employed in the coach-building, iron-forging, and general repairing works erected here in connection with the London and N.W. Railway. Pop. (1841) 890; (1857), estimated at 4491.

GREYKIRK, a tn. and par. England, co. Somerset. The town, 16 m. S.E. Taunton, is pleasantly situated by a fertile vale, well wooded, and surrounded by cultivated eminences. The streets are well paved, lighted with gas, and

present altogether a neat and cleanly appearance. The church is a large cruciform structure, with a lofty and delicately ornamented tower. The Baptist and Presbyterian have places of worship here. There are a free grammar-school, founded in 1490, with their exhibitions to six colleges in Oxford, and six other daily schools. There are two almshouses, and several other minor charities. Stages were worn here to a great extent, at one time, but the trade is now wholly extinct, and its place supplied by the manufacturers of millinery, drapery, and stockings. Area of par 5881 ac. Pop. par 4491; in 1803.

CRICCIETH a tn. and par. N. Wales, co. Denbigh. The town, on Crickethen Bay, 18 m. S. Caernarvon, has a spacious church, several dissenting chapels, and a free day-school. The coast here is very dangerous, and only a few fishing-boats belong to the place. Crickethen is embrothered in Caernarvon in returning a member to the House of Commons. The remains of the ancient castle occupy the summit of a precipitous rock overlooking the bay. Ar. 1873. P. 797. CRICK a par and vil. England, co. Derby 5180 ac. The village, 4 m. W. by S. Alfreton has a handsome church a commanding eminence, with a tower and a spire, places of worship for General Baptists and Unitarians, and a national school. The mining of lead and the quarrying and burning of limestone, employ the most of the inhabitants, though a few manufacture stockings, spin candle-wicks, and turn bob-bins. Area of par 5878 ac. Pop. 3870.

CRICHTON par Scotland, Edinburgh 54 m. by 44 m. Pop. 1387.

CRICK par Eng. Northampton; 5980 ac. Pop. 594. CRICKADARN a tn. and vil. S. Wales, co. Brecknock. The village, 54 m. W. by N. Hay has an ancient

church with dissenting chapels, and several small charities. Area, 4831 ac. Pop. 414.

CRICKET two par. England Somerset.—1. (Mellor-Mo) 540 ac. Pop. 285.—2. (St Thomas) 875 ac. Pop. 69. CRICKHOWELL (Wales, Crug-Bywedd) a market tn. and par. S. Wales Brecknockshire. The town beautifully situated 12 m. S.E. Brecknock, on a declivity 1 bank Udd, here crossed by a bridge consists of six principal streets, irregularly built, but well kept. Houses chiefly of stone supply of water abundant. Besides the parish church—a fine old cruciform structure—there are places of worship belonging to Calvinists, W. Methodists, Welsh Methodists, Primitive Methodists, and Baptists. There are also two national schools and an infant school and several benefit societies. The people are chiefly employed as labourers and mechanics. Area 1941 ac. Pop. 1403.—(Local Correspondent).

CRICKLADE, a par. bor. England, co. Wilts 43 m. N. Salisbury & bank lake. It is mainly built, and not tightly comprehends two parishes, St. Mary and St. Sampson. The church of the former is small, that of the latter a spacious cruciform building with a lofty and highly-ornamented tower. It has places of worship for Independents and Wesleyan Methodists, several schools and some minor charities. Area, 5119 ac. Pop. of par 1906 of bor 35,503.

CRICKSTOWN par. Ire. Leath; 1433 ac. Pop. 120.

CRICHTON par Scot. Scotland, Pop. 2714.

CRIEFF a tn. and par. Scotland, co. Perth. The town is beautifully situated, 164 m. W. by S. Perth, on a slope above the Earn, backed by lofty hills and crags. It consists of one principal street, in the centre of which is a handsome square; and of several other well-built streets, one of which leads to a bridge over the Earn. The inhabitants are supplied with water from springs in the vicinity collected in a reservoir in St. James Square, which, being surrounded with some fine lime trees, forms an elegant ornament to the town. Crieff is also well lighted with gas. Nearly in the centre of the High Street stands the ancient cross, curiously carved in front. It is of great antiquity but nothing more is known of its history, than that it is not the original cross of the town, but was brought from a farm in the vicinity where it had stood for centuries. There are five places of worship—one Established, one Free Church, two U. Presbyterians, and one Episcopal. The only other buildings of any consideration are, the mason's and weaver's hall—the former a handsome structure. A subscription library has been established, and is well supported; there are also a circulating library and two reading-rooms, maintained by subscription. The principal manufacture is hand-loom weaving, in which it is

estimated that about 500 persons are engaged. There are also some pretty extensive fisheries, distillation, and mulling establishments. The services of Chaff are singularly localised, and its climate remarkably salubrious. The par is 4 m. by 8 m. Pop. (1861) 4504.

CHILLON CAPE, the most S point of the Japanese Isl. Tanaka, or Sagami, Strait of La Perouse, lat. 45° 54' 23" N lon 141° 38' E. (s.)

CRIMEA, or **OKRA TAVARY** [anc. *Chersonesus Taurica*] a peninsular territory of S. Russia in Europe, between lat. 44° 31' and 49° N lon. 33° 30' and 36° 38' E. forming a large portion of the Russian gov. prov. of Taurida (which see)

CRIMMITSCHAU a tn. Saxony circle Zwilchen, 57 m. S. Leipzig on the railway thence to Hof and on 1 bank Pleiss. It contains a pretty townhouse, with a tower two churches, and three schools. This is a busy manufacturing town, and has nearly doubled its population since 1834. Needle and button-making, turning, glass-making, but, above all, the spinning of woollen yarn, with the weaving of both woollen and cotton fabrics, maddening casimere, moerose, vestings, &c. are carried on; besides distilling and fulling and some minor branches of manufactures. It has a weekly and three annual woollen markets. Pop. (1849) 7088.

CRIMOND par Scot. Aberdeen 9 sq m. Pop. 893.

CRIMPEN a tn. Holland See *Karinx*

CRIMPLESHAM par Eng. Norfolk 1820 ac. P. 839

CRINAN (Loon) a small arm of the sea, Scotland W coast co Argyll, about 5 m. E. the N. end of the island of Jura, from the sound of which it diverges S E into N. Knapdale, for about 2½ m. At the head of the loch is the entrance to the Crinan Canal which is about 9 m. long has 15 locks and leads across the peninsula to Loch Gilp, into which it opens at Ardrisholm. By means of this canal which is only suitable for small vessels, the long passage from the W coast, round the Mull of Kintyre, to the Firth of Clyde is avoided.

CRINGLEFORD par Eng. Norfolk; 960 ac P. 189

CRINOW par Wales, Pembroke. Area, 352 Pop. 69

CRITCHILL, two par. England Dorset—1 (Long) 1869 ac. Pop. 144.—2 (Moore) 1705 ac. Pop. 874.

CRIWITZ, or *Karwitz* a tn. Mecklenburg-Schwern circle Mecklenburg, cap. hnt. of same name, on a small lake 11 m. E. E. Schwerin. It has walls with two gates, and contains an old Gothic church with a fine altar-piece, and a courthouse. Pop. 2387.—Area of hnt. 78 geo. sq m. Pop. 4454

CRIZA.—1 A tn. Brazil, prov. Goyaz, 10 m. W 1 bank river of the same name, 115 m. N by W Goyaz, or Villa Boa. It owes its existence to the discovery of gold mines in its neighbourhood, which induced a company to settle, form an establishment, and build three churches. The working of the mines having ceased to be profitable, has been almost entirely abandoned, and the inhabitants are chiefly employed in cultivating the ground and rearing cattle.—2, A river, Brazil, which rises in the mountains prov. of and N. the town of Goyaz, flows N.W. and joins r. bank, Araguaya. Its whole course is about 200 m., and partly navigable. Near its mouth are extensive alluvial, which might be but are not traced to profit.

CROA, the name of five small islands in the embouchure of the Amazon, S.W. of the Isle of Belice, or Pontentina. They are not inhabited, but are frequently visited by the inhabitants of Villa Nova, who salt the fish which they catch in the neighbourhood of their shores.

CROAGH, a par and vil. Ire. co. Limerick; 7231 ac. Pop. 1598.

CROAGH PARK, or *Rizz* a mountain, Ireland, co Mayo, 9 m. S.W. Newport, S. side Clew bay of which it commands a fine view. It rises towards the top in the form of a cone, 3540 ft. above the sea. A well on its top is one of the most celebrated places of pilgrimage in Ireland, and at certain seasons greatly resorted to. At its base, close on the shore, are the ruins of Murrish Abbey

CROATIA [called by the natives, *Horvatz* Austrian, *Oravay*, German, *Kroatien*], an extensive prov. Austria situated formerly incorporated with Hungary now in kingdom Dalmatia, divided into Civil and Military Croatia, bounded, N. by Styria and Hungary proper, E. by Slavonia and Turkey, S. Dalmatia, and W. the Adriatic Sea and Illyria area, 2760 geo. sq m. It is naturally divided into two parts by the Sava, which traverses it in an E. direction. The S. and larger part is generally covered with lofty mountains, forming a continuation of the Julian Alps, and taking the general name of the mountains of Velahich. They consist of two principal ranges, called Great and Little Capella, and have heights varying from 3500 to 4800 ft. The culminating point, Velika Vinohozina is 4400 feet. The N. part, though much less mountainous, is traversed by a branch of the Carnian Alps, constituting the watershed between the Drave and the Sava. A characteristic feature in the mountains of Croatia is the number of deep ravines and subterranean caverns and channels which they contain. In the latter the waters of important streams are often lost, and, after pursuing a mysterious course, reappear. The whole country belongs to the basins of the Sava and the Drave, the former draining a considerable portion of its diversity and a still larger part by its important tributaries, the Kulpa and the Ura, and the latter which forms its N. boundary receiving the comparatively limited amount of water which flows down the N. side of the watershed already mentioned. The lakes are not in individually of great extent, but are numerous particularly in the S. The climate varies much in different localities. In the S. the air is often piercingly cold, and a boisterous wind called Bora, blows, almost without intermission from September to May. The violence of this wind is said to make some of the regions most exposed to it almost uninhabitable. The temperature is mildest towards the shores of the Adriatic. The valleys and plains which extend between the mountain ridges are, in the N. of considerable fertility but are often so much broken by rocks and abrupt precipices as to be altogether unfit for the plough. The soil along the banks of the rivers is usually a rich alluvium, from which large crops might be obtained did not frequent extensive inundations defeat the hopes of the husbandman and present almost insuperable obstacles to successful cultivation converting large tracts into mere morasses. On the low and sunny slopes of the N. the vine is successfully cultivated. In the S. the olive, mulberry and fig thrive well. The S. portion of Croatia is generally of very indifferent fertility and many parts of it may be considered as absolutely sterile. The soil is not well adapted for wheat, and the principal crops are barley and oats. Hemp and flax are grown merely for domestic use. The rearing of stock attracts far less attention than might be expected, from the extent of surface which is necessarily devoted to pasture. Both cattle and horses are of inferior breeds; but great numbers of swine are reared on the coast of the forests. The rivers are well stocked with fish. Manufactures are scarcely to be said to have an existence and the little trade which is carried on is nearly confined to wood and wine. The inhabitants belong generally to the R. Catholic church, though a considerable proportion make use, not of the Latin, but the Greek ritual. They are very ignorant and so ignorant that it is not long since Protestants were permitted to enjoy even a nominal toleration. Civil Croatia is wholly situated N. of the Sava, and comprehends the counties of Agram, Kistva and Wersalin; Military Croatia is chiefly S. of the Sava, but partly also N., and comprehends three military divisions, which bear the name of the Karlstadt, Banat, and Wersalin-Grenze or frontier. These divisions are subdivided into eight regimental districts. Military Croatia forms part of the extensive military frontier which stretches along the N. of Turkey from the Adriatic eastward to Moldavia, and owes its name to the strictly feudal and military tenure by which the inhabitants hold their lands. Instead of the ordinary payment of rent, they render military service, according to arrangements which were made in 1407. Croatia was anciently inhabited by the *Frankists*; who were subdued by the Romans, under Augustus. In A. D. 458 it was taken possession of by the Goths, and in A. D. 640 the Croats, a tribe from Bohemia, settled in it, and gave their name to the country. In the 10th century the palace assumed the title of king of Croatia, which they subsequently

Cromarty is 6 m in length by 2 m in breadth. Pop. 2177 of which in 1868 — The Fairs of Cromarty is a long narrow inlet of the sea, about 18 m in length N.E. and S.W., and averaging from 2 m to 5 m in breadth. Its entrance is nearly a mile wide, with 20 to 40 fathoms water and its shores except the S point are clean. Being completely landlocked it affords excellent shelter for shipping and is often crowded in stormy weather to the great advantage of the town, which then becomes a stirring place.

CROMDALE and INVERALLAN par Scotland Inverness 27 m by 9 m Pop 8980

CROMH 18 par and maritime in E gland, co. Norfolk 1001 ac. The town on a plain commanding a fine view of the Bay of Cromer and sheltered on three sides by well wooded hills, is 21 m. N Norwich, and about 30 m N W Yarmouth. It is much frequented by sea bathers, on account of its beautiful beach and picturesque scenery. It has a number of neat houses a library a news-room, and fine jetty 70 yds. long forming a favourite promenade a handsome church in the late Gothic style with a tower 169 ft. high a Methodist chapel, several schools, including a free grammar school founded by Sir Bartholomew Reed in 1508. The inhabitants are chiefly fishermen. A thriving coasting trade is carried on but there is no harbour. Exports, chiefly corn imports coal, tiles, and oil-cake. The bay is so dangerous, so to have obtained from sailors the name of the Devil's Throat. Life-boats are always kept in readiness on the beach. Robert Bacon a mariner of Cromer discovered Iceland in the reign of Henry IV Pop 1356 — (Local Correspondent)

CROMFOHD a to England co. of and 12 m N W Derby on the Derwent and a station on the railway to Matlock. The town owes its rise to the extensive cotton works established here by Sir Richard Arkwright. There are here also a paper mill and hat manufactory. In the vicinity are lead mines, smelting works and a red lead work. There are an Episcopal chapel founded by Sir R. A. Arkwright a Wesleyan Methodist chapel, and almshouses. 10 p 1190 CROMHALL-ABURY par Eng Gloucester 25.6 ac Pop 766

CRONSTADT or KRONSTADT a seaport in Russia gov. of, and 30 m W from St. Petersburg on the long flat, and arid island of Kotlin near the E. extremity of the Gulf of Finland lat. (Cathedral) 59° 58' 43" W lon 29° 48' 30" L (N) The town is built in the form of an irregular triangle, on the S.E. extremity of the isle, opposite the mouth of the Neva, and is strongly fortified on all sides. On the S side of Kotlin is the narrow channel through which only one vessel can pass at a time, from the gulf to the capital and scores of guns could here be brought to bear on an enemy by means of a fortress erected on a detached islet or if arriving on the opposite side, by the batteries of Rensbank, and the island of Cronstad. The appearance of Cronstad is respectable. It is regularly built, and contains many straight and well-paved streets and several squares. The houses, however are all low being generally of one story with those singular red and green painted roofs common in Russia and are mostly of wood with exception of those belonging to Government which number nearly 200 and are nearly all built of stone. The town is entered by three gates and is divided into two sections, the Commandant's division and the Admiralty each of which is subdivided into two districts. It is also intersected by two canals, which have their sides of granite and are hith deep and wide enough to admit the largest vessels. The one, Peter's Canal is used as a repairing dock and the other Catherine's Canal for commercial purposes. Cronstad contains three Greek churches—that of the Transfiguration, a large wooden edifice built by Peter the Great, and covered with images. Xenia church, and St. Andrew's church in the Byzantine style, with a handsome cupola. There are also two Greek chapels, and three other churches, one each for Lutherans, English and C. Catholics. Between the two canals stands a handsome palace, built by Prince Menchikov now occupied as a naval school, and attended by 300 pupils. The other public buildings deserving

of notice are the marine hospital fitted up with 2500 beds; the exchange, custom house, admiralty, arsenal, barracks, cannon foundry, &c. and the small palace in which Peter the Great resided and in the gardens of which are several oaks planted by his own hand. The shady elysium of the gardens form the principal promenade. The harbour lies to the S. of the town and consists of three sections, the military or outer harbour which is the great naval station of Russia and is capable of containing 35 ships of the line, the middle harbour properly intended for the fitting out and repairing of vessels and the innermost harbour running parallel with the last, and used only by merchant vessels, of which 1000 might lie in it. Two-thirds of the external commerce of Russia pass through Cronstad, although the depth of water at the bar is scarcely 9 fms and ice blocks up the harbour nearly five months in the year the shipping season continuing only from May to November. In 1845 the number of vessels that entered the port was 1811 of which 840 were British the departures were 1,550 of which 860 were British. For the trade of the port, see St. Petersburg. Cronstad has constant communication with the opposite shores, and steamers now ply regularly between it and the capital. Pop. In winter not above 6000 exclusive of the garrison and marine but including these in summer not less than 40,000

CRONSTADT 1 a gov and in Transylvania. S & KROX STADT

CROOKE, par Irel Waterford 1985 ac. 10 p 683 CROOKED ISLANDS, an isl group, N Atlantic, 23 m E. Long Island in the Bahamas. It consists of Crooked Island, Acolin, and Fortune Islands, and Castle Island, with a number of islets. lat. (S. point Castle Island) 22° 7' N lon 74° 21' W Crooked Island is the principal one of the group, and at its W point has a town called Pitt's Town. It also contains an extensive salt water lake. Pitt's Town has a custom house, and post-office, where the Bahama mail is left, and taken up by the Jamaica packet. Supplies are scarce and dear but a stock of turtle is at all times kept in ponds (CROOKED LAKE) — 1 a small lake N America, on the boundary between the U States and Upper Canada lat. 48° 7' N lon. 91° 50' W — 2 a lake of the U States, New York 170 m W Albany 18 m long and from 1 to 14 m broad, and connected W th Seneca lake by a canal 8 m long. CROOKHAY EN a manor and island co. of and 60 m S W Cork. It has a parish church and several sc. ools and exports some wheat, oats, pork, and butter. Pop. 831

CROWLAND or **CROVLAND**, a par and tn. England co. Lincoln 12 789 ac. The town 1/2 m. N. Peterborough consists principally of four streets connected by a carefully constructed ancient bridge one of the most singular architectural relics of antiquity in the kingdom and known as the transverse bridge. One of the wings is a statue of Alfred or as has been affirmed of Ethelred, King of Mercia, supposed to be of the ninth century now much dilapidated. The streets are straight, and kept in good order. Houses pretty well built, of brick and stone well supplied with water. Here are the interesting ruins of an old abbey part of which is now used as the parish church. It is partly Norman and partly Gothic was founded by Ethelred, frequently destroyed and as frequently rebuilt, each time with greater splendour than before. There are also places of worship for Wesleyans and Latter day Saints several day schools for boys and a steam 8-hr. mill. The inhabitants are principally occupied in dairy industry in rearing geese, and in sewing and fishing. Pop. 1163. (Local Correspondent).

CROWLEY par. Eng. Worcester 1640 ac. Pop. 680.

CROWLEY a par and tn. England co. Lincoln 7250 ac. The town 28 m. N.W. Lincoln stands on a plain, nearly surrounded by moorland, which has undergone the fertilizing process of vespertine from the Trent and Ouse. It consists of

principal streets, well kept, and well built of brick, supply of water abundant. The town, which is rapidly increasing has, in many respects, greatly improved within the last few years and has a church of the time of Henry I. four day schools three private schools and an endowed school for poor children. Flax is extensively manufactured and gives employment to a great proportion of the people. Pop. 3068. (Local Correspondent).

CROY and **DALLEROS** par. Scot. Inverness 44 800 ac. Pop. 1.

CROYDON a vil and par. Eng. Cambridge 7111 ac. Pop. 508.

CROYDON a tn and par. England co. Surrey both pleasantly situated on the border of Handland Downs. The town which is 1/2 m. S. London consists of one long street and as small smaller. The houses are a really substantial and well built and many of the more modern handsome. The streets are paved, lighted with gas and the supply of water is ample. In the immediate vicinity are several manoriums, with parks and pleasure grounds numerous detached residences, and ranges of neat dwellings. The church an ancient building is spacious and elegant, built of freestone and finished in the later English style, having a lofty embattled tower with crocketed pinnacles. It contains many fine and interesting monuments. Two additional churches were erected in 1827 — 1 one of which is a handsome edifice also in the later English style. There are places of worship besides, for Baptists, Independents, Wesleyans and the Society of Friends. The education institutions comprise a free school a British and foreign school a school of industry for girls a national and Society of Friends schools. The charities are — a hospital several almshouses and a charity school. The public buildings, a library of the churches, are the townhall a handsome structure, surmounted by a cupola a commodious barrack a jail and a market house for butter and poultry. The principal trade of the place is in corn there are also several brewers and some calico-printing and bleaching but these latter branches of business has greatly declined of late years. One of the most interesting objects in Croydon is the remains of the ancient archiepiscopal palace for a long time the chief residence of the archbishops of Canterbury. It was originally built of timber but no part of the present structure is older than the 14th century. Queen Elizabeth and her court were more than once entertained here in great splendour by the archbishops of the time. The salubrity of the air and the convenient distance from the metropolis renders Croydon a favourite resort for merchants and retired tradesmen. It is one of the stations on the London and Brighton railway at the junction with the latter of a branch line to Epsom. Area of par 9821 ac. Pop. 20 031 of which the town contains about 10 260.

CROYLAND a tn. Lincolnshire. See **CROWLAND**.

CROZET ISLANDS, a group of four small islands in the E. Indian Ocean, between Kerguelen and 11 miles Edward islands. They are ranged in the form of a crescent at short, and nearly equal distances from each other. The most E. called East Island, is placed by Sir James Ross in lat 46 27' S. lon 52 14' E., which is considerably N.E. of its present position on our maps where it is represented as in lat 46 48' E. On this subject, Sir James says, Although arrived near the position on our charts of Crozet's group of islands, we could see nothing of them and I should have lost much time in the search, had I not, fortunately before leaving the Cape of Good Hope, obtained a more accurate account of their situation from a merchant of Cape Town. The islands are called, respectively Penguin or Immaculate Island, Pig Island, Fox Island, and East Island. They are all of

volcanic origin, and present, generally the peculiar characteristics of such formations being composed chiefly of lofty black *psilophorus* rocks, exhibiting in some instances beautiful columns and the appearance of extinct craters. Possession Island, the largest and most available of the group, is believed to be about 20 m. long, and 10 broad with three bays on its E. side in which ships may anchor. The W. side is unapproachable, on account of the heavy swell that constantly rolls in upon its shores. The three bays above alluded to, are called respectively America Bay, Lively Bay, and Ship Bay. All of them afford protection from the prevailing winds; but in the case of an E. wind the latter two must be immediately evacuated as in the first only is there room for a ship to wait out a while to attempt to ride out an E. gale in any of them. The E. end of the island is a low, sandy beach, the station with sundials, parades of which frequently, several times for months together, subsisting on a species of small rock fish, albatross eggs, which are above a pond in which said to be excellent eating, young albatross, also described as well as to excellent eating, young albatross, also described as well as to excellent food, young ducks, goat fish and the tongue and flippers of the sea elephant (*Morchnesia proboscidea*) all of which are to be had in great abundance, and with little trouble. Though presenting from the sea the appearance of a perfect mountain mass of volcanic land, Possession Island has some patches of good soil in which the sealers, when Sir James Ross found there had no doubt potatoes and vegetables would thrive. The temperature never being very low. Though Possession Island, with its numerous islets, is a sort of chain of islands, with which it is covered, it is more rock, without any appearance of vegetation, its shores are inaccessible, no point on which a landing could be effected being visible and its gulleys terminate in enormously slanted promontories. Figs. 1 and 2, the most W. of the group, presents a more attractive appearance. In 1834 Captain Distante left some pigs on this island, which have so increased, that, according to the sealers, it is difficult to land for them, they having completely overrun the island, whence its name. Great numbers are every year killed by the sealers, not only for present subsistence but salted down for supplies on their voyages to and from the Cape of Good Hope. Eggs taken is about 3 or 4 m. in diameter and of great height, the most plentiful of the island, and in some places near several hundred feet perpendicular from the sea. —(Capt Sir James C. Ross's *Voyage to the Southern and Antarctic Regions in 1839-41*.)

CROZON a com and maritime tn France, dep. Finistère, 9 n S. Brest, on the S coast of the peninsula that separates the Bay of Douarnenez from the rheadst of Brest. It has a small port and the inhabitants engage in the pilchard fishery. One of the outer ports intended to defend the approaches to Brest is a town on the territory of that town. On the coast are some remarkable caves, inhabited by nomads and sea fowl. Jan 18576

CRUYBEKE, a vil. and com. Belgium, prov. E. Flanders, 14 m. N.E. Dendermonde. The church, a Gothic structure is surmounted by a very lofty tower and adorned within with sculptures, rib ornaments and some good pictures. In the neighbourhood is a fine Gothic chateau. The chief manufacture is wooden shoes of which 180 000 pairs are annually made. The trade in corn and other agricultural produce is considerable. Pop. 2811

GRUYSHAUTEM a vil and comm Belgium, prov E. Flanders 12 m. S.W. Ghent. Lenoir weaving employs about 600 looms in this commune and there are also a gin distillery a brewery and numerous mills Besides a weekly market, there is an annual fair for horses. Near the centre of the commune is an ancient castle. See *Belgium* p. 272A.

CRUÏ (SAÏTã) or SAINT CROIX the largest and most S. of the Virgin Islands, W Indies, forming with St. Thomas and St. John the Danish government of the W Indies. It lies 65 m. E.S.E. Porto Rico lat. (E point) 17 45 30" N lon 64 44 W (n.) and about 20 m. E to W breadth 5 m.

brood area, 110 sq km. It is generally flat—though a range of low hills follows the line of the N shore—well watered and fertile climate at times unhealthy and temperature varying from 54 to 73. Earthquakes and hurricanes are frequent. Two-fifths of the island are in sugar-cane plantations, and about one-half is occupied with general crops, only a small portion remaining uncultivated. Some cattle are reared. The capital and residence of the governor is Christiansburg and in the island is another small town called Fredenburgh. Santa Cruz was discovered by Columbus on his second voyage in 1492, and was named in his honor. It was discovered by Spaniards, and French who ceded it to Denmark. It was taken by the British, in 1807 and restored to the Danes by the treaty of Paris. The prevailing language is English. Pop. 23,600.

CRUZ (SANTA) n to Brazil prov Goyas, near I bank. Par 140 m. S of Goyas. It owes its existence to the discovery of gold mines in its neighbourhood, and was settled at an early period—its church being one of the oldest in the province. It had at one time acquired considerable importance, but has fallen into decay and does not now count more than 8000 souls in the whole district though very extensive. In the vicinity are thermal springs said to be very efficacious in entropic and other affections.

CRUZ (SAWA) TWO ISLS. Ascotes Islands—1 Cap. Isal. *Cap. Isal.*
Graciosa It has no harbor worthy of the name, but merely
 an exposed roadstead with a rocky bottom. Pop. 8000.—2
 Cap. Isal. Flores, E. coast of the island. It lies low with
 hill rising abruptly behind it and consists chiefly of
 streets, running parallel to each other from the sea. Houses
 substantially built of stone, and generally two stories high
 The church, a magnificent and spacious structure, thorough-
 neogot, is still hastening to decay. There are also a Fran-
 ciscan monastery and an old dilapidated fort. Pop. 3000

CRUZ (SANTA) several islands, Am.—1 An isl off the N coast of Cuba, 50 m. N. E. Matanzas.—2 An isl Gulf of California, lat. 5° 22' N. lon 110° 49' W.—3 An isl off the N Pacific separated from the mainland of Upper California, by the channel of Santa Barbara, lat. Length, 140 miles, 12 in is of volcanic origin, and has an extremely fertile soil, the principal productions of which are coconuts, bread fruit, yams, bananas and plantains.—5 A group of isls. E.E. coast of Africa, Algon Bay lat 33° 50' S. lon 25° 40' E.—6 A cluster of islets, Solos archipelago, between Nicobar and the N.W. point of Mindanao on—7 A to and port Philippines, Island Luzon, on bay of same name, 105 m W Manila. Only small vessels can enter.—8 A river Patagonia after a rapid V course falling into the Atlantic in lat. 50° S lon 68° 30' W.

CRUZ (SANTA) or MUJICA, a town Spain New Castile, prov of and 26 m S E Ciudad Real, on the E. declivity of Mount St. Roque. The houses, in general are tolerably well built, and comprise wide, clean and paved streets, and a large square, containing the meat-market and townhouse—the last adorned with a handsome portico. The town also has a conspicuous parish church three chapels, five schools a convent, prison, hospital, storehouse, and cemetery. The main portion of the inhabitants are principally occupied in bus bandry and the females in weaving. A small trade is prosecuted in cattle, grain, wine and fruit with Seville. 1 1350

CRUZ (SANTA) DE LA SIERRA, a dep. Bolivia, bounded N by the rivers Beni, Manora, Itenez, and the Brazilian prov Mato-Grosso. E by the Pilcomayo and the desert of Grand Plasco. E. by the River J. agrary and the Brazilian possessions and W by the departments of Cochabamba and Chuquisaca. It lies between the parallels of 12 and 23 S. and the meridians of 61° 00' and 50° W and comprehends the provinces of Santa Cruz, Valle Grande, Cordillera, and Chiquitos. Although it resembles it—Andes on the W and in India the mountains of the Chiquitos, this vast territory is, for the most part, a level plain being an stretch of 500 000 sq. m. or half as large again as that of France. The rivers above named are all navigable yet this open soil is fertile & rich, lies at present an almost unprofitable waste owing to its secluded position and distance from the sea. It is divided into four provinces—namely Ba in Cruz, Chiquitos, Valle Grande and Cordillera and contains a population of about 190 000.—The province of Santa Cruz de la Sierra is situated at the F foot of the Andes and on the W side of the department of the same name. It is, throughout a plain of alluvial soil free from marshes, though abundantly watered by the Rio Grande, the Pity and numerous small rivers. All the fruits cultivated in Bolivia, except the orange, grow wild here. In the absence of manufactures industry is the whole population which, in 1835 amounted to 15 000 is engaged in, or dependent on, agriculture. Their exports chiefly to their neighbours on the west, consist of rice, and other grains sugar molasses, tobacco beef fat, dried meat and wax, which is gathered in the forests by the Indians. They receive in return hardware, French and English cloths, Indian goods, and maté or Paraguay tea. The mercantile business of the country is transacted wholly by itinerant traders, chiefly from Chuquisaca and Cochabamba.

CRUZ (SANTA) DE LA SIERRA, a town Bolivia, cap. prov and dep. of same name, lat 1° 24' S. lon 63° 20' W. r bank, Pity (Pity in Quechua—Fish river) which here presents in the dry season a bed of sand two miles wide, with a small stream winding through it. The city is in the midst of forests 200 m L. Cochabamba, and 250 W the nearest mission of the Chiquitos. The houses are but one story high built partly of timber and partly of earth with large balconies, and massive roofs made of the Curatol palm. The windows are not glazed the streets unpaved, are filled knee deep with fine sand. Neither within the houses nor without does there seem to be any situation need to comfort. Even the simplicity of the Indian costume is to Europeans eyes uncomfortable. The original site of Santa Cruz is 8° E. of the present city at the foot of the Sierra de la Barranca, near the mission of San José. When the inhabitants migrated westwards at the end of the 16th century to the village of San Lorenzo de la Frontera, they carried with them the name

of their old dwelling-place hence the modern Santa Cruz, though far from the mountains, is still entitled de la Sierra. Owing to the absence of the men at distant cattle stations, the women form two-thirds of the resident population, which amounts to about 5000.

CRUZ (SANTA) DE TRINIDAD, the cap. city and chief commercial port of the Canary Islands, N. E. coast of Isl. Trinidad, near where the Spanish flag landed lat. 28° 59' 15" N lon 16° 14 48" W (s). Many of the houses are handsome and of one and two stories high but the majority are low. However as they are white-washed or painted they present a gay appearance and give evidence of the neatness and cleanliness of those who inhabit them. The streets are well paved and provided with footpaths and jumps and there is a square, surrounded with good edifices, adorned with a colonial statuary group representing the separation of the Virgin of Candelaria to the Guanches, the original inhabitants and having at the extremity along the sea, the principal fort that of San Cristobal. Besides the customhouse and the military hospital there are scarcely any public buildings such as usually characterize a capital and almost all the public bodies hold their meetings in the old Franciscan convent. There are a prison, a poor-house, two public, and two private primary schools a drawing-school and one for navigation one or two promenades, possessing little attraction, and not much frequented several fountains two parish churches one of them a magnificent edifice; three hermitages and two cemeteries—none for N Catholics and the other for Protestants, but the town is almost destitute of artistic ornaments. The harbour which is very secure, and can easily contain 10 or 12 vessels of war has a magnificent mole of modern construction, which juts out far into the sea, and the coast is commanded by four forts and various redoubts. Besides the construction of boats for fishing and unloading large vessels that arrive in the harbour there is no other branch of industry of any consequence except the making of chairs, tables, and other articles of household furniture for the home market. Wine brandy almonds and cochineal, are the only articles exported and the imports consist of English, French Spanish and Genoese mail features. On an average of the two years, 1844 and 1845, the number of vessels entering and leaving this port were as follows—Entered 242 tonn. 17 273—cleared 228 tonn. 19 561 Pop 8970

CRUZ (SANTA) DEL REPTAMAR, a town Spain New Castile prov of and 0 m. N.W. Toledo, on a declivity facing the S.W. It has badly-made and steep streets, a small square, parish church, four schools a chapel town hall prison cemetery and several convents. Charcoal iron, wine and oil are manufactured and some little trade is carried on in cattle and grain. Pop 1642

CRUZ (SANTA) DE LA ZARZA, a town Spain, New Castile prov of, and 43 m P by N Toledo, between two hills. It possesses a spacious square, two parish churches, a chapel several convents, two schools a prison, theatre, and storehouse. The people are mostly engaged in weaving dyeing expressing wine and oil and in husbandry. Pop 3371

CNAHA [pronounced Tzaha] a vil Hungary the largest in Europe, ex. Békéser on the Körös 63 m S.S.W. Debrecen. It contains a N. Catholic and Protestant churches, and has a considerable trade in grain, wine, hemp, cattle, &c. The wine produced in the vicinity is of inferior quality Pop 24 600.

CSACZA, or CASZTZA, a market in Hungary alone Hither Danube, co. of and 54 m N.E. Trestschin on the S. slope of Mount Jablonka, and r bank Klauzka. It contains a parish church. Pop 4540.

CNAIKH TEN BA FAILOUW-DISTRICT, a dist. Hungary Military Bolyvoss, on the angle formed by the Danube and the Theiss—the former river separating it, on the S. from the military district of Peterwarden and the latter on the E. from Co. Tornóczy while Co. Bacs bounds it on the N and W areas. 54 sq. m. It contains a market town and 13 villages. Pop 20 600.

CNAKATHURM CAKOVETZ, or THAKOVITA, a town Hungary on Szabolcs 7 m. N.N.E. Warasdin, on a tongue of land formed by the Tarnova. It contains a N. Catholic church originally built by the Franciscans and an old castle which has recently been thoroughly repaired. Pop 1680

CSAKOVA, a tn. Hungary circle Thither Thelae, co. Temes, 1 bank, Temes, 18 m. S.E. Temes. It contains a Greek and a Protestant church. Pop. 4250.

CSAKVAR a tn and lordship, Hungary circle Thither Danube, co. Stuhlweisensburg 27 m. W S W Buda. It contains a castle, and a R. Catholic and a Protestant church. Pop. 4840.

CSANAD two tns Hungary.—1 A tn co same name on the Maros, 7 m. S.E. Makó. It has a R. Catholic and Greek church and contains the ruins of the former palace of the bishops—the latter not now residing here—together with those of other old buildings. It was formerly a place of some importance, but has now fallen into decay. A small trade yet remains in honey wax &c. Pop about 5600.—2 A tn co. Torontal also on the Maros, with a castle and a R. Catholic and Greek church. Pop. 6000.

CSANTAVEH, a vil. Hungary circle Thither Danube, co. Bacs, near Magyar Kanizs. It contains a R. Catholic parish church. Pop. 3186.

CSANY or **THANY** a vil. Hungary circle Thither Thelae, co. Heves, not far from Arck Sallás, and 8 m. from Harvan. It contains a handsome parish church. Pop. 2175.

CSANZAR a vil. Hungary circle Thither Danube, co. Komorn, 8 m. from Tatis. It contains a Protestant and a R. Catholic church. Pop. 2388.

CSAT **CHATH** or **CHATT** a market in Hungary circle Thither Thelae, co. Borsod 13 m. from Makoica. It contains a Protestant parish church. Pop. 5740.

CSERJ, a vil. Hungary circle Hill or Danube, co. Bacs 9 m. from Palanka. It contains a parish church. Pop. 2045.
CSERLE or **CSERLAK** a market in Hungary circle Thither Danube on 10th dist. of and near Katakomet. It contains a Protestant and a R. Catholic church and has a trade in corn and wool. Pop. 1349.

CSERLE, or **THETZEL**, a river island. Hungary co. of and immediately S of Pesth formed by the Danube greatest length N to S, 25 m. average breadth 4 m. It abounds with game, particularly hares and hence sometimes bears the name of Haseninsel or Hare Island. It used to form part of the domain settled on the Queen of Hungary at marriage.

CSERRECH or **THYATISCH** a market in Hungary co. of and 20 m. S by E Ödenburg on the Rypce. It contains a castle, two churches a Protestant gymnasium and a printing press and has an annual fair. The district around is covered with vineyards. Pop. 1819.

CSERLEKES a market in Hungarian Slavonia dist. Syryas 11 m. W S W Peterwardein r bank Danube a bridge over which here gives a communication with the Haps. It contains a Greek and a R. Catholic church. Pop. 2010.

CSERNATFALA or **SEAR MURALLY** a vil. Hungary Transylvania, about 5 m. from Krotstadt, on the southern of Wallachia. It contains a Protestant and a Greek in united church. Pop. 3460.

CSENYVKA a tn. Hungary circle Thither Danube, co. Bacs on the Franzosa Canal about 10 m. from Zombor. It contains a Lutheran and Reformed church. The inhabitants are all Germans. Pop. 2701.

CSENYKE a tn and lordship, Hungary circle Thither Thelae, co. Gomor on the Csanak, 8 m. W Rosann. It contains two parish churches, two schools, and a poorhouse. In the neighborhood both iron and anthracite are worked. Pop. 2500.

CSIKFESTEL a dist. Transylvania, Szekler country on the borders of Moldavia, and hence forming part of it Military Land. The only town of the least consequence in it is Csik Szekes, the population of which is only 574. The Szekler area 960 geo sq m is rich in romantic beauty but cannot boast of its soil. There is almost no wheat, and even oats and rye will scarcely ripen, the whole district being traversed and broken by ramifications of the Carpathians. Cattle and horses, of inferior breeds are reared in considerable numbers and a good deal of timber is floated down by the Maros. Pop. 20,000.

CSIKLOVA **NEMET** or **TOCHIKLOWA** a market in Hungary circle Thither Thelae, co. Krusne in a mountainous district, famous for its copper mines, about 2 m. S. h. Oravica. It contains a R. Catholic parish church. The inhabitants are chiefly Germans. Pop. 2040.

CSOKA a market in Hungary circle Thither Thelae, co. Torontal dist. of and about 5 m. from Torok Kanizs, on the Thelae, over which there is here a ferry. It contains a chapel. The inhabitants are chiefly Ruteni. Pop. 2040.

CSOKONYA, a market in Hungary circle Thither Danube, co. Szemegh dist. of and 6 m. S W Babosa. It contains a Protestant and a R. Catholic parish church. A good deal of flax is grown here. Pop. 1530.

CSONGRAD a market in Hungary circle Thither Thelae, 73 m. S.E. 10th dist. of and about 5 m. from Makó, at the junction of the The as with the Körös. The houses are built rising on a hill, and thatched. The inhabitants live mainly by rearing cattle and by their vineyards. Pop. 15,680.

The county is bounded N. by co. Heves, great Kanizs, and Bacs. W. Bacs Torontal, S. Canada, and E. Bacs and Canada area 1008 geo sq m. There is scarcely a hill throughout the county which is so uniformly flat, that a steep of moderate height commands a view of the whole surface. The principal rivers are the Theis, Kőrös, and Maros. The soil is remarkably fertile and produces in abundance wheat maize, hemp tobacco, and fruit, including grapes apples pears and water-melons. The meadows and pastures also are excellent, and support great numbers of horses cattle, sheep, and swine. Land tortoises, game and fish abound. The inhabitants are chiefly Magyars, with some Servians, Germans and Rutenians. Pop. 187,000.

CSORNA a market in Hungary co. of and 32 m. E Ödenburg. It contains a Premonstratensian abbey founded in 1181 richly endowed, and surrounded with 7 gardens. Pop. 3920.

CSORGO a tn. Hungary circle Thither Danube co. Szemegh at a short distance from the Drave 27 m. S S W Martal. It contains a Protestant and a R. Catholic parish church a gymnasium and a castle. Much wine is produced in the district.

CUB (**NORTH** and **SOUTH**) two Iles N. America. James a Bay. The N. in lat. 54° 25' N. lon. 80° 50' W.—the S. in lat. 53° 42' N. lon. 80° 30' W.

CUBA an island belonging to Spain the largest of the Antilles or West Indian group at the mouth of the Gulf of Mexico. It is about 130 m. S. from Florida, from which it is separated by the Bahama Channel. It is separated from Hayti by the windward passage, about 48 m. wide S from J's also, by a port on the Caribbean Sea, 30 m. across, and W. from Yucatan by the Yucatan Channel of about 130 m. wide and is, probably about a third larger than Hayti and nearly five times the size of Jamaica. It extends from lon. 74 to 84° W. and is about 750 m. in length from E. to W. greatest breadth at Cape de Cruz, 120 m. average width from 50 to 60 m. while towards the W. extremity it does not exceed 30 m. The extreme E. end of the island Point de Hayti, is in lat. 20° 15' N. lon. 74° 7' W. (a) the W. San Antonio, in lat. 21° 15' N. lon. 84° 57' 12" (a) and S. to N. it extends from lat. 19° 50' to 23° 10' N. Area 48,000 sq m. of which it is supposed about one-seventh is under cultivation and in pasture. Coast line, exclusive of numerous sinuosities about 1600 m.

General Description.—The island is intersected longitudinally by a range of mountains, diminishing in height from N to W. At the E. and W. ends they are diffused over nearly the entire surface they attain their greatest elevation about 8000 ft. From the bases of these high lands, the country opens into extensive marshes or beautiful plains and savannas, with occasionally some low swampy tracts. Owing to the cavernous structure of the limestone deposits, the great molination of their strata, the small breadth of the island, and the frequency and nakedness of the plains, there are very few rivers of any magnitude, and a large portion of the territory is subject to severe droughts. Yet the undulating surface of the country the continually renewed verdure, and the distribution of vegetable forms, give rise to the most varied and beautiful landscapes. Everywhere however the eye falls only upon a mass of luxuriant vegetation, and nowhere in the structure of the country to be seen except on steep treeless mountain slopes. The largest river in Cuba is the Cauto at the E. end of the island having its sources in the marra del Cobre or Copper Mountains and falling into the Bay of Buena Esperanza, after a course altogether of about 90 m. None of the streams are navigable excepting by small boats and for

but a few miles inland. The coasts of Cuba are in general exceedingly foul, presenting reefs and shoals, which extend from 3 to 2½ in into the sea, and make the approach to the land both difficult and dangerous. While these reefs there is often a good sandy beach, but for the greater part of the circumference of the island there is a belt or zone of low land very little raised above the level of the sea, subject to floods and inundations, and so wet at all seasons of the year, so to be constantly in a state approaching to mud, rendering the access to the coast and the ordinary communication between the interior and the sea, next to impossible in the rainy season and not very easy during any month in the year. There are however a considerable number of harbours, ports and bays on all the coasts, including the Havana, one of the finest harbours in the West Indies. Many of the others are also excellent, such as Guanantomo, Santiago, Manzanillo and Jagua on the E. coast, Balao Honda, and Puerto de Cabanas on the N.W. coast and Baracoa harbour, port Harago, Puerto del Padre, and Matanzas on the N. and N.E. coasts.

Geology and Mineralogy.—Geologically the island of Cuba may be shortly described as composed of granite gneiss, syenite and euphotic overlain by secondary and tertiary formations chiefly calcareous, containing numerous fossils, and through which the granitic rocks are seen projecting. The mountains of the S.E. part of the island appear to have a submarine connection with the heights of Hayti and Jamaica and so this part of the island constitutes a frequently felt though they rarely extend to the W. part. In some localities the limestone is extremely pure and cavernous, absorbing rapidly the drops of sea water and even emitting considerable rivers. The latest calcareous formation is entirely coraliferous, and goes on at present accumulating on all the coasts and contains numerous small volcanoes. No traces of volcanic eruptions, properly so called, have hitherto been observed.

The mineral resources of Cuba have not yet been fully explored, but it is known to be deficient in it in respect. The precious metals have been found, but not in sufficient quantity to require the cost and labour of working. Copper is more abundant, there being several extensive mines of this metal in active operation in the Sierra del Cobre. The average produce of these mines is about 27 per cent, but some specimens have yielded as high as 55 per cent. They were wrought by the *quadrant* at an early period but had been abandoned for upwards of a century when they were reopened about 1825. Mines of silver and copper were also at one time worked in the mountains of Juraguá, but were speedily abandoned. Coal has recently been discovered near Havana. A crystalline serpentine marble, chalcodony and schists are also present, and flinty plates and schists have been found in various places. The schistose formation shows itself most conspicuously at the base of the mountains of San Juan and Trinidad, where great masses of slate are to be found, of a dark blue or iron of a prismatic but numerous quality. In the quarries near the Havana a thick slate is found for floors and pavements. The mineral water spoken of exhibiting also a variety of properties, sometimes in a liquid state, like the next, from the seams of the rocks, sometimes soft like wax, or half melted resin. There are several mineral springs in different parts of the island, and on the N. coast are quite a large number, which in dry years, produce immense quantities of mineral salt.

Climate. Soil, *Vegetable Productions.* &c.—The climate is hot and dry during the greater part of the year, but, on the whole, more temperate than that of some other islands in the same latitude. The mean temperature is 74° F. but in the interior only 73°. The hottest months, July and August, do not give a greater average than 83° F. and the coldest, December and January, present the mean of 69° F. In summer the thermometer does not rise above 82° or 86° and depression in winter seldom goes below 59° or 63° F. Rain often descends in torrents, from July to September and occasionally even falls for a month or two before and after these periods. In December and January the air is much cooled by the S.W. winds. No snow is known ever to fall on the highest mountains, but frost occurs occasionally forming ice about 1 inch in thickness. Hail storms are rare, and hurricanes much less frequent than in the other Antillas. The vegetation of Cuba is exceedingly luxuriant. Forests of mahogany, ebony, cedar, sassafras and other useful woods,

abound and the fields are covered with flowers and odoriferous plants. The principal cereal cultivated is the indigenous maize, or Indian corn. Two crops of it are obtained in the year. Rice is also produced in considerable quantities in many districts, but the principal crops are sugar, coffee and tobacco, also a little cotton, coconuts, and indigo. A considerable extent of country is appropriated also to cattle-breeding farms, of which there are 7359 in the island and to *potrerías* or farms on which vegetables are raised, maize, melon, chila grass, cassava, onions, garlic, poultry, wax and honey.

The principal fruits of the island are the pine or *piñón*, oranges, shaddock, plantains, bananas, melons, lemons and sweet limes; figs and strawberries are also to be had.

Animals.—The most valuable domestic animals are the ox, horse and pig, which form a large proportion of the wealth of the island, the sheep and mules, are inferior in quality and numbers. Jackasses and rabbits have been recently introduced and dogs and cats are numerous. The domestic fowls comprise the cocks and hens of Europe, geese, turkeys, pigeons, and parrots. The sylvestrian birds are numerous, and in great variety, but birds of prey few, the principal is the bald-headed vulture or turkey buzzard. Small birds swarm in some places. The only indigenous quadruped ever known in Cuba is the *ancho*, which resembles a large cat, about 18 inches long without the tail. Snakes and reptiles are not very numerous. The most remarkable are the mule, 12 or 14 ft in length and 18 or 20 inches in circumference, and the juke about 6 ft in length, the latter is considered more dangerous than the former and is also more common. Phosphorescent insects abound as do also those of a noxious description, in clothing, figs, ants, mosquitoes and a singularly disgusting-looking spider with a poisonous sting. There are also centipedes and scorpions. The stores abound with turtles, and in the deep gulf and bay the crocodile and cayman are found. The latter more especially where the water is stagnant. The muskrat is met with in the deep pools of fresh water and the iguana a sort of lizard on the banks of streams, bays, and lagoons. Fish are said to be abundant, particularly on the coast, but no fishery of any note has been yet established.

Agriculture. &c.—As elsewhere most of the sugar, coffee, and tobacco form the principal objects of cultivation, but of these the first is by far the most important. The quantity of sugar produced in Cuba per acre is estimated at a little more than 2000 lbs. being somewhat better than Jamaica, but grows short of Barbadoes. The coffee, planted in the confined almost solely in the N. side of the island, the only part where the precise degree of heat most favourable to the growth of the plant is to be found. It is best season for planting the trees is in the middle of the month of May, the gathering commences in August, but November and December are the most active and important months of the harvest. The buildings on a coffee estate in Cuba are generally of a very humble description, and the circumference of the proprietor in most instances, inferior to that of the sugar grower. The export of coffee from Cuba, unlike that of sugar, is an increasing trade. The best coffee is grown in the district of Santa de Abaja, a little W. of the Habana about 84 m. in length and 21 m. breadth, and here the smallest and finest is cured as produced on the banks of the San Sebastian river. It is made into cigars, celebrated under the name of Havana cigars, reckoned the best made anywhere. Previously to 1870 the cultivation and sale of tobacco were subjected to the same sort of monopoly in Cuba as in Mexico, but, at the present reform of the trade was thrown open. The cattle-breeding farms of Cuba are said to be by no means in a prosperous condition. They are generally let with the stock upon them, at the rate of two or three dollars a head for a term of five years, with an obligation to leave the property in good condition, and to account for the stock which was on it when let, and all the increase during the term belonging to the tenant. The number of these farms, as elsewhere stated in 733.)

Manufactures. Commerce &c.—The manufactures of Cuba are confined to the making of sugar molasses, and cigars, bleaching wax and the preparation of coffee. The cigars the lower orders smoke—and in Cuba every one smokes, men, women and children—cost about four dollars or 16s per 1000. From the same quality of tobacco the first, second, and third class of cigars are made. When the cigars are twisted and

before they are sorted they are said to be on revolution. They are now sorted and picked and about 75 per cent of the whole are chosen and these are called of the first-class the rest are divided into seconds and thirds, and the prices vary from 8 to 15 dollars per 1000. The chief imports are grain and flour called *monte*, and *sal* cheese brandy vinegar when spices fruits, and cotton linen and woolen manufactures. The exports are sugar molasses, coffee, tobacco mahogany cedar, fustic, and other valuable timbers fruits and the precious metals.

The following figures show the export a quantity of the principal articles produced in the island in the years 1846 and 1862—

		1846	1862
Sugar	cwt.	8,908,141	9,461,747
Coffee	lbs.	27,136,238	15,678,382
Tobacco	lbs.	138,204	206,226
Indian Corn	bu.	1,113,795	8,922,536
Rice	cwt.	309,683	396,510
Wax	lbs.	516,236	1,737,608

The production of sugar has been for many years an important and increasing staple trade of Cuba. Of late years the introduction of coolies chiefly from China, has had some effect upon the character of the labour employed in the cultivation of the sugar-cane. The free labour of the coolie is said to be less costly than that of the slave and it is ascertained that the planters prefer the coolie to the negro not only for his greater physical capacity for work but also for his more uniform obedience and industry. The exports of sugar from the principal ports of the island in 1863 and 1864—the latter prosperous year—were as follows—

	Boxes		Hogsheads.	
	1863	1864.	1863	1864.
Havana	979,328	1,169,91	10,204	26,404

Money Weights &c.—Accounts are kept in dollars real, and maravedis respectively worth about $\frac{1}{2}$ d. 2d. 6d. and 0.47d. the dollar being divided into 8 hard reales or 34 maravedis. The gold coins are the doubloon or ounce, and its sub-division. The doubloon is worth about 10 dollars, or 23 10s. 10d. but varies in price according to weight, and sometimes demand. The principal weights and measures in the pound equal to about 1 lb. 4 oz. avoirdupois making 100 lbs. or libras equal to 101 lbs. 7 oz. avoirdupois. The vara is equal to 33.854 inches or 108 varas = 100 yards. The fanega is equal to three bushels nearly or 200 lbs. Spanish. The arroba, of liquid measure, is equal to 43.45 gallons.

The roads in Cuba formerly in a most wretched condition have lately been much improved and the internal traffic of the island is now facilitated by the laying of railways, of which no fewer than 10 have been opened in the course of as many years. The first, from Havana to Guines, a distance of 46 m. by railway was opened in 1837. Steam vessels also ply between Havana and other parts of the coast. No foreigner can land in the island without procuring the security of a native of responsibility for his good behaviour.

Slave Trade, &c.—It has been a general impression that the slave trade of Cuba notwithstanding the treaty with Spain for its abolition has been not only continued, but protected by the Spanish government. It is at any rate certain, that the degree of suzerainty it meets with depends much if not entirely on the disposition of the captain general of the island for the time being. The slave trade papers for 1846 report that the Cuban slave trade was almost annihilated under the honest able administration of Captain general Valdes. But it soon after revived under another governor and ultimately attained a height which it had never reached before carried on principally under the American flag. In 1844 no fewer than 10,000 slaves were introduced into Cuba, and this was under the governorship of General Valdes. Says us to that period and since then it is number has been more than doubled. At present the number of slaves in Cuba is estimated at about 500,000 although there can be no doubt that a large portion of them are wretchedly held in bondage there being a Spanish law to the effect that every negro brought into Cuba, after a specified time should be *libre y fidei* free. The Spaniards have obtained credit for treating their slaves with extraordinary humanity and kindness but of this credit, both Mr. Turnbull, who visited Cuba in 1839 and Mr. Madden who did the same thing about ten years later would deprive them—both declaring in very nearly the same words that it is a gross mistake as regards at any rate the held negro, whom they allege to be treated with the strictest cruelty and generally with a rigorous unreprieved if not unequalled in any other slave-holding country their kindness being reserved wholly for the domestic slaves, who bear but a small proportion to those employed in out-door work. It is very possible that the accounts of both Mr. Turnbull and Mr. Madden of the severity with which the field negroes of Cuba are treated may be exaggerated but even after every reasonable deduction is made on this score, sufficient will be left to render the wretched humanity of the Spaniard to his slave exceedingly questionable. The slaves of Cuba like nearly all other negroes, are remarkably addicted to their dances and fond of dress. Their cottages are thatched with palm leaves with walls of poles, and mud plastered thickly on them to fill up the interstices, the floors being of the latter material and often not higher than the ground without. They contain little furniture—a table, one or two stools a cot, and a few plates or cups, some possess all the household articles while women, dressed often in a single gown half open, and half off their shoulders, and squallid, dirty naked children, form the family group. The hut however is tastefully shaded by groves of cocoa or other trees, and surrounded by plantains, and orange and lemon trees.

Education, Religion, &c.—The schools of Cuba are generally under the inspection and control of the patronos and economic ecclusies the superiors of convents, and some public bodies

The total number of persons employed in giving primary instruction in the island is estimated at about 417, and pupils, 8447. In 18 the white and colored children were estimated to amount to 119,519, of whom 104,440 were believed to be destitute of primary instruction. In writing, the Roman character is generally in use. In the country parts, the most profound ignorance regards the master and the servant the agricultural people of all sorts are equally in ignorance of the first elements of instruction. Neither religion nor morals are in a better condition. The R. Catholic is, essentially the prevailing religion, though Mr. Glenville Taylor declares that he never knew an instance of men going to any church at all in Cuba and that no reverence whatever was exhibited for churches, pictures, images or music. Cuba would thus appear to have, in fact, no religion at all. The same author represents the inhabitants as being sufficiently peaceable but devoted to gambling and cock fighting.

Territorial Divisions, Government, &c.—Cuba, with the Spanish islands dependent on it, forms the captain-general y or military government of LA HABANA the captain-general being also civil governor is assisted in his duties by a sub-governor and a colonial junta of seven members. The division of the island is twofold—ecclesiastical and military. Civil and marine departments it is divided into two, the P and the W and each by a bishop resident at La Habana. The civil divisions are also two, called provinces, but not continuous with the ecclesiastical divisions. Each province contains several smaller subdivisions and has its distinct governor that of the W or La Habana being the captain-general, and that of the E. and of Cuba being a separate governor independent of the former in civil and political matters. The two principal civil subdivisions are the audiences of La Habana and of Puerto Principe and of which the captain-general is president ex officio. The military division is into three departments—eastern, central and western over each of which is a commandant-general. This division corresponds nearly with the fiscal division, into three intendencias, each having its requisite governor and court. The fifth or maritime division is into five provinces—HAVANA, TRINIDAD, SAN JUAN DE LOS RIOS, CAMAGUEY, and SANTIAGO DE CUBA, having each for its capital a town of the same name, being the principal towns of the island. The first is subdivided into five districts, the second into four and so of the others into three.

Population—Half a century after the discovery of Cuba the indigenous population and by the first navigators to have been numerous, had entirely disappeared and has been exterminated by the Spaniards. The present population consists of whites the descendants of the Spaniards and other Europeans of mixed blood, called Pardo, and negroes. The increase has been rapid in 1721 the total population was 272,640 in 1811 551,046 in 1827 704,886 and in 1841 1,007,694 of whom 152,914 were free colored, and 463,480 slaves. The census of the years 1846 and 1850 gave the following results.

Population	1846	1850
Whites	660,497	841,100
Colored free	14,704	22,948
Slaves	22,688	158,500
	697,889	1,022,548

The numbers in the census of 1852 are exclusive of the army and navy and other transient population but include a of 34,500 Cubans, of whom there were none or scarcely any in 1846. The number of slaves who obtained their liberty either by purchase or by gift of their masters was from 1838 to 1852 both inclusive 4,946.

History—Cuba was first discovered by Columbus, on October 28 1492 who retained it in 1494 and again in 1502. In 1511 the Spaniards formed the first settlement on the island and have retained possession of it ever since. In 1762 Havana was taken possession of by the British but was restored to the Spaniards in the following year. From this part of the history of Cuba presents nothing more interesting than a catalogue of captain-general and bishops, down to the year 1791-1811 when the ports were opened to the ships and trade of foreign countries. During which period, the captain-general have in turn ruled the island. The most serious misfortune in its history was the practical emancipation, made in May 1850 and again in August 1851 by a local of Cuba and elsewhere under the command of a

Spaniard named Narciso Lopez, to seize upon the island. Such expeditions signally failed, in consequence of the determined front shown by the Cubans to the invaders. The whole 450 men who landed were either slain in fight or taken prisoners of the latter 50 were shot and shortly thereafter Lopez himself was executed. (Arnold's Cuba Madden's Cuba 1849) *Resumen de la Sagrada Historia Fisica y Politica de la Isla de Cuba* Parthenius Papers.)

CUBA, a tu and par Portugal prov Algarve, 14 in N N E Baga. It contains a church and a convent. Pop. 2410

CUBAGUA an Isl Caribbean Sea, belonging to Venezuela dep. Maricao between Margarita and Point Araya lat. 10° 42' N lon 61° W. It was formerly noted for the pearl fishery at present it is uninhabited, and only occasionally resorted to by fishermen. Vessels bound for the N shores of S. America usually pass between this island and Margarita.

CUBBINGTON par Eng Warwick 1785 ac P 805 **CUBCABEA** an Darfur 35 m S W Cobbe lat 14° N lon 26° 30' E. It is of cons. derivable size, and is the depot of all the merchandise brought from the W. A market is held here twice a week and for articles of small value the common medium of exchange is salt. It is famous for the great quantities of leather and of cotton cloth called *obakes* which are exhibited for sale. The population are a singular mixture of Arabs and of various tribes of Africans. CUCUTA a in New Granada. See ROSARIO DE CUCUTA

CUCUTA a valley New Granada prov. Pamplona, on the Venezuelan frontier lat. 3° 2' N lon 73° 10' W between the cities of Pamplona and San Cristobal remarkable for its fertility and excellent breed of mules. Cucuto of the finest quality is raised in the greatest abundance. The valley was discovered by Juan de San Martin, in 1814.

CUDALORE a maritime in Hindustan, Carnatic and one of the largest and most populous in the B. of India 17 m S. by W. Pondicherry and bank Trivadi at its embouchure in the Bay of Bengal lat. 11° 48' 30" N lon 78° 45' 45" E. It has a court-house, a custom house, and some trade particularly in exporting to Madras the cotton produced in this part of the peninsula. It is one of the principal stations for soldiers who have been invalided, or who choose to remain in India after having obtained their discharge. This place has been the scene of many combats and has frequently changed masters. It was captured from the French by the British army under Colonel Coote, in 1780 and contained under the dominion of the Nabob of Arcot until 1782 when it was taken by the Rajah of Mysore with the assistance of some French troops. In June 1788 the town was attacked by a body of British troops under General Stuart, which sustained heavy loss and was eventually forced to attempt to carry the place by assault. In 1796 Cuddalore, with the remainder of the province, was ceded by treaty to the East India Company who have ever since retained it. (Ponsonby Voyages dans l'Inde.)

CUDDAPAH a collectorate and tn. Hindoostan presid Madras. The COLLECTORATE forms the E. division of Balaschant district, stretching from the borders of Bellary to the Bay of Bengal and from lat 18 1/2 to 18 20' N. area, 12 758 sq. m. It is traversed, N. to S. by the E. Ghats, and watered by the Pennar and its affluents, the Godavari, and other smaller streams. Though the district be considerably elevated above the sea, the heat in April and May is intense; and the water during the hot season is brackish but during the rains it is sweet and good. Soda is found in the hills to the S.W. of the town of Cuddalah, and is used by the natives in places of soap. Salt and saltpetre likewise abound and are easily procurable. On the banks of the Pennar about 7 m. N.E. the town of Cuddalah, are diamond mines, which have been wrought for several hundred years, and in which at times gems of considerable value are found. Nearly a fifth of the district is under grain cultivation. Cotton is likewise pretty extensively grown.—The town has on a small river of same name, an affluent of the Pennar 145 m. N.W. Madras lat 14 32' N. lon. 78 53' E. It contains a residence of the Rajah now converted into a court-house and prison and was formerly the capital of an independent Rajan state.

CUEACA a prov. Spain, New Castile, between lat 39° 20' and 40° 41' N. lon. 1° 5 and 3° W. bounded N. by prov. Guadalajara E. by Teruel and Valencia S. by Albacete W. and S.W. by Ciudad Real and Toledo area 1° 177 sq. m. It is mountainous, more especially its central and E. portion which is formed into numerous longitudinal valleys, having a dipension generally N. to S. and watered by streams flowing into the Júcar. The N.W. part of the province is comparatively flat and belongs to the basin of the Tago. While the waters of the S.W. part flow into the Guadiana. The mountains yield excellent timber exquisite honey and some minerals including copper silver N. in coal alum, and depositate numerous flocks of sheep. The N. part of the province produces chiefly oil fruit, and honey, and the S.W. part, called La Mancha, which is of a dry soil yields grain and wine. It is, however as a whole well watered, the principal streams being the Tago Júcar Gabriel Bismarck Guadale, &c. There are several medicinal springs and warm salt lakes in Cuence. The woollen manufactures, at one time considerable, and also much extended are now along with every semblance of commerce, extinct. The people are said to be honourable labourers, and sober and about five in the 100 attend school. The province is divided into nine partidos. Pop. 262 723.

CUEACA a city Spain cap. above prov. 85 m. E. S.E. Madrid, romantically situated, about 2400 ft. above sea level between the heights San Cristobal and Socorro, at the confluence of the Huécar and Júcar. It is a Moorish town, with

streets steep, narrow and tortuous, the houses rising in terraces roof above roof to the plain and cathedral. It is surrounded by high old walls, which, with its towers and houses hanging over the precipice, give it a singularly striking and picturesque appearance. Cuence is a bishop's see and one of the mines which sent deputies to the old cortes of Castile. It has six gates, six bridges over the Huécar and two over the Júcar that of San Pablo over the former connecting the town with the Dominican convent is a remarkably fine structure, built in 1533. It is reared on colossal piers, the arches are of great solidity and rise to a height of 150 ft. recalling the arches of Sagrada and Alcantara. The cathedral a simple Gothic edifice, one of the most structures of the kind in Spain is profusely adorned with jasper and other precious stones, its pinnacles and arches are superb, and it contains some good sculptures and paintings. It was founded about the middle of the 13th century. Near the cathedral is the bishop's palace with a portal of mixed Gothic, and a fine saloon inside. The city contains, besides, a number of churches two hospitals and one for foundlings, three colleges and a clerical seminary and before the suppression of the religious houses it had seven convents of monks and six of nuns.

Cuence was at one time celebrated for its literature its arts, and manufactures as regards the two first, it has nothing new to boast of and the latter is confined to the manufacture on a small scale, of paper woollen stuffs linen and soap. The scenery in the vicinity is beautiful presenting an alternation of lofty rocks and fertile valleys. Pop. 6037.

CUEACA or **KANAS** a tn Ecuador on prov. of same name lat. m. S.E. Guayaquil lat. 55 3' S. lon. 8° 13' 15" W. 1) In the fine valley of Yunguilla, 3179 ft. above sea level. The streets are broad and straight but the houses built of rough unshaped bricks are low and mean in appearance and, notwithstanding the town is supplied with water the streets are dirty. It is the site of a bishop, erected in 1766. Besides the cathedral which is poor and ill decorated it contains two parish churches four convents two monasteries, an hospital a chamber of finance and other ed. fices. There are here extensive sugar refineries and manufactures of confectionery, cottons, hats, and of cases resembling Peruvian Shells are worked with much taste. The chief trade is in grain leather bark and other products of the neighbour hood. A little to the S. is the mountain of Tarqui which Condansco, and other treach astronomers selected for their meridian in 1743. Pop. 20 000.—The province founded A. by prov. Piobanza E. Quixos and Macas S. by Juncal, Bismarck, and W. by Guayaquil is intersected by mountains and valleys and watered by several rivers. It has an agreeable climate and produces grain sugar and cotton in abundance. The pastoral insect also exists and there are gold silver copper sulphur and sulphur mines. It is famed for its cotton fabrics and tapestries which form the principal articles of its commerce.

CUECANAYACA, a tn Mexican confederation, state of and 35 m. S. Mexico on the S. declivity of the Cordillera of Guadalupe, in a temperate and delightful climate.

CURRAN (anc. *Castro de Corra*) a tn France, dep. Var 10 m. N.E. La Ciotat-sur-Mer. It stands at the foot of a hill covered with vineyards olivaryards and orchards, and enjoys a clear sky and delightful climate. It has some trade in oil and wine and several annual fairs. Pop. 1568.

CUEVAS several tns. Spain the most important are—1 (de Vera) a tn. Andalusia, prov. of, and 40 m. N. Almeria, in a plain r. bank Almaraz. Its streets are, in general regular paved and lined with well constructed houses and it has two squares, the principal of which contain the town and session houses and an extensive Moorish castle. The other public buildings comprise a handsome Moorish parish church two chapels of ease, a convent, college several schools, a prison hospital storehouse and cemetery. The inhabitants manufacture earthenware hardware, superb fabrics, wine, and oil. The mines and smelting works of the neighbouring sierra de Almagro occupy great numbers, not only of the natives but of foreigners, whom mining speculations have drawn hither. Some trade is carried on in cattle, grain wool and timber. Pop. 10 000.—2 (de San Marcos, or *Alías*) a tn Andalusia, prov. of and 33 m. N. Málaga, on a declivity. It has well-made streets, and possesses a parish church, two schools and a cemetery. Some trade is carried on in grain

CULNA or **KHALANA** a tn Hindoostan, prov Bengal r bank, Hooghly 45 m. N N W Calcutta. There is here a circular area composed of two concentric circles, the outer one of which contains 108 temples and the inner 85. Here also is a flourishing school and mission station, in connection with the Free church of Scotland. It is one of the principal ports on the Hooghly for the Burdwan district and carries on a thriving trade. Pop. 40 000

CUNAI a vd Para, in the Andes dist, Camh, about lat. 11° 10' S, remarkable only for its great elevation, being about 10 000 ft above sea level. But great as this height is, it is far below that of many other towns, villages, and port stations in Peru and Bolivia. The highest of the latter, Runkhuasi, in Peru being 15 842 ft. above sea level, the highest town or city Potosi in Bolivia, 13,830 ft. and the highest village Tacna, Peru 14 260 ft. At Culna cultivation ceases ending with the potato, tropicallz coals, and bacula. The second region of plants also terminates here and thereafter comes the Paramera, or pasture regions of the Andes, avoided by the inhabitants of the lower districts on account of this cold

CULNA a river Croatia. See **KULNA**

CUMA (anc Cumae) a fortress, kingdom and prov Naples 4 m N W Posenilli near the Mediterranean on the site of the ancient and celebrated city of Cumae of which the only existing remains are ruins of some walls, temples aqueducts and a triumphal arch

CUMANA a city Venezuela cap. prov of same name, gov of and 186 in L. Caracas near the mouth of the Gulf of Caracas about 10 m from the sea, on an arid sandy plain lat. (Fort Roen) 10° 37' 86" N lon 64° 11' W (N). The fortress of St. Antonio, built on a volcanic hill commands the town, and forms the only defence of the place On the S.W. slope of the same rock are the ruins of the castle of St. Mary The town has no remarkable buildings, and the frequency of earthquakes forbids all embellishments The houses are for the same reason, low and lightly built. The suburbs are nearly as populous as the town itself and are three in number—Ferreira, St. Francis, and Guayguacua. The port of Cumana is capable of receiving all the vessels of Europe, and the whole of the Gulf of Caracas, which is 42 m. long and from 7 to 9 m broad affords excellent anchorage still the number of vessels frequenting the port is small—in 1847 only 10 tonn. 682 entered, and 6 tonn 608,

cleared The chief trade is in turtles turtle, smoked meat, salted fish, coals &c. provisions and wines here are plentiful and very cheap. The climate is excessively hot—the temperature, from June to October reaching 80° or 80° Fahr during the day and seldom falling below 60° during the night. The inhabitants are described as being very polite, and of active business habits. Cumana is the oldest European city of the New Continent having been founded by Governor Diego Castellon in 1528 It has suffered severely from two earth quakes by that of 21st October 1766, it was entirely destroyed in the space of a few minutes. On 14th December 1797 more than a fourth of the city were again completely demolished Before the revolution of 1843 its population was upwards of 30 000 now it is about 12 000.—This province is bounded W by the Caribbean Sea E by the Gulf of Paria and the Atlantic, S by the Orinoco, and W by the Vinhos Barcolona. The shores of Venezuela intervene in N part, parallel to the sea, and sends numerous offsets over the shore S. parts of the provinces All the hills are of a moderate height steep and covered with unpenetrable forests. It is watered by numerous streams of which the chief are Lari, Mamo, Lomone, and Guareco affluents of the Orinoco the Guarepo which falls into the gulf of Paria, and the Maracay and Curacao, affluents of the Caribbean Sea. Along the Orinoco are numerous lakes. In the valleys and along the rivers, are fertile plains a nd excellent pastures Cattle are extensively reared and field crops are carried on and dried fish, coals tobacco hides cotton rubber nut and medicinal plants, are exported There are 87 schools in the province acted by 1003 scholars Pop. (1848) 70,828

CUMANACUA a tn Venezuela, prov of and 21 m. S. E. Cumana, on the brow of a high hill straits in the fort is the valley of its own name r bank Manacure It is a small hill-built place, where houses mostly of wood Tobacco is grown in the neighbourhood the fruits are uncommonly fine, and there are some mineral springs. 10p 2800

CUMBER two parns Ireland—(1) Upper Londonderry and Tyrone 26 329 ac Pop 6044—(2) Lower Londonderry 14 83 ac Pop 10p 9800

CUMBERLAND one of the N counties of Engla lat bounded N by Scotland and the Solway Firth, W and S by the Irish Sea and River Don and P by parts of Lancashire, Westmoreland Durham and Northumberland. Greatest length at the N. end 85 m. breadth, E and W, 45 m. area, 974 790 ac The surface of it is mostly particularly in the S. and S. parts, is rugged and mountainous, and in many places, remarkable for magnificent scenery. lofty summits many of them of the most imposing forms beautiful lakes and far-stretching woodlands, combine to render this district one of the most romantic and picturesque in the United Kingdom. Its principal mountains exceed 8000 ft. in height while there are many that fall but little short of that elevation. It contains also a number of lakes more remarkable, however for their beauty than extent. The largest, Ulsterwater is 9 m. in length, and 1 m. in breadth, none of the rest with one exception exceed 3 m. in length. Its rivers and waterfalls also form conspicuous and highly picturesque features in the landscape—several of the latter having falls varying from 60 to 190 ft. Both the lakes and tarns are abundantly stocked with fish particularly trout, pike and perch. The geological features of Cumberland comprise granite, clay-slate, trap, limestone red sandstone, and coal. The minerals are silver copper lead iron plumbago, and limestone, many of which are wrought to a great extent, and with success. The climate is in general moist and variable—cold and piercing on the high ground, dry and mild and temperate on the lower but universally healthy. The lower lands of E. Cumberland chiefly rest on the red sandstone formation, and the upper district on mountain limestone. In the plains along the banks of the rivers and streams, the soil is generally a fertile alluvial loam on the low lying ridges which divide the several plains it varies from a strong retentive soil to good friable turnpitted, and near the Scottish border there is an unusually diminishing extent of unimproved, or peat moss. The extreme moisture of the climate, which often often ruins the hopes of the farmer suggests a preference for stock-rearing over corn-farming, and the former is now in consequence, becoming more general than the latter. On one of the largest estates in the county comprising 30 000

acres of land the farms are let on lease, at money rents, for a period of 14 years, free of all taxes of subsoil. The rents vary considerably—from 20s. to 26s. being about the average for arable land. The highest rent for the best land is 60s. an acre. The tenants of E. Cumberland are an industrious, hard-working and economical class of men. In W. Cumberland the soil is generally of a very impervious character rendering extensive and effective systems of drainage essentially necessary. The great proportion of the arable lands here is held in farms of from 50 to 160 ac. A considerable number occupy farms from 200 to 300 ac., and a few as much as 400 ac. Some hold on leases of 14 years, or more, but verbal contracts, from year to year, is the more general position, without any stipulation as to the mode of farming. The chief excellences in the farming of W. Cumberland is the economical management of the Swedish turnip crop, for which the soil and climate seems to be peculiarly suitable. The stock principally kept in the arable parts of this county is the improved short-horns, and the sheep preferred the pure Cheviots. The butter produced at the dairy farms of Cumberland, particularly in the E. and S. divisions, is of well-known excellence. The farmers generally are plain, frugal, and intelligent men who bring up their families in habits of industry and economy. The principal manufactures are of cotton, coarse linens, checks, woollens, &c. there are also extensive calico printing establishments. These manufactures are carried on principally at Carlisle—long celebrated for its gingham—at Fawcett and several other towns. The principal towns are Carlisle the capital, Whitelaven, Workington and Cockermouth. Cumberland is divided into five wards, and 114 parishes. It now sends nine members to the House of Commons, instead of six as formerly. Pop. 1,45,422.

CUMBERLAND—1 A peninsula, British N. America, having N. F. Davis Strait and N. W. Northumberland Inlet between the parallels of 41° 40' and 61° 20' N.—2 (House) a station of the Hudson Bay Company British N. America on the W. side of Line Island Lake, in lat. 54° N. lon. 102° 40' W. The soil of the surrounding country is fertile and generally well wooded. The heavier black and red bearing soils of different colours, are found in the district.—3 (Mountain) a mountain range, 1 State, one of the ridges of the Alleghenies, commencing in the S. part of Pennsylvania, passing into Virginia, where it takes the name of Laurel Mountain passing through the S. E. part of Kentucky and terminating in Tennessee, 80 m. N. E. Nashville. In these mountains are found hard millstones and marble in great variety. They also contain numerous singular limestone caves, and abound in organic remains, both animal and vegetable.—4 A river U. States, rising in the Cumberland Mountains, on the S. E. side of Kentucky and after a tortuous W. course through the S. E. part of Kentucky the N. part of Tennessee, and the E. part of Kentucky falling into the Ohio, a little before the junction of the Tennessee. It is the most important affluent of the Ohio, with the exception of the Tennessee, its whole course being about 600 m. and the territory drained by it 17,500 sq. m. It is navigable for steamers and large vessels to Nashville, 208 m. and for boats 300 m. farther.—5 (Harbour) Cuba. See GUAYAMA.—6, A maritime co. New K. Wales, 50 m. in length N. to S. and 34 m. in breadth area, 914,800 acres, chiefly undulating plain. It is the metropolitan county of New K. Wales, and returns five members to the Legislative Council. It is divided into 18 hundreds and 56 parishes. The principal town is Sydney. Pop. 47,353.—7 A co. Van Diemen's Land, in Clyde district. It contains a number of beautiful lakes. Its principal town is Bathurst.—8 A bay N. side of St. Jean Perduende, off the coast of Chili lat. 33° 47' S. lon. 73° 35' W. (N.)

CUMBERLAND ISLES—1 A group of small islands, Australia. N. E. coast, extending from lat. 20° to 23° S. and as called by Captain Cook, in 1770, in honour of the Duke of Cumberland. They consist generally of elevated rocky islands, and are all abundantly wooded, particularly with pines, which grow to a large size.—2 An Is. U. States, in the N. part of N. York lat. 42° 58' N.; lon. 81° 34' W. (N.); 15 m. long, and from 1 m. to 4 m. broad.—3, An Is. S. Pacific Ocean between the Low Archipelago and Society Islands, lat. (N. E.) 1° 15' N. lon. 141° 11' W. (N.)

CUMBERNAULD a par and manufacturing in Scotland, co. Downpatrick, 11,550 ac. The town, constituted a burgh of barony in 1649 stands on an alluvial with heights on the N. E. and S. 18 m. N. E. Glasgow. The principal street, which is almost straight, is wide and well kept and the houses are in general, substantially built of stone. The principal shops, workshops, and dwellings, are lighted with gas, and the inhabitants are well supplied with water but the town is rather in a declining state, and property has lately fallen greatly in value. It has Established Free, and U. Freeby Roman churches three schools, a library institution, a free-school, and several friendly and provident societies. Hand loom weaving is the chief employment, though some tanning and small sewing is done; and a few are occupied in the lime and coal works of the vicinity. The Hon. Mount Stuart Elphinstone was born in Cumbernauld. Traces of Agricola's Wall are to be met with in the parish. Pop. entire par. 8778 of 1827.—(Local Correspondent)

CUMBERWORTH par Eng. Lincoln 9-0 ac. P. 235

CUMBRAY (Great and Little) two is. Scotland, forming a par. co. Dumfries, at the entrance to the Firth of Clyde, lying nearly midway between the Island of Bute and the mouth of Ayr. The larger island is about $\frac{1}{2}$ m. long by $\frac{1}{4}$ or $\frac{1}{2}$ m. broad circumference, 10 m. area, 5120 ac. of which about 3000 ac. are arable. It is hilly and some of its elevations command beautiful views of the coast. It produces grain and green crops of all kinds, and has a considerable extent of pasturage. The shores and bays abound with fish of various sorts. On the S. side is the village of Millport a pleasantly situated and thriving little place much resorted to in the summer season by citizens of Glasgow. Permanent pop. about 127.—LITTLE CUMBRAY the smaller island lies about 1 m. S. by W. from the former. It is about 1 m. long, and $\frac{1}{2}$ m. broad area, 700 ac. and has an elevation of 600 ft. above the sea. It is composed entirely of trap-rock resting on the sandstone formation of the opposite coast. On the W. side of the island there is a lighthouse in lat. 55° 46' N. lon. 4° 58' W. (N.). There are the remains of several ancient structures in different parts of the island. Pop. 9

CUMBRE an elevated pass Chilian Andes prov. Santi ago, lat. 37° 54' S. height, 12,450 ft. The ascent is gradual but long and tedious, owing to its numerous turnings. From the end of May to the end of October—generally, but not always—the Cumbray, an great part of the hills, leading to it on each side, can be passed on foot only.—The S. side of the ascent is covered with a lower red soil, but in many parts of the mountain side are shelves of rocks, inclined or vertical. The descent, on the S. side, is more broken into gullies, less fertile and more stony. Miers relates that he has met with considerable patches of red snow in the pass of Cumbray, and more rarely green.

CUMBRIF (Is.), a in Spain, Extremadura, prov. of and 20 m. N. E. Cáceres in an extensive plain. It is hilly but level and has a square, church, town hall, prison school and cemetery. The inhabitants are engaged in weaving and agriculture. Pop. 2081

CUMBRIF AYAR, or MATONOS, a in Spain, Andalucia, prov. of, and 56 m. N. Huelva, on a declivity facing the N. The streets are tolerably well made, and generally paved and the town comprises two public squares, a parish church, school townhouse, and prison. Pop. 2053

CUMBRIF an ancient British principality comprising with part of Cumberland the Scotch districts—Galloway, Kyle, Carrick, Cunningham and Strathclyde. It was given to Malcolm, prince of Scotland early in the 11th century to be held as a fief of the Crown of England.

CUMBRIF MOUNTAIN, a range of hills, England, occupying part of the counties of Cumberland, Westmorland, and Lancashire, extending from Fall Top in Cumberland, to the slate quarries near Ulverston in Lancashire, about 50 m. N. to S., and 30 m. E. to W. The mountain rises with steep acclivities, including in some parts, narrow but well cultivated valleys, with numerous picturesque lakes. Limestone, slate, and granite are found in several parts of these mountains.

CUMBRIF, an African tribe, to be met with chiefly in the kingdom of Yaouri, in Houssa, and in the towns and villages on the banks of the Niger, in the central parts of Soedan, towards the S. They are a mild, homely, and in-

discriminate race, but much oppressed and persecuted by their more fortunate and powerful neighbours. Being of a kind and peaceful nature, they fall on any prey to all who choose to molest them and bow their necks to the yoke of slavery without a murmur. They are generally considered good agriculturalists and expert fishermen, and raise abundances of corn and onions. Their sleeping huts, about 7 or 8 ft. wide of circular form, made of clay and thatched with palm leaves, are elevated above the ground to secure the inmates from ants, snakes, and alligators and to keep clear of the wet ground. The doorway, which is the only opening they have, is closed by a mat suspended inside. They have no steps to enter by but scramble into it as well as they can.

CUMIANA a tn. kingdom of Italy Piedmont, prov. of, and 8 m. N. Pignerol near the r. bank Cisola. Pop. 4500

CUMILY or **CAMALIA**, a maritime tn. Hindoostan, prov. of Madras, dist. Canara, 30 m. S. by E. Mangalore. It stands on a peninsula, projecting into a salt-water lake.

CUMMER par Irel Galway; 8515 ac. Pop. 1419

CUMBERTRELL par Scot Dumfries 7 m. by 4 m. Pop. 1888.

CUMMUMET a tn. Hindoostan 1 bank of a tributary of the Kistna, 110 m. E. Hyderabad lat. 17° 18' N. lon. 80° 11' E. It is the cap. of a district of the same name, of which little more is known than that it is uninhabited by a lawless and disorderly race.

CUMNER par Eng Berks 7750 ac. Pop. 1048

CUMNOCK, New par Scotland Ayr 12 m. by 9 m. Pop. 2750

CUMNOCK Old a vil Scotland so. of and 11 m. E. Ayr, and a station on the Scottish S.W. Railway beautifully situated at the confluence of the Glasnock and Lugar. It consists of three pretty long streets, and several narrow lanes the former regularly built, consist of good houses—the latter irregular count of inferior buildings. Altogether the village is cleanly and cheerful, and the vicinity exceedingly picturesque. There are a Free church, a gas-works, and two libraries. Cumnock is noted for the manufacture of wooden snuff boxes, made of plum-tree, and often beautifully painted. It has also some celebrity for its brown potteryware and yet more for its thrashing machines and steam presses—these manufactured here being held in high repute throughout the W. of Scotland. Pop. about 1200 The par is 10 m. by 3 m. Pop. 2777

CUMNEW par Eng Cumberland 2894 ac. Pop. 106.

CUMWHITTON par England Cumberland 8400 ac. Pop. 574.

CUNDAB or **KUNDAB** a tn. Hindoostan Holcar's dominions, 100 m. S.E. Odein lat. 21° 53' N. lon. 76° 25' E. on an open plain, surrounded by a good mud wall, about 15 ft. high. Pop. between 4000 and 5000

CUNDALL, a par England, York (N. Riding) 8851 ac. Pop. 889

CUNDEEGURREE, a vil Hindoostan, prov. Orissa, 25 m. from Cuttack. Here are three hills, which are perforated in every direction with caves of all dimensions—many being the dwellings of devils and priests of the Jain worship. The Hindus say these caves are the works of demons. Above the entrance to several are long inscriptions, in a forgotten tongue. Several tanks also have been constructed in the rock. The palace of the ancient rajahs, like all the rest, is hollowed out of the solid stone and consists of two stories the lower comprises a good-sized square court, surrounded on all sides by large excavated chambers. Into this yard you are obliged to descend from above.—(Rev. C. A. Adair)

CUNDINAMARCA, a central div. New Granada comprising the provinces of Antioquia, Mariquita, Meyra, and Bogota, and the valleys of the Lower Cauca and the Upper Magdalena. Its population consists of whites, Indians, and mixed races, in almost equal proportions.

CUNENE, a river S.W. Africa, Bechuanaland, flowing westerly along the N.E. extremity of the kingdom, and, after receiving several affluents, falling into the Atlantic, under the name of Nouene, in lat. 17° 15' S.

CUNHA, a tn. Brazil, prov. of, and 120 m. E. N. E. Rio Paulo, and nearly same distance, W. by S. Rio Janeiro, on Monte Falcão, near the small river Jacob. It contains a parish church and, owing to its elevated position and proximity to the sea, has a cooler and more salubrious climate than L.

than almost any other place within the tropics, in Brazil. All the inhabitants are employed in cultivation, or cattle-rearing. Pop. 8000

CUNHEAT a tn. France, dep. Puy-de-Dôme 10 m. N.W. Ambert. It has manufactures of linen, bombazine, and calico; a trade in cattle, and three annual fairs. Fragments of Roman mosaic have been found in the neighbourhood. Pop. 1088.

CUNNINGHAM, a dist. Scotland, co. Ayr about 20 m. in length and varying from 9 m. to 13 m. in breadth. It is the most N. of the three districts of Ayrshire—Cunningham, Kyle, and Carrick—and in that portion of the county N. of the water of Irvine. See Ayr.

CUNNINGHAM ISLAND a fertile and populous lat. N. America, in the W. part of Lake Erie, a little N. the entrance into Sandusky Bay

CUNHINGA, a river W. Africa Angola, rising in lat. 11° 10' S.; lon. 20° 30' E.; and after a N.W. course of 190 m. entering the Congo, on the L., 180 m. E. Fort Pedras

CUNNEBERDORF See KERNBERG

CUNTI, a tn. Spain, Galicia, prov. of, and 15 m. V. Pontevedra, on a steep ground, at the bank of a small river. Near it are mineral baths, the waters of which contain sulphuric acid, sulphureted hydrogen and chloride of sodium and vary in temperature from 100° to 154° Fahr. The baths are much frequented in their season.

CUPAR ABERNETHY, a burgh of barony Scotland parly co. Perth, and partly in that of Perth 14 m. N.E. Perth a station on the railway from Perth to Aberdeen. It contains many good houses, is well built, well paved, and well lighted with gas. It has a town-hall, jail, a handsome parish church a Free and a U. Presbyterian church and a Congregational chapel. It has a tannery some extensive bleaching-works, and carries on a considerable business in weaving some of the coarser kind of linen fabrics. The vestige of a Roman camp are still visible here. It was an equilateral quadrangle of 400 yards, and fortified by two strong ramparts and large ditches, comprised 24 ac. and guarded an important pass. Pop. 1661.—The par is 5 m. by 2 m. Pop. 2872

CUPAR FIFE, a royal burgh and cap. co. Fife, Scotland 37 m. N. E. Edinburgh and a station on the Edinburgh and Northern Railway. It is a place of considerable antiquity having been erected into a royal burgh by David II. in 1363. The streets are wide well built, well lighted with gas and partially paved. It contains several fax thrash corn barley and flour mills and a snuff mill, a weaving or filling mill glue manufactory three breweries, two tanneries—one for hides, another for sheepskins—and some irish and the works. The principal modern structures are the town and county halls—the latter a handsome range of buildings. It has a law library a public subscription library containing 4000 volumes, two reading-rooms a literary and antiquarian society a medico-chirurgical society and an agricultural and horticultural society. Being the seat of the county courts it contains a large body of legal practitioners. Cupar was once celebrated for its typographical productions—several editions of the Latin classics, of great excellence, having been printed here. On a mound at the E. end of the town, on which stood an ancient castle of the family of Macdow, was erected, in 1555, the witty and powerfully-succinct drama of *The Three Estates*, written by Sir David Lindsay of the Mount, and which, though there is no doubt, tended to hasten the Reformation. Cupar is associated with St. Andrews, E. and W. Australia. Urali Kilrenny and Pittenweem, in returning a number to the House of Commons. Pop. burgh and par (1851) 7427

CUPICA, a vil and seaport, New Granada, on a bay of same name, near the entrance to the bay of Paramo, lat. 6° 40' N.; lon. 77° 50' W. The bay of Cupica will probably one day be the W. termination of a ship canal across the isthmus of Darien as the course from the gulf of Darien, up the river Atrato, thence up its affluents the Nequi, and overland to the bay would appear to be the route offering greater probabilities of success for such an undertaking than any other on the American continent. Native boats at present ascend these streams and disembark their goods at a point on the Nequi, about 13 m. distant from the bay of Cupica, the remainder of the journey being completed overland.

CURA (SAN LUIS DE), a tn. Venezuela, prov. of, and 50 m. S.W. Caracas. The climate is warm and dry and the

and yields excellent pasture. There is here a church of some celebrity. Pop. 4000.

CURACAO an isl. Dutch W. Indies, Caribbean Sea, 40 m. N. the coast of Venezuela, between lat. 12° 3' and 12° 24' N. and lon. 68° 4' and 68° 19' W. stretching N.W. to S.E. 26 m. long and 8 m. broad esp. W. whelmed. It rises wild, bare and abrupt and consists of two ridges of granitic lava capped by a limestone dike 1½ m. thick. Iron and copper occur but are not wrought. Both soil and atmosphere are dry and the heat tempered by the sea breeze; yet yellow vir. reappears very early in the year. The inhab. ants often suffer from long and severe droughts, and even in the humble seasons they and the shipping depend on deep wells for water. Indigo, cotton and the cane, once cultivated, are now abandoned. The opuntia among other cactuses, grows on the island, yet cochineal has been cultivated carefully only of late. The tamarind adorns the gardens; the cocoa, palm, banana, and several other useful trees, are reared—among which are three varieties of the orange—and the lime from which the fat named Curacao liqueur is made. Sempervivum ab unda so does water melons, pumpkins, cucumbers, and all varieties of other vegetables. The great and small maize are cultivated, as food for the slaves. The small proprietors live mainly by rearing horses, asses, horned cattle, sheep and goats—all originally from Liverpool or Barbary—but heavy losses are often sustained in herds and flocks from drought. The horses, which are small but fleet and vigorous, are used only for riding—oxen and cows being employed for draught. The sheep are small and have a hairy wool the goats are large and handsome. Sea and land turtle including a few of the tortoise-shell species abound together with land turtles sea fowl and insects, including three kinds of scorpion and very large centipedes. There are several varieties of lizard. The shore teems with magnificent lobsters crabs, and shell-fish and the sea furnish plenty of excellent fish. The staple of the island however is salt obtained by natural evaporation and of the finest quality. The salt exported in 1847 was 109 34 barrels—that produced 250 000. The amount of cochineal produced in 1848 was 18,450 lbs. In 1847 662 vessels, for 38 212 entered the port of Curacao. The islands of Curacao, Bonaire, Oranienburg and Little Curacao, form a Dutch government, the residence of the governor being at Willemstad. Curacao was settled by the Spaniards, early in the 16th century; it was taken in 1634 by the Dutch and was captured by the British in 1763 but restored to the place of Amiens. It was taken again by the British in 1806, and finally ceded to Holland as the general peace in 1814. Pop. 15 000.

(1) **CURACAO**, a small isl. Caribbean Sea, about 8 m. E. Curacao, lat. 12° 2' N. lon. 68° 38' W. It is low cannot be seen till very close upon it and only yields some grass is unimproved but sometimes used as a retreat by fishermen in the winter.

(2) **CURACAO**, a river Ecuador rising in the Andes, on the N. side of the Llanganates Mountain, 60 m. S.E. Quito, and after a direct course of 86 m. W. to E.E. through a flat country inhabited by several Indian tribes falling into the Napo 87 m. below San Miguel lat. 2° 40' S. lon. 78° 18' W. The Velezo is the most affluent which it receives on the r. but it is joined by the Sotano, Nacolino, Ferlana, and Santa, on the l.

CURDOWORTH, par. Eng. Warwick 51 0ae P. 15. CURIE, a river France, rising in dep. Ardennes near Givet, around of Chateau-Chalon, flowing N.W. into dep. Yonne and after receiving several tributaries, falling into the Yonne after a course of 66 m. For 22 of which it admits of flotation.

CYRENE or **GYRENE**, a miserable tn. N. Africa, regency of, and 505 m. E. Tripoli, on the plateau of Barca, occupying the place of an ancient Cyrene 1800 ft. above sea level, lat. 32° 50' N. long 21° 47' E. Numerous interesting remains of antiquity have been discovered here, including a bath two temples supposed to be of the Roman period and a magnificent necropolis, containing grotesque figures, and monuments of various kinds. In one of the groves are several curious phinxes. Cyrene was the birthplace of Aristippus, Eratosthenes, and Callimachus. It was founded in the year 682 B.C., by a colony of Greeks, from a small island in the Egyptian sea, and became the capital of a district, to which it gave its

name, extending from the Great Syria to the Gulf of Persia (Babylon). This country continued for 1800 years under a monarchical form of government, then became republican. It became tributary to Egypt under Ptolemy Soter and, along with Crete, was ultimately formed into a Roman province. From an early period it was inhabited by numerous Jews.

CURIA MIRA or **KOONIA-MOONIA**, a group of islands and a bay S.E. coast Arabia. The bay extends from Ras-Morebat, on the R.W.—lat. 18° 58' N.; lon. 54° 45' E.—to Ras-El-Arrow on the N.E. lat. 17° 50' N. lon. 56° 15' E. These two headlands, which form the extreme points of the bay are greatly elevated by Arabian sea-men, on account of the violent squalls often experienced off them especially from the end of October to the beginning of March. The islands, five in number are situated near the entrance of the bay. Of these, Hailanah, the largest, is in lat. 17° 33' N. lon. 56° 6' E. It has a remarkably barren appearance, is completely destitute of trees, and yields only a scanty subsistence to a few wild goats. Its human inhabitants, about 23 in number subsist entirely on fish and are in other respects, in the most abject poverty. The other islands of the group are barren, uninhabited rocks.

CURICO,—A diet Chili having N. Colopagua, N. Monte, E. the Andes, and W. the Pacific. It contains a rich mine where gold and copper are found in equal parts.—A N. cap. of dist. 115 m. S. Santiago, S. the Tono, a pleasant plain at the foot of a hill lat. 30° S. lon. 70° 50' W. Pop. 5000.

CURISCHN or **KLANCHEN HAPF** an extensive lagoon E. Prussia, N.E. shore of the Baltic, from which it is separated by a narrow belt of sand, and with which it communicates, at Hensel, by a flood-gate. It is a somewhat of a triangular shape, a foot in the S. and gradually narrowing to a point in the N. at its outlet. Its greatest length is about 4 m. and its breadth from F. to W. near its centre, 14 m. It receives the Mesele or Memel and several other smaller streams. On the belt of land which separates it from the sea and is called the *Curische Aelwing* the sand is gradually rising. Vegetation is thus destroyed and many small places have been already buried. The inhabitants who originally dwell along the lagoon were called Kuren, and hence its name.

CURILIA,—A N. in Brazil prov. of and 250 m. S.W. Rio-Real. It is situated in the C. mountains of Cabaico, near a river of its name here crossed by a bridge and is a place of some antiquity having been founded in 1664. It is tolerably well built; the streets are paved, and the houses are usually of brick and occasionally of stone. It contains a handsome parish and two other churches and a Latin school and has manufactures of cottons and other articles of wool which are extensively sold in this and the neighbouring provinces. The district is of large extent and the inhabitants are chiefly employed in cultivation and in raising cattle and horses and large numbers of swine. Pop. of dist. 12 000.—A river Brazil which rises in the W. side of the mountain of Cabaico, in the S.E. of prov. Rio-Real follows a circuitous course towards the N. passes the town of same name, after receiving the Rio-Jacé turns W. and precipitates itself over the cataract of Cayacuan. Its course beyond this is not well known but it ultimately joins the Iguaçu which sometimes is considered as a continuation of the Curitiba, and bears its name.

CURILAND par. Eng. Somerset 727 ae. Pop. 367. **CURNOUL** a tn. Hindostan. See KERNUL. **CURRACLOONE** par. Irish Queen's County; 3645 ae. Pop. 572.

CURRAJ a tn. Hindostan, prov. of, and 40 m. N.W. Allahabad lat. 25° 41' N.; lon. 81° 16' E. on the R.W. side of the Ganges. It is now in a ruinous condition and is enclosed between steep precipitous of conks, or cultivated land and presents from the river nothing but dilapidated houses, and a few ruined mosques and ghats. At some distance in land are also numerous ruins. It is celebrated in Indian history as the site of a great battle between the Hindus and their Mussulman conquerors. Sherah Cunal a celebrated Mahomedan mint, his son and several of his disciples, are buried here.

CURRANS, par. and tn. Irish Kerry 5045 ae. Pop. 1067. **CURRIE**, par. Scotland, Edinburgh 8 m. by 44 m. Pop. 2190.

CURRENT ISLANDS.—1 An island N.E. coast, Calcutta, Madras Presidency, lat. $0^{\circ} 27' N$ lon. $124^{\circ} 42' E$. (a) —2 An isl. $\frac{1}{2}$ mile long between Pulus and the Pulus Islands, lat. $4^{\circ} 38' N$ lon. $123^{\circ} 5' E$. (a) This island is sometimes called Anna, or Pulo Anna. It is only about $\frac{1}{2}$ mile in extent, covered with trees, and although very small and low, is inhabited. It may be seen from the shore at a distance of 12 m. A reef is said to project from its N. and S. extremities.

CURRIGI ABB, a vil Ireland co of and 23 m. N.E. Cork in the fertile valley of the Brides. At its E. end is the parish church and a male and female school. Pop. 377.

CURRIN par Ireland Monaghan 11 372 ac. Pop. 4900.

CURRITUCK, an isl. U.S. States, off the N.E. coast of N. Carolina. It is 30 m. long and 2 m. broad and encloses the Sound of same name.

CURRODA a tn Hindoostan presid Bombay 1 bank Nerbudda dist. of and 80 m. N.E. Surat.

CURRY two vils, and three parcs. E. island Sumatra — 1 (*North*) par 1650 ac. Pop. 584 — 2 (*North*) par and vil 5556 ac. The village situated in a valley between the Menday and Quano hills, 63 m. E. by N. Saunon is increasing, and consists of two principal streets well built and kept in good order; abundantly supplied with excellent water. It has a parish church a fine old Norman structure and a Wesleyan and a Baptist chapel and a school established in 1847. Pop. agricultural 1856 — 3 (*South*) par and vil. 4108 ac. The village on a hill side consists of one somewhat irregular street the houses built of blue clay have a neat and respectable appearance water abundant. It has a fine Gothic church and an Independent chapel and several schools. Quarries of blue and white limestone are extensively worked in the parish but the people are chiefly agricultural. Inq. 1857 — (*Local Correspondent*).

CURRYKIPPAH, par Ireland Cork 2708 ac. P. 928.

CURUSAO a colonial chain, British Guiana intersected by the parallel of $2^{\circ} 47' N$. These mountains which are densely wooded, extend about 5 m. from N. to S. and the highest summit rises about 3000 ft. above the Takuin.

CURTATON a vil and conc kingdom of Italy gov. Milan prov. of and 3 m. from Mantua, on the Lago di Mantua, and the high road from Cremona to Milan. It contains a parish church. The district around has rich pastures, and also raises much corn, flax and hemp. Pop. 5500.

CURTIS ISLANDS — 1 An isl. base Strait 88 E. Wilson's Promontory 1000 ft high in lat. $39^{\circ} 28' S$ lon. $146^{\circ} 40' E$ (a). — 2 An isl. dry sand between the N.W. coast, Australia, and the Island of Lumar lat. $12^{\circ} 27' N$ lon. $123^{\circ} 55' E$. — 3 A group of small isls. S. Pacific Ocean, about 550 m. N.E. from the E. end of the north of the New Zealand Islands lat. $30^{\circ} 30' S$ lon. $179^{\circ} 14' W$ (a).

CURY par Empire Cornwall 2845 ac. Pop. 549.

CURZOL a vil Corsica [anc. *Coryra-Nigra* Slavonia, *Agropolis*] an isl. Adriatic, the most beautiful of all the islands of Dalmatia lat. (Fort Biaggio) $43^{\circ} 57' 34' N$ lon. $17^{\circ} 5' E$ (a) separated by a narrow strait from the peninsula of Salona the greatest length W. to E. about 25 m. average breadth about 4 m. area, 68 sq. m. It is hilly and abounds in trees and brushwood, which grow down to the water's edge, particularly on the S. coast. In the interior the pine attains a great size, and yields excellent timber for shipbuilding for which the natives of the island have long been famous. Vegetation being exceedingly rapid the cut timber is soon replaced by a new growth. The climate is mild, and well suited to the cultivation of the olive and vine, which is extensively carried on. Vicia grain is grown. Water is deficient. Many of the inhabitants are engaged in the fisheries which are very productive. Pop. 6500.

CURZOLA, a tn. Austria, cap. of above isl. and situated near its N.E. extremity on the strait between the island and the peninsula of Salona. It rises from the water's edge in a triangular form, is surrounded by massive walls defended by large old towers, built in 1420. A fort commands the strait. The town is regularly built, the streets running at

right angles to each other and at the N.W. end is the piazza, on the one side of which is a church, formerly the cathedral, with its campanile forming the apex of the triangle. On the other side is the palace of the Venetian governors. The suburb is kept alive by shipbuilding, Curzola being still famous for its boats. All the vessels of the Austrian Lloyd's company are built here. Pop. 1916.

CUSANO a tn. Naples, prov. Terra di-Lavoro, 20 m. N.W.E. Caserta. It is surrounded by mountains, and has three churches, an hospital and several manufactures of coarse cloth. Pop. 4430.

CUSHERDALL, or NEWTOWN-GREENS, a tn. Ireland co. Antrim, 81 m. N.W. Belfast basically situated on the slopes near the sea, and the mouth of the Glenties which runs through it. The town consists of four principal streets, at right angles to each other straight, and tolerably kept houses of stone, generally small but neat structures, of two stories. In the centre of the town is a curious square and there are an Episcopal church, and a R. Catholic chapel both large handsome buildings and three schools. The women are chiefly employed in knitting and crocheted work and the men are engaged in fishing or in tillage. Pop. 227 — (*Local Correspondent*).

CUSHINDEPPI a vil Ireland co. of and 36 m. N.W. Antrim on a small bay of same name. It is a coast guard station and has a small church and two schools. The harbour is a place of shelter for small craft. — (*Local Correspondent*).

CUSHINSTOWN par Ireland Meath 1200 ac. Pop. 268.

CUSOI par U. G. Harford 2204 ac. P. 224.

CUSSET a tn. France dep. Allier 82 m. S. by E. Moulins, agreeably situated at the extremity of a double valley formed by the river fitches and the Loire. The surrounding hill slopes are covered with vines. There are 1200 manuf. of blankets and cotton corsets silk edging cord and lace cotton yarn leather and chemical stuffs. It has also a paper and some extensive flour mills. It was formerly surrounded by high walls, flanked with enormous towers, but these have almost entirely disappeared. Pop. 2655.

CUSTIN a tn. Prussia See Koberon.

CUTCH a prov. of W. Hindoostan between lat. $22^{\circ} 4'$ and $24^{\circ} 40' N$ and lon. $68^{\circ} 40' E$ and $71^{\circ} 30' E$, having to the Gulf of Cutch B. Scindia N. with the vast salt marshes called the Rann, intervening the Arabian Sea W. and prov. S. S. by the Muzir E. Length, N. to W. about 160 m. breadth N. to S. 110 m. both measurements including the Rann which is considered to be within the district. During the rainy season Cutch is wholly insulated by water and during the dry season, by a desert space from 4 to 10 m. in breadth. Almost the whole surface of the country near the hills, is covered with volcanic matter the rocks appear to have been split by the action of fire, and the rocks are covered with specimens of metallic scales—all proving it to have been in times past, as it was very recently the scene of violent convulsions. A range of low rocky barren hills, rising here and there into rugged and volcanic cones, intersects it in various places. It is nearly entirely without any great rivers. It has no wood and no rivers with perennial streams but many torrents during the rainy season. The arable portion consists mostly of valleys the general soil of which is a light clay covered with a coarse sand, by no means fertile, the whole province not producing sufficient grain for the subsistence of its inhabitants while, with exception of dates, which are good, fruits are reared with difficulty. Cotton however is grown in considerable quantity and exported to Bombay and other provinces, in exchange for grain. The herds of Cutch are much esteemed by Europeans in India. Camels and goats also thrive but the cattle are of an inferior description. Wild asses are met with on the salt wastes, and their flesh is said to be good eating. They are larger and stronger than the domestic ass and are remarkably swift, but fierce, and untamable. The natives are represented as addicted to every kind of vice, and treacherous to a proverb. They are, however, adventurous mariners presenting in this a remarkable contrast to the timid navigators of the East. They also excel in naval architecture. A violent earthquake occurred at Cutch on June 16, 1819 when the principal town Bhuj was converted into a heap of ruins, and the F., and almost deserted channel of the Indus which bounds Cutch was greatly changed. This catyary or rule of the sea, was, before the earthquake,

fordable at Sukpat at low and ebb tides. Sure the shock, it has had 19 ft. at low water and by this, and other remarkable changes of level, a part of the inland navigation of that country which had been closed for centuries, became again practicable.

The Penn of Cutch is a flat region, of a very peculiar character. It has an area of about 700 sq. m. and is apparently the dried up bed of an inland sea. For a great part of every year it is dry, but during the monsoons, when the sea runs high, the salt water drains up from the Gulf of Cutch and the creeks at Sukpat, with both of which it communicates overflows a large portion of the Rann especially after rain, when the soaked ground permits the sea water to spread rapidly. The surface is somewhat uneven with salt about an inch in depth in consequence of the evaporation of sea water. Islands rise up in some parts of the waste, and the boundary lands form bays and promontories. The former are a favourite resort of the wild fowls.—The curf of Cutch is an arm of the sea running N. E. between Cutch and the peninsula of Guyana, about 2 1/2 m. wide at its entrance, and upwards of 110 m. in length. Its entrance is about lat. 2° 40' N. lon. 69° 20' E. The danger of navigating the gulf has been greatly exaggerated. The eddies and dirty appearance of the sea, which builds up and bulges in an extraordinary manner present a frightful aspect to a stranger, but the natives traverse it at all seasons without fear. It is tolerably free from rocks and the cutch laves is made with little surf.—*Levell's Geology Orissa* 1840 p. 10. Mrs. Kennell's *Physical Geography* 1841 vol. 1, p. 10. *Ind. Ann.* 1841 p. 10. *Berlin Ann.* 1841 p. 10.

CUTCH GUNDAVA is a division or prov. of Belochistan occupying a N. E. projection of that country from which it is, in a manner separated by the Hala range of mountains that rise along its W. frontier and in which is the celebrated Bal Pass. It lies between lat. 21° 40' and 29° 00' N. and lon. 69° 17' E. bounded N. and N. E. by Afghanistan, E. and S. E. by Seinde, and W. by the Helooche districts of Baluchistan and Sarawan. It is about 160 m. in length N. to S. and 130 broad E. to W. Area, estimated at 10,000 sq. m. The general characteristics of this province are its large extent of level surface, its exceedingly salubrious climate, which has become proverbial for the scarcity of water for agricultural purposes, which restricts its cultivation both as to quantity and variety, its low population and great number of towns and villages. It is the N. E. is a hilly tract running along the S. frontier of Seistan, being a continuation of the Harand and Dajal mountains. In the N. E. the desert of Shikarpur stretches for a distance of 40 m. described as a levelless level plain of indurated clay of a dull dry earthy color and showing signs of being sometimes under water. The aspect of this desert is dreary and repulsive in the extreme the only vegetation to be met with is its dreary wastes below a few saline plants (*Phorolium aduncum*) and stunted bushes. No water is here to be found to supply the necessities of a traveller and when any is precipitated into it, at certain seasons from the higher parts of the province it is instantly absorbed by the parched soil. The river river flows nearly through the centre of Cutch Gundava. It rises in the hills near Tola, in Afghanistan enters the province near Dadar and loses itself in the desert of Shikarpur. Its banks are thickly dotted with villages. The climate of Cutch Gundava is so oppressive from April to August, that communication is scarcely suspended and travelling is attended with great risk from the hot winds, which sweep over the parched and arid lands with fatal violence. No less terrific are the radiations from the heated surface of the soil. The winters, however, are extremely mild. The natural vegetation of the province is very limited consisting of a few of the saline plants already mentioned and some stunted mimosa, and bér trees, the last being met with of more stately growth in the vicinity of towns and villages. There are also gardens, in which oranges, limes, and mango trees thrive and in the N. provinces, groves of date trees are seen encircling the towns, and skirting the hills. The orchards of the general husbandry and obscurity of the soil, there are yet few river streets which with due irrigation and some of it are rendered extremely fertile, producing cotton, sugar cane, tender dates, oranges, limes, and pomegranates. The grains most extensively cultivated are jowary and Indian millet (*Holcus sorghum*) and beign (*Holcus spicatus*) which are adapted to a dry soil. Cutch Gundava is inhabited

by three very distinctly marked races the Jats, Rindas and Brahmins. The first are the primitive inhabitants, the others are more recent settlers. All these classes are Mahomedans, generally of the Sunni persuasion. There are also a few Hindoos, who live in towns and principally conduct the commercial affairs of the country. The principal towns are Gundava, the capital Dadar Bhag Lohra, and Kotwa. Pop. estimated at 100,000.

CUTIGLIANO a tn. and com. Tuscan prov. of and 33 m. N. W. Florence, L. bank. Luma, here crossed by a hand some bridge. It is well built, and contains a church and an old castle. Pop. 1151

CUTTACK, a maritime dist. Hindoostan, presid. Bengal prov. Orissa, bounded E. by the Bay of Bengal N. E. by prov. Bengal W. by various petty native states, formerly in tributary to the Nagpur Maharajah, and S. W. by the N. Orissa, extreme length N. E. to S. W. 180 m. extreme breadth, 110 m. area, 104 sq. m. It is well watered being intersected by the Mahanadi, Bramany, Loyle, and smaller streams, all abounding with fish. During the dry season the minor streams dry up but in the rainy season they swell to large rivers. A range of hills running parallel to and at some distance from the coast produces tank, and other timber which are floated down to the sea during the rainy season. The forests being extremely valuable can only be explored during April and May when the monsoon exhalations somewhat shade both the plains and hilly districts are infested with every species of wild animals, and a vast number of snakes and venomous reptiles. Rice, pulse, sugar cane, and dyestuffs are grown along the coast, which is low and marshy and wheat and maize in the hilly regions. On the coast is extensively manufactured the best and whitest salt made in India. The chief towns are Cuttack the capital Balasore and Juggernaut Pop. 1,984,600

CUTTACK [Cuttack, a royal residence] is a Hindoostan cap. about 60 m. from Mahanadi 60 m. from its mouth, here, and 280 S. S. W. Calcutta. It is a straggling town contains a number of good houses of brown stone and brick but mostly in very indifferent repair from the poverty of their inmates. The largest dwelling houses are those of the former amirs and governors, but they also are all fast falling to ruin. The principal building is the Kuddum Bazaar in the suburbs. It has no pretensions to elegance of design but contains a number of sacred relics, and the ground around it is chiefly used as the common burial place for the Moslem inhabitants. The only other building worthy of notice is the Jamma Masjid situated in the principal street. It is also a clumsy building and is used both as a school and place of prayer. The Hindoo temple with exception of an unfinished one, are all small and insignificant, and none are of any real utility. The town has little trade its chief manufactures are brass cooking utensils and those for which the place is famous. Cuttack is protected from inundation by vast embankments faced with stone. The river during the rainy season is 1 1/2 m. broad and 38 or 40 ft. deep but during the dry season it is narrow with a depth of only 3 ft. Cuttack is the most important station in the Bengal presidency and is esteemed exceedingly healthy from being near the sea, and the absence of vegetation around it. About 1 m. N. W. from Cuttack is the fort of Barabhattee now falling into decay the stones being taken from it for various public works. It was of the form of a parallel logogram and was originally defended by high square bastion towers, projecting at different distances. It was surrounded by a broad and deep moat, faced with stone. On being taken possession of by the British in 1803 the ditch was drained and great numbers of the alligators, with which it was filled, were there destroyed. See more details in the article on the river Pop. 40,000.—*Journal of the Asiatic Society of Bengal* 1833 p. 10. (Cuttack, Orissa, &c.)

CUTTUB, a small tn. Hindoostan, prov. of, and 18 m. S. Delhi. Near it is the remarkable and beautiful pillar called Cuttub Minar or Cuttub Minar. It is built of very fine, hard, red sandstone, elegantly shaped, with balconies occurring at intervals. It is 62 ft. in diameter at the base, and rises, gradually tapering to the height of 265 ft. the whole

being crowned by a small dome, supported by eight square pillars. A winding staircase, of 368 steps, conducts to the summit of the column, from which one of the most magnificent views conceivable is obtained.

CUTUP a to. of N.W. Africa, state of, and 75 m N by W Jacaba lat. 9° 15' N lon. 10° 8' E. It consists of an immense number of hamlets almost adjoining each other occupying an extensive and beautiful plain, adorned with a variety of elegant and flourishing trees and exhibiting a delightful appearance of rural comfort and simplicity. It is the seat of a considerable traffic in slaves and cattle and also in goats, rice, honey and other natural productions of the country and in cutlery, rings, needles, and various other articles of manufacture these different commodities attracting purchasers from an immense distance. (Lander's *Revue*.)

CUTWAI a to. in Hindostan, prov. Bengal 80 m N.W. Calcutta lat. 23° 37' N lon. 88° 10' E. It has some manufactures of brass vessels as it is one of the ports on the Hoogly for the exportation of Burdwan. An action took place here with the troops of Oomah Ali in 1763.

CUVO a river S.W. Africa, S. Guinea Benguela, rises in a hilly district near a place called Zembo, lat. 13° 52' S lon. 17° E. From this point it flows N.W. to lat. 11° 10' S lon. 15° E. When it turns nearly due W. and falls into the sea at Gunas, from 15 to 20 m N. Nova Redondo lat. 11° 28' S. Its whole length is about 220 or 230 m.

CUXHAM par Eng Oxford 487 ac Pop. 172

CUXHAVEN a seaport in Germany belonging to Hamburg built Rittenbüttel at the mouth of the Elbe, on its S.W. side. It is 58 m N.W. Hamburg lat. 53° 53' 42" N lon. 8° 43' E. (N) The harbour is spacious and deep and furnished with a light-house, and is a quarantine station. Vessels lie at anchor off the place waiting for favourable winds and when going up the Elbe call here for pilots. In winter when the river is frozen passengers going to and from England to Hamburg embark and land at Cuxhaven. It is much frequented in the summer season by sea bathers particularly from Hamburg. The chief magistracy is always vested in a senator of that city. Packets ply regularly between it and London Havre and Rotterdam. The inhabitants are mostly fishermen and pilots. Pop. 1200.

CUYABA a to. Brazil See COABA

CUYAHOGA a co. to. and river U States Oil in The country lies along the S. shores of Lake Erie about 88 m in length E. to W. and about 6 m in breadth. Principal town Cleveland on Lake Erie at the mouth of the Cuyahoga. The river flows into the lake at Cleveland lat. 41° 30' N lon. 81° 30' W. Columbus has extensive paper and other manufactures and is rapidly rising in importance. The river, a very considerable stream, rises in about lat. 41° 48' N whence it flows S.W. for upwards of 40 m when it bends round to the N.W. and falls into Lake Erie at Cleveland lat. 41° 30' N. It has some fine falls, and is extensively applied to hydraulic purposes.

CUYK a to. Holland See KUK

CUYOS ISLANDS, a group of small islands Philippines, Mindoro Sea, between Palawan and Putney. The largest of them, Great Cuyo, is in lat. 10° 55' N lon. 121° 15' E. (N) They are mostly high and rocky but abound previously of all kinds and vessels may here water. The inhabitants are laborious, shrewd, and courageous and trade with the neighbouring islands. They are also distinguished from the people of the islands around by their clear colour their habits, language, and more advanced civilization. Cuyo is defended by a fort, and has a small port on the N.W. side.

CUYUNI a river British Guiana, which joins the Essequibo from the W. after receiving the Massarony in lat. 6° 28' N lon. 56° 45' W. It is greatly obstructed by rapids and falls. The territory it traverses is extremely fertile and yields cotton of a superior quality.

CUECO, an anc. city and cap. Peru. The city occupies the top of a wide valley about 11,800 ft. above sea level, between the rivers Apurimac and Urubamba lat. 13° 30' 55" S lon. 73° 41' W. The houses are built of stone, covered with red tiles and are of fine proportions, being many of them, of the era of the Incas and partaking of the peculiar and striking style of architecture practised by the

Peruvians of that period. Amongst the principal architectural remains of its ancient grandeur are the fortress, the cathedral and the convent of St. Augustine and *La Merced* the latter three large buildings, and in design and workmanship inferior to few in the old world. The fortress, which was erected by the Incas for the protection of their capital the ruins of which stand upon a hill a little N. from the city is a stupendous specimen of Cyclopean architecture, many of the stones employed in the structure being of the weight of 160 tons and thought of irregular shape so nicely adjusted to each other that no mortar was required. It is, and has always been a source of perplexity to conceive how these enormous masses of stone were placed in their positions as it is not known that the Peruvians had any machinery of power sufficient to accomplish this feat. Other objects of interest are the baths, the one of warm, and the other of cold water the ruins of a large stone-way which was built by order of the Incas, and which, it is said, reached as far as where Lima now stands, a distance 400 m. the vestiges of some subterranean passages which led to the fortress from the houses or palaces of the Incas, and in which passages the walls were cut very crooked admitting for a certain space one person only to pass at a time when shortly afterwards two might pass abreast. Cuzco has still a number of churches and convents, with several monasteries, collegiate schools, and a university. The inhabitants use a mixture cotton and woolen goods, leather and parchment, and excel in embroidery furniture carving, painting and sculpture.

Cuzco is the most ancient of the Peruvian cities, and was at one time the capital of the empire of the Incas. It was founded, according to the common tradition in 1043, by Manco Capac, the first Inca of Peru. In 1534, it was taken by Pizarro who was surprised with the grandeur and magnificence it exhibited. Its streets were then large, wide, and straight and its churches, palaces, and temples, the latter including the famous temple of the Sun, richly adorned with ornaments of gold and silver which glittered on the walls. While still in possession of Pizarro it was besieged by the whole Peruvian force, and a great part of it destroyed. It is estimated at 47,000.

The *PERUVIAN* has chiefly between the parallels of 13° and 15° S. and the meridian 75° 30' 78° W. It comprehends all the countries drained by the affluents of the Amazon and the upper course of the Apurimac. It consists of 11 provinces and has an area of 44,800 sq. m. Nearly nine-tenths of the population are Indians the mines are not much worked and the principal objects of trade are the woolen cotton stuffs and leather which are manufactured by the inhabitants. It is 263,924.

CYGLADES, or **CYCLADES**, the name given to the principal group of islands in the Greater Archipelago belonging to the kingdom of Greece, and now formed into a separate nome subdivided into five eparchies or *dioceses*—Tinos, Naxos, Beos or Hornapollis, Malos and Thera or Santorin these being the most important islands of the group. They are situated between lat. 36° and 38° N. and lon. 24° and 26° 30' E. They are generally mountainous, and evidently of volcanic formation. In several of them the soil formed of decomposed lava, is of remarkable fertility producing much barley, wine, olive oil and silk. In others the surface is almost sterile, and the principal products are sulphur and alum. The inhabitants are much addicted to a seafaring life, and have often distinguished themselves by their maritime prowess. United population 118,905.

CYFFIG, par Wales, Carmarthen 4556 ac. Pop. 520

CYPRILN (Str) a to. France dep. Dordogne, 8 m W. Seriat at the foot of a rugged hill r. bank Dordogne. It has several fairs, and in the neighbourhood is the mineral spring of Panasson. Pop. 1690.

CYPRUS [Turkish, *Adas*; Greek, *Kypros*; French, *Cypre*; German, *Cypern*; Italian, *Cipro*] an is. of Turkey in Asia and the most E. in the Mediterranean near the mouth of the bay or gulf of Iskenderoon. It is 44 m. S. Cape Anamur in Antiochia, and 1 m. W. Latakia, in Syria. Cape St. Andrea, its N. h. extremity, is in lat. 35° 41' 42" N. lon. 34° 35' 30" E., and Bafra near its S. h. extremity is in lat. 34° 47' 19" N. lon. 32° 54' 30" E. (n.) and it stretches from Cape Gazzo, lat. 34° 39' 18" to lat. 30° 41' 42" N. or Cape St. Andrea. It lies S. W. and N. E. and is about 184 m. long with a width for 100 m. W. to E., of about 40 m. but its N. F. extremely narrows greatly and terminates in a long narrow peninsula, about 40 m. long and not over 15 m. broad. The whole island is occupied by a range of mountains stretching N. E. to S. W. known in heathen mythology as the third range of Olympus, and whose culminating points, Santa Croce (Olympus) and Turados, are 7000 ft. high. On the N. E. side of the island the slopes of these mountains are bold and rugged and one of the elevated valleys contains Nicosia the modern capital of the island. On the S. side the hill-slopes are even bolder presenting a deeply serrated outline with thickly wooded ridges furrowed by deep valleys. The prevailing formation of the mountain-range, in its N. E. di. lition is limestone, which assumes many abrupt and remarkable forms—an example of which may be seen in the accompanying view of *Tous Mir Eux* the Hundred and One Towers being a portion of a steep mountain between

TOUR MIR EUX ON THE MOUNTAIN AND ONE HUNDRED, CYPRUS
Photo Courtes. Voyage Mémorables de la Sicile de la Phénicie, etc.

Nicosia and the coast town of Carina. The S. W. portion of the mountains is of crystalline formation and yields excellent asbestos also tale red Jasper copper in abundance, gold & liver emeralds, and the Paphian diamond (but the only islets wrought are the first three named).

Cyprus is deficient in water its streams being chiefly mountain torrents, which dry up in summer the only perennial river of importance being the Pedias (anc. *Pediasus*) which waters the valley of Nicosia, flows E. and falls into the sea at Famagusta. The climate is in general healthy excepting in some points on the S. coast during the heats of a minor insect increased by the burning winds from the Arab sea and African deserts, which causing a rapid evaporation give rise to a dangerous malaria. Temporary blindness is sometimes occasioned by the sun's reflection from the white chalky soil; and to avoid sun stroke the natives wrap their heads in the k. shawls. On the N. side of the

island the climate is more temperate; and on the elevated grounds severe colds are experienced in winter the summits of the mountains being covered with snow during several months of the year. There are no large wild quadrupeds; but foxes, hares small game and several species of serpents, abound and bees constitute a source of riches. Clouds of locusts sometimes destroy the harvest.

The mountains of Cyprus are covered with vast forests of excellent building timber and the island is esteemed the richest and most fertile in the Levant, yet it has few Jewish tenets of country those around Nicosia, Famagusta, Larnica, Limassol and Bafra being the chief. Agriculture, however is in a very backward state, caused, in a great measure, by the oppressive exactions of the Turkish Government, and of the Greek priesthood. The cultivable surface of the island is estimated at about 2,500,000 acres of which not much over 180,000 ac are actually under tillage. Fertile spots in the neighbourhood of the villages are cultivated but the more distant tracts are neglected. Of the vegetable products cotton may be assumed the most important. It is sent chiefly to Marseilles and Leghorns excellent wheat and barley are raised, the surplus of which is exported to Syria. Tobacco of good quality is grown in the S. W. of the island and is on the increase madder after that from Smyrna, the best in the Levant, and in numerous localities, and in quantity augmented yearly. Silk is produced abundantly in the vicinity of Bafra, and in other quarters and only needs a better process of winding to be adopted, to make it fetch a higher price and be more sought for in the markets of Lyons and Liverpool. Carobs are extensively grown and exported, chiefly to Odessa, to be eaten by the Russian peasantry during Lent. Olive oil is largely produced but is much neglected. Wine is the most noted productive of the island. It is of five qualities the first two are black and red common wines heavy and with a strong taste of tar from being kept in barrel casks they are exported to some extent to Alexandria, but never to Europe. Commanderie is the wine most sought after. It is grown near Limassol near the site of the ancient commandary of the Knights of the Temple and of Malta. At first copper-coloured it becomes black when many years old and is viscous, thick strong and an excellent stimulant. The other two sorts are muscat and morocconese, both also excellent wines. Other vegetable products are sugar flax saffron poppies liquorice exquisite fruits—including the orange, citron, date fig pistachio nuts, caper etc.

Manufacturing establishments there are none. Salt, in large quantities is obtained from salines at Limassol and Larnica. The Greek females of some of the towns still willages do beautiful embroidery and make a silk net which will stand comparison with the finest European lace. The females also weave some common cotton woollen and linen fabrics—it is last chiefly sackings. Good morocconese is made at Nicosia and salices imported from Britain, are here dyed in brilliant colours, and exported to Syria Smyrna, and Constantinople. Pottery sufficient for home consumption is made and on the W. side of the island the peasantry distil rose, orange, and lavender water and myrtle and cedarum oil.

The Cyprian ladies, so famous in antiquity are handsomer taller and more stately than those of any other Greek island. Their features are regular and dignified, exhibiting that elevated cast of countenance which is so universally admired in the works of Grecian artists.

The island forms a parish, of which the capital is Nicosia. The principal ports as well as the principal towns are Carina, Famagusta, Larnica, Limassol and Bafra. The island is under his Majesty's power has under him 12 lieutenants, one over each of the twelve districts of the island whose affairs they administer in conjunction with an officer called *demogeronte*, chosen by the Greeks of the district. The parish is assisted in levying taxes, &c. by a *dyvas* or council of eight members consisting of the mufti the molлах—who is the judge of Nicosia—the commander of the forces, the principal Turkish aga, the Greek archbishop, and one of the demogerontes. For ecclesiastical affairs the island is divided into the four dioceses of Nicosia, Larnica, Carina and Bafra and Limassol—the first being administered by an archbishop, appointed by the sultan.

Originally peopled by the Phoenicians, and afterwards colon

in. there is a gymnasium a philosophical academy a head district school, a seminary and a hospital. It is the seat of a Greek bishop, a Greek consistory and of a court of justice. It has a considerable trade with Wallachia, Germany &c. and has manufactures of cloths, silver-plate, earthenware, &c. &c. Pop. 9754, of which about a sixth are Jews.

CZORKOW is a town, Austrian Galicia, bounded N by Ternopol E. Rzesza, S. circle Czemowicz, and E. Kolomoj and Stanislaw areas, 1040 gas. sq. m. It is remarkably well watered, being traversed centrally by the Dniester and skirted on the S. by the Pruth the Podhorca, a tributary of the Dniester forms its boundary on the E. and the Seret,

another tributary of the Dniester flows through it from the N. The soil is generally remarkably fertile, and produces abundance of corn and other field crops. Wood also occupies a considerable extent of surface. Cattle are of inferior breeds and not much attended to. An important branch of rural economy is the rearing of bees. The chief manufactures are linen and cotton. The inhabitants are, for the most part, Ruthenians. Pop. 150,500.

CZORKOW a tn. Austrian Gallies, esp. circle of same name, on the Seret, 97 m S.E. Lemberg. It contains a castle and a parish church, and has an extensive tobacco factory Pop. 2,000.

DACCA and DACCA JELLIPPOOR, two dists. of Hindoostan, prov. Bengal, between lat. 23° and 24° N. and lon. 89° 30' and 91° E. bounded N. by the district of Mymensingh E. by Tipperah S. by Tipperah and Backergunge and W. by Rajshahi and Jessore. It was formerly of much greater extent than now—stretching to the sea, or from about 60 to 90 m. further N. and to the Garrow Mountains about 120 m. further E. A new arrangement, which took place in 1804, reduced it to its present limits. It is one of the richest districts in India and, although containing much jungle and uncultivated land than any other district in the province produces such quantities of rice, as to be called the granary of Bengal. The surface is an uninterrupted flat, and is intersected by two of the largest rivers in the world—the Ganges and Brahmaputra—from whose periodical inundations its extraordinary fertility arises. The principal agricultural productions are rice, betel nut, cotton, hemp, &c. &c. which are grown most largely in the E. and E. districts—the N. and S. being over-run with jungle, in which elephants, tigers, and other wild animals so abound, as to prevent the extension of cultivation by the terror they inspire and the damage they do to the crops. In some parts of these districts however a marked and rapid improvement is in progress—villages and cultivated fields are now met with in tracts formerly covered with brush-wood and rank vegetation. Dacca was at one time celebrated for its manufactures for its fertility particularly for its muslins, which were of singular delicacy and beauty. This branch of industry however has been wholly extinguished—500,000 weavers in these provinces having been

thrown out of employment mainly in consequence of the successful rivalry of British manufactures of the same description, but also in consequence of the amplexation of the native courts of India, and of native power and wealth generally. Limitations of various kinds and patterns, dyes, and damask linens are still manufactured to a considerable extent. There are a number of Hindoo schools throughout the district, in which the rudiments of the Bengalee language are taught, with the principles of their religion and law. During the Mahommedan government, the Dacca were ruled by a foudlar or commandant but after the British conquest they were partitioned into different districts, under the jurisdiction of distinct judicial and fiscal officers with a court of appeal for the superintendence of the whole. These districts were, at one time notorious for the number and atrocity of the crimes committed in them but the vigilance and energy of the Bengal government have greatly limited the more ordinary offences and have almost entirely suppressed those of deeper dye. The population is composed of Hindoos and Mahomedans, in about equal proportions. The principal towns are Dacca, Narraingunge, Soanagong and Rajanagar.

DACCA an inland city Hindoostan, prov. Bengal, and cap. of above districts, about 100 m. from the mouth of the Ganges and 140 m. N.E. Calcutta, lat. 23° 45' N. lon. 90° 52' E. situated nearly midway between the Brahmaputra and the main stream of the Ganges, within 4 m. of the Boorah Gunga, a large branch of the latter river. It extends about 6 m. along the bank of a river but its breadth is not in proportion. The streets are narrow and crooked, and the houses,

RAJAH PUTTON SINGH MROOT of DACCA — FROM PHOTOGRAPH OF DUNN.

composed of brick, thatch, and mud, have a very mean appearance and are so combustible, that they are usually burned down once or twice a year—the owners looking on with the greatest apathy; mats, thatch, and bamboo being

composed of brick, thatch, and mud, have a very mean appearance and are so combustible, that they are usually burned down once or twice a year—the owners looking on with the greatest apathy; mats, thatch, and bamboo being

cheap, the expenditure of a few rupees restores their edifice to all its original splendour.—[*Hamilton*]. Along the river front, however, are many elegant buildings among which is distinguished Major Nutt's Singh's school, and the residences of other Indian nobilities. Still in this part of the town also, houses composed of mud and straw are of frequent occurrence, forming a strange contrast to their more stately neighbours. The jagodas are few and small. The European houses are of limited size and mean compared with those of Calcutta, and those out of the town are surrounded with jungle and with ruins, and have thus a dreary desolate appearance. Besides the natives there are many respectable Greek, Armenian and Portuguese merchants resident here. The Armenians have a church, with two priests, and the English have also a church here—a neat Gothic edifice. Dacca is a station of the Berampore Mission the missionaries of which conduct religious services in English, Hindoostanee, and Bengalee, and superintend an extensive circle of schools. The city was formerly much more extensive than it is at present, and exhibited a degree of splendour to which it has now no pretensions—as the magnificent ruins of bridges, canals, and numerous palaces, gardens, &c. within its ancient limits sufficiently prove. These ruins are not surrounded with jungle and overrun with rank vegetation. No trade of Dacca, which consisted chiefly in the manufacture and exportation of its beautiful muslins—[see *Bengal Province*], is nearly extinct the fabrics of England being preferred even by the natives, on account of their greater softness. Dacca is considered one of the healthiest and most pleasant stations in Bengal being free from the violent heats experienced in other parts of the province, in consequence, it is believed of the ground being covered with verdure during the hot months. In this city is one of the four hospitals for the insane under the Bengal presidency, and a college, founded in 1814, at the public expense in which there were, in 1845, 342 students of which 301 were Hindus and 41 Mahomedans. The expense of this establishment, in 1847 was £21,043 13s 6d. The inhabitants are represented as quiet and orderly and desirous of acquiring the English language, and adopting the English costume. The population has been stated at 200,000 but the *Monthly Register* for February 1828, rates it at only 1,00,000—one-half Mahomedans, the other half Hindus.

DACHAU a to Upper Bavaria, esp. dist. of same name, on the river Danube, 12 m. N. W. Munich. It contains a parish church old castle, hospital and infirmary and has an extensive brewery and oil saw and other mills. Pop. of to. 1450 of dist 18,296.

DACIA a former country of S. Europe bounded N. by the Carpathian mountains, E. by the Danube and the Black Sea, S. by the Danube and W. by the Rhaetia corresponding with the Danub. Hun. an circle of Th. the Thracian, the duchy of Bukovina and Transylvania in the Austrian dominions, and the principality of Valachia and Moldavia and the Russian government of Bessarabia.

DACRE a par. and vil. Eng. so Lumberland 8205 ac. Pop. 844.

DADARANI a large vil. Scinde, 2 m. from Z. bank, Indus, on the route from Larkhana to Sehwan and 32 m. N.W. from the former lat. 27° 3' N. long. 68° E.

DADI a vil. Greece name Attika and Viotia, and 24 m. N.W. Livadia. It faces the plain of the Cephissus, and is built on terraces in the form of an amphitheatre. On a hill beyond the village are ancient walls, of Cyclopean architecture, which are supposed to have been the walls of Amphibia.

DADUI a to. Beloochistan, prov. Cutch Gundarra, near the base of the Hala range, and 5 m. E. from the entrance of the Bolan Pass lat. 29° 6' N. lon. 67° 41' E. It is a place of considerable size is inclosed by a wall and contains many well-built houses. The host here is so intense, as to have according to the inhabitants, reddened the unburnt bricks of the old domes. It is probably the hottest place on earth in the same parallel of latitude and certainly one of the hottest in the globe—the thermometer rang in tents, to 180°.

DADVOI a vil. Scinde, 40 m. E.W. Subulsoote on the route to Shikarpore 4 m. from 1 bank Indus, in a poor and well-cultivated country lat. 28° 2' N. lon. 69° 3' E.

DAENY or Darna Island, Persian Gulf, Great Pearl Bank lat. 24° 57' 50" N. lon. 52° 25' E. about 1½ m. in length narrow low and nearly level with the sea. The

Vol. I.

colour of the sand, in hazy weather renders it difficult to be distinguished when at a distance.

DAET a to. Philippines at Luzon, cap. prov. Camarines Nord 140 m. S.E. Manila, on a small stream flows into the ocean, near the entrance to the bay of San Miguel. Some of the houses are built of stone, and some of nipa palm.

DAFAR a prov. and to. Arabia. See *Duorah*.

DAGANA a to. of W. Africa, Senegambie, country of Wallo, 1 bank, Senegal lat. 16° 22' N. lon. 16° 30' W. It is a small but flourishing place, deriving much of its consequence from containing a French fortified trading station, which fronts the river and is a kind of rude edifice, surrounded by a wall mounted with 10 cannon. This post is kept by a garrison and about 50 black soldiers. The natives manufacture different kinds of pottery, particularly vessels called *casars*, and pipes, which are much used. They are subject one portion to the prince of Wallo the other to the authority of the Foutas, whose requirements here is a marsh. In the environs is a productive *mangrove*, or fish pond. Pop. about 1200.—[*Raffin's Afrique Occidentale*].

DAGEI ET an isl. Sea of Japan, between lat. Nippon and the peninsula of Corea lat. (N.E. point) 37° 43' N. lon. 130° 56' E. (S. E.) to command by La Paroisse, who visited it in 1787. It is about 9 m. in circumference, and the shore is encircled by a perpendicular wall of rock. It is covered up to the summits of its highest elevations with wood.

DAGHNAM par. Eng. Latex 6008 ac. Pop. 2494.

DAGHETIAN [Arar. *Tegh-atan*, mountainous country] a prov. Russia, stretching along the Caspian Sea W. side, between lat. 40° 30' and 43° 18' N. and, in breadth, between lon. 46° and 49° E. having Cape Agdashan at its N.W. extremity and Cape Apel on at the S.E. Its whole length is thus about 200 m. in breadth 40 m. area, about 5500 sq. m. It consists partly of plains, but, as its name implies, chiefly of mountains offshoot from the Caucasus, which separate deep valleys as they traverse the province, 6 E. towards it a plain lying along the Caspian Sea. They are chiefly of limestone. In the S. parts of the province there are numerous bituminous springs, some of which are worked and afford in addition to petroleum an inexhaustible supply of black and white asphalt while others have for ages emitted a burning steam known by the name of Indian fire. Notwithstanding the general mountainous character of Daghestan it comprises many valleys and level tracts of great fertility. Its climate is various—on the plains it is warm and unwholesome on the slopes of the mountains it is more temperate and healthy but still more decidedly so on the higher elevations. Agriculture is carefully attended to, and good crops of grain are produced also silk cotton madder flax saffron and tobacco. The vegetables and domestic animals are nearly the same with those of Europe. The wild animals are tigers panthers, camels and buffaloes. The population is composed chiefly of Tartars, or of races of Tartars of gent, and of various Caucasian tribes. Those occupying the towns and plains are of middle size strong and active those inhabiting the mountains are a taller race. They are brave and hospitable but revengeful given to falsehood theft, and intrigue and noisy and boisterous in their convivialities. They are careful agriculturists and industrious shepherds, taking sturgeon and turtle in such quantities as to form a considerable export trade to Persia and Russia. Their religion is Mahomedan and their language dialects of the Tartar tongue, mixed with Armenian Persian and Hebrew. Chief towns—Derbent, Farkh, Nimbah, and Kuba. Pop. estimated at 950,000.

DAGLINGWORTH par. Eng. Gloucester 1884 ac.

Pop. 520.

DAGMLER-SHI LEN or **DAMCHENKUN** a vil. and par. Switzerland can. of and 18 m. N.W. Luzern, r. bank, Wigger. It contains a large new church and a handsome paragon and school and has a considerable transit trade, and important annual fairs. Pop. 1828.

DAGÖE or **DAGMAN** an isl. in the Baltic, belonging to Russia, gov. Revel or Esthonia, S.W. the entrance of the Gulf of Finland and opposite to the island of Gothland, from which it is separated by the Hela Sund, between lat. 60° 41' and 60° 8' N. and lon. 23° 10' and 23° E. greatest length E. to W. 34 m. greatest breadth 15 m. The soil, chiefly sand and chalk, is not fertile and the cattle though the pasture seems good, are of an inferior stunted breed. There is a

100

considerable extent of forest, in which game abounds and the fishing including that of seals, is productive. Pop. almost all Swedes about 11,000.

DAHA a market in Bavaria, circle Pfalz, L. bank
Lauter 20 m. S. Kaiserslautern. It contains two châteaux
and the ruins of an old castle and has three mills. 1 1900

PAHAN, or MUSA DAHAN (Golden Port) Arabia, peninsula of S. on W. coast of the Gulf of Akaba lat. 28° 28' N. lon. 34° 57' E. There is here an extensive date grove which is uninhabited during the fruit season.

ALAILI a large vil. Arabia, Yemen, 50 m. S.S.E. Lohela contains a mosque, and the tombs of a Saint. The inhabitants make bricks, tan leather and manufacture indigo—blue being a fash. one to colour throughout Yemen.

DAHLF, two places, Germany.—1 A tu Prussia gov
of and 14 m. W 9 R Düsseldorf. It contains a R Catholic
parish church and has manufactures of silk velvet and linen
a trade in linen and flax and three annual fairs. Pop. 1300

A Saxony circle of 94 m. h. Leipzig, on the Dahlenwasser over which there is an old bridge. It contains a castle and an hospital and has a fishpond several miles, and three annual fairs. Dahlen is a station on the railway from Leipzig to Dresden 101, 1849, 245"

DAHME a river Prussia, gov Potsdam 44 m N. Berlin, on a river of same name. It is surrounded by a wall and forms the east of a provincial and town court contains a castle and church. It has manufactures of w. linen and linen cloth a tobacco factory a trade in cattle and four annual fairs. 1 sea. 756.

DAHMME, a kingdom of W. Africa, on the coast of Guinea (esp. Abomey). Its boundaries are not well ascertained, being liable to extension or abatement with the power or weakness of its sovereign. At present it appears to occupy the space between b. and n. 6° lat. and 3° 30' to 4° 15' long. or includes in its territory the Malée territory. It is recently conquered by the Kingdom of Benin. The king seems to be a chief of the Kikay, and even the Kikay kings seem to be under limited viceroyalty to the riverine Zoa. A Lagos boat, b. 18° 10' N. but the present arrangement is 1840 appears to have extended his influence and power considerably beyond this point—the first contact in contact was experienced by Mr. Denham the late African traveller in the recognition of his authority. A war at Zafra, in lat. 18° 58' N. and 10° 15' E. was fought in the dominions of another and more friendly kingdom.

The country appears to be in general a remote fertile and well watered one, especially in the north where the soil is rich and the climate is healthy. The country is well cultivated, particularly in the north, there are some of the highest rice plantations in the world, the rice is of a high quality and is much valued. The country is well watered, particularly in the north, there are some of the highest rice plantations in the world, the rice is of a high quality and is much valued. The country is well watered, particularly in the north, there are some of the highest rice plantations in the world, the rice is of a high quality and is much valued.

rice, yams, and the numerous other crops that grow into meat and oil. The most important principle article of food is *to*. *To* crops of corn are raised in the hills and of a smaller sort of rice on four or five islands in the bay. *Manuring*, drawing and the drilling of rice are all understood and practiced at remote places in the interior. On the country loam some of the beauty and fertility for which it is distinguished on the coast. *Enslavement* and trade goods alternating with large expanses of grayish reds and fields of corn, form the leading features of the interior, influenced by the frequent occurrence of towns and villages, picturesque in contrast with the beautiful scenery. After leaving the town of Ahimoy (about 50 m. from the coast), says M. F. Nixon, the path passes through beautifully cultivated fields of corn, of various sorts, as well as many kinds of low- and past. Many sorts of ground beans are also much cultivated here, some of the size and shape of a large

marble, and of a delicious flavour commonly used by the natives in soups and stews as well as separately. This scene was truly beautiful—the corn field six feet high, with beautiful white and red flowers about a foot in height as numerous, that, at a little distance the ground appeared a continuous bed of flowers.

Dahomey though generally level or but slightly and gradually rising from the coast, has yet several pretty extensive mountain ranges and hill tracts, formed in all believed by effects of the Kong Mountains. About 10 or 14 m. N. of Abomey—in lat 7° 30' N. lon 5° 35' E.—a low range of hills runs W to N E and here the country is broken up into romantic glens and valleys, overhung with trees, and resplendent with the music of waterfalls. Beyond this mountain range wooded borders upon the river bearing S. N. E. and about 800 ft high with here and there immense blocks of granite showing their crowns above some of the tallest trees.

[illegible]

Although springs and rivers are numerous in the interior and the mountains on the whole, wild waters there are no rivers of any magnitude. One of the largest is the *Yon*, which is only 40 yds wide, and (it deep, at this point where we were) 10 ft deep. It flows in about 15° N. and this was in the rainy season when it had of course attained its greatest volume. The banks, however, are extremely deep (30 ft) and wooded with trees of *gymnoc. alm.* This river discharges itself into the *Bay of Hannu* in about lat. 6° 26' N. lon 3° 21' E. and may be considered as bounding the kingdom on the N. and the *Yin* on the W. Between the river *Yon*, the *Lago*, and lat. 8° N. Mr. Duncan has laid down a line 8 or 10 different rivers or streams, all apparently flowing N.W. to S.E. but has given in particular account of them except in one or two instances. Small mannaes are of frequent occurrence throughout the country and, occasionally extensive swamps are met with—some of them many miles in breadth and impassable in the wet season.

In Bhadrachalam the temperature is not so high as in the plains. The abundance and luxuriance of the vegetable productions of the Deccan are evidence of the singular fertility of the soil. The most trees attain the most gigantic dimensions, and are interspersed with fruit trees of various kinds, including the tamarind, of which there are two different species, a yellow fig and damson, both of pleasant flavour, casahuate, kalis, and ground nuts, the shes butter-tree, from the nuts of which an unctuous substance, resembling butter is extracted. Green grapes are also plentiful. The coconuts and palms of various kinds, abound on the coast. The rocks and trees are furnished with beautiful parasitical plants, and the climate and fountains fill the air with their delightful odour.

The wild animals of Dehagany are of the same kind as those met with throughout W Africa, consisting of Monkeys, hyenas, panthers, deer &c—the last of a large size, the former all of the most formidable description, being extremely strong and powerful. Monkeys also abound and elephants

are met with in the vicinity of the swamps in the interior. Alligators and hippopotamuses are numerous in the rivers, to wards the coast. Snakes are also numerous, especially about Wydah as are also lizards of various kinds. Bats, constituting, of enormous size, are met with in the interior. Insects, in great variety abound—amongst them a description of ant offensive small. Swarms of locusts are also met with. Birds are numerous and large—the Wydah, vulture-like measuring from 33 to 36 in. between the tips of the wings, they roost on trees branching by the hinder claws, with their head downwards. Birds of beautiful plumage are met with in great numbers as are also Guinea fowl, the common and Muscovy duck, cranes and pigeons. The cranes are very large, with white breasts the pigeons are finely variegated with green yellow and blue. Vultures and eagles also abound as do likewise partridges, and other game cranes and pelicans.

The domestic animals are oxen, generally of small size all sheep, goats, and swine—the last of a superior description. Horses are not bred here, and few of the natives ever saw one. A few have been sent to the king as presents. They are approached with timidity and the rider is invariably held on the animal's back by two men who walk on either side.

The rivers abound with fish and the banks with land tortoises both of which are taken in great numbers by the natives. The sea coast is so crowded with sharks as to render it almost dangerous to go into the water.

The general condition of the people under the present King of Dahomey who seems to have effected an extensive and beneficial reform moral social and political in his kingdom appears to be prosperous and happy. The towns and villages, many of them large and populous are crowded with a busy and cheerful population. Their markets are abundantly supplied with provisions, fruits and vegetables and the surrounding districts yield copious harvests with very little labour and where this little is required it does not seem wanting, nor the necessary skill in its application. At a great distance inland Mr. Duncan found the land beautifully cultivated along the foot of the mountains and the drilling system in operation with all sorts of grain as well as with the sweet potato. Many of the more wealthy natives own numerous herds of cattle which they keep in folds or pens, preserving their dung for manure. They are excellent farmers, says Mr. Duncan, even in this remote part (Ivawe, about lat. 8° 0' N. lon. 2° 30' E.) where they never can have had intercourse with any civilized being. Their agricultural implements too are well adapted to their purposes and much superior to those manufactured nearer the coast. The Dahomans manufacture a very good cotton cloth, though by a tedious process the thread being spun by the distaff, and the loom being of a very simple construction, though on the same principle as the looms of England. Instead of using the shuttle, of which they have no knowledge, in putting in the warp, they merely hand the reel through the shed from one side to the other. The web seldom exceeds 6 inches in breadth and is variously coloured in stripes. In many places men are wrought with considerable dexterity and skill into various useful articles. Almost every town and village has a market place, generally an open space shaded with trees, in which on certain days of the week, besides provisions, cloth, both native and foreign the latter including English kerchiefs, are exposed for sale.

The people of Dahomey both males and females, are generally tall well formed and intelligent, and although a disposition to theft forms a prominent feature of the African character singularly honest. It is however not unworthy of remark, that the Dahomans character improves with increase of distance from the coast. In other words, from the influence of civilization. Although it may be asserted, and perhaps with truth that this civilization is of the most corrupt and impure kind its only result being to deprive the African of his native simplicity and to put a vicious knowledge in its stead.

The females are remarkable for chastity although polygamy is permitted to any extent. The Dahomans are all Pagans, and worship fetish, but do not seem to be at all rigid as to religious faith, there being a number of Dahomans in their armies, whose religious opinions are in no way interfered with. They are generally temperate are excellent cooks, and, ac-

cording to Mr. Duncan make a number of very savoury dishes.

The sovereign power is absolute, extending to an entire control over the lives and properties of the people who invest their king with the attributes of deity believing him to be superior to all human wants and infirmities. Thus when he drinks in public his attendants hold handkerchiefs before him that none may witness such act of mortal imperfection. In place of respecting his decrees, however sanguinary his subjects rejoice in their execution and themselves voluntarily favoured by being called upon, or permitted to sacrifice their lives to his pleasure. The possession of this extraordinary power and influence by a barbarous prince combined with the gross ignorance and superstition of his people led to the perpetration of the most fearful atrocities, wholesale murders forming the principal and most acceptable part of all state and religious ceremonies. The numbers sacrificed on these occasions is now greatly diminished, there having been 32 only put to death in 1849 and there is reason to believe that most of these, if not all were criminals. Formerly many hundreds used to be sacrificed at the Customs, as such sacrifices were called on all occasions of any official act. The present sovereign has also revised and ameliorated the criminal and petty laws of his kingdom has established a court of appeal at Abomey where he chiefly resides, in which the sentences of provincial authorities are reconsidered at the desire of the condemned party, and it often happens that persons who have been doomed to death, under unjust accusations, have been acquitted on this second trial at which the king himself always presides as judge. In all cases of putting to death, the sovereign's sanction is necessary while formerly the chief provincial authorities could inflict that punishment with out either his knowledge or concurrence. Even in war his humanity and justice and, it may be added his policy are conspicuous. When a town surrenders without resistance he allows the inhabitants to preserve their villages un molested and reduces the duties on the goods to the Dahoman scale. Having secured his authority he, after a time furnishes his soldiers with arms, and by his justice and liberality converts them from enemies to faithful allies.

The King of Dahomey commands the whole of the European trade from the coast, and a principal part of his revenue is derived from duties on the palm oil and ivory exported and on the slaves shipped from his kingdom. He also levies a capitation tax which is regulated in amount by the rank and income of the party taxed and on all goods exposed to sale in the market a heavy custom is exorable the headman or chief constable making the round of the market-place daily to collect it.

One of the most extraordinary manifestations of barbarian spirit and sentiment in this country is exhibited in the king's female army consisting of from 5000 to 8000 women, formed into regiments, and armed with long Danish muskets short swords, and dubs. Their clothing consists of a blue and white striped cotton surcoat, the stripes about 1½ inches wide of stout, native manufacture, without sleeves, leaving freedom for the arms. The skirt or tunic reaches as low as the knee of the Highlander. A pair of short trousers is worn underneath, reaching 2 inches below the knee. They are commanded by female officers, the most distinguished of whom, at the time of Mr. Duncan's visit, was called Adahome whose warlike exploits had recommended her to the special favour of the king. She was says the African traveller a tall, thin woman, about 72 years of age good looking for a black, and mild and unassuming in appearance. These Amazons use their muskets with perfect ease, are singly with great precision, and go through their evolutions, such as they are with much energy and alacrity; but know nothing of the compact and manœuvring movements of disciplined troops. Their attack like a pack of hounds, and would be useless against disciplined troops, if at all approaching to the same numbers. Still their appearance is more martial than the generality of the men and if undertaking a campaign I should prefer the female to the male soldiers of this country.—(Duncan.)

The King of Dahomey has always expressed the utmost anxiety to form friendly alliance with the British Government but it has been found impossible to prevail upon him to abandon the slave trade, from which he derives a large and immediate revenue, 9080 being annually shipped from his

Kingdom. Pop. estimated (1890) at 200,000 of which not more than 20,000 are free. — *Danmark's Travels in Western Africa in 1845-6* Forbes Dancy and the *Dahomans*, 1851 Part I, p. 1.

DAHLI par Secor Ave 7 m br 6 m. Pop. 2413

DAIMAA or **ARANDIA** a river Banda Oriental, an affluent of the rugged river in a mountainous district in the centre of the state and flowing north-west W. falls into the Laguna at lat 31° 25' S. its whole course being about 110 m.

DAIMIEL, in Spain New Castle prov. of and 90 m N. E. Ciudad Real 1 bank. *Asensio*. The majority of the houses are tolerably well built, and form numerous streets, of which many are wide and clean though unpaved but others are mean, narrow and dirty. The town has four squares, the principal of which is hedged with substantial edifices, adorned with porticoes and balconies the remaining three are small and irregularly constructed but two of them are planted with white poplars. It has two parish churches, Santa Maria and San Pedro the former a spacious (the other structure possesses three naves and a lofty tower the latter is in the Dome style with an nave and a square tower of stone its interior is highly decorated and contains a magnificent reliquary. In other public buildings comprise four chapels, two convents, several schools, a townhall, prison, hospital, and cemetery. In the environs are a variety of agreeable public walks and gardens. Linen and woollen fabrics, blonde lace, wine, and oil are manufactured and considerable trade in grain, cattle, wine, wool and colonial produce, is carried on with Madrid and Valencia. The commercial importance and population of Damiel have been greatly augmented during the last few years. 1 p. 1553. — *Mad.*

DAINA or **DANA** — *Mad.* — a river of and 20 m W. Aleppo supposed to be the ancient *Pamir* or *Lemus*. It is said to have been a place of some consideration, from the antiquities remaining many sepulchral monuments are cut into the rock, among which is a very fine monument with some Christian Greek inscriptions on it although the style of its architecture would indicate a date as recent as the date of Christianity.

DAIKI KAWAR, in Turkey is Asia, Syria, and cap. of the Dimes, on a slope of Mount Lebanon 1 m N. E. Beyrut. It is a succession, except by two narrow paths and is composed of two distinct quarters, the *Lema* and the *Christians*. It contains a Maronite convent, several churches, and a mosque and is the seat of an American Protestant mission and school. The only remarkable public buildings are the *kaiserey*, a large *khan* and the old *casas* of the Emir of Lebanon a palace with several court yards. The handsome houses in the town are those which were once inhabited by the Greek Catholics dispersed abroad by the recent troubles of the country. The place was once flourishing and the seat of some manufactures among others, that of gold and scarlet cloth but it exists no longer. Pop. estimated at 20,000. — (*Journal de Reports, Constantinople* 1849) 1 p. 1553. — *Mad.*

DALHUS a in Spain Andalusia prov. of and 30 m W. S. W. Almeria 4 m from the Mediterranean. Its streets are generally irregular, badly constructed and with its aspect unimproved. It has three squares, one containing the town and court houses two fountains, and the foundations of a long-contemplated new church. Up to 1804 there were here two parish churches, one in the town the other in the hamlet of *Cosun* both however were nearly destroyed by an earthquake in that year and although the first stones of the above named new church were laid in 1817 no superstructure has yet been erected upon them. The other public buildings comprise four chapels, two schools, a prison, two storehouses, and an extramural cemetery. The employment of the working classes is mining and smelting of metals, chiefly lead and antimony produced in the *sierra de Gador* and other neighbouring mountains. The remaining inhabitants are occupied in husbandry and fishing. Near the town on the sea-side, are some mineral baths, much frequented in the season. Pop. 9000. — (*Madon*).

DALINTOBER, a vil. Scotland co. Argyll, dist. Kintyre about 1 m N. W. Campbellton, of which it is a suburb. The inhabitants are chiefly employed in the fisheries. P. 1762

DALKEITH a tn. Scotland co. of, and 6 m S. E. Edinburgh, a station on the Edinburgh and Harwick branch of the N. British Railway. It is beautifully situated on an acclivity between the N. and S. E. Eddis, the banks of which are covered with wood and adorned with numerous elegant mansions, occupied by families of rank. It has one principal

street, about two-thirds of a mile long, E to W straight wide, and well paved and several other smaller streets, also respectable and well kept. Houses in general regular and handsome, built of stone. A ample supply of excellent water well lighted with gas. Within the last few years, considerable improvement has been made on the town, which is rapidly extending W along the line of the N. British Railway. The old parish church is a venerable Gothic structure of the 16th century with a spire of more modern date, 105 ft high. Attached to its S. end are the remains of an old edifice, dating it is said, from the 8th century and now used as the intermediate vault of the Bueloch family. The new parish church is an elegant building also in the Gothic style, with a spire about 170 ft high. It was erected in 1840 by the Duke of Buccleuch, but has never been used except as a Sabbath school. A beautiful Episcopal chapel was erected by the Duchess of Buccleuch in 1845. There are also a Free, and three U. Presbyterian churches, a Congregational and a Wesleyan Methodist. Dalketh has a grammar school an academy in connection with the Free and other dissenting congregations, with a female and infant school attached. A Seasonal an Episcopal and the Bueloch school with an infant school attached with several private educational establishments. It has two public libraries several adult and literary associations, numerous friendly and charitable societies a large handsome workhouse a court-house where a Justice of the peace court is held weekly four branch banks and a savings bank. In the town and vicinity there are distilleries and corn mills a woollen factory a brewery a snuff mill three candle-works three iron foundries, two tanneries several very extensive collieries, &c. But the prosperity of Dalketh depends almost entirely on its gram market, held every Thursday and considered the most important in Scotland. There is also an extensive meat market every Monday and two annual fairs are held in May and October for horses and cattle. In the neighborhood are Dalketh palace, the residence of the Duke of Buccleuch Newbliston abbey &c. Area of par. 5 sq. m. Pop. (1851) 6521.

DALKLY a vil and market town, Ireland co. of and 8 m. S.E. Dublin, beautifully situated at the foot of a hill 474 ft high from the summit of which a fine view of Dublin bay is obtained. It is irregularly built, and consists of cabins and villas intermingled. It was a place of considerable importance in the 14th century but has had a charter of incorporation at that period from Edward III. In the 15th century fairs and markets were established here, for the encouragement of foreigners who frequented the place in great numbers, and carried on an extensive trade with the inhabitants. Seven strong castles were erected for the protection of the port the remains of three of which are still in existence. Towards the close of the 17th century the trade of Dalkly began to fall off and continued to decline till it became the most insignificant village it now is. Opposite the village is Dalkey Island, separated from the mainland by a channel between 200 and 300 yds wide called Dalkey Sound, which formed the principal anchorage-ground in former times for the vessels frequenting the port. The island contains about 30 ac. Its only inhabitants are a few artillerymen, in charge of a small battery. Previous to the year 1795, it was the scene annually of certain singular convivialities. In the month of June of each year a mock king of Dalkey, with various officers of state, was chosen, and the proceedings duly recorded in a newspaper called the *Dalkey Gazette*. Thousands of people from Dublin used to repair to the island to witness the ceremonies on these occasions. Dalkey is connected with Dublin through Kingstown, by railway the portion to Kingstown being the only atmospheric railway in the United Kingdom. Area of par. 407 ac. Pop. 2382.

DALLA, a ta. Burnah, prov. of Fagu on a river of same name 50 m. S.W. Haogoon. The inhabitants are chiefly employed in the manufacture of salt and the salting of fish, which they send into the interior of the empire.

DALLAN, a ta. Baden, cant. Unterwalden. It contains two parish churches and a small castle and has tile-works and several mills. Pop. 1167.

DALLAS, par. Scot. Elgin. 50 sq. m. Pop. (1851) 1228.

DALLY a vil. and par. Sweden, 114 of and 15 m. N.N.E. Malmö. It contains a royal residence, formerly a monastery and was once the see of a bishop. The church

which is ancient, has a crypt and in the churchyard the Danish king, Harald Han, is buried.

DALLYA or **DALSA**, a market town Austria Solovonska co. Verona, on the Danubio, 18 m. E. S.E. Ezer. It contains a R. Catholic, and two Greek non-united churches. The district around is cattle raising much corn and rearing many cattle but the chief employment is fishing, including that of the sturgeon. Pop. 8490.

DALMAGHERY a ta. B. Hindooistan, prov. Mysore, 100 m. N.W. Madras lat. 18° 45' N lon 75° 2' E. It gives its name to a well known pass in the adjoining mountains.

DALMALLY a vil. Scotland co. Argyle 16 m. N.E. Inverary picturesque situation on the Orkney near the N. end of Loch Awe. A little E of it is the famous wall of St. Conan.

DALMATIA (*Kingdom of*) [Serbian *Kraljevina Dalmacija*] a prov. of Austria comprising the ancient kingdom of Dalmatia, Croatia, Slavonia, and the town and territory of Fiume—the latter three of which were formerly comprised in the kingdom of Hungary, from which they were separated by the constitution of March 4 1849. The following article refers only to the first division the others will be found noticed under their respective heads.

The kingdom of Dalmatia is a maritime province, and the most S. portion of the Austrian dominions. It consists of a long narrow tract of mountainous country and a number of large islands along the N.E. coast of the Adriatic Sea, and bounded, N. by Croatia, and N. E. by Turkey. It extends from about lat. 42° 9' N. or 23 m. S.E. Ostria to lat. 44° 27' N. about 19 m. N. from the cap. where it is joined by Croatia. In breadth it is very limited not exceeding 40 m. in a y part and at the narrowest, near Ragusa about 2 m. its whole area, 2718 sq. m. The surface is much varied a ridge of limestone mountains separates the N. portion from Turkey and another range nearly parallel with the coast, sterile, and destitute of soil. The highest peaks are—Orjen 6538 ft. Diavon, 6040 ft. and Furvero 5920 ft. and the largest and highest part of the S. range is that of Yelichko, to the N.E. of Zara, which is 5430 ft. On the coast range occur the peaks of Mount Mosor 4454 ft. and S.E. Motun Boouvo 5639 ft. The inland parts of Dalmatia are diversified by undulatory ground hills, and low mountains—many of the latter having the same rugged barren aspect as those of the coast others, again, are partially covered with low wood. There are also several extensive and unwholesome marshes in various parts of the country causing deadly fevers in hot weather. The soil though not rich is good, and the produce as a whole suffices for the limited population of the country, but altogether it cannot be otherwise considered than as a poor unproductive territory though not without some rich and beautiful valleys but these are generally very narrow. It has few rivers and all with short courses. The principal are—the Neretva, in the S. having a depth of water sufficient to admit large steamers the Zernaia, Krka, and Cetina. On some of these rivers the Sclavians singularly wild and picturesque. The Krka has several magnificent cascades and on the Cetina there are two from 90 ft. to upwards of 100 ft. high. There are also numerous small lakes, but most of them become dry in hot weather. The waters of many of the Dalmatian streams have a petrifying quality and cover the rocks over which they flow with a coarse stalagmitic deposit. The country is not rich in metals, although in ancient times, it produced large quantities of gold, but iron and coal are wrought—the latter in the district of Dornie where there are several mines, but is not used so extensively as it ought to be. The quality is said to be inferior.

The coast is indented with numerous harbours and bays, the principal of which are Cattaro Sebenico and Ragusa. A vast number of islands also, of all dimensions, stretch along and parallel to, the shore. The largest are Arbe Pago Isola Crozza, Braza, Lissa, Curzola, Lame, Malota, &c. Most of these islands are mountainous and present the same general aspect as continental Dalmatia but are valuable for their productions such as timber wine, oil, cheese honey salt, and asphalt and in several of them shipbuilding is carried on to a considerable extent. In summer the prevalent wind on the coast is the mistral or N.W. wind which moderates the excessive heat of the season. The climate of Dalmatia, generally,

is warmer than in any other part of the Austrian dominions; and in spring the African acroscia occasionally fold, but not in the same extent as in Sicily or Greece. Frost and snow rarely occur in the lower districts and are of but short duration in the mountains. Timber is extensively scarce in the country rice is firewood abundant but none of the islands produce it; use and brushwood in great quantities—particularly "urculo whimb, in former times, furnished the Venetian arsenal with timber and has still the greatest quantity of wood in this part of the Adriatic.

Agriculture is in an extremely backward state but it is said that the peasantry require only proper instructions in directing their labour to remedy this evil. At present, the greatest proportion of available land is in pasture the next in wood, and then arable land and vineyards. The following are some of these vineyards. —

	area		area
Arable	575.89	Orchards	1.940
Meadows	17.403	Pastures	1,086.87
Gardens	5.71	Wood	696.04
Yards	11.89		

the reefs. It is rich and commodious for wooding, watering, and refitting ships.—8 An Isl Torres Strait, between Australia and Papua, and called by the natives Damood. It is in lat. 9° 57' S lon. 148° 21' E. (n.) and consists chiefly of coral but is tolerably well peopled, and produces coconuts, yams, some leguminous plants, &c. The huts of the natives are constructed with remarkable neatness.—4 A port, Van Diemen's Land, mouth of the Tamar River lat. 41° 5' S. lon. 148° 42' E.

DALSERF a river and vil Scotland co Lanark 7819 ac. The village, 15 m. S.E. Glasgow is beautifully situated on the Clyde, and surrounded with orchards. It has a neat and clean and most picturesque appearance, and contains the parish school and a school. Pop. 2868.

DALSTON par Eng Cumberland 10 890 ac Pop. 2844

DALTON a small market in England, co of and 16 m. W. N. W. Lancaster pleasantly situated on a gentle declivity. It consists principally of one street, at the extremity of which is a spacious market place. It has communication with the sea by a canal 3 m. in length capable of bringing vessels of considerable size up to the town. The staple trade of the place is mulling grain. There are also extensive iron works in the vicinity. At a short distance from the town are the ruins of the magnificent abbey of Furness, founded in 1127 by Stephen, afterwards King of England, for monks of the Cistercian order. Fair is held here on June 8 for horned cattle and October 3 for cattle, horses, and poultry. Market on Saturday. Bonny the celebrated jockey was born here in 1784. The Furness Railway has a station at Dalton P. n. 800.

DALTON in Furness, par Eng Lancaster 15 364 ac. Pop. 4683

DALTON in DALE, a par and vil England co Durham 4281 ac. The village 9 m. E. N. Durham lies in a deep narrow valley and about 1½ m. from the sea. Agriculture mining and quarrying employ the inhabitants. Pop. 5125

DAM (LEM) name by which Apungedorn is generally known among the country people of Franzland. See APUNGEDORN.

DAMACON BAY W Africa. See KANTYRAC.

DAMAK, a tn Java. See DEMAK.

DAMALA a vil Greece in the Morea, near the Gulf of Egina, and 38 m. S.W. Athens. It contains between 40 and 50 houses. The water in bad and the climate very unhealthy in the environs are numerous ruins supposed by d Anville to be those of Troezen.

DAMANHUR, or **DAMANHOOR**, a tn Lower Egypt, 16 m. S. the Lake Marcotis and 37 m. E. by S Alexandria lat. 31° 2' N lon. 30° 31' E. It is large but ill built, and although it carries on a considerable trade in cotton is a very poor place.

DAMAR, or **DEMAR**, a tn Arabia Yemen 120 m. N by W Aden agreeably situated on a mountain. It has a castle where the Governor resides a college for the sect of Zaidi attended by several hundred students. It was once the seat of the Himyarites, and has about 5000 well built houses.

DAMARAN or **DUMARAN**, one of the Philippine islands off the N.E. coast of Ialawan. It is of a triangular form and about 45 m. in circumference lat. 10° 30' N lon. 120° E.

DAMARAB, a coast country of S.W. Africa, lying between lat. 21° and 24° S. and of which nothing was known except by report till visited by Captain Alexander in 1856.

The country so far as it was seen by that traveller is described as being very fertile consisting of wide plains covered with herbage, broad and grassy slopes at the foot of hills, and mountains rising to an elevation of some thousand feet, some of a tabular shape and others with remarkably sharp and rugged profiles. Copper would appear to abound, the natives manufacturing it into rings. The temperature of the climate is exceedingly various and fluctuating the thermometer being at 40° in the morning and generally rising to

60° at noon. Wild beasts are numerous, including lions, rhinoceroses, white and black and others. On the plains vast herds of cattle are reared. The natives are divided into two great and distinct nations the Damaras of the plains, and the Damaras of the hills, the former rear cattle, the latter subsist by hunting and on roots. Both are of the negro race, being black with woolly hair small round noses and thick lips. The Damaras of the plains from their superior living are much more robust than those of the hills they are circumcised and extract the two front teeth of the lower jaw they are almost entirely naked men and women wearing only a sort of skin kilt about the waist and reaching to the knees; their arms are bows and arrows a club and a stabling assegai, or javelin composed entirely of iron—shaft and blade; they speak a language peculiar to themselves. The huts of the Damaras of the plains are of a conical form the stakes wattled, plastered with clay and covered with hides. If a Damara of the hills generally wear a short mantle of deer skin on their shoulders, and about their waste many strips of leather behind and before that belted containing a large pocket for roots they are armed with bow arrow and assegai and speak the clicking Namaqua language. The Damaras carry on an extensive trade in cattle with the Americans, chiefly at Walvisch Bay on the coast of Damara.

DAMASCUS, a large path. Asiatic Turkey comprehending nearly the whole of the E part of Syria. It is bounded N. by pashaliks Aleppo, L. by the Euphrates, S. by Arabia, and E. by pashaliks Tripoli and Acre. Its surface is various, as are also its soil and productions. The first presents a series of mountains, valleys, and plains, in alternate succession. Some of the plains are extremely fertile, producing wheat barley Indian millet sesamum cotton hemp flax mulberry tobacco &c. while the high grounds are generally appropriated to the olive mulberry and other fruit trees. It is divided into 20 districts or governorships and has eight cities and towns, with 122 villages. It is considered the most important pashalik in the Turkish empire, and its Pasha one of the principal dignitaries of the Ottoman court. Pop. 620 812.

DAMASCUS [Arab. Dimashq] a celebrated city Asiatic Turkey Syria, cap. above path. hostilities strictly on a plain at the E. base of the Anti Lebanon range about 180 m. S. by W Aleppo, lat. 33° 27' N lon. 36° 26' E. supposed to be the most ancient city in the world. It is 6 m. in circumference, and is surrounded by a dilapidated wall its appearance when it first opens on the view has been spoken of by all travellers, in all ages, in the most rapturous terms. It is said of Mahomet, that, when he looked to it, he exclaimed that as man could have but one Paradise below he would not enter it; but I should have named it above. Strabo also speaks of it in the most eulogistic terms and Julian calls it the great and sacred Damascus surpassing every city both in the beauty of its temples and the magnitude of its shrines as well as the timeliness of its seasons the impetuosity of its fountains, the volume of its waters and the richness of its soil. Addison describes the view of the city as one of the most magnificent prospects in the world. Leonardus speaks of it in the same enthusiastic language and Lord Lindsay likens it, with its picturesque minarets, to a fleet sailing through a sea of verdure. The plan on which the city stands is of great extent and extraordinary fertility and is covered with the most beautiful gardens and orchards, irrigated by the impetuous waters of the Barrada, forming a waving grove, of more than 20 m. in extent, rich in the most luxuriant foliage and the finest fruits including oranges lemons, citrons, pomegranates, mulberries figs plums walnuts, pears apples and a variety of others. As however is the case in nearly all eastern cities the interior of Damascus by no means corresponds with the exquisite beauty of its environs. The streets are narrow and have many of them a gloomy and dilapidated appearance they are paved with basalt, generally in three divisions—that in the middle devoted to cattle and riders being the lowest, and of the same size as the other two. In the Armenian quarter the houses are built with mud and pierced towards the street by a very few small grated windows, with red painted shutters. They are low, with flat arched doors resembling those of stables, while a dingy and pool of putrid water almost invariably stand before each door. In many of them, however a singular contrast is presented between the dull prison-like outer walls

of gray mud, and the richness within. Interiorly they are of a quadrangular form, enclosing a court paved with marble, ornamented with beautiful trees and flowering bushes, and having copious fountains playing in the center. The lower rooms on each side of the court are raised above its area, and open in front—their roofs and walls highly ornamented with figures of flowers and inscriptions, and a variety of arabesque devices. The furniture, also, is of the most splendid description, consisting of superb Persian or Bagdad carpets, which entirely cover the marble or cedar floor and of numerous cushions and mattresses spread in the middle of the saloons, for the members of the family to sit upon or lean against. The ornaments alone of many of these saloons are said to cost 1,100 sterling.

The best and wealthiest part of the city is what is called the Moslem quarter where the streets are wider and cleaner the houses higher and better built and the supply of water much more abundant than in any other part of the town. The Christian and Jewish quarters are the most miserable. Amongst the places most worthy of notice in Damascus are the bazars. They are merely long streets—the principal one about 1½ m. in length—covered in with high wood work and lined with shops, stalls, mazzenas, and *cafés*. The shops are narrow and go only a short way back and the merchant is often sitting in a stall outside his shop, his customer, which, in the former case, he does by a long stretch of the hand, without making any attempt to rise. There is a separate bazaar for almost every commodity exposed to sale: all of them are paralleled by unnumbered confectioners and dealers in seeds and cooked herbs. In the midst of the bazars stands the Great Khan, said to be one of the most magnificent structures of the kind in the East. It is an immense cupola supported on granite pillars and built in part, of alternate layers of black and white marble. Its gate is one of the finest specimens of Syrian architecture to be seen in the world. This Khan is frequented by the great merchants and in this building and in 30 inferior khans, purchases and sales are conducted by the merchants, who have their counting-ouses near them. The principal mosque is also a fine edifice and was originally a Christian cathedral. There are three Latin monasteries in Damascus—those of the Franciscans, Capuchins, and Jesuits. The first of these has an extensive library containing a large number of works in Arabic and Syriac in print and in manuscript and a considerable number of grammars and dictionaries in various tongues. There is also a school for boys attached to the Franciscan convent, in which the former are instructed in Arabic and Latin. The principal Catholic church is also part of the monastic buildings; there are besides, a number of detached churches belonging to different sects in various parts of the city. Besides the more remarkable architectural objects mentioned there are no extensive gardens and a sort of palace in which the pasha resides. The most interesting locality in the city is, perhaps what is called Straight Street, mentioned in connection with the conversion of the Apostle Paul in the 9th chapter of the Acts of the Apostles.

It is the most important and spacious street in Damascus and one of its broadest. It is about 1½ m. in length, and runs from E. to W. The house of Judas also to which Annas went, is still pointed out as well as that of Ananias himself. How much credulity may have had to do with fixing on and perpetuating the recollection of these localities, says Kitto, it is probably easier to suspect than to ascertain.

Damascus continues to be the most thoroughly oriental city in all its features and characteristics, in its buildings and in the habits, manners and appearance of its people, of any city in existence. How strange, how oriental, how unlike I to go to everything here, says Mr. Graham, no broad streets, no wheeled carriages, no temples, shops, no glass windows, silver and gaudy the eyes. But see, there is a caravan load, with his black slaves, carrying his pipes, and a few obedient to their master, there goes the Persian with his great pyramidal cap, to remind you at once of Cyrus, to work history in a year and out of his days. See the broad Arab, the child of the desert, the crazy Greek, the mercantile Armenian, the degraded Egyptian, the lordly Turk, the crusader of Hyacinth, men from the ends of the earth—the hat, the turban, and the sea cap, and not only of all kinds, but of

all degrees, meet here, and mingle in strange confusion. The costume of the men on the streets is rich and varied. It is, however, almost all Syrian or Arabian, few Turkish habits being seen. The great turban shows the nobility of the E. the descendants of the prophet. When they intend to get intoxicated with wine, or violate any of the commandments of their prophet, they reverently lay the turban aside till the delirium is ended. The rich yellow turban marks the Moslems generally and until lately no other was permitted to wear them. The Jewish ladies of Damascus are remarkable for the grace and dignity of their manner and deportment, the delicacy and softness of their features, and the fine symmetry of their forms. They dress richly and are profusely adorned with ornaments of gold and pearls. Wilson in describing the interior of a wealthy Jew's residence in Damascus and the every day life of its inmates, says, The ladies themselves made a busy scene of it, trading along on their high pattens or calling to one another from one end of the quadrangles to the other. They seemed however to cultivate great kindness, as well as volubility of address, when summoning the attention of their companions. The simple names of Sarah, Rebekah, Miriam, and Esther fell like music on our ears and in the persons of those who wore them we saw the forms which our imagination associates with the Hebrew mothers and their daughters on whom they were first bestowed.

Damascus is the chief emporium of the trade in European manufactures with Bagdad, Basora, Persia, and the neighboring countries. It is also a place of great manufacturing industry. Traders and merchants arrive and depart with the caravans to and from Mecca once a year, and from Bagdad Mesopotamia and Persia, two or three times a year, to and from Aleppo twice a month, and from Beyrout weekly. It is one of the holy cities and here the pilgrims assemble on their journey to, and separate on their return from Mecca. The business classes in the city consist of Mahomedan, Christian, and Hebrew merchants. The latter are considered the most wealthy. The traders are the retailers of British goods and also the shopkeepers, grocers, and druggists. There are also a number of manufacturers of silk damasks, cotton and other fabrics, the looms for working which amount to 4000. There are lovelies, can cross cotton printing and dyeing establishments, tobacco factories, copper and iron foundries, glass works, soapworks, &c. The manufacture of Damascus blades, for which the city was once so celebrated no longer exists. Saddles and bridles, rich and highly finished, shoe-making work, and elegant jewellery are amongst the manufactures of Damascus. Until a very recent period no Christian could walk the streets of that city without incurring the risk of being insulted and probably maltreated, by its bigoted and fanatical population. This intense hatred of the Frank, however is now considerably abated although an ostentatious display on the streets of nationality in costume might still be attended with unpleasant consequences.

Of the origin of Damascus nothing certain is known. The building of it has been ascribed by all to Abraham and to his steward Eliezer of Damascus. There is however abundant evidence of its great antiquity being mentioned in Gen. xiv. 15 as existing 1913 years B.C., and appearing even then to have been a place of note. At subsequent periods it fell successively under the power of the Egyptians, Greeks, and Romans, attaining great eminence under the last. In 1516, it fell into the hands of the Turks, who retained it till 1831 when it was taken by Ibrahim Pasha, but reverted again to the Turks, when the Pasha of Egypt was compelled to evacuate Syria. It is the native place of the geographer and historian Abulfida Beyrout, distant about 58 m. N.W. is the seaport of Damascus. Pop. 111,559 of which 11,772 are Christians, and 5000 Jews. —Chamney's *Prophetic Expedition Jour. As. Geo. Soc.* 1840 to *Babylon* (Cyclopaedia Without Lands of the Bible, &c.) DAMAUN a seaport in Hindooostan, near Gujarat at the mouth of the Gulf of Cambay 100 m. N. Bombay lat. 20° 25' N. lon. 73° 54' E. It belongs to the Portuguese who conquered it in 1521, and have kept possession of it ever since. The town has a prepossessing appearance from the sea, the houses being generally whitewashed, but the streets are narrow and dirty. It has several churches and convents. Three miles off the shore there is anchorage in 8 fathoms, but small vessels find a secure harbour in the river. The commerce of the place is rapidly declining; but shipbuilding is still carried

on to a considerable extent, timber being obtained from the adjoining teak forests. Pop. about 8000.

DAMATIN or **DAMAT**, a dist. formerly in Afghanistan now included within the territory of the Punjab, comprising the tract of country between the Salt range on the N. the Soilmun Mountains on the W. the Indus on the E. and S. and the Upper Swat, on the S. about 220 m N. to S. by an average breadth of 80 m. It consists chiefly of bare arid plains, destitute of all vegetation except a few dwarfish bushes widely scattered, and occasional trees, of about 2 ft. in height beyond which they rarely rise. Where duly irrigated, however, these parched plains become very productive, as is seen in the district called Damat, on the W. bank of the Indus which is extremely fertile. Other portions of the country again, consist of tracts of loose iron-clayable sand. In its S. parts are extensive jungles, the resort of numerous wild animals. In the immediate vicinity of the villages the land is cultivated and rendered fruitful and many of them are surrounded with groves of date trees. The heat in summer is excessive both by day and night while in winter the thermometer is often some degrees below the freezing point. The people of Damat are chiefly Jats and Baluchis, dark complexioned and all farmers who live in a state of continual hostility with each other.

DAMBACH a village in France dep. Bas Rh. 6 m N. E. of Metz. It was once defended by a castle called the Chateau de Bernstein on a height just above it. It is still beset with a dilapidated wall and is entered by three gates. The houses are generally mean and the streets badly paved. Near this path leading to the castle is a chapel of St. Sebastian, which has a curious altar of wood, with fine carvings. Dambach has some linen weaving and vinegar-works. Pop. 3480.

DAMBACHAN a village of W. Africa, on the Senegal in the Damga country, lat. 16° 30' N. lon. 13° 30' W. It is inhabited by Saracenic negroes—a spirited race, who hold their own against the predatory Moors.

DAMIELLING LAKE a large salt-water lake of W. Australia, about 100 m S. by E. Bay of Plenty probably about lat. 33° 25' S. lon. 117° 30' E. It is the largest of several lakes in this territory about 15 m long by 7 or 8 m broad and allows many low islands of various and beautiful forms. On the N. and E. shores there is a good grassy country down to the lake, and in the surrounding hills, and extending over the hills or 3 m distance from it. The water is salt and the shores flat and muddy.

DAMBOOY or **DAMBOLD** a village in Ceylon 43 m N. W. Kandy and 70 m. N. E. Colombo. It lies at the junction of four lines of road leading respectively to Arippe and Mawar to Trincomalee to Kandy and to Kumbura and Ambepussa and has a considerable rest-house, and carries on some little traffic. It receives its name from a large mass of rock situated about a mile from the village and named Damboolligalla, which rises about 500 ft. above the level of the surrounding plain is of primitive formation being chiefly composed of gneiss and mica schist, and is, in many places, rapidly advancing to disintegration. The rock is shaped somewhat in the form of the hinder portion of a gigantic human skull and is, for the most part, destitute of vegetation. On the S. side and about 100 ft. from the summit

are some remarkable cave-temples devoted to the worship of Buddha partly natural and partly artificial. The caves which are reached by an easy ascent, are five in number and vary from 10 to 80 ft. in height, and stretch into the heart of the rock various distances from 15 to 150 ft.—the largest being 170 ft. long, by 76 ft. broad. In one of these caves is a lot of and interesting monuments showing considerable light on the state of the government of Ceylon in the 12th century and showing it to have then been in a condition far from contemptible. In another cave there is a colossal statue of Buddha, in a recumbent position, hewn out of the rock, and similar figures, though smaller are in some of the other caves. In all of them there are numerous carvings and images. These caves

Vol. I

a hundred years before the Christian era served as a place of refuge from invading Malabars to the Ceylonese monarch Walagambahu who, in gratitude for the protection thus received, ordered them to be enlarged, placed in them images of Buddha, appointed priests to take charge of them and dedicated certain lands for their support. Notwithstanding all these changes but have taken place since that period the priests of Buddha still take charge of and officiate at the cave-temples of Dambooy.—(W. Langhston in *Journal of Asiatic Society of Bengal*, 1847.)

DAMBORITZ or **DAMBORSCHITZ**, a market in Austria, Moravia, circle Bräun. It contains a parish church school and synagogue, and has a potash work four miles and two annual fairs. Pop. 2048.

DAMEH one of the Ambrose islands (see)

DAMEH, or **AI DAMEH**, a town in Nubia, cap. of a small independent state on the bank Nile near the junction of the Atbara. lat. 17° 40' N. lon. 84° 5' E. 15 m N. E. Khartoum. It is regularly built and consists of about 500 houses. It contains a beautiful mosque, and one of the most celebrated seminaries of students in F. Africa. It carries on a considerable trade on the Nile and is the seat of a numerous and influential priesthood of whom whose consent no enterprise is undertaken. The inhabitants are Arabs.

DAMFRHAM (Source) par Eng. W. lat. 48° 10' N. 1° 55' E.

DAMGHAN a town in Persia, Khorassan, cap. of a small name 50 m S. Astrabad. It is a town in a state of utter ruin and decay not a quarter of the space with its walls being occupied by habitable buildings.

DAMIANO D'ARTI (Dante), a town in Italy, Piedmont, 8 m N. E. of the Barba. It is partially fortified. Soil is raised here. Pop. 6100.

DAMIANI (Dante) a town in Italy, Piedmont, 10 m N. E. of 141° W. lon. cap. of a small name 1 mile N. E. of the town. Pop. 1500.

DAMIETTA a town in Lower Egypt, 70 m N. E. of one of the principal branches of the Nile and about 10 m from its mouth 100 m N. N. E. Cairo. lat. 31° 23' N. lon. 31° 5' E. It is irregularly built but many of the houses are tolerably good though inferior generally to those of Rosetta while many of them again, are of the most wretched description. It contains, however, some fine mosques, bazars and marble baths. Damietta was at one time a very important place

DAMIETTA.—From Rosetta. View from the River.

and carried on an extensive foreign trade, but is now eclipsed by Alexandria. It still however enjoys a considerable trade with the interior in fish and rice—the former the produce of the fisheries on Lake Menzalah in the neighbourhood—and exports some coffee beans, and linen. A bar at the mouth of the Nile prevents large vessels from reaching the town compelling them to anchor outside and to load and unload by means of small craft of from 20 to 60 tons burthen. Damietta was at one time famous for its manufacture of leather and striped cloths which last, when imported into Europe, are supposed to have received from it the name of *damietta*. A military school and cotton factory were established here by Mehmet Ali. The ancient town of Damietta (*Tamias*),

gation, while currents and strong squalls add to the risk. Singular interruptions to the trade winds are caused by these low lagoon islands not only do the former often fail among them but heavy squalls come from the opposite direction and more frequently by night than by day. Many of the islets are inhabited.

DANHOLOM formerly **HNALAK** a small island Prussia, in the Baltic, opposite the port of Stettin in the narrow strait between Hügen and the mainland. It has only 10 m. inhabitants.

DANIEL (Port) a bay Lower Canada on the E. side of the dist. of Gaspé near the entrance of Chaleur Bay. It is a good harbour but open to E. winds. At the head of the bay is a river which can be entered by boats only at high water. The country around is rocky and barren.

DANIELLE (Bak) a m. Austrian Italy go Venice, prov. of, and 12 m. N.W. Udine. It is surrounded by walls and has a castle, belonging to the counts of Cone. It is an active trade in grain. On the 11th May 1803 the Austrians under Archduke Charles were defeated here by the French. Pop. 8000.

DANILJOW a m. Russia, gov. of and 41 m. N. Yaroslavl chief place dist. of same name on the Peldina. It contains a wooden church and has manufactures of wax and tallow candles dyestuffs some trade in oil and provisions and a small fair. Pop. 1842 301. The pierage which is of considerable extent has an undulating surface is watered by the Volga, Peldina and Kaf, and extends nearly 1000 m. but is not well wooded and only indifferently fertile. Pop. 6405.

DANKALI (Kivenom ov) formerly a province of Alsace now an independent state, bounded, N. E. by the Red Sea, and S.W. by a range of mountains running nearly parallel to the coast. It is N.W. and forming a frontier line towards Turkey and the Gallic country. It is about 200 m. long by about 56 m. wide at the broadest part and extends from about lat. 13° to 15° 30' N. It is in general low sandy level and unproductive, although and it has been formerly a rich country. The heat is often excessive, the thermometer rising frequently to 110°. In the dry season it is almost destitute of water. Caravans are now scarce. Its population is composed of various Arab tribes known under the general name of Dankali or Danakali and described by all travellers as being an unprincipled and ferocious race and the most treacherous and cruel of all the inhabitants of Africa. Major Hare speaks of them as un-

harming all the worst passions and as of the same habits and being many of them the most scowling ill-favoured, and hideous looking savages in the universe. They are cruel and revenge for the slightest injury of all. Monsters not men their savage propensities are portrayed in a dark and baleful eye, and the avenger of blood is closely dragging the footstep of one-half of the population. The climate gives them a smaller character calling it the most cold blooded assassins however met with or read of. By their own showing, in my view, not one of them that were a small raft of hair upon the bow of his shield had killed and murdered 10 or 12 individuals which if only understood as two or three the men surrounding me must have earned the death of at least, a score of their fellow beings and the delight and exultant with which they spoke of, or listened to the most cruel struggles in which they had been engaged told the fierce and cruel character of these demons in human shape.

The companion of the day and the shaver of your foot will under cover of night, strike, without remorse, his knife into your throat. The common instrument of murder is a short sword or rather large knife called a crescent the blade of which is about 2 ft. long and 3 inches broad with a crook in the centre. With

this formidable instrument the Danakali builds his house cuts his meat at table paras his pelts shaves his beard, slays his beef and mutton and cuts the throat of his enemy or dismembers his man—a still more favourite mode of despatching him which is performed by a peculiar ripping motion accompanied by a fiendish howl of satisfaction. The spear is also a very common weapon it is 1 ft. in length topped by a blade from 10 to 15 inches long. Fifty habits, darkness of person, and indolence and a sullen aversion, complete the character of this savage people. The chief employ ment of the women is placing mats and baskets for salt and corn, from the branches of the palm tree. They dress very slovenly and frequently wear nothing but a piece of cloth of a gray blue, or variegated colours fastened round the waist, and reaching to the knees. The people distinguished by the name of Danakali are not confined to the territory so called but extend over the adjoining districts S. and S.W. The Danakali population of this part of Africa is estimated at 70,000. (Harris's *H. planda f. Ethiopia Johnston's Travels in Abyssinia*.)

DANKARA or **DIXKARA** formerly an independent kingdom Upper Guinea now incorporated in the Ashantee territory to which it was added, by conquest, in the beginning of the 18th century. Its former capital Dankara, is 50 m. N.W. Coomassie, the capital of Ashantee.

DANLAWAN or **DANKARAV** a small island in the Gulf of Aden off the N.E. coast of Horn of Africa. Lat. 4° 40' N. lon. 48° 51' E.

DANNI or **DFRG** a m. or gov. of a dist. in the T. S. T. theburg on the Jatta, which branching off divides it into three parts. It consists of a long principal street and several others which open up to it, contains an old Gothic church and several mills and has manufactures of linen and it becomes a trade in yam, linen, and hops, and a small cattle market. Pop. 1100.

DANNEWIL or **UZEVAL** or **DEIR DUKAK** a market town Moravia circle of and 24 m. S. Hall in it contains a parish church and school and has six works and two annual fairs. Pop. 255.

DANJUMWOLDE or **DANWOUD** a d. Hildesheim Freehold 11 m. N.E. Lüneburg, in a cultivated area we find it has a Reformed church with a tower a Baptist church and a school. The canal from Dookum to Groningen passes this place near which also much cattle is sold, and a hundred cat are raised. Pop. 700.

DANUBI (anc. Danubius) German, Roman Hungarian Danube a celebrated river of Europe originates in two small

streams the Bregge and the Brigach, rising on the E. declivity of the Schwarzwald a mountainous region of S.W. Germany in the grand duchy of Baden at an elevation of 2850 ft. above sea level about lat. 48° 3' N. lon. 8° 13' E. and uniting at

Danube. Its general course is from W to E, falling into the Black Sea by four different outlets called respectively the Delta, Stambul, Balucha, and the Rethin or St. George's Mouths. The delta mouth or channel the deep at 10 m lat. 45° 18' N lon 26° 40' 30" E (N). The extent of the basin of the Danube is estimated at 260,000 sq. m. the direct distance from source to mouth is upwards of 1000 miles, and its development of course including meanders—343 m. From its source the Danube flows N. E. to Nagensberg (Ratis Boni) in Bavaria, lat. 41° 1' N lon 1° 52' E (L) when it takes a N. E. direction to Watzzen, in Hungary lat. 47° 50' N previously passing Vienna and Presburg. At Watzzen it suddenly bends round and flows nearly due S to the point where it is joined by the Drave near Esseg in Slavonia, lat. 44° 30' N thence it runs S. E. to Belgrade on the N. confines of the Turkish province Servia, of which it subsequently forms the boundary separating it from Hungary continuing its general E. course though not without some marked deviations, to the point where it is joined by the small rt. or Borzaka lat. 44° 25' N lon 2° 12' E. it abruptly turns to the N. E. and continues in this direction to Orsova, a distance of about 45 m. when by sudden taking a S. E. course it fairly enters the Turkish European provinces, forming the boundary line between Wallachia and Bulgaria. At Hassova, on the N. E. extremity of the former prior near lat. 44° 18' N lon 2° 3' E it takes a direct northerly due N. to Valah lat. 40° 22' N lon 28° 2' 58" E when it bends round to the S. E. and after a short course (about 80 m.) falls into the Black Sea by the so-called mouth to be enumerated. During its progress from source to sea it embouches the Danube passes through Witteberg, Haara, the archduke hills of Austria, and Hungary and forms the boundary between the Hungarian Banat on the N. and the Turkish provinces of Servia on the S. and between the Turkish province of Bulgaria on the N. and the Danubian principalities Wallachia and Moldavia and the Russian province of Bessarabia, on the N.

The great length of the Danube has been divided into four unequal basins. The first an area of vast plain of a perpendicular form 1640 sq. also a sea level at 150 m in length and 150 m broad surrounded by mountains, and comprises a large part of the principality of Hohenzollern part of the Kingdom of Württemberg and the greater part of the Kingdom of Bavaria. This tract is by far the most fertile and most populous through which the Danube passes during its entire career. The principal affluents within its space are the Isar and Lech both from the right or N. and the Inn from the left or S. being trifling. During the part of its course the Danube flows through deep and difficult valleys, and is elevated 1000 ft. upon high banks by abrupt and wooded slopes but expands as it reaches Lim about 80 m from its source to about 300 ft in width having an extensive and rich plain on its right bank. After leaving Lim where it becomes navigable, it continues to widen but has little depth and is covered with wooded islands—its right bank consists wholly of extensive plains and marshes.

The second basin belongs to the empire of Austria having Vienna nearly in its centre, and comprising the archduchy of Austria, Hungary as far as Watzzen, and Styria. It is very irregular and is bounded on all sides by very high mountains. Generally it is well peopled well cultivated and the inhabitants industrious. The soil is rich in mineral products, and the climate one of the best in Europe. The principal affluents in this basin are the March or Morava, and the Ena—the former from the left, and the latter from the right. The Danube here passes through a succession of the most picturesque scenery till it passes Vienna. Below Presburg it runs with great velocity is crowded with islands and flows between banks alternately covered with reeds willows and poplars and varied occasionally by forest trees and patches of sand. In this portion of its course also it sands off numerous arms, enclosing large tracts of country thus forming islands. Of these, the most important are the Great and Little Reichitz very fertile districts formerly called the Golden Gardens. They are well peopled the inhabitants being gathered in villages near the centre, to avoid the sudden inundations to which the islands are subject.

The third basin of the Danube comprises Hungary E. of Watzzen, and the principality of Transylvania, and consists of

an immense plain almost without undulations of any kind, and only 894 ft. above the sea level. It is intersected by large rivers, with marshy banks, and interspersed with stagnant pools, salins and sandy wastes. Rich however in mineral products, in rocks and herbs and in fishes. It comprises about one half of the entire basin of the Danube. The climate is bad especially in the vicinity of the marshes, and is a species of 30° 35° N. The principal affluents in this basin are the Save, the Tisza and the Morava. From Pash to Belgrade the river passes through an immense plain covered with sand and alluvium through which it is constantly forming new channels, and sending up the former ones sometimes sweeping away towns and at others leaving such as were built on its banks some miles from them. Below Belgrade the river winds its way now between slight undulations and now through a cultivated plain at one time separating into two or more branches, at another forming only one vast stream. Below Moldavia it passes, for 60 m. through a succession of rapids and shallows interspersed with rocks and sandbanks where it has cut a passage for itself through the cross chain of hills which connect the Carpathian Mountains with the Alps and between Brekova in Hungary and Neale Kladoro, in Servia the navigable is effectively interrupted by three great rapids, the principal or last and lowest, of which is the famous cataraet called the Iron Gate, where the current rushes through a narrow channel between steepen cliffs with great rapidity and a noise so overpowering as to drown every other sound, and with a series of whirls, pools, eddies and smaller falls. It is said however that the principal and supernatural tides of these rapids have been some what exaggerated. They are passed with no fear or danger by heavy Turkish boats and it is held to be possible so far to ameliorate them as to allow of a free navigation for large vessels. A canal as once expedient, has been proposed to bypass the difficulty but has not yet been attempted.

The fourth basin comprises Walla via Moldavia, a portion of Bessarabia and Bulgaria. This tract is flat inundated and marshy along the banks of the river dry mountainous and difficult on the borders of the basin. It is fertile in products of every kind yet badly cultivated thinly peopled with miserable roads and wretched villages. The principal affluents in this basin are the Alota Scythia and Pruth. In its progress through Turkey the Danube gradually increases in width from 1400 to 2100 yds and below Lim in Servia, it forms an expanse of water like a sea and is studded with islands. Excepting between Brekova and Kladoro, the Danube may be said to be navigable for steam vessels from Lim to the sea although in some places rendered difficult by the occurrence of shallows and sandbanks, intersected by narrow and intricate channels. The outlets of the Danube are separated from each other by several low islands, covered with reeds and trees. The greater part of a ship loaded up the river enter it by the Sultana mouth it being the deepest. The Danube receives as 60 navigable tributaries and its volume of water is nearly equal to that of all the rivers that empty themselves into the Black Sea taken together. Its rapidity is in many places above Orsova so great as to render any navigation except that of steam impossible, but below that point its current is gentle and navigable. A number of steam vessels now ply on the river between its principal towns. Before steam navigation was introduced into the Danube, the boats which descended it were very rarely if ever taken back but were broken up at the end of their voyage. The principal towns on the banks of the Danube are Lim in Württemberg, Regensburg (Ratis Boni) and Passau in Bavaria, Linz and Vienna in Austria, Presburg, Buda, Peterwardein and Orsova, in Hungary, Belgrade, Widin Nikopol or Nicopolis, Rastchuck, Silistria, Hirsova, and Brailow in Turkey—(Larveller's Military Topography, Page 1 Hungary and Transylvania &c.)

DANUBE, HITLER and DANUBE, TRITNER [1] *Ann. Theoret. der Donau und Jenseits der Donau* or (1) is the Danube and beyond the Danube] two of the four principal divisions of Hungary comprehending all the W. portion of the country and called also Nieder or Lower Hungary. Thither Danube, sub-divided into 11 counties, comprehends generally the whole of the kingdom situated on the right bank, and W. of the Danube and Thither Danube sub-divided into 13 counties comprehends a considerable portion of the N. east

W part of the kingdom N and E. of the Danube and W of the Thule.

DAAUBE (Circle 09) one of the four circles of Württemberg comprising the S E part of the kingdom, and bounded N by Jaxt circle E by Bavaria, S by Bavaria and Lake Constance and W by Baden Hohenzollern and the circles of Schwabwald (Black Forest) and Neckar area, 1760 sq sq m. It is watered by the Danube and some of its affluents, and by some affluents of Lake Constance and is divided into 18 bailiwicks. Pop. 878,594.

DANUBE (Upper and Lower) Ober and Unter Donau (two former circles, Bavaria, now called Swabia, and Lower Bavaria).

DANVILLE numerous places U States particularly —1 A vil. Virginia, pleasantly situated on a small river 164 m S.W. by W Richmond. It has two banking-houses, a printing-office, numerous stores an iron foundry and two tobacco warehouses. Pop. 1200. —2 A vil. Kentucky 41 m S. by W Frankfort. It has four churches, two academies, one school and is, besides, the seat of Centre college, and of the Kentucky society for the deaf and dumb. Pop. 1254. —3 A vil. Pennsylvania, 21 m N by E Harrisburg with two churches an academy and numerous stores. Pop. 1000.

DANZIG a gov. prov W Prussia, bounded N by the Baltic, E by Königsberg, S by Ma. Inowroclaw and W by Kistritz area, 2438 sq sq m. It consists of an extensive flat, broken only in one part by some low heights, which nowhere rise more than 500 ft. above the sea. It is well watered, both by rivers and lakes. Of the former the principal are the Vistula which here divides into two arms, the one retaining its own name, and the other being that of the Rega, the Elbing, Thiesse, Great and Little Schwenta, Motlitz, Kibiel and Fure. The principal lakes are the Druas-nice, Iasnaw, Iasnaw and Radanice. The lowest ground is covered by a shallow alluvium often rendered marshy from its liability to inundation. Wherever the ground rises to any height and begins to prevail. The crops particularly of barley and oats are very abundant, and a considerable extent of surface is occupied by flax and tobacco. On the higher grounds there are some extensive forests. Considerable attention is paid to the raising of stock, and there are excellent breeds of horses, cattle, and swine found in several districts, though in others very inferior breeds are still allowed to remain. Game is not very abundant, but there are ample supplies of fish. Manufactures and trade has made considerable progress. Pop. 1845, 406,850.

DANZIG is in and port Prussia cap. prov W Prussia lat. (observatory) 54° 21' 15" N lon 18° 41' 12" E (in 258 m N E Berlin) bank, W arm of Vistula about 3 m above its mouth in the Helva, and at the confluence of the Motlitz and Radanice which both traverse the town, one of the most important seaports in the Prussian monarchy as well as one of its chief commercial entrepôts. It is nearly of a circular form, and ranks as a fortress of the first class being both surrounded by walls and bastions defended by a citadel and several outworks and provided with the means of laying a considerable part of the surrounding country under water. It is entered by four gates has nine suburbs and is divided into five parts—the Old New and Law towns the Speicher (granary) an island and Langenwerder. The last is the more modern part of the town and is both regularly and well built. In the other parts the houses are generally old and indifferent, and the streets narrow and winding. The principal edifice is the Dom or cathedral, begun in 1343 but not finished till 1503. It is 380 ft. long by 143 ft. broad and its vaulted roof 98 ft. above the pavement is supported by 28 slender brick pillars. It possesses a fine brass font and a curious astronomical clock which has long ceased to move but its chief attraction is a painting of the Last Judgment, attributed to John van Eyck, and well known under the name of the Danzig picture. The other buildings and institutions deserving notice are the townhouse, the church of St. Catherine, the oldest in Danzig and 11 other Protestant and five R. Catholic churches, three monasteries a nursery two synagogues, the exchange, an imposing gothic edifice built in 1379 (the arsenal) gymnasium navigation school, school of arts, townhouse theatre foundling and orphan hospitals, poorhouse, and workhouse also, a lunatic asylum, seven

hospitals for the sick a respectable annual an observatory and a picture gallery. It is the seat of the provincial government, and contains the various offices connected therewith and is also the residence of several foreign consuls. The

manufactures are numerous, but some of them are of small importance excepting tobacco stored, beer and brandy. There are at least two employ 39 breweries, and 25 distilleries, to which must be added 80 establishments for distilling known liquors which in commerce bears the name of Danzig Goldwasser or Fan de Vie de Danzig. Some sugar-refineries and various manufactures or metal are likewise carried on, also cloth weaving, the making of pottery and the baking of ship biscuits. But the prosperity of the town is founded on its trade, which is mostly all foreign. The staple article is grain particularly wheat, for the warehousing of which there are extensive granaries on the island of Speicher capable of containing half a million of quarters and secured against fire by a strict prohibition which allows no lights to be used on the island. The wheat, which is chiefly Polish though small in the grain is remarkable for the fineness of its skin and both the quantity and quality of the flour which it yields, and is well known in the foreign market, where it commands the highest price.

There is a considerable trade at Danzig in amber which is collected in ditches or pits dug at great distances from the sea-shore. It is also thrown up on the beach and collected. Large quantities are exported to France, and the trade supports a large number of workmen and their families. Among the imports by sea in the year 1863 from Great Britain the principal sources of them were 10 418 tons of iron 13 115 084 bushels of coal 12 390 cwt of tar and 48,148 tons of herring. The exports by sea to all countries included 332 460 bushels of wheat 414 008 bushels of rye 264 068 bushels of barley 26 193 bushels of beans and peas and 80 445 tons of timber of all sorts. The other articles exported are wheat beer herring starch clover seed, with tallow hemp salt, sulphate and woolen and linen cloth. The shipping at the port in the same year consisted of 1281 ships and 136 steamers and of with cargoes, and of a total tonnage of 122,565. From the port there sailed 3939 ships and 191 steamers, of 307 055 tons, with cargoes, and 26 ships and 1 steamer of 907 tons in ballast. The proper port of Danzig is Neufahrwasser at the mouth of the Vistula, the sandbanks which encumber the river immediately above seriously obstructing the navigation. Now however by means of a canal about 100 ft. wide by 15 ft. deep the worst of the obstructions are avoided, and vessels of large size come up close to the town. The history of Danzig reaches back to the times of historical obscurity. As early as 970 there was a town here. In 1271 it was taken by Mestwin, and in 1284 by the Poles. In the 14th century it fell into the hands of

the Teutonic Knights, under whose sway the town increased and its commerce was ext. dev. Left by the Teutonic knights it again in 1454 fell into the hands of the Poles, who granted it important privileges. After enduring many vicissitudes of fortune on the second partition of Poland in 1793, it fell to the 1st Prussia. It was besieged, bombarded and taken by the French in 1807, and retained by the Russians in 1814. Since that time Prussia has done much for the town, but its commerce has never regained its former importance and extent. Pop. (1846) 96,877.

DAOLDNAGI R. a Hindoostan presid Bengal prov. Mahar r. born. Sona lat. 25° 6' N lon 84° 27' E. It is a large place and contains a cloth factory. It was built by David Khan the last king of Bengal about the middle of the 16th century.

DAOLRIA a country Asia now included partly in the Chinese territory of Manchouaria, and the Russian gov. Irkutsk. It is a tract from N.E. to S.W. by ridges of mountains, offsets of the Tshonli Krolot and forming the Daurian Mountains. They lie E. of Lake Baikal and are rich in minerals. The country is traversed by the Shikha, one of the head streams of the Amoor.

DAR EL BEHA a town Morocco, near a cape of the same name and which is in lat. 33° 3' N lon 1° 24' W. It is about half a mile square stands on the beach and on a point projecting N.N.E. half a mile from a small bay 2 m. long. A rudimentary wall is placed from W. winds and protected by a fortress. The town which was long in the possession of the Portuguese was built for the exportation of corn and wool in which the trade is increasing. It contains several mosques and some good European buildings. It has many palm trees and numerous gardens surround the town. The country in the summer is said to be exceedingly fertile. Pop. about 200.

DARA a town in Asia Turkey prov. Bagdad. 33° 48' E. Mar. lat. 37° 8' N lon. 41° 44' E. Its graves are remarkable and a deep well reservoir, are among the ancient remains that indicate the former greatness of Dara. It contains now only 100 Musulman and 30 Armenian families.

DARAI a vil. W. Africa Bordon country about 12 m. W. from Faidon lat. 14° 40' N lon 10° 16' W. It is a large and populous place built on a plateau or mountain view over an alluvial and well wooded country.

DARABJELD **DARABJERIA**, commonly called **DARAB** in Persia, prov. Farsistan, 140 m. S. of Shiraz lat. 29° 0' N lon. 51° 57' E. pleasantly situated on a small river in an extensive plain surrounded by groves of dates, oranges and lemons. It is famous for its abundance that the juice is exported to all parts of Persia. The tobacco that grows in the moist border is celebrated for its mildness, and held in great esteem not only through Persia, but in India and Arabia. Darabjeld was formerly of much greater extent and importance than it is now as its numerous ruins indicate. About 3 to 4 m. S. of the town are some remarkable remains of antiquity consisting of excavations and sculptured rocks. Pop. 15,000 to 20,000.

DARLI or **DARLA** a country of W. Africa, bounded N. and W. by the great Atlas, which separates it from Morocco. E. by Tafillet and S. by the Sahara. It is traversed by the great ocean route from Fes to Timbuctoo. The chief produce is dates. A superior breed of goats is reared in the district and in the mountains which border it copper iron and antimony are found. Darli is intersected by a large river of the same name which rises on the S. side of the Great Atlas range and after a course of upwards of 900 m. discharges several branches which are absorbed by the sands of the desert.

DARJILLET a small town Beland, bank Baggar or great W. branch of the Indus in the delta of that river Darjil was formerly one of the principal ports of Sumatra but as the Baggar has now for many years ceased to be

navigable, during the season of low water in the Indus, above that port, it is not at present so much frequented as it was. The river is, however, at all times navigable up to Darjil itself where there is always 12 ft. water. Pop. about 2000.

DARAPORAM a large and populous town Hindoostan prov. Colabaator S. end lat. 10° 57' N lon. 83° E. 123 m. S.E. Bencapalan. The streets are spacious, and the houses, although built of earth and timber with tile and thatch are large and commodious. The adjoining country produces rice and tobacco.

DARDA NAOT a market in Hungary Thither Danube or Baranya in a plain 38 m. S.E. Munkacs. It contains a E. Catholic and a Greek non-united church. Pop. 2160.

DARDANELLES [anc. *Hellepont*] a narrow channel Turkish dominion, which connects the Sea of Marmara with the Grecian Archipelago and at this particular point separates Europe from Asia. Its junction with the Archipelago is at about lat. 40° N. and with the Sea of Marmara lat. 41° 4' N. It stretches N.E. and S.W. and is about 40 m. in length varying in breadth from 1 to 4 m. There is always a rapid

current in the channel running S., the violence and velocity of which is much increased by the prevailing winds which blow in the same direction with the current for at least 10 months in the year. There are shoals in some places, but deep water is always to be found in some part of the channel. The Asian side presents the most beautiful scenery and is seen in proceeding up the strait gradually rising from the sea upwards to the range of Mount Ida and exhibiting the appearance of a fine and fertile country. The European side is in general steep and rugged, but in many parts densely peopled and highly cultivated, while the various inlets form secure harbours for vessels of every size, and well sheltered from N. gales to which are already noticed these parts are subject. On both shores there are numerous forts and batteries, for the purpose of preventing any vessel in case of war from passing through the channel. Of these there are eight upon the European side mounting in all 340 guns, some of which are calculated to throw stone shot of enormous size and on the Asian side seven mounting 885 guns 34 of which throw stone shot. These guns, as well as some of the other heavy armaments, cannot be pointed and can fire with effect only when a ship covers them. The guns for the throwing stone shot require a charge of 220 lbs. of powder. The modern name of the strait is derived from its use as

called the Dardanelles, built on its banks, at its S. W. entrance its ancient name, Haliospont, from Helle daughter of Athamas, King of Thesbe, who was drowned in it. It is also memorable as the scene of the death of Leander who used to swim across at Abydos, the narrowest part of the strait, but yet about a mile in breadth to visit Hero a feat also performed by Lord Byron, who achieved it in one hour and 10 minutes.

DARFUR is a town in the gov. of and 37 m. S. W. Magdeburg. It is surrounded by an old wall and entered by three gates, and contains a church, townhouse, and hospital and has six mills. Pop. 1813.

DARFUR is a river England so Kent, rising about 5 m. W. the Seven Oaks and, after a course chiefly N. E. of about 20 m. falling into the Thames near Erith. It is navigable to Dartford the only important place which it passes. Numerous mills are situated along its banks.

DARFELL a par. and vill. Eng. co. York (W. 1 ling) 18 367 ac. The village, 20 m. S. by F. Leeds, between the Durne and one of its tributaries, and near the N. Midland Railway is well built. The linen manufacture is carried on in it to some extent. Pop. 8644.

DARFUR a vill. in the kingdom of Italy g. Milan prov. of and 30 m. N. E. Bergamo o bank Ollo. It contains a handsome parish church of modern construction with fine paintings and has a silk and several saw mills, three blast furnaces, and other iron-works. Much corn, wine, and silk are produced in the district. Pop. 1711.

DARFUR, **DARFUR**, or **DARFUR**, a country Africa of E. Sudan whose boundaries are but imperfectly known but which may be supposed generally as lying between lat. 11 and 15 N. and lon. 25 and 29 E. It lies W. from Kordofan from which it is separated by a strip of country inhabited by wandering Arab tribes rich in cattle and horses. It is bounded by the vast country named Fartak, possessed by a number of tribes, from whom, as well as from those between Darfur and Kordofan, the Sultan of the former country raises a yearly impost, payment of which however is frequently refused. W. it is bounded by Wadai and N. by a desert country part of the Great Sahara. Darfur is said to be 50 days journey in length N. to S. and about 15 days E. to W. and it is traversed longitudinally by a ridge of mountains named Marrah from whose sides E. to W. descend numerous streams, none of which are of any size. The largest river in the country is the Barre or Mussaki, flowing along the W. side of the mountains but whether it goes to the sea is not known. There are no lakes. The heat in Darfur is excessive and there are, properly speaking only three seasons in the year—spring in December, January and February; summer in March, April, May and June; and autumn in July, August, and September followed by a winter which can scarcely be distinguished from it. The spring and summer are about three months in advance of the same seasons in Egypt; but the autumn only two. Autumn in Darfur is the season of the rains, which continues 75 days, during which time four or five rainbows may often be seen at once. During summer drought prevails on the plains.

The crops chiefly cultivated are millet, rice, maize, sesamum for its seed, not for its oil and legumes. Holes are dug in the field, into which the seed is thrown and then covered up with the foot. The grain after being thrashed out, is dried in the sun, and laid up in holes made in the earth, lined with chaff. Water melons abound in the wet season. Among the fruit trees are the fig and date; but the latter are not of good quality. Tobacco, both wild and cultivated, abounds, and is much used by the natives in all its forms, including that of snuff. Besides these, numerous plants used in medicine, and producing dyes, abound; among the former the dargah is alleged to be an instantaneous remedy for inflammation in the eye. Cattle form the principal wealth of the inhabitants and the number of milk cows kept is so great, that milk is said to be almost of no value. Camels are numerous and their flesh is eaten. Goats are common and a few hardy horses and sheep are kept. The flesh of the latter being poor, and the wool, or rather hair, unfit for manufacture. The wild animals are the lion, leopard, hyena, wolf, jackal, the elephant, rhinoceros, giraffe, hippopotamus, crocodile and wild buffalo. The elephants are of a small size. They go in herds of several hundreds, and are

taken in great numbers by the natives, who find them a valuable source of gain, their tusks bringing a high price, and their flesh and fat being in great demand, the former constituting a favourite article of food and the latter being manufactured into an unguent, much in use. Antelope, ostriches, and civet cats are also met with. Vultures, guinea-fowl, turkeys, doves, chameleons and all kinds of lizards abound. It has been found to have and yielding a dark, unpleasant honey, while near the southern coast, acacias, mesquites, and locusts are numerous, the last being frequently roasted and eaten.

The inhabitants are a mixture of Arabs and negroes, though many individuals of both races still retain their peculiar physical characteristics, the latter being quite black with short and wavy hair, the former continuing to exhibit their distinctive features colour and language. They are brutal and insatiable especially when drunk, availing in excess, and insatiable still they are in their dances, and extremely fond of dancing. They are filthy in their habits and their victuals, eating of whatever has the appearance of food, even although bitter or decayed, indeed sometimes bitter and decayed food is preferred. Men and women work together on all occasions, war being the only employment in which the services of the latter are dispensed with. Polygamy is practised, and the intercourse between the sexes is remarkably free and indiscriminate, many practices being in vogue sufficiently strange to those habituated to its strict life, and evidencing that the inhabitants of Darfur in some respects are only a degree elevated above the level of their own cattle.

Consequently typical of the common; leprosy and elephantiasis also prevail. Circumcision is practised on both sexes, and by all classes the ceremony on the occasion of a young man's marriage with a slave. The houses are generally built of mud, and of a circular form on account of the heat of the climate, few garments are worn, but these are usually of a brilliant white and extremely clean. Education is here confined to the confined to learning to read the Koran and that by the male children only. The religion is Mahometanism, but the precepts of the prophet are observed with little strictness. As a result of its position the commerce of Darfur is all inland but this is very considerable, owing to its central situation which also in some measure compensates for its want of means to carry on a regular trade with a little to offer in exchange for the produce of other countries. Its principal intercourse is with Egypt, which is carried on by caravans which traverse the desert, carrying a very diverse cargo. The caravan of the caravan consists of the hippopotamus, ostrich feathers, gum, pumato, tamarind, and leather sacks for water, parrots, monkeys and gill a horse, and a little copper and bringing in return, trinkets, cotton, both sword blades, small looking glasses, fire arms, coffee, silk, iron, wrought iron, glass beads, copper culinary utensils, furs or red caps of Barbary, French silk, and some silk stuffs of Damascus, Aleppo, etc. shoes of red leather, pepper, writing paper and Syrian soap. There is also a considerable trade with Marsa, combined with religious objects. It is common for Darfur is conquered wholly by force. Little is known of the native of its trade with the countries further inland, beyond the fact of its drawing from these the greater part of the ivory and rhinoceros horns which it sends to Egypt.

Darfur is governed by a Sultan who is completely despotic, and always surrounded by a numerous corps of principal aged old women who assist in various ceremonies. The Sultan seldom or never appears to either his or her except through the medium of an interpreter. It is advantage thus gained when in the seat of public justice, is that he never makes the least mistake in his language, all faults being of course corrigible on the interpreter. When the Sultan sits, his wife is gathered up by the hands of his attendants when he coughs or sneezes, every one present, out of politeness, must do the same, thus at times producing the most amusing scenes. When in council the Sultan is flanked with a fan of ostrich feathers and during the chase, he is shaded by a parasol carried by one of his nobles should his horse stumble, and the monarch be unseated every one present must perform the same evolutions under pain of summary chastisement, administered on the spot. The Sultan has private possessions in land which are sown for him every year after the rains. The prince, on such occasions, goes out surrounded

by upwards of a hundred young women selected from among the beauties of the hill, carrying on their heads vessels filled with the greatest delicacies. They march behind the Sultan's horse along with young male slaves, armed with lances, and a troop of fine players, soon accompanying the instruments. When arrived at the fields, the prisoner dismounts, and throws a few seeds upon a place where a slave has stirred up the earth, whereupon all the nobles, vassals and officers of the court commence to dig and in a short time the whole of the field is sown. When the labour is ended the vassals are set out and eaten. A custom like to a very similar to the imperial coronation, usually goes through at 11 o'clock. The royal revenues are derived chiefly from a heavy duty on imported merchandise, fines presented, and tribute from neighboring states and tribes. The latter is paid principally in ivory rhinoceros horns, white copper gold and silver, but so usefully that detachments of troops are constantly engaged in robbing it throughout the various districts. The army is composed of irregular troops armed with shield and spear and a few with bows and arrows. The cavalry are armed with double-edged sabres obtained from Germany and are, in part clad in the old Hindustani horse in shirts of mail.

In 1841 when Browne was in Durfur Cobbe, lat 14 11 N lon 9 5 E was the capital the royal residence however is now held by the Tondali about 20 m S.S. the former. Several other towns are named but very little is known of them even their position being uncertain. Those however best known are Sawchen, near the frontier on the direct road to Kaptag, and (Shabab or Kuluabab) also 20 m N.W. 10 o'clock women are considered the manufacture of leather at 1 o'clock cotton cloth. The population according to Browne is about 200,000 but by the estimate made by Mohammed Ali-Omar-el-Torjey who resided in the country from 1843 to 1870 and journeyed most ample opportunities of investigation the number is raised to three or four millions, all speaking a dialect of the Arab. The works of the two travelers are named as the only reliable sources of information respecting this country. (Browne's Travels in Africa Egypt and Syria 1843-48 F. Rogers at Darfur par. Mubian ed. L. Omar-el-Torjey 1868-70 2nd ed. of *Travels in Egypt* in 1843).

DARJUN a market town on the Terek 80 m N. W. of the head of the Terek, but of same name, on the Kistarsa 27 m E.N.E. (outpost). It consists of three distinct parts consisting of a parish church, and a castle in the form of a square with a tower at each angle and has a 4-stallery a drawwork and two annual fairs. Pop of 1851 of half 5947.

DAPIFF a fortress, situated on the Terek 80 m N. W. of a hill on a nearly isolated rock in a narrow pass of the Caucasus, a most commanding position and might easily be defended against any force that could be made to bear upon it. It is however in a very dilapidated state, and can rely only on a strong square tower at 4 a walled space around it, capable of garrisoning several hundred soldiers.

DARJEN (DARJEN) a narrow extensive gulf S. America, New Granada Caribbean Sea, between the isthmus of Panama and the mainland, S. of 10° N. lat. and between 1° 25' 40' and 2° 40' N. But some authors have limited the gulf to the S. portion of the indentation, called also the Bay of Choco, having Point Arenas on the E., and the Molendina islands on the W. All the F. and S. coasts, to the Bay of Comacina near the head of the gulf offer safe anchorages at all times of the year but the manner to Cape Tiburon is very wild at certain seasons, and without any shelter excepting for small vessels. Several rivers empty themselves into the gulf the largest of which is the Atrato or San Juan it was the governor of the Spanish colony of Darien, on the W. shore of the gulf that Vasco Nunez de Balboa discovered the Pacific Ocean Sept. 26 1513.

DAJILIN (DARJILIN) a town in India.

DAJILIN or DARJILIN, a British sanitary station for H. M. troops in India, in the Rikitra territory, lat 2° 8' 40' N. lon. 85° 25' E. about 218 m N. Calcutta. It is about 10 m more than 36 m from the plains of Bengal at an elevation of 7400 ft. above sea level 16 m. W. from the bank of the Terek. From the station of Darjiling the view in every direction overlooks mountain-ranges, covered with dense forests except in a few spots, where partial clearances have been made for cultivation. No bare, grassy mountains meet the eye, no rocks or precipices afford any relief from the prevailing uniformity which, but for the magnificence of the snowy mountains behind, would be undoubtedly monotonous and fatiguing. (Dr Thomson). The atmosphere is humid and moist, and the annual fall of rain 120 inches.

DAKHERMAN a town in Prussia prov. E. Prussia gov. of 14 m. S.W. Gumbinnen cap. circle of same name, on the Angerap. It is the seat of several courts and offices for the circle, and has manufactures of woollen and leather, a trade in cattle, corn and linen, and five annual fairs. Pop. 2400.—The circle's area, 234 sq. m. is flat, and watered by the Angerap and several lakes. Pop. 95,781.

DAKHLAN a mountain Mongol, prov. of Khabkha lat 47° 26' N. lon 110° 10' E. It extends N. to S. and its lofty ridge is composed of steep rocks of red granite. From the summit S. are seen eight salt lakes, and the blue mountains of Kheroulun while W. the view extends over an immense extent of country covered with pointed eminences. The Mongolians associate with this mountain the memory of Genghis Khan.—(Thomson).

DARLINGTON a town and par. England co. of and 1 m S. by E. Stafford. The town stands on a slight acclivity and consists of a number of straggling and irregular streets, which however are well kept. Houses in general small and badly built of brick. Water deficient except by light with gas and the town rapidly increasing and gradually improving. It has a church and 4 chapels of ease two Wesleyan chapels a Primitive Methodist and an Independent several schools, a mechanics hall and library. The principal manufactures are that of iron which is here made of all descriptions and of excellent quality. Articles of iron are also manufactured to a great extent such as gun locks, bolts, bars, screw door latches, bullet moulds castings &c. The coal and iron mines in the par. are also extensively worked. Area of par. 4,100 ac. Pop. 10,500.—(Local & general).

DARLE par. Eng. co. of by 104 ac. Pop. 1892. DARLING DOWN a district of New S. Wales, between lat. 28° 15' S. its limits, however are not precisely defined. A considerable portion of its S. part of the district consists of low level land, mostly numbered. The downs occupy the E. portion of the district. The principal rivers are the Condamine.

DARLING MOUNTAINS a range of mountains, of W. Australia commencing in the Tross or about lat. 31° S. and terminating at Point D. between lat. 34° 53' S. It runs parallel to the coast, and generally at a distance from it of from 10 to 15 m. excepting towards the S. where the distance is about 50 m. The entire length of the range is about 250 m. the highest summit 1,350 ft. above sea level.

DAVING RIVER a river of New S. Wales supposed to be formed by the junction of numerous streams, about lat. 30° S. After pursuing a W. course of upwards of 400 m. it falls into the river Murrumbidgee at lat. 34° 10' S. lon. 141° 40' E. It was discovered by Captain Sturt in 1879.

DAKHLIN par. Eng. co. of by 740 ac. Pop. 12,403.

DARLINGTON a town in England co. of and 1 1/2 m S. Durham on the side of a hill that slopes to the river Wear, over which is a bridge of three arches. It is built in the form of a square with streets diverging from a central market-place is plentifully supplied with water and lighted with gas. Houses in general well built of lofty of brick. The townhall and central hall is a handsome structure, in the Grecian style but the principal architectural ornament of the town is St. Catharine's church an ancient Gothic building with a lofty spire founded in 1160. There are besides, two other churches, and places of worship for Baptists Independents Friends K. Catholics and Methodists. The education institutions include a free grammar-school an academy founded by the Society of Friends a national school, and several Sunday schools. There is also a dispensary a savings bank a mechanics institution and public library. The principal manufactures of the place are carpets and flax and worsted spinning. There are also breweries, tanneries, ropewalks, and brass and iron foundries. The borough is governed by a bailiff appointed by the Bishop of Durham. Petty sessions are held every alternate Monday in the townhall with which a house of correction is connected. The weekly

market is held on Monday there is a large market for sheep and cattle every alternate Monday and numerous fairs are held for horses, cattle, sheep, hogs and merchandises. There is a station here on the York, Newcastle and Berwick Rail way and on the Stockton and Darlington Railway which latter was the first line in England on which locomotive steam engines were employed. Darlington gives the title of Earl to the Duke of Cleveland. Pop 11,238.—(Local Correspondent)

DARMSTADT a town Germany cap grand duchy Hesse-Darmstadt, in a sandy plain, on the Darmbach 15 m S Frankfurt. It is surrounded by walls and ditches and consists of an old and a new town. The former is very poorly built, the houses are old and the streets narrow and gloomy. The new town has a much more agreeable appearance, and is laid out with great regularity. Two principal streets, the Rheinstrasse and the Kockstrasse, traverse it from E to W and N to S respectively and are lined by houses of handsome appearance. Immediately off the Rheinstrasse is the finest public square the *Louiseplatz*. In its centre is a Doric column surmounted by a statue of Duke Louis I., the pedestal adorned with bas-reliefs and around it are a number of lofty and elegant mansions among others the new palace, the residence of the Grand Duke, built at the commencement of the present century but though sufficiently commodious, not of much architectural merit. Other buildings deserving of notice are the old palace a large pile of mixed architecture now fitted up as a residence for the hereditary Grand Duke surrounded by an old dry ditch which has been converted into a shrubbery and garden and containing a picture gallery with some fine paintings a museum of natural history particularly rich in the remarkable shells which have been dug up in the neighbourhood of the Rhine and a library of 200,000 volumes the theatre with a portal of six Corinthian columns, and till lately in possession of one of the finest orchestras in Germany the Lustau house with a fine hall in the form of a semicircle the government offices the *St. Catharine* of which built by Moller a native architect, externally of brick and internally in the form of a rotunda surrounded by pillars 50 ft high the Protestant town church an ill-situated and somewhat unlighty building the Exarnerhaus or drilling house, originally intended for drilling the garrison under cover in wet weather but now used as an arsenal and remarkable for the large size and ingenious construction of its roof the work, it is said

shaped area, surrounded by old houses, of which the town-hall (*Rathhaus*) built in 1680, is the most gloomy looking Darmstadt depends more upon the residence of the court than upon either trade or manufactures. Of the latter however may be mentioned carpets, playing cards, carriages, matches, tobacco philosophical instruments and machinery. As the seat of Government, Darmstadt possesses the usual appendages of a capital and has important civil and criminal courts, and public offices and a number of establishments—benevolent educational literary and scientific. It is also provided with various sources of amusement at public places of resort and with several fine promenades. Of these the best are the palace gardens, which are well laid out, but very indifferently kept Darmstadt is a station on the Frankfurt and Heidelberg Rail way and, though on the whole somewhat dull as a town, has much to attract the tourist in the picturesque scenery of its environs. A C Schleiermacher and Liebig the celebrated chemist, were born here. Pop 16,000

DARNETAL, a town France dep Seine-Inférieure, on the Robec and Aulnette 2½ m S Rouen. The town is charmingly situated at the top of a narrow valley, is well built, and its principal buildings are two churches one, called the *Lout*, a large Gothic edifice and the other a parish church of modern construction with exception of a square Gothic tower of great antiquity. It contains several busy factories the works of which are moved in and out of the town, by the stream which runs through the town for the manufacture of cloth, and other woollen stuffs spinning and dyeing &c &c Pop 3550

DAVIS ISLAND Bay of Bengal Martin archipelago lying 4 m W.S.W. the E. point, lat 8° 12' N lon 72° 10' W. It is about 10 m. in circumference and may be seen from a distance of from 20 to 25 m. lat 40° N lon 9° 40' E.

DAVIS STRAIT a vast area or inlet of the N. Atlantic Ocean, stretching N. and S. and running N. in Baffin's Bay having Greenland on the E. and Cumberland Island British N. America with adjoining parts on the W. It presumes limits cannot well be determined but navigators commonly understand it to extend from about lat 60° to 70° N. or taking the Greenland coast from Cape Farewell to the N.W. extremity of Disco Island a distance of about 700 m.

These limits on the E. coast correspond with those of Cape Churchill and Arisa on the W. side. The narrowest part of the strait is precisely at the point where it is intersected by the Arctic circle being there 220 m broad, the widest being probably about 600 m. The E. coast is thickly strewed throughout its whole length with rocks and islets, and serrated with numerous narrow inlets, which penetrate a good way into the land. The W. coast has fewer but larger indentations, the most extensive being Hudson's Strait, and Northern Island Inlet.

Davis Strait is the principal resort of whalers, the fish being more numerous here than in other seas near the pole. But the numerous icebergs, which even in summer from the W. coast of the strait, and which run some hundreds of feet above the level of the sea, and the violence of the currents render these voyages very dangerous. The countries on both sides of the strait rise in rocky mountains to a considerable elevation and exhibit a very scanty vegetation. They are inhabited by the Esquimaux. This strait was discovered in 1585 by the celebrated navigator John Davis.

DAVIS INLET a bay formed by the Atlantic on the E. coast of Labrador 80 m. N.E. Nain lat 56° 37' N lon 60° 40' W. It extends 57 m. inland, with a mean breadth of 6 m. In the neighbourhood of this bay to the N.W. is a more important strait.

It has 10 churches, 2 academies, 6 schools, a courthouse and county offices, a jail a bank, several distilleries, with flour and saw mills, and various other manufactures, as also three printing-offices, and numerous stores. The Miami Canal which passes through the place, connects it with Cincinnati. Pop. 8067.

DEABELIAKA a vil Hungary Banat dist. Temesvar 5 m. from Neudorf. It contains a Protestant parish church, and has several mills. 1 op. 2201.

DEAD SEA [Latin *Locus Asphalotus* Arabic, *Birket Iust* or *Bahr Luth*] the Sea of Lot French *Mer-morte* German *Todes-see*] called in Scripture Salt Sea, Sea of the Plains, and East Sea, a celebrated lake, Asinon Turkey near the E. extremity of Palestine, pass. Damascus, N. extremity 20 m. E. Jerusalem and 10 m. E. Jericho centre in about lat. 31° 30' N lon 35° 40' E. length, N. to S. about 41 m. breadth at the widest part, 94 m. average about 84 m. The general form of the lake is that of an elongated oval, interrupted towards its E. extremity by a peninsular projection, formed of loose calcareous matter with an incrustation of salt, which runs out from the E. shore towards

the opposite coast till it has reached the centre of the lake, when it suddenly takes a N. direction, and finally terminates in a narrow point, called Point Cosgoun. Its E. extremity formed by a small isthmus is named Point Molyneux. This projection narrows the breadth of the lake at this point to about 2 m. and forms almost a small separate lake of the S. portion, measuring 9½ m. N to S with an average breadth of about 8 m. whose S. shore is a mud flat backed by hills. The basin or hollow in which the Dead Sea reposes, forms the S. terminus of the great depression through which the Jordan flows, the river entering it at its N. extremity. The surface of the lake is 1312 ft. below the level of the Mediterranean and 984 ft. below lake Tiberias, from which the Jordan issues. It lies deeply imbedded between lofty cliffs of naked limestone, its shores presenting a scene of indescribable desolation and solitude, uncompensated by desert sands and bleak, stony salt hills excepting where there are fresh-water streams in which localities the shores are fertile. Lofty moun- tains, exhibiting frightful precipices, rise on the E. shore to the height of 2000 and 2500 ft. above the water and on the W. the rocky barriers attain an elevation of 1500 ft. Reposing in its deep basin like a lake of molten lead in a large eddies upwards of 1500 ft. below the level of the Mediterranean and far below the general surface of the earth, this dismal sea has exposed, for seven or eight months in the year to the un- clouded beams of a burning sun surrounded by sterility and solitude. Its waters are intensely salt, bitter and sour, thick and heavy and so singularly buoyant from the quantity of salt held in solution, that a person heaving in them floats without effort like a block of wood and is so slightly annoyed as to be hardly able to obtain sufficient purchase in the water to enable him to propel himself forward. On coming out of the sea, says Dr. Wilson we observed that our bodies appeared as if we had been bathing in oil and our skin had something of a leathery stiffness when dried our hair too, was quite clogged. Lieutenant Molyneux thus describes the effects resulting from a bathing excursion on the Dead Sea.— "Everything in the boat was covered with a heavy dirty substance, even the much corroded and looked as if covered in patches with coal tar, and the effect of the salt spray on ourselves by lying upon the skin, and getting into the eyes, nose, and mouth, produced constant thirst and dryness, and took away all appetite. The general colour of the waters of the lake is of a very dark blue though in some places, near the shore it assumes that of a dark bottle green. Its component parts are marble of lime, magnesia, and soda, and sulphate of lime. It was formerly believed that no bird could attempt to fly across the lake without being killed by the pestiferous vapours which were supposed to exude from its surface, but this is now known to be untrue, birds abounding on and about the lake, Lieutenant Molyneux having killed some which were actually standing in the water and having seen, while in the very centre of the sea several ducks or other fowl fly past him. Various other travellers corroborate this statement, leaving the point no longer in doubt. There is, however, no evidence of there being any fish in the lake the Arabs say there are none, and no signs of any have been seen nor of any other living thing although shells are numerous on the beach all those found by Dr. Wilson were of fresh water species, and were supposed by him to have been carried into the sea by the Jordan where he had himself panned up their congener. Although the waters do not appear to emit any noxious exhalations, their deleterious nature is further evinced by the absence of aquatic plants on the margin still the inhabitants of the banks of the lake, which always have been peopled, do not appear to suffer though subject to fevers, which how- ever can scarcely with propriety be attributed to the vicinity of the lake. On the borders of the lake, pieces of sulphate of large size, white, are found in great quantities, also the black bituminous limestone, of which so many bricks are made at Beethlehem and Jerusalem, including courses of which great numbers are sold to the pilgrims who visit the sacred places. The asphaltum, or bitumen from which the lake takes one of its names, is not very abundant on the shores and large masses are found after earthquakes only. Soundings have been taken at different points by various travellers. Those by Mr. Lynch give 218 fathoms as the greatest depth, although 800 fathoms are said by other authorities to have been obtained. The N. end of the lake seems to be by far the deepest the soundings

at the S. end, or S. of the promontory above-mentioned, give 2 or 3 fathoms only. It has no visible outlet, although it re- ceives six streams besides the Jordan. Its surplus waters being carried off by evaporation. It was long assumed that the lake did not exist before the destruction of Sodom, and the other cities of the plain and that, previously to that time the present bed of the lake was a fertile plain in which these cities stood and was then merely traversed by the Jordan which in accordance with this theory was supposed to hold on its course to the Red Sea flowing through El Arabah, by a channel now dry called Wadi el Ghazal, but the fact of the Dead Sea being far below the level both of the Red Sea, and the intervening tract El Arabah renders this assumption a physical impossibility while the idea that any convulsion of the earth had occurred at the period of the catastrophe alluded to sufficient to form the vast cavity in which the lake is situated is very satisfactorily shown by Dr. Wilson to have been highly improbable. In such case he remarks how should Lot have been safe in Sodom within two or three miles of the centre of action and how should Abraham have been near Hebron, within 15 m. of it, have been unconcerned of its occurrence? Some eminent critics including Professor Robinson and Dr. Wilson of Bombay are of opinion that the cities of the plain may probably have stood on the part of the lake S. of the promontory—the lake by this supposition, receiving an extension merely when these cities were destroyed. A circumstance, however brought to light by the survey of the sea in 1848 by Mr. Lynch, would seem to nullify strongly against this hypothesis, namely the extreme shallowness of the water in this locality, the soundings nowhere exceeding 2½ fathoms or fifteen feet, a depth which must be regarded as wholly insufficient to submerge the cities of the plain unless it be supposed that they are buried in the soft mud everywhere found on the bottom in this part of the lake. —(Robinson's *Researches in Palestine* Wilson's *Leaves of the Bible* Kitto's *Biblical Cyclopaedia* London Geog. Journal Lynch's *Exposition to the Dead Sea*.)

DEAKOVIA, a town, Austria Slavonia, co. Vuk, capital of same name, 38 ½ m. S. of Pest. It is poorly built, but is the seat of a bishop, contains a cathedral and episcopal palace, both handsome edifices, a parish church, a church, a Franciscan monastery and cavalry barracks. Pop. 3000.

DEAKY or DEAKOVKA, a vil Hungary co. Presburg, about 18 m. from Fuzs. It contains a handsome parish church. Pop. 1524.

DEAL, a municipal and port for export market in Kent on the coast between the N. and S. Forelands, 72 m. E. by E. London, and a station on the South Eastern Railway lat. 51 18' N. lon. 1 24' E. It is divided into Upper and Lower Deal. The latter consisting of three streets running parallel with the shore and occupied by the bulk of the population. The former composed chiefly of detached houses occupied by the wealthier classes. The town well paved and lighted with gas has a spacious and handsome esplanade, a public library reading room and bath; and is well frequented as a watering place. There are two parish churches a chapel of ease, a Wesleyan and national school, Baptists, Independents and Wesleyans and national and infant schools. Deal has a large yard including an extensive naval storehouse this establishment originated in Deal castle, built by Henry VIII. as a coast defence. There are also a custom house, and a jail and at Walmer a detached suburb to the S., is the royal and naval military hospital now used as a coast-guard station. At the N. end of the town is another coast-guard station formerly the castle of Sandown. There are also commodious barracks. Deal is a great pilot station 56 of the licensed or licensed pilots of the cinque ports being attached to it. Boatbuilding for which the town is famous is extensively carried on and likewise sail making but the greater part of the inhabitants are engaged in maritime pursuits, as fishermen, boatmen, and pilots. The Deal boatmen have long been celebrated for their skill and intrepidity, unobtainably lauding their lives in saving their fellow-creatures from the numerous shipwrecks that take place on the neighbouring Goodwin Sands. There is no harbour but a spacious roadstead—the well-known Downs, bounded seaward by the equally famous Goodwin Sands, affords good anchorage, and was much frequented during the

was by merchant vessels waiting for convoy. Much of the trade of the place is still derived from the supply of the shipping which takes refuge here during contrary winds, as many as 600 sail being frequently congregated at one time. Deal is a member of the *ci que port* of Sandwich and Walmer Castle, the official residence of the warden of the cinque ports, is about half a mile from the town. It contributes with Sandwich to return two members to the House of Commons. Its municipal government is vested in a mayor, six aldermen, and eighteen councillors. Weekly market, Saturday two fairs annually. Area of par 1217 ac. Pop 706.

DEAN—A river Scotland co. Forfar issuing from Forfar Loch and after a S.W. course of about 12 m. falling to the lake, 1 m. N. Meikle. This stream is famed for the excellence of its trout—2 (or Dean) River Highland rising in co. Leicestershire and falling into the Trent at Newark co. Nottingham.

DEAN FOREST England co. Gloucester 5 m. S.W. Newnham formerly comprised the greater part of the county W. Severn, but is now reduced to 22,000 ac. about a half of which is enclosed for the growth of navy timber. It is a property of the Crown, and its inhabitants, besides being exempted from county rates, enjoy other ancient privileges. It is divided into six extra-parochial districts, called Deanby, Herbert's walk, Little Dean walk, Speech House walk, York walk, and Worcester walk. It contains extensive plantations of oak and beech, and from the numerous orchards, cider of excellent quality is produced. The inhabitants are principally employed in the iron and coal mines with which the forest and neighbourhood abound. The forest is intersected by numerous railways crossing between the various mines and the rivers Severn and W. Pop. 10,639.

DEAN MITCHELL a par and market in England co. Gloucester 680 ac. It is a town situated in a valley 11 m. W. Gloucester consists of one principal street, irregularly constructed and badly kept. Houses roughly built of stone, and roofed with stone tiles and Welsh slate. Water abundant and good. It has an established church and several dissenting chapels, and a parochial school. The people are chiefly employed in agriculture. Area of par 680 ac. Pop. 662.—[Local Correspondent]

DEAN'S ISLAND a lagoon on S. Pacific Ocean between the Low Islands and Society Islands lat. 15° 5' S. lon. 168° W. (S.)

DEANSTON a vil. Scotland co. of and 30 m. S.W. Perth a bank town about 1 m. W. Dundee, consisting of one principal street, houses exclusively occupied by the workers (and their families) employed in the Dundee cotton factories, established on the S. bank of the river and driven by water power. Pop. 962.

DEAGHAM, par Eng. Cumberland 8377 ac. P. 2178. DEASE, a river British N. America, rising in the Coppermine Mountains, and flowing into the N. side of Great Bear Lake.

DEASE INLET a small bay in the Arctic Ocean, Russian America; lat. 71° 18' N. lon. 155° 10' W. It is so called after one of the persons who first explored it, in 1887 by order of the Hudson's Bay Company, is about 5 m. broad, and has two fathoms water with a muddy bottom. The coast which lines it is flat and desolate, with frozen banks of mud from 10 to 12 ft. high.

DEASE STRAIT a channel in the Arctic Ocean, between Victoria land on the N. and East peninsula on the S. communicating on the W. with Coronation Gulf and having parallel of 69° N. and lying between lon. 106° and 110° W. It is about 120 m. long, 12 m. average breadth, and at its widest part is considerably obstructed by islands.

DEHA, or DRAPA a tn. Tibet, cap. of the division of Umda, 50 m. S.W. Garoo lat. 31° 10' N. lon. 79° 07' E. 14,934 ft. above sea-level. It is situated on a succession of hills, forming the side of a ravine, and descending to the Tildi and is divided into three parts—the college or monastery, the residences of the lama and his priests, the university and the town, properly so called, the residences of the governor and the other inhabitants. The houses, which are of stone and two stories high are whitened externally but inside are very filthy. In the middle of the town is a temple of Vishnu, a very irregular building the door of which is covered with gilded bronze, and ornamented with grotesque figures. In the town are also numerous other temples, tombs, and vast granaries. A place, called even, from which a fine view of the town is obtained is cultivated extensively in the neighbourhood.

DERACH par Eng. Bedford 464 ac. Pop. 104.

DERAH a maritime in Arabia, Persian Gulf S.E. side; lat. 25° 16' N. lon. 53° 20' E. It may be considered the termination of the Persian Coast, as the natives to the S.W. have been generally less addicted to predatory habits, and inclined to be friendly to the English. It consists of an assemblage of mud hovels, surrounded by a low mud wall, having several breaches, and defended by three round towers, and a square castellated building with a tower at one angle much dilapidated in which are several old rusty guns. The town situated on a small cliff over the creek is in mud-brick, with three or four guns mounted. The inhabitants are of the Beni Sa tribe, amounting to between 1000 and 1200 and the Sheikh is subject to the Imam of Muscat, who keeps 150 negroes here as soldiers to guard the town. The inhabitants collect shark fins, and send about 90 boats to the pearl fishery which is their chief support the yearly returns amounting to between £4500 and £5000. The country around is very barren.

DERBEN a par and vil. England co. Essex 4404 ac. The village 4 m. N.W. Thaxted is pleasantly situated on an eminence, and has a church in the early English style. 1 pop. 1034.

DERBENHAM a par and market in England co. Suffolk 3271 ac. The town 12 m. N. Ipswich on the Deben contains a church built on a hill top in the center of the town a place of worship for Independents and a school. The streets are always dry and clean. The inhabitants are chiefly engaged in agriculture. Friday is market day and fairs are held twice annually. 1 pop. 1600.

DERBY a vil. Senegal, 1 bank Senegal about 20 m. from its mouth and 7 m. E. from the Atlantic Ocean. It is built on a low sandy hill and has a trade in fish and fish oils. The fish are taken in a stream which passes through the place.

DERBO or DERUX LAKE, Central Africa, 160 m. S.W. Timbuctoo lat. 15° 30' N. lon. 5° W. It is about 60 m. in length, E. to W. and 20 m. in breadth with a depth in the deepest parts, of 20 fathoms. Several streams flow into and from it, and the Niger passes through it. Shores low and swampy.

DERBOU a vil. W. Africa Benoué 1 bank Felomé lat. 14° 30' N. lon. 12° 14' E. It is situated on a cliff overlooking the river and has the appearance of a considerable village, with clean, well built houses. It has a large tank, of solid construction on the highest point of the river bank. The people are chiefly occupied in fishing, and show some ingenuity in the contrivances which they employ. A mile or two lower down is another village, on the same side, called Benoué-Debou and between the two a rocky bar obstructs the course of the navigation.—[Raffin.]

DERECZIN or DERECZET a tn. Hungary cap. of Thér Thér, co. Bihar on the border of the great central plain of Hungary 115 m. E. Buda. Though the second place in Hungary in respect of population, it has more the appearance of a collection of villages than of a single town. Its houses are almost all of one story and its streets, though wide, are unpaved becoming so wet weather a liquid mass of mud. It, however, contains several handsome edifices, which contrast somewhat oddly with the mere huts in their vicinity. The most important of these are the Reformed church and college, with a library of 20,000 volumes, the R. Catholic church, the Marxist college and gymnasium, the R. Catholic high school, an orphan, and three other hospitals, and two lunatic asylums. The manufactures are extensive, and consist

chiefly of coarse woollens, leather, soap, tobacco pipes, pear, woad, cedar, and other kinds of carpenter's timbers, &c. The trade, at present important, and expected to be greatly increased by the completion of the railway embraces a great part of the produce of the N and E. of Hungary—cattle, horses, bacon, tobacco, wine, wax, honey, fax, various kinds of oils, leather, hides, wool, potash soda, ewe milk cheese, horse hair &c. Here, too, the traders from Transylvania supply themselves with animal produce and the showy dresses of Vienna. There are also four large animal fairs and the largest ewe market in the kingdom. Debrecen may be considered as the capital of the Magyars and the capital also of Hungarian Protestantism. More than two-thirds of the inhabitants are Protestants and their college here, founded in 1779 has been pronounced the best educational establishment of which Hungary can boast. Pop. 68,000.—(Pogor's Hungary and Transylvania. Refractorer Lex. (in. States).)

DEBTLING par Eng Kent 1576 m. Pop 853
DECATUR, American place in U. States particularly—
 1. A vil Georgia, 90 m. W. Milledgeville agreeably situated on elevated ground, and having a jail, courthouses, three churches and an academy.—2. A vil Alabama, 189 m. N. N. E. Tuscaloosa, a bank, Tennessee.—3. A vil Mississippi, 76 m. E. Jackson, on the head waters of the Chickasaw.—4. A vil Illinois on the Sangamon in the midst of a fertile country 40 m. E. Springfield.

DELAZVILLE, or **LAZARIE**, a tn. France, dep Aveyron, about 18 m. from Villersmaube. It dates only from 1880 and owes its existence to the erection of blast furnaces and other ironworks said to be the largest and most complete of their kind in France. The town takes its name from Duke Dunois by whom it was founded and the minerals are worked by a joint-stock company who have a capital of £286,000 and employ about 1600 hands. Pop 4200

DECCAN [Sanskrit *Dakshina*—the South] a term formerly applied to the whole of peninsular Hindoostan S. of the Nerbuda, and of a line drawn from the source of that river E. to the mouth of the Hoogly. It is now limited to the territory lying between the Nerbuda and the Kistna, or between the parallels 16 and 23° N., and the Arabian Sea on the W. and the Bay of Bengal on the E. greatest length from E. to W. 900 m. greatest breadth from N. to S. 490 m. It comprises the provinces Candahar, Gualwara, Orissa, Berar, the Northern Circars, Becher Aungmyah, Hyderabad, Dejjapoor, together with the dominions of the Nizam the Prince of Berar and Satarah, the Guicowar and Gwalior sovereigns. What is known as the British Deccan comprises the collectorates of Candahar, Ahmednuggur, Poona, and Daurar, under the Presidency of Bombay, and the Bahaghat solid districts on the Nerbuda, under the Presidency of Bengal.

DECCAN or **DEKIN** INDIAN INLAND Bay of Bengal at the mouth of the Megun or Brahmaputra, from the sediment of which it is formed. It is 30 m. long and from 10 to 15 m. average breadth very low and at spring tides during the rain, is almost submerged. Silt of excellent quality is manifested here, on Government account.

DECEMBER ISLAND one of the New Zealand Isles, 88 Atlantic Ocean lat 38° 53' S. lon. 60° 35' W. Seen from a distance, it has a singular and striking resemblance to a vessel whence its name. The principal part of the island is composed of alternate layers of ashes and ice, as if the snow of each winter during a series of years, had been prevented from melting in the following summer by the ejection of cinders and ashes from its volcanic crater. On the E. side of the island is an opening of about 800 ft. wide which affords an entrance to a kind of lake or internal sea, of a nearly circular form, 5 m. in diameter and 97 fathoms deep. At this lake occupies the entire centre of the island the land forms merely a kind of ring around it, similar to the atoll islands. It abounds with hot springs affording the extraordinary spectacle of water at the temperature of 140° issuing from beneath the snow with which the ground is covered. The hills, whose height is about 1800 ft. are principally tufts, coarse, and a red brick-like substance. The cliffs on the N. side of the entrance to the lagoon or internal sea, rise precipitously to the height of 800 ft. and appear to be of older formation than the rest of the island. The only sign of vegetation

is a lichen, growing in small tufts around the mouth of the volcanic crater, of 3 or 4 ft. in diameter, from which a heated vapour is constantly issuing, accompanied by much noise. In February 1842 Capt. Sully saw the whole S. side of the island apparently on fire, and counted 18 volcanoes in action. The island swarms with penguins. Port Egmont has, penguins, and various kinds of petrels also abound and sea-leopards are numerous.—(U. States Exploring Expedition, Lieut. Kendall's Journal, &c.)

DECIOMANNU a vil in Sardinia, div of and 7 m. N. W. Cagliari at the confluence of the Santuliana and Mannu. It has an annual fair of eight days, which is sumptuously attended. Good wine is grown in the neighbourhood.

DECIZE (anc. *Decies*) a tn. France, dep. Nivernais, 17 m. S. E. Nevers picturesquely situated on a rocky plot of the Loire at the confluence of the Aron and the commencement of the canal of Nivernais, which gives a communication between the Loire and Yonne. The inlet is connected with one bank of the river by a stone, and with the other by a suspension bridge, and its highest summit is crowned by an old castle of the Duke of Burgundy. Decize possesses several blast furnaces, and other ironworks. The coal mines, extensively wrought in the neighbourhood are about the richest in France, and furnish the town with the staple of its trade which, however includes also grinding and mill stones, charcoal and ship timber. The glass-works of Châtillon about 1 m. distant, make about 100,000 bottles monthly Pop 3828.

DECS, a vil. Hungary Thither Damba, co. Tolna, 8 m. from Buda. It contains a Protestant church. P. 1686.

DECCUMAN (Sv.) par Eng Somerset 4391 ne P. 2768

DEDDINGHAM, a vil. Hungary Thither Damba, co. Schweg, about 2 m. from V. It contains a Protestant and a R. Catholic church. Pop 1173.

DEDDINGTON a par and tn. England, co. Oxford 3890 ac. The town picturesquely situated on an eminence, 16½ m. N. by W. Oxford consists of one principal street, straight, and tolerably well kept. The market square which is remarkably large, contains the townhall, an insignificant building, and a capacious reservoir for water, of which there is a plentiful supply. The houses are plumbly but substantially built of stone. There are a parish church a handsome Gothic building of the 18th century with a massive tower erected in the reign of Charles I. and two plain chapels, belonging to Independents and Wesleyans and national schools for boys and girls. A castle formerly stood here in which Piers Gaveston the favourite of Edward II. was confined for a night, on his way to Warwick to be beheaded. There are two mineral springs in the neighbourhood, and at a short distance from the town, a station on the Oxford and High Wycombe branch of the Great Western Railway. The inhabitants are chiefly employed in agriculture. Pop. 2178.—(Local Correspondent.)

DEDEL BEN (GROSS and KLEIN) two adjacent vil. Prussia, gov. Magdeburg near Ocherden. Each village has a parish church and the two contain several mills. Pop. 1325.

DEIDHAM a par and vil. England co. Essex. 551 ac. The village, 6 m. N. E. Colchester in a picturesque valley on the Stour over which is a good bridge, consists principally of one street. Pop 1792.

DEE.—1. A river England which has its source in a mountainous out of Merionethshire, N. Wales. It pursues a N. E. course, traverses the vale of Llanelgall, and, approaching Chester, near Shocklach, forms the boundary between Cheshire and Denbighshire, till it approaches Aldford whence it flows on to Chester the walls of which it nearly encircles, and where it is 100 yards wide. From Chester it is conveyed by an artificial channel into the broad estuary which unites it with the Irish Sea.—2. Two rivers, Scotland, one in Aberdeenshire, the other in Kirkcubrightshire. The former rises in the S. W. extremity of the shire, and after a course of 70 or 80 m., falls into the German Ocean at the harbour of Aberdeen. It is not navigable, but its salmon fisheries are valuable, and the scenery on its banks romantic. The latter formed by the junction of the Dee water and the Ken, after a course of 40 m. enters Kirkcubright Bay. It is navigable by vessels of 800 tons for 2 m. above the town of Kirkcubright. It has valuable salmon fisheries also.—3. A river,

Ireland, co. Meath and Louth. It rises near Drumcannon, passes through the rich vale of Ards, is joined by the White River near Poo's Court, and after a course chiefly E. of about 21 m. falls into Dundalk Bay by a common embouchure with the Glyde 48 m. N. by N. Denny Point.—A. A river Van Dusen's Land, co. Cumberland. It is a branch of the river Derwent.

DEEG a m. and stratum, Hindostan prov. Bengal, prov. of mid 57 m. N. W. Agre lat. 27° 30' N. lon. 77° 12' E. To preserve this town from the violence of the torrents that pour from the hills during the rains, it is necessary to keep large embankments in repair. There are here the ruins of seven remarkably fine palaces. It was thought to be impregnable by the people of India, till it was taken by storm by Lord Lake in 1805.

DEEL—1 A river Ireland chiefly in co. Limerick. It rises in the Erris mountains, co. Cork, and, after a circuitous course, S. to N., of about 25 m., flows into the Shannon, 16 m. below Limerick. It is navigable to Akenston.—2 A rivulet, Ireland, co. Mayo, flowing into Lough Conn.

DEENE a m. and stratum, England co. Lincoln.—1

DEEPING several places, England co. Lincoln.—1 (Market) a m. and stratum, and par. area, 1240 ac. The town 3 N. E. C. Lincoln and 2 m. W. the Peckirk station of the Great Northern Railway has a fine old church an independent chapel an endowed school a well attended weekly market on Wednesdays and several small fairs. Pop. 1221.—(East) 177 acres and par. area, 6110 ac. The village, 2 m. S. E. Market Deeping of which it is a suburb is situated on the Welland which is here navigable for small craft. It has one main street leading to a well drained is pleasantly supplied with water and kept remarkably clean. The houses though somewhat irregular are well built, principally of stone but the only imposing structure is a recently erected town hall. It has a spacious nave parish church two Dissenting chapels, two public schools two private academies a mechanics institution and several local churches and at its E. end a chalybeate spring. The people are chiefly employed in agriculture. Pop. 1649.—3 (West) a vil and par. area 1170 ac. The village, 2 m. W. W. Market Deeping is compact and well built, and contains a handsome parish church. Pop. 861.

DEER (New) a par and vil Scotland, co. Aberdeen, 29-020 ac. The village is a town on a ridge of a hill 26 m. N. by N. Aberdeen consists of one street. Fairs are held on one time annually for cattle sheep, horses, and agricultural produce. Field marshal Keith who fell at the battle of Hochkirk October 14, 1745 was a native of the parish and Robert Arbuthnot grandfather of the celebrated Dr Arbuthnot who was physician to Queen Anne, and the friend of Dean Swift is buried in the churchyard. Pop. 2073.

DEER (Old) a vil and par. area 2000 ac. co. Aberdeen the former 26 m. N. by N. of Aberdeen and 10½ m. W. Peterhead. It is populous and thriving and contains an Episcopal chapel.—The village comprises about 25000 ac. Pop. 448 of which about 2000 are in the village.

DEER (Island)—1 An isl. Ireland, co. Clare, W. shore of the estuary of the Fergus 4½ m. N. E. of Midway. It is about 1 m. long with a medium breadth of about one-third of a mile.—2 An isl. 1 Statute mile, N. E. shore of Penobscot Bay and separated from the mainland by a very narrow channel. It is about 18 m. in circumference with several adjacent islands it forms a township has a fertile soil and contains several good harbours, conveniently situated for the fisheries. Pop. 2841.—3 An isl. New Brunswick, in Passamaquoddy Bay near its entrance on the N. W. side about 7 m. long, and 5 broad. Irregular in form, and inhabited chiefly by fishermen.

DEER (Island) a small isl. Indian Archipelago, Macassar Strait, off the extreme N. W. coast of Celebes, and directly opposite the town of Macassar lat. 5° 5' S. lon. 119° 14' E. (S.)

DEERFIELD numerous places, U. States, among the most important of which are—1 A township, Massachusetts, 90 m. W. by W. Boston. It has a pleasantly situated village, and contains a Congregational church an academy and several schools. Tanning and rope-making are carried on, and there are several grist and saw mills. Pop. 1912.—2 A township, New York, 4 m. N. Utica. Pop. 3130.—3, A

township, New Jersey. It contains four churches, three academies, 11 schools, several stores, various factories, and a printing-office. Pop. 3227.

DEERHURST par. Eng. Gloucestershire 9330 ac. P. 899 DEERNESS par. Scot. Orkney, 4½ m. by 1½. P. 1718

DEES, or DEESAC (Lat. Duesac) a market tn. Austria, Transylvania, co. Baden, agreeably and advantageously situated at the confluence of the Great and Little Sannos, 30 m. N. N. E. Klausenburg. It is well built, contains a Protestant, a R. Catholic, and two Greek churches, two Franciscan convents, and a gymnasium and has a considerable trade in salt. In the neighbourhood are the ruins of the old castle of Deesvar. This district is said to be the first in Transylvania the inhabitants of which embraced Christianity. Pop. 6306.

DEESSA a tn. Hindostan, prov. Goozerat 1 hock, Dumas 12 m. W. Falknapp lat. 21° 5' N. lon. 72° 5' E. It is the most advanced military station of the British on the Goozerat frontier.

DEGERAND (Cape) Van Diemen's Land, forming the S. extremity of Freyria's peninsula lat. 43° 28' S. lon. 146° 32' E.

DEGERLOCH a vil Wirtemberg, circle Necker 3 m. S. Stuttgart, to whose environs it is a great holiday resort. A good red wine is produced in its vicinity. Pop. 1512.

DEGENDORF or DECKENROSE a tn. Lower Bavaria cap. dist. of same name, at the junction of the Kolbach and Danube, over which there is here a bridge 22 m. N. W. Passau. It is well built contains five churches, to one of which numerous pilgrimages are made a denary and Latin school and has manufactures of linen and gloves, wax rollers, some shipbuilding trade an iron and several other mills Pop. of tn. 3800 of dist. 1574.

DEGUINGE a vil Wirtemberg, circle Danube, half of and near Gesslingen. It contains a parish church and has several fairs. Pop. 1707.

DEIDORF a tn. Kingdom of Italy Piedmont div. of and 27 m. S. W. Austerlitz chief place manducations of same name, L. bank, Rhodanus. The Austrians were here defeated by the French in 1796.

DEH HAJEK, a walled tn. Afghanistan on the route from the hazyuk Pass to Kandahar 20 m. S. E. the latter lat. 31° 28' N. lon. 64° 44' E. The houses which are from 20 to 30 ft. high are built of sun-dried bricks, with domed-roofs constructed of the same material. Pop. about 5000.

DEHRUNG a dist. Assam, on the N. side of the Brahmaputra, about 30 m. sq. It is an elevated tract, not subject to inundation but very fertile, and well cultivated.

DEIDERSHEIM a tn. Bavaria circle Pfalz, dist. of and 3½ m. W. N. W. Spire. It contains the ruins of a old castle and has manufactures of fire-arms, tile works, and two mills. Excellent wine is produced in the neighbourhood. Pop. 2327.

DEIGHTON Kinn par. Eng. 10rk (W. Riding) 8611 a. Pop. 480.

DEINLM a vil Holland prov. Friesland 8 m. W. Leeuwarden on the coast thence to Franeker. It is pleasantly situated is surrounded by a dyke, and has a Reformed church and a school. Pop. 400.

DEIR, or EL DEIR, a tn. Arabia Turkey path Damascus r. bank Fozbratan lat. 35° 21' N. lon. 40° 18' E. 70 m. S. E. Rakka. Alexander the Great had a dock here for building vessels.

DEIR-EL-KAMMER. See DEIR-EL-KAMMER.

DEIROUT or DEIROUT a tn. Lower Egypt, 1 bank of the Rosetta branch of the Nile, 14 m. S. by R. Rosetta.

DEISLINGEN a vil Wirtemberg, circle Schwarzwald, half of and 4 m. S. Rotenell on the Neckar. It is a place of considerable antiquity and contains a parish church.

DEJ'JAR, a vil Hungary Higher Danube, co. Neograd, near the Ipoly 5 m. from Balazs-Gyarmath. It contains a R. Catholic church. Pop. 1297.

DEL RLY (Rio) a river W. Africa has its sources in the Cameroon mountains, and falls into an open shallow bay in the Right of Biafra.

DELAGOA BAY, in S. E. Africa lat. 26° 4' S. lon. 83° 1' E. formed by a narrow slip of land, projecting from the mainland, and parallel to it, called the peninsula of Inyanga. The bay stretches N. and S. upwards of 40 m., with a breadth of from 18 to 50 m. Though crossed at its entrance by a

bar on which during the E. E. monsoon, the sea breaks with great fury, it is accessible to vessels of the largest class, and is the most valuable bay on the E. coast of Africa, both on account of the extent, and the deep and large rivers that discharge themselves into it, the principal of which are the Limpopo, English River, and the Mazona. But the great deposit of shells by these streams has created shoals, banks, and flats, which have rendered the navigation of the bay somewhat intricate. Its shores are generally low and swampy and lined with mangroves; and at high tides are in part over flooded. There is here a Portuguese fort, on the N. bank of English River about 8 m. from its mouth lat. 25° 58' S. lon. 33° 23' E. the southernmost establishment of that nation on the E. coast of Africa, although they claim a territorial dominion as far as Point Natal. The natives here are perfectly black, tall muscular and well set; with short thick neck and small head. The women are mostly of small stature, stout, although not positively handsome, have agreeable countenances. Several acts of treachery towards Europeans are recorded against the natives, with more particular reference to those inhabiting the country for some distance up the river. Delagoa Bay was originally called *Lourenço Marques*, after its first discoverer who was amongst the earliest of the Portuguese voyagers.

DELAWARE, two parts Eng. 1—1 Chester 8770 as Pop. 1850 —2 (Tobacco) Hurford 1877 as Pop. 193.

DELAWARE, one of the U. States of N. America, and next to the state of Rhode Island, the smallest in the Union. It is bounded, N. by Pennsylvania, E. by the Delaware River and Bay S. and W. by Maryland between lat. 38° 29' and 39° 47' N. lon. 74° 56' and 75° 40' W. length 92 m. breadth 23 m. area, 2120 sq. m. With the exception of a small rounded exposure to the N. it has the form of a right-angled triangle, with its base on the S. its perpendicular on the W. and its hypotenuse stretching from N. W. to S. E. along the bay Delaware belongs geologically to the secondary formation intermingling between the carboniferous and the cretaceous series. In the S., and towards the coast, the surface is very level but the N. part is rather hilly. An elevated swampy table land towards the W. traverses the state, forming the watershed between the Bay of Chesapeake and the Delaware. The soil, thus divided is heterogeneous, but about the Delaware it is rich, and productive. In the N. the soil is sandy but there is some fine grazing land. A cypress swamp on Indian River, 13 m. long by 6 m. broad, yields large quantities of timber. The chief crops are wheat, which, made into flour forms the principal article of export Indian corn, rye, barley, oats, flax buckwheat, and potatoes. The climate is generally temperate and salubrious but winter is occasionally severe. The rivers of Delaware are small, and the sea coast, though of considerable extent, has no good natural harbours. Wilmington the largest and most commercial town in the state is accessible by vessels drawing 14 ft. The capital is Dover. By the present constitution, adopted in 1891 the governor is chosen for four years, and is ineligible ever after. The state is divided into three counties, and the senate consists of three members from each county elected for four years the representatives are seven from each county, chosen for two years. Every male citizen above 21 years of age, after a year's residence has the right of suffrage. The present income is \$2600 and exceeds the expenditure by \$262. There is no state debt. Delaware was first settled by Swedes and Finns, under the patronage of Gustavus Adolphus, and received the name of New Sweden Pop. (1880) 91,586 of which 2389 were Swedes.

DELAWARE, a river and bay U. States. The river rises in two principal branches, W. side of the Catskill mountains of New York, pursues a winding S. course, forms the boundary between New York and Pennsylvania, then between Pennsylvania and New Jersey and finally between New Jersey and Delaware until it expands into Delaware Bay. Its length is about 800 m. Its principal tributaries are the Lehigh, which it receives at Easton from the W. and the Schuylkill, which joins it 6 m. below Philadelphia. It is navigable for vessels of the largest burden 40 m. to Philadelphia, and for sloops 85 m. further to Trenton. It is connected by canals with the Hudson, and with Chesapeake Bay. The principal towns situated on the Delaware are Philadelphia, Burlington Trenton and Easton. —The BAY at the mouth

Vol. I

of the preceding, of which it forms the estuary is a large inlet of the sea, between the states of Delaware and New Jersey extending 86 m. inland and is 18 m. across at its entrance, between Cape May on the N. and Cape Henlopen on the S. At this bay has its natural harbour the U. States Government have caused a magnificent artificial one to be formed within Cape Henlopen. The anchorage is in lat. 39° 47' N. lon. 75° 6' W.

DELAWARE, a tribe of N. American Indians, occupying a portion of the U. States territory assigned to the Indians, W. of the Missouri, and N. of the Shawnees. They are industrious and frugal and devoted to agricultural pursuits, and to the rearing of cattle and horses. Baptists and Methodists missions have been established among them. They were formerly numerous and powerful, occupying part of New York, Pennsylvania, and New Jersey their present number is about 526.

DELBEUCK, a tn Prussia, prov Westphalia, gov of, and 40 m. S.S.W. Münden, on the Hanoversch. It contains a R. Catholic parish church; and has manufactures of linen and tobacco a trade in cattle, and four annual fairs. P. 1087

DELLEN a tn Holland, prov Overijssel 51 m. S.E. Zwolle, on the road from Deventer to the Hanoverian frontier. It consists mainly of a single badly paved street, and has a Reformed and a R. Catholic church and a school; with a branch of the public utility society Pop. 1850

DEI EMONT (German, *Delberg*) a tn Switzerland can. Berne cap. bal. of same name in a fertile valley 1 h. N. Berne 18 m. S.S.W. Basel The houses are well built and the streets broad and straight, and adorned with fountains. The church courtyards, and school, are all handsome buildings. An old palace now belonging to the parish, was the summer residence of the old bishops of Basel. Delémont has a college with three professors, and a principal. One of the chief employments is bleaching. In the vicinity the remains of Roman baths have been discovered. John Prevot, a celebrated professor of Padua, was born, and died here. Pop. 1432 all R. Catholics.

DELPHHAVEN a tn Holland, prov S. Holland 2½ m. below Rotterdam 7 h. N. Mass. the seaport of Delft, with which it is connected by a canal. It is strongly defended from the inundations, to which it is much exposed by dykes, flood gates, and other engineering contrivances, and presents ample conveniences for shipping. It has a Reformed church with a crowded belfry for the steeple vane in token of the town's obligations to the herring trade and a neat R. Catholic church also a courthouse a royal navy provision store, formerly the East India Company's warehouse a town's school for various branches of education the deacons' school, a handsome new building and a magnificent boarding school for girls, including day classes for the citizens daughters. Pop. 2800

DELFT (original name, *Ydenhoen*, or Long Island) a small id. off the N.W. coast, Caylon about 8 m. long, by 3 broad, and entirely surrounded by coral reefs. It possesses no natural harbours; but a small and secure one has been formed on the N. side. Water is scarce. This island was appropriated by the British for the breeding of horses and, till lately an extensive stud was kept up. Cattle, of a good description, are reared here in great numbers. Pop. 2947 — (Cape Hen)

DELFT formerly *DELS* a tn. Holland prov S. Holland, 8 m. N.W. Rotterdam, supposed to be one of the oldest towns in the Netherlands. It stands on a dead flat, and is intersected in all directions by canals, which are crossed by 60 bridges, mostly of stone. These canals make the great market-places, with its public buildings, an island, approached by 9 bridges. The counterescarp of the old ramparts are now planted with trees, and form public walks, such as are greatly prized by the Dutch. The town-hall (Stadhuis) in the great market-place, was repaired and improved in 1593, with an anxious desire to retain the original style of its architecture. It is a large solid-looking building, with a heavy square tower rising from its roof. The Prisoner-hall, once the occasional residence of William I. of Orange, and the scene of his assassination, is now a military barracks. There are three Reformed churches. The old contains the monuments of Admirals Tromp and Hain; the famous naturalist Leewardsch and other worthies. The magnificent mausoleum of Father

209

William, and the burying-place of the Orange family are in the New and from the top of its huge square tower the town and neighbourhood are from time to time regaled with the richest music from a chime of three towers; the new church

THE TOWNHALL, DELHI.—From Royal Academy of Religion and History

contains also the tomb of Hugo Grotius. The third is called the Hospital Church. The Belgian Reformed, the Evangelical Lutheran, and the Jesuits, have each a church, and the R. Catholics two. Delhi has long been the seat of an arsenal, for which its central position fits it. The old *Armamentarium Ordinum Hollandiae et Frisiae*, as the inscription runs, is now a store for small arms and artillery and the *Constructio-machi-næ* machinery for cutting and boring and for everything required by the ordnance and commissariat departments. The old *Laboratorium* is now an ammunition store, and the Old East India House has become the clothing and tent store, and the needle-maker's shop. To these have been added, since 1830 a large iron foundry. There are a gymnasium and 17 other schools several associations for promoting the fine and useful arts, and science and literature as infirmary and several benevolent institutions. In 1654 the powder magazine exploded accidentally when not a single house entirely escaped and many persons were killed or maimed. From 1780 to 1815, the population fell off but since 1815 it has increased and in 1840 it was 17,514.

DELFIJIL (Latin, *Castrom Delfilicorum*) a maritime town and fortress Holland, prov. of, and 16 m. E.N.E. Groningen at the mouth of the old Delft or Damsterdijp, and on the estuary of the Emsa. It is well fortified, has three gates, and a roomy haven—not, however so deep as once it was a *berneek arsenal, magazijn, a Calvistic and R. Catholic church, a school and a marine college Agriculture, fishing, shipping, and trade, employ the inhabitants. Pop. 1704.*

DELGAO a low rocky cape, Mozambique Channel, N entrance, lat. 10° 41' 15" S lon. 40° 39' 45" E (n)

DELHI, formerly an extensive prov. Hindoostan, cap. same name, straits principally between lat. 28 and 31 N and lon. 75 and 80° E., bounded N by Lahore, S by Agra, and Ajmer E by Oude, and W by Almor and Lahore. It extended E. to W about 240 m. and N to S. about 200 m. The province is generally level, and the soil arid and unproductive, except on the banks of the rivers. Much pains, however have been taken by the British government to irrigate the land, by restoring the ancient canals with which the country was intersected and by constructing new ones. Many thousand pounds have been already expended on these meritorious works, with the best results. extensive tracts of sterile and waste lands having been fertilized by the waters, and rendered capable of the highest cultivation. Wheat, barley and other kinds of grain are produced in the districts lying between the Jumna and the Ghaggar, and wheat and sugar in that between the R. bank of the Ganges and the kingdom of Oude, called the Rohilla district; the soil here being extremely

fertile in consequence of its being irrigated by numerous streams from the Kassiun hills, the waters of which are collected in reservoirs the climate also is genial. The W. part of the province, especially the Bhaty and Marjuna countries,

suffer greatly from want of water the inhabitants being obliged, in the hot season, to dig from 150 to 200 ft. deep for it; and even then, what is obtained is brackish! The appearance of the country however wonderfully improves after the rainy season. grounds formerly parched and burnt up, are then covered with a rich verdure produced by temporary streams, and by the overflowing of rivers. The principal rivers are the Ganges, Jumna, Caggar and Chistang. The Saraswati in the N.W. part of the province, was formerly another important stream, but is now nearly extinct. The people of this province are remarkable for their quiet and orderly habits, and easy circumstances. This territory has frequently changed masters. For a long period it was under the Patan or Afghan monarchs. In 1525, the Mogul dynasty was founded by Babur who had slain the last of the Afghan monarchs in battle. The empire continued in the possession of this sovereignty and its descendants, until the establishment of the British in India. Shew Alam II. signified the commencement of his reign by an unconditional attack upon the English and on his defeat, by an unconditional surrender of himself. From this period the territories of the Mogul gradually decreased and in a short time he possessed little more than a nominal sovereignty. The Rohillas became masters of the capital in 1783, whereupon Shah Alam transferred the residence of his empire to Muta Raja, and became a prisoner to the Maharajah. Matters continued in this state till 1803 when Lord Lake, after defeating Dewlah Row Scindia, took possession of the country and appropriated a portion of it for the support of the Mogul throneforth entitled king of Delhi.

Delhi is now one of the six administrative divisions of the North western provinces, and comprehends but a small portion of the N.W. of the ancient province. It is divided into five districts, the names of which, with their area and population, &c. are as follows:—

	N of Terr. sq. m.	Area (sq. m.)	Area in Acres.	Land Revenue in Rupees—r	Total Pop.	N of Terr. sq. m.
Panipat	501	1973	1,019,006	228,196	231,811	182-6
Muzaffarnagar	498	3148	1,614,604	44,118	310,749	30-6
Meerut	618	448	208,574	28,413	231,261	440-0

DELHI (Sanskrit, *Indraprastha*) a city Hindoostan, prov. Bengal, cap. above prov., and successively of the Patan and Mogul empires lat. 28° 40' N lon. 77° 10' E. About 700 m. N.E. Bombay and about 790 m. N.W. Calcutta, and near the residence of the King of Delhi. It was at one time the largest city in Hindoostan covering a space of 80 sq. m. and having a pop. of two millions. It is now reduced to a circumference of 7 m. and its pop. to about 250,000. A vast tract covered with the ruins of palaces, pavilions, lakes, gardens, and monuments, mark the extent of the ancient metropolis of the Mogul empire. The present city built on two rocky eminences, is surrounded by walls of red sandstone, 30 ft. high, and from 3 to 5 ft. thick, with a moat 30 ft. broad. There are seven colossal arched gates defended by round bulwarks and all built of freestone. The streets are all narrow excepting two, which are, or rather were, of the breadth respectively of 30 and 40 yards, but now narrowed, and otherwise disfigured by the erection of new buildings one of them divides the city E. to W. and is intersected by a canal or aqueduct,

The houses here are of sandstone and brick, and are of two and three stories in height. The bazaars have a very attractive appearance, being filled with rich and showy goods, displayed to the best advantage, and thronged with busy crowds. The palace or residence of the Great Mowlā built by Shah

in S of the city is the tomb of the Emperor Humayun, the largest and handsomest of the sepulchral monuments of Delhi. It is built also of red sandstone and white marble, and is two stories high with a large lofty vaulted hall, in the centre of which are the beautifully sculptured white marble sarcophagi.

of the emperor and his consort. The exterior of this splendid structure is adorned with domes, supported by square pillars, with arabesques and sculptures. At the distance of a few hundred paces are the tombs of several saints the most remarkable of which is that of the celebrated Muzammil saint, Nizam ad-Din, distinguished by its elegant arabesque and filigree work executed in beautiful white marble. There is also a school for the promotion of education amongst the natives of British India, the funds for the support of which are supplied chiefly by the Indian Government. In 1846 the college was attended by 460 students, of whom 299 were Hindoos, and 148 Mahomedans. The salaries and other expenses for 1848 amounted to 239,060 Rs 10d. This college or Madrasa, was originally built by Ghias-ud-Din. It is a so elegant structure that it has been named the *Almshouse-gate*. The famous observatory of Jyoti Bugh rajah of Yeperon at the S.W. extremity of the city has been much discredited and its astronomical instruments nearly all destroyed or carried off. The principal manufacturers of the town are cotton cloths, indigo, finely embroidered shawls, and jewelry for which as well as for delicately carved ivory Daulat is somewhat noted. The chief imports are by the northern caravans, which bring from Cashmere and Cabool shawls, fruit, and horses. Free use on stores of good quality are to be had at Daulat's bazaar, where silver and gold are also carried in. In the vicinity wheat, rice, millet, and indigo are raised.

Delhi or it was suddenly called Indraprastha, was ruled by the Mahomedan rulers as early as A.D. 1000 when it was the residence of the Bihno rulers. It has at various times undergone great vicissitudes having been frequently taken by hostile powers, and subjected to all the miseries of such events. In the beginning of the present century the prosperity of the city and country around was almost entirely ruined and the Mogul Emperor and royal family fled to the mountains. The British General Sir John Malcolm, who took possession of his capital of his garden and houses, and used his means to oppress and impoverish the people by fraud and extortion. From this miserable state of desolation and ruin the city was rescued by the British in 1804 when it was entered and taken possession of by Lord Lake, after he had defeated the army of Dowab Row Bahadur in the neighbourhood. Peace and order were soon restored and the city was again made the residence of the British rulers. It was made to the Emperor and family. Pop. 250,000 of whom the Mahomedans are to the H indos in the proportion of two to seven. (Governor's Returns Journal Statistical Society vol. 1)

PALACE OF THE KING, DELHI.—From the Hon. L. J. HAY, *at* Residency of India.

When commenced in 1681 and finished in two years it was the most interesting building in Delhi from its being the most magnificent structure of the kind in India. It is situated on the bank of the Jumna, or rather a branch of it only and is about a mile and a half in circuit, being enclosed by an embattled wall of reddish sandstone, nearly 80 ft. high, with round towers at intervals; the whole perforated with loop holes, and surrounded by a broad moat which is separated from the streets of the city by a wide road or esplanade running along the palace a regular fortress, impregnable against an assault from any quarter, and in the centre of the town. There are two principal entrances—the Delhi and the Ajmer gates. The most splendid buildings of the kind, particularly the former, which is probably not surpassed by any similar structure in the world. The lofty embattled walls the stupendous towers, surmounted by elegant pavilions, the marble domes and gilded minarets, form altogether an unequalled assemblage of taste and magnificence, and give one a high idea of the former splendor of the emperor of Delhi. The main gateway is flanked by two massy angular towers, embattled to correspond with the top of the adjacent wall and surmounted by two elegant octagonal pavilions with marble domes, the central portion of the gateway is a lofty archway and above the towers, in the form of an alabaster carved sunburst, is a group of slender columns, with minarets at the ends and over all seven small marble domes with gilt spires. Just above the great gateway which is somewhat concealed by the wall of the court that surrounds it, is a covered gallery with low balustrades in front, which might contain a considerable number of people. The interior of the palace corresponds with the noble entrance and sufficient yet remains to show that by the days of the meridian glory of the empire, it was a place worthy to be seen on account of the richness of its decorations, and the splendour of the court. In many places the walls are of marble, and these from the Juma are tumbling down and threatening ruin to the inmates. One of the most remarkable objects in the city is the Taj Mahal mosque a magnificent structure in the Byzantine-Arabic style, and considered by the Mahomedans the wonder of the world. It stands upon an irregular foundation and is built of white marble and red sandstone, inlaid like mosaic, in hues and arabesques at the two extreme corners rose minarets 150 ft. high and between them two lofty domes. This imposing edifice was built by the emperor Shah Jahan in the 17th century and took several thousand men for six successive years (1631 to 1667) to complete it. The gateway of the city and adjoining gateway is situated from the sunnits and moonnits, which are encircled by winding staircases within. There are no fewer than forty other mosques in different parts of the city most of them having lofty minarets and gilded domes. Five

and is of considerable fertility producing much corn and fruit. Pop. 47,809.

DELLI is a town and small state N.E. coast, lat. Sumatra. The town is situated at the mouth of a river of the same name lat. 8° 45' N. lon. 99° 43' E. It is a more assemblage of many dirty huts, on both sides of the stream, which is navigable for canoes one day's journey inland.—The state yields gold, camphor, banana, and pepper; the inhabitants are Malays and mostly pirates.

DELLIHLAT a vil. Hungary, dist. Temevar about 10 m. from Nendorf. It contains three Greek orthodox churches, and has numerous mills. The inhabitants are Walachians. Pop. 2866.

DELLNICEZ, a vil Austria, Croatia, vo Agram, about 13 m. from Plesina. It is the seat of a court of justice, and contains a parish church. Pop. 1679.

DELLY—1 a seaport in Algeria, 49 m. E. Algiers; lat. 36° 55' 30" N. lon. 8° 55' 12" E. It is a small place, partly at the foot, and partly on the declivity of a high mountain, built out of the ruins of an ancient city supposed to be the Ruconium of Ptolemy. The inhabitants carry on a brisk trade with Algiers the great seat for their agricultural productions, and with which they have regular steam communication. Pop. 1049. 1859.—2 A cape about 30 m. E. the port.

DELLMÄHNERF a m. (Hidderburg, cap. curia of same name, on the Delme, 163 m. S.E. Oldenburg. It is an old place, entered by two gates, and has recently been considerably improved. It is the seat of a court of justice and several public offices, contains a church and high schools, and has a considerable trade in fir-wood, cattle and horses and four annual fairs. Pop. 177.—The district has an area of 231 sq. m. Pop. 33 1/2.

DELCORA R. a m. Van Diemen's land, co. Devon and Westportland, 32 m. from Launceston.

DELOS, DILI or DOLI two small and barren islands, Greek archipelago, between Myconos, Syra and Paros lat. 37° 26' N. lon. 25° 15' E. The larger of the two was called Rhenea, but little Delos was the more important, from its being a chosen seat of Pagan superstition. Here may be still seen remains of a famous temple of Apollo, built at the joint expense of all the communities of ancient Greece. Early in the 18th century the greater Delos furnished nearly pasture to the people of Myconos. It is still inhabited by a few shepherds with their herds.

DELOW or **DALLI** a m. of W. Sudan, 20 m. S.E. Boma lat. 9° 55' N. lon. 9° 15' E. Pop. 10,000. It was formerly the capital of Mandara.

DELPHI or **CASTRUM** a m. Greece dist. Phocis, S. side of a mountain range which terminates at Parnassus, 7 m. E. Delos. It is built on terraces of masonry which rise in regular gradation, and have all the appearance of great antiquity, but with this exception there is little in the modern Castrum to remind us of the ancient Delphi, so famous through out Greece for its oracle of Apollo, and the series of temples and other splendid edifices with which it was adorned. The (satellian spring rising at the foot of twin peaks, celebrated (Hafford says not correctly) as those of Parnassus, is still shown and though the walls of the vast amphitheatre are no longer visible, its seats, hewn out of the solid rock are still almost perfect. Pop. about 500.

DELTING, par. Boct. Shalmd. Pop. 2124.

DELLUW a large vil. Persia, prov. Khuzestan 140 m. S. Meshed. It has a numerous castle, about 100 houses and numerous gardens, well supplied with water by subterranean water-courses. Pop. 200, of Arab race.

DELVINO or **DELVINO**, a m. European Turkey prov. Albania, 44 m. W.W. W. Janina lat. 39° 55' N.; lon. 20° 10' E., beautifully situated, and the seat of a Greek bishop. It is fortified, and the chief place of a sanjak. The women here wear a white wrapper covering them from head to foot, with two half sleeves, into which the elbows are stuck, and thrust out at right angles. They look like rough brown warlike cranes. The wrapper opens at the feet, to exhibit a black mask, with two holes for the eyes. There are great plantations of olives in the district, and the town has some trade in oil and other local produce. Pop. about 10,000.

DEMAK or **DAMAK**, a m. dist. and river N. coast, lat. Java, prov. Samarang. The town 15 m. S.E. Samarang, on the river of same name, is populous and was formerly

capital of the kingdom of Demak.—The narrative is flat and sterile, producing considerable quantities of European goods and legumes and fruits. Salt is likewise obtained in various localities. The district is watered by numerous streams, the Demak being the most important. It rises in the mountains of the province of Boornahra, flows in a very winding course N.E. and falls into the Java Sea about 5 m. W. N. W. the town of Demak, after a course of about 70 m.

DEMARICATION POINT a cape on the Arctic coast of N. America lat. 69° 45' N. lon. 141° W., marking the boundary between the British and Russian N. American possessions.

DEMAYEND—1 A lofty volcano peak or mountain Persia, 14,695 ft. high, on the borders of Irak-Ajemi and Mazandaran lat. 35° 30' N. lon. 53° E. The cone, for about 100 ft. from the top, is entirely composed of a soft rock, from which pure sulphur is dug.—2 A large vil. about 25 m. S. S. W. the above peak, on the banks of two beautiful streams that flow in a serpentine course through an extensive basin surrounded by lofty mountains.

DEMREHA, ZARA or ZANA a large and beautiful lake, Abyssinia, kingdom of Ambara, intersected nearly at its centre by the parallel 12° N. It is of an irregular square form and from 140 to 150 m. in circumference, situated in a spacious plain considered from its fertility the granary of the country and at a height above the sea no great (8000 ft.) that spring is perpetual though within the tropics. It contains a number of islands some of them of considerable size and all inhabited. This lake is the receptacle of numerous streams, which flow into it from all sides. It is also traversed at its S. extremity by the Abdi the Nile of Sennaar, the current of which is distinctly visible as it crosses the lake.

DEMREHA, RIVER, W. Africa, Sierra Leone, supposed to rise in the mountainous district on the S.E. of Boegabana, flows in a S.W. direction, and falls into the Atlantic at lat. 8° 45' N.

DEMRELEY par. Eng. Lincoln 1071 ac. 1 op. 64.

DEMED a vil. Algerian Sahara, 174 m. S. by E. Algiers. The houses, which are low and all constructed, are surrounded with gardens containing fruit trees, pulses, and grapes of excellent quality. The powder manufactured here is highly valued in the desert. Woolen stuffs for garments are spun by the women. Pop. about 100.—(Dumetia Sahara Algeria.)

DEMER a river Belgium which rises about 2 m. N. F. Tongres prov. Limburg proceeds circuitously in a N.W. direction through that province, passing Bilen Hamlet, and Easlen, enters province Brabant, proceeds circuitously but almost directly W. passing Dils and Aershot, and joins R. bank, Dyle, 5 m. N. Louvain. Its whole course is about 48 m. of which 18 m. beginning at Dils is navigable.

DEMERARA a considerable river British Guiana, rises in the interior of the country about lat. 6° 15' N. lon. 56° 40' W. from which, with exception of a short run E. it flows nearly due N. parallel with the Essequibo and falls into the Atlantic at George Town lat. 6° 48' N. lon. 56° 13' W., after a course of about 190 m. Its affluents are small but numerous flowing both from the right and left. It is navigable for ships of considerable burden for nearly 100 m., when the navigation is interrupted by cataracts. At its mouth it is about 2 m. broad but inland does not exceed 1 1/2 m. It is for an excellent and spacious harbour at its embouchure, but is obstructed by a bar. Cultivation extends 25 m. up the river.

DEMERAHA, a colony S. of Barmen GUYANA.

DEMETRIUS (Gara) Gulf of Salomon, Thesely; lat. 5° 19' N. lon. 158° 29' E.

DEMIANKA a river Siberia, which rises in Lake Ougulinsk, gov. Tobolsk, flows E. and, after a course of about 400 m. joins R. bank Irtysh, at Demiansk, 95 m. N.N.E. Tobolsk. Its chief affluents are the Sargat, Bostonsk and Khlovi.

DEMIANSK, a vil. Siberia, gov. and 95 m. N.N.E. Tobolsk, at the confluence of the Demianska with the Irtysh. It consists of only about 100 houses, occupied by Russian shepherds.

DEMIR-HISSAR (Iron Castle) a fortified town, Turkey supposed to be built on the site of the ancient Heraclea, 286 m. W. by N. Constantinople; lat. 41° 30' N. lon. 28° 29' E. It stands at the foot of a high hill this being crowned with an old fort, from which it takes its modern name. The houses

are built on a mill stream, which is a tributary of the Kara Su. It has several mosques and a Greek church. Pop. 7000.

DEMMIN is a town, prov Brandenburg gov of, and 10 m. W N W Berlin, on the frontiers of Mecklenburg-Schwerin, on a valley surrounded by hills on a height above the Fenne, which is here navigable, and crosses the Tollense and Trebel. It consists of the town proper surrounded by walls with three gates and of three suburbs, contains four public squares, a townhouse and hospital, is the seat of a law court, has manufactures of woollen and linen cloth hats, leather shoes, hosiery and tobacco, and carries on a trade in corn, malt, and wood. It is a place of considerable antiquity having been both walled and fortified during the 12th century. It suffered much during the Thirty Years War previous to which it was a place of much more consequence than at present. Pop. 6585.—The **CIRCLE**, area, 937 sq. m. is well watered both by streams and lakes, is only tolerably fertile, but raises a great many cattle. Pop. 41 719.

DEMONTIV is a kingdom of Italy on the Stura, 14 m. S W Coni. It has a communal college, three churches, and an hospital. The town is commanded by a fort, built on a neighbouring height. Pop. about 8000.

DEMOTICUS, or **DEMOTICA**, is a town in Turkey, prov Roumelie, 30 m. S. Adrianople; lat. 41° 30' N. lon. 26° 20' E. It is a town, Maritima, here navigable for small vessels. The town is defended by a citadel containing a palace once dwelt in by several sultans, before the Turks seized Constantinople. It is the seat of a Greek bishop; and in the environs silks, woollens, and pottery are manufactured. Charles XII. of Sweden found a retreat here, for some time, after his discomfiture at Poltava. Pop. about 8000.

DEMAIN is a town, France, dep. du Nord, 6 m. from Valenciennes, 1 bank, Scheldt, which is here navigable. It stands in the centre of a coal field, and has rapidly risen into importance, four-fifths of the houses being of recent construction. Both coal and iron are extensively mined, and supply several blast furnaces and other iron works on the spot. Demain had once a celebrated abbey founded in 764. Two battles—one in 1079, and another in 1712 the latter gained by the French over the Anglo-German allies—were fought here. Pop. (1826) about 900 (1848) 8545.

DEMARISTON or **DEMISTON** is a town of Suffolk, 1280 as Pop.

DENBIGH, a maritime co. N Wales, bounded, N by the Irish Sea E by Flint, Chester and Salop, W by Caernarvon S by Montgomery and Merioneth greatest length, 46 m. greatest breadth, about 28 m.; area, 623 sq. m. or 465 120 ac. Its surface is much diversified. Towards the N there are some level tracts, but its general character is that of a rugged and mountainous character redeemed by several beautiful and fertile valleys amongst the more celebrated of which are the vales of Llangollen, Clwyd, Conway and Valle Crucis. The E part of the county is enclosed by a range of rugged hills, commencing near St. Asaph's the loftiest summit of which is 1845 ft. above the sea another range encloses the county on the S.W., attaining an elevation of 1660 ft. Heath and ling is the general covering of these hills whose dreary wastes are interspersed with numerous small lakes and streams. Black cattle, sheep, and goats are reared in great numbers in the hilly districts. Barley, oats, and potatoes are grown on the uplands, and in the rock valleys, wheat, beans, and peas. In the S and E parts of the country dairy husbandry is carried on to a considerable extent, and cheese produced equal to that of Cheshire. The climate is salubrious, but in districts exposed to the N winds somewhat rigorous, although in the valleys it is sufficiently mild. The minerals consist of lead, iron, coal, freestone, slate, and millstone. In the hilly districts there are immense quantities of peat, so close-grained as to exhibit a polished surface when dry, and cut with a sharp instrument. Flannels, coarse cloths, and stockings are manufactured to a considerable extent. The principal river is the Clwyd. The Dee crosses the county in a N.E. direction, and the Conway crosses it from Caernarvon. These three rivers are the chief channels through which the surplus waters are drained; but it has no river navigation nor any seaport. The projecting point or headland called Great Orme Head, at the entrance into the Menai Strait, is in this county. The Chester and Holyhead Railway passes through it, in a line parallel with, and close to the sea coast. The county is divided into

six centres or hundreds, and 57 parishes. It returns three members to Parliament; two for the county and one for the borough of Denbigh. Pop. (1841), 68,896 (1851) 92,563.

DENBIGH, a town and parish in N Wales, cap above sea, near the centre of the vale of Clwyd, 22 m. W Chester and 180 m. N W London picturesque situated on a rocky eminence, the summit of which is covered by the ruins of an ancient castle. The town, which consists of one principal, and several subordinate streets, extends down the slope of the hill and some way round its base, and is well paved and lighted with gas but scantily supplied with water. It has two churches; and chapels belonging to Calvinistic Methodists, Wesleyans, Independents, and Baptists. The new market-hall is a spacious building in the Elizabethan style. There are here a free grammar-school founded in 1727, a national school several Sunday schools, a blue-coat charity school, a reading room, a Welsh literary society mechanics institution agricultural society dispensary for the poor and a splendid lunatic asylum capable of accommodating 300 patients. Tanning and shoemaking are carried on to a great extent, the latter being the principal trade in the town, and occupying between 400 and 500 hands. Woollen plaid, hosiery-woolens, and waistcoat pieces are also manufactured in considerable quantities. There are two weekly markets Wednesday and Saturday and six annual fairs one of which is the most important held in N Wales. Denbigh was made a borough in the time of Edward I. It sends one member to Parliament, in conjunction with Holt, Ruthin and Wrexham. Denbigh in the reigns of the Edwards, was, with its fortress, bestowed on various individuals, at different times, as a special mark of royal favour. In 1646, it was taken and dismantled by the Parliamentary troops; and after the Restoration it was blown up with gunpowder and rendered completely untenable. Pop. 4498.—(Local Correspondent).

DENBURY is a town of Devon 1068 ac. Pop. 405.

DENBY par Eng Derby 2395 ac. Pop. 1208.

DENCHWORTH par Eng Barke; 1060 ac. Pop. 278.

DENDER, or **DENDRA**, a river Belgium which rises in the province of Hainaut, from two sources, the waters of which converge below Ath, where it becomes navigable. It flows N enters E. Flanders, and passes through or near Lessene, Grammont, Ninove, Alost, whence it is canalized to its mouth in the Scheldt, at Dendermonde or Termonde. Total course, about 80 m.

DENDER, a river Abyssinia and Nubia, having its rise in the former but nearly the whole of its subsequent course in the latter. It rises in a mountain range W of Lake Demben, in about lat. 12° 40' N. lon. 36° 7' E. from which point it flows N W skirting Abyssinia for about 95 m. when it fairly enters Nubia, and, running parallel with the Bahad on the E., and the Bahr el Jebel on the W. joins the latter about lat. 14° 10' N. having itself joined previously by the Gologo precisely at the point where it enters Nubia or in lat. 12° 40' N. lon. 36° 7' E. Total course about 260 m.

DENDERAH [the Temple of the Greeks and Rome] a ruined city of Upper Egypt, 1. bank, Nile lat. 26° 10' N. lon. 32° 40' E.; celebrated for its temple, the most magnificent, and best preserved, of any of the remains of antiquity in Egypt. The town stands on a plain, surrounded by mountains, and beautified by palm trees. About the distance of 1½ m. E. are the ruins of the temple of Isis. The temple was enclosed within a square wall built of sun-dried bricks. The wall is, on either side, 1000 ft. in length, in some parts 55 ft. high and 15 ft. thick. The gateway which leads to the temple is a singularly beautiful specimen of Egyptian architecture and sculpture. It is 45 ft. in height, 38 ft. in width, and 17 ft. in depth and is covered with hieroglyphs and ornaments elegantly designed and exquisitely cut. The portico of the temple consists of 24 columns, in three rows each about 22 ft. in circumference, 32 ft. high and covered with hieroglyphs. The interior consists of several apartments all the walls and ceilings of which are covered with religious and astronomical representations, including the figure of Isis, the presiding deity of the place, which is very frequently repeated. The roof is flat, and are formed of oblong masses of stone resting on the side walls, or on rows of columns carried down the middle of the apartment, and whose capitals are richly ornamented with the budding lotus. The only light admitted to the interior was by small porpo-

similar holes cut in the ceiling or by oblique apertures in the sides. It was thus exceedingly dark and gloomy but well calculated for the mysterious religious rites of which it was the scene. The most remarkable object, however, belonging to the temple, and that which has excited the greatest interest, is a mythological table, resembling a celestial planisphere or zodiac sculptured on a kind of conical pedestal, and forming the ceiling of one of the eastern chambers. It occupied the central space of three concentric circles, and appeared as if supported by 12 figures four of which are females. These are standing while the eight male figures, who have hawk's heads are represented kneeling. The zodiac, as it is called, was carefully removed from its original place in 1833 and conveyed to France, and is now in the museum at Paris. It has formed a fertile source of discussion among antiquaries, great differences of opinion existing as to what it is, and how old it is.

DENDERMONDE, a to. Belgium. See THURBOURG.
DENKAMP a vil. Holland prov. Overijssel, 89 m. E.S.E. Zwolle, near the Haasrover frontier. It has a Reformed and a R. Catholic church, and a school. The inhabitants are chiefly engaged in agriculture. Pop. 560.

DEPFORD par Eng Northampton, 1840 ac. Pop. 324.
DENGVLEB or **GORDOL** a vil Hungary Thutser Themas, co. Sathmar about 5 m. from Plakott. It contains a Protestant and a Greek united church. Pop. 1526.

DENGIE, par Eng Essex 3319 ac. Pop. 319.

DERHAM — a par and vil Eng. Backs 8900 ac. Pop. 1062 — 2 a par Eng. Suffolk 126 ac. Pop. 518 — 3 a par Eng. Suffolk 1267 ac. Pop. 518.

DEWHOLM a vil Scotland, co. Northburgh, 40 m. S.E. Edinburgh, pleasantly situated on a rivulet that falls into the Tyne. It contains a chapel belonging to the Independents, and a subscription library. The inhabitants are chiefly employed in stocking weaving for the stocking manufacturers of Hawick. Dr John Leyden, the poet and linguist, was born in this village in September 1 75. Pop. (1691) 760.

DENIA (anciently *Arad*) a city and port Spain. Valencia, prov. of 56 m. N.E. Alcala, at the base of Mount Monte lat. 38° 52' N. lon. 0° 15' E. (i.e.) It is enclosed by ancient walls, defended by several batteries, and overlooked by a ruinous castle. Except a few of modern constructions, the houses are, in general poorly built, and most of the streets, though paved and clean are irregular. The square is spacious, and contains the parish church, prison and town-house—all large and handsome buildings. Here are, besides, several convents, three schools an orphan asylum, hospital, some capacious storehouses, a cemetery, and several pleasant promenades. The city is supplied with water from a spring five miles distant, by means of an aqueduct. Its chief exports are fruits, potatoes, honey and timber at imports grain, wine, sugar, iron, salt fish and colonial produce. The vessels entering and sailing from Denia average annually 404 tons 47 459 but the land is gaining on the sea, to the prejudice of the port. This city was bombarded by the French, in 1812, when most of its fortifications and public buildings were demolished, and, though afterwards restored, it has never recovered its former consequence. Pop. 3619 (Madrid).

DENFO par and vil Wales, co. Carmarthen 1 2331.

DENIS (St.) a to France, dep. Seine, on the rivulet Grand and Bonville, near r bank, Seine, 6 m. N. Paris, and a station on the Great N. of France Railway. It is the seat of a sub-prefecture, and a place of some importance, and of great historical interest. It is well built, and its streets are spacious and clean while its proximity to Paris causing a constant intercourse, gives it a busy stirring look. Its chief interest in the abbey church, once the manseum of the kings of France, from Dagobert downwards, and still containing several of their monuments. This ancient edifice, which has lately been splendidly restored with great care and cost, is one of the finest gothic buildings in France. Its original foundation was anterior to 686 additions were made in 775; and an entire reconstruction of the building took place in the 12th and 13th centuries. It was for many ages the conventual church of an abbey of Benedictines, founded by Dagobert when its walls his remains were interred, and there his monument is still to be seen. In 1793, the revolutionists, after ridding out the mon, devastated their church, and turned it into a market for horses, beavers, and heavy merchandise;

previously to which the bones of three dynasties of French kings, accumulated during nearly twelve centuries, were thrown into ditches prepared for them outside. The abbey buildings still exist, and are occupied as a national asylum, for the maintenance and education of 500 young ladies, daughters of members of the Legion of Honour. St. Denis once had important fairs, that of St. Lande amongst the oldest in France) still exists, with a yearly sale of nearly 100,000 sheep. In the town and environs are several flour-mills, dye-works, printfields, manufactories of woollen, shawl and works, monstrous manufactories, &c. The locality is also the seat of an active inland trade, which is much favoured by the neighbouring Seine and the Canal St. Denis, connecting that river with the Canal de l'Ouere. Pop. 9186.

DENIS (St.) a to cap. Isl. Bourbon, on the N. coast. It has a high tribunal a court of first resort, a college, which had 16 professors and 157 pupils, in 1837 a public library and botanical gardens. It is the seat of a busy trade, has a bank, founded in 1836, a chamber of commerce, and a Government entrepot. There is no port for ships, but a neighbouring roadstead, the bay in the island, supplies the want, during eight months of the year (April till December) Pop. 13 000 including negroes.

DENIB, or **ORIXA ISLAND** the most N. E. Isl. of the Seychelles Archipelago lat. 8° 45' N. lon. 65° 44' E. It is about 2½ or 3 m. in extent, N. to S. with several shaded habitations on its N. side. It is very low covered with trees, and may be seen from a distance of 12 m.

DENIZLI, a to. Anatolia Turkey push Anadolu, 125 m. S.W. Smyrna lat. 37° 50' N. lon. 29° 15' E. on a low hill towards the S.E. part of a spacious plain. It was destroyed, about 1715, by an earthquake in which 13 000 people perished. It now consists of about 1200 Turkish, 120 Greek, and 35 Armenian houses but the town consists chiefly of barracks and market places, most of the inhabitants residing in villas in the environs. Tanning and dyeing leather, chiefly red and yellow, and the washing of a kind of sarcenet, from sheep and goat skins form the main occupations. Around the town there are many vineyards the produce of which is partly converted to rum and partly into a kind of syrup, extensively employed as a substitute for sugar.

DENKENDORF a vil Wirtemberg circle Neckar, back of, and 4 m. S. Zwillingen, r bank Neckar. It contains a parish church, originally belonging to a monastery which once existed here, and was richly endowed. Pop. 1459.

DENMARK (Latin *Dania* Danish *Danmark* German, *Deutscher* Dutch *Deensche* French *Danemarck*) a northern kingdom of Europe (cap. Copenhagen) between lat. 53 22 42° and 57° 44 52° N. and lon. 7 34 45° and 17° 20' E. It is composed of a peninsular portion, and an extensive archipelago, lying E. of it with a few scattered islands on its W. side and is bounded, N. by the Skager Rack, which separates it from Norway N.E. and E. by the Kattegat and Sound, which separates it from Sweden E. by the Baltic, and the great duchy of Mecklenburg S. by Hamburg and the river Elbe, which separates it from Hannover; and W. by the German Ocean or North Sea. The peninsular portion is composed of N. Jutland, followed in order S. by the duchy of Schleswig, formerly called S. Jutland, the duchy of Holstein, the duchy of Lauenburg, and the town of Altona and measures, N. to S. 332 m. with a breadth varying from 30 m. to 108 m.—its broadest part being from Furesø point, lat. 56° 20' 43' N. on E. coast, to Midsøen Fiord on the W. coast. The numerous islands lying E. of Jutland are nearly comprised in two groups—First, that of Seeland or Zealand, including besides the large island of that name, the small adjoining islands E. of the Great Belt, the principal of which are Åmager, Langeland, Tåsinge, Hven, Ægø, Agsø, Lolland or Lolland, Falster, Møn, &c. and, second, the Funen group, comprising, besides the large island of that name, the neighbouring islands W. of the Great Belt, including Langeland, Fünen, Tåsinge, &c. Besides these, there are the outlying islands of Læsø and Årbo, in the Kattegat, and Bornholm, in the Baltic. These islands, with the province of N. Jutland, comprise Denmark proper the remaining sections are called the Duchies. The principal islands belonging to Schleswig are Ålesø and Arbo, in the Little Belt; Fensø, in the Baltic and Røm, Byø, Føø, Fælø, and Nordstrand, &c. in the German Ocean.

DENMARK

825

DENMARK

Besides these territories, Denmark possesses the *Feroe* Islands and *Island*, in N Atlantic Ocean. Greenland, in the Arctic regions; the islands of Santa Cruz or St. Croix, St. Thomas, and St. Juan, in the W Indies and the *Niuebar* Islands, in the Bay of Bengal. She also formerly had some establishments on the coasts of Guinea, in Africa, and of Ceylon, in India. But these have been sold to Great Britain.

For administrative purposes, both Denmark proper and the *Duchies* are divided into *hundreds*. The following tables exhibit these divisions, with their area and population, as well as the total area and population of the whole monarchy—

Counties.	Subdivisions.	Area, Sq. m.	Pop. Feb. 1, 1867
I. DENMARK PROPER.			
BEKLAND and the islands W of the Great Belt.	Copenhagen, city	4	138,800

Geology and General Aspect.—All Denmark, with exception of the island of Bornholm, lies in the great northern European plain, which, bounded on the S. by the Wænerghede and the Hær Mountains, stretches W to the Atlantic, and N to the Baltic N Sea, and English Channel, and towards the E merges insensibly into the great plain of Russia. In the N this plain lies so low as to be, in some parts, below the level of the sea from which it is only defended by high and strong embankments. Holland and E. Friesland, on the N of Hanover, are the countries to which this country principally applies, but part of Denmark—namely the W side of Holsten and Schleswig—are included. Further eastward the plain gradually loses its monotonous flatness acquires first an undulating and finally assumes a hilly appearance. To the surface so characterized all Denmark with the exception of the flat already mentioned, belongs the greatest height being attained on the E side of the peninsula, though, even there, it never exceeds 1200 ft. In respect of geological structure all the rocks belong to the upper series of the secondary and to the tertiary formation, and have been deposited from water in regular strata with the exception of the remarkable hill of Gipsberg, near Søborg, which is crystalline and evidently volcanic, and appears to be the effect of a single burst from some unfathomable depth below since it has nowhere else succeeded in penetrating the surface. The rock most fully developed is chalk of which several distinct species have been recognized, particularly the white chalk sometimes called *Skåtholm* limestone, which, commencing in this island, is developed largely in Holsten, and more partially in Jutland and Holsten. The coral chalk or *Feroe* limestone which generally occurs in comparatively thin beds, of a sandy texture, but is rich in fossils and the blue chalk, a fine limestone in thicker beds than the coral chalk formation, but apparently belonging to the same period. Above the chalk is an extensive boulder formation, which stretches over a considerable part of the country, and contains some seams of lignite. Immediately above it and sometimes intermixed with it, are thick beds of clay and sand. Where it prevails, as in Bekland, Schleswig, Holsten, and the E. of Jutland, the soil is generally fertile, but in the other parts of the country and especially in the N and along the W coast of Jutland, where it is supplanted or overlain by deep beds of sand, the country has an extremely desolate aspect, producing little else than alternations of sand and heath while its whole W coast is rendered almost uninhabitable by the drift-sand, which has formed an almost uninterrupted line of sterile dunes, called *Klitter*, extending from Cape Skaggen to Blavands Hook, a distance of nearly 200 m. Along the W coasts of Holsten, Schleswig, and parts of that of Jutland, are extensive flats or plains, which have been wrested from the sea, and which are protected from its encroachments by huge dykes, as in Holland. Woods of considerable extent yet exist on the E side of Jutland and Schleswig both of which countries were, at one time, covered with forests of oak and birch. The coasts are deeply indented with bays and inlets, and, in some places, are steep and bold, though generally flat and sandy. The larger islands, Bekland, Lolland, and Funen, are fertile and well cultivated, their soils consisting chiefly of clay mixed with sand and lime. Woods of beech and oak occur in these islands with partial tracts of moor and heath. Besides the minerals already noted, salt and fuller's earth are found in moderate quantities; and on the Hæus, a bank on the W coast of Jutland, near both of the white and yellow kind, is found. The annual quantity of

males collected varies from 1650 to 2900 lbs. and the largest pieces ever found weighed 14 and 13½ cwt. *Beaver, Lutra, Putorius, &c.*—Denmark has no large rivers the principal is the *Byder* which flows from an inland sheet of water in Holsten, and falls into the N. Sea at Toulung, at the S.W. extremity of *Schleswig* where it is 300 ft. wide. It forms the boundary line between the duchies of Holsten and Schleswig and formerly separated Germany from Denmark Proper. It is navigable throughout nearly the whole of its course and by means of the Schleswig-Holstein canal which connects it with the Kiel Fjord water-communication is effected across the peninsula, from the N. Sea to the Baltic. The rivers next to the *Byder* are the *Guden* and *Trave*, both also navigable. All the others are insignificant streams. There are no rivers in any of the islands, but brooks and streamlets abound. The *Elbe* flows along the E. frontier of the kingdom for about 80 m. There are a number of lakes, particularly in Jutland and Holsten, and several in the larger islands but they are all small none of them exceeding 5½ m. in length by about 1½ m. broad and few of them being of more than half that extent. There are four canals, two on the mainland, and one on each of the islands *Seeland* and *Funen*. The most remarkable of the physical features of Denmark are its lagoons or fjords, winding inlets of the sea, that penetrate far into the land. The largest of these is the *Lyndorf*, or *Lum Fjord* in Jutland, which, entering the land in the *Kattegat*, near lat. 57° N., winds its way nearly through the peninsula, and is separated from the N. Sea merely by a narrow strip of land, which storms have ruptured in one or two places. It extends here and there in its course into large bays, studded with islands, and throws off branches in all directions—the whole forming a series of the most fantastic ramifications. The other more remarkable fjords are *Ringhjborg* and *Niema*, on the W. coast of Jutland, and *Marner* and *Rander's Fjord* on the E. coast. Most of the streams, lakes, and coasts of the kingdom are well stocked with fish. Besides these inland seas, the Great Belt separates the large islands of *Seeland* and *Funen*, and the Little Belt flows between the latter and the coast of Jutland and *Schleswig*. Intercourse between the various islands and parts of the kingdom separated from each other by water is necessarily kept up by means of water communication, regular ferries being established at numerous points. Denmark is well supplied with excellent exports, the most important being Copenhagen Altona, Gluckstadt, Kiel Flensburg Aalborg, Aarhuus, and Randers.

Climate.—The prevailing characteristic of the climate of Denmark is humidity it is also remarkably temperate for so northerly a region: both the result of the lowness of the land, and of its proximity to the sea on all sides. The winters are seldom severe, though instances of extreme rigour have occurred as in 1859 when the Swedes marched an army on the sea across the Sound, but the cold is not generally very intense, except in the N. of Jutland, where it is greatest. On the other hand, the heats of summer are great, sometimes excessive. The mean temperature of the year is 47° the mean from November to March ranges from 25° to 7° and the extreme cold in January and February reaches 22 below zero. The mean temperature of June to the middle of August ranges from 59° to 75° and the extreme heat reaches 89° The shortest day is about 6½ hours, the longest 17½. Thunder storms are rare, and of short duration. They occur generally in June and August. Violent winds are frequent, and rains and fogs prevalent; but the climate is, on the whole, favourable to vegetation. A failure of the crops from want of moisture seldom occurs, the heavy soils suffering in absence for a long while without injury while those of a sandy nature rarely want it for any length of time.

Animals and Vegetable Products.—Horses and cattle are reared in great numbers, and both are excellent. Large flocks of sheep are kept but rather for the flesh than the wool, which is coarse and short. Swine are also reared to a great extent. Goats and mules are rare. Deer, stags, roes, hares, and a variety of other game, are met with in the royal and other forests, but do not abound anywhere else. Wild fowl—including the water duck, so famous for its down—are numerous, especially on the islands along the *Schleswig* coast. Wild animals are mixed, particularly goats. Potatoes, barley, oats, rye, beans, peas, turn, fax, hemp, madder and

tobacco are raised wheat in Lolland and *Holsten*, and buckwheat in *Funen*. Among the garden fruits are apples, plums, cherries, pears, and nuts. Few of the great forests with which the country was once covered now remain, having disappeared from want of care, and from want of a systematic consumption. Denmark is, in consequence, dependent for her supplies of timber on Norway, Prussia, Russia, and other countries. Government, however has of late years paid some attention to this source of national wealth, and has taken measures for the protection and better management of the forests. The larger forests are now confined to the E. side of Jutland, to *Seeland*, and *Lansburg*. The principal tree is the beech tree, constituting, perhaps, about four-fifths of all the growing timber which consists chiefly of elm and lime. Oak, though once the most abundant kind of tree, now forms but a small portion of the forests of Denmark and woods entirely of oak are rarely met with. Birch occurs, in single trees only in the N.E. parts of *Seeland*, and in Jutland. The alder tree abounds in marshy places, called alder plots, the elm, ash, willow and aspen are met with only in small numbers, or singly. Pine forests have been lately planted in the N. of *Seeland*, and in some parts of Jutland. Hazel, hawthorn, and blackthorn grow in the dry districts and alders water-cedars, and willows of different kinds in the marshy countries.

Agriculture, Cattle Breeding &c.—Although not particularly favoured by nature, Denmark is yet pre-eminently an agricultural country but improvement is greatly retarded by want of capital, and in no small degree, by want of energy and industry also on the part of the cultivators of the soil, by an extremely minute subdivision of property by oppressive dues and services and, lastly by bad roads. Of late years, however considerable advances have been made in agricultural skill and management, notwithstanding these very serious impediments, particularly in *Holsten* and *Schleswig*. The kinds of grain most largely cultivated are barley, rye, wheat and oats. Barley the oldest cereal of the north, is grown chiefly in *Seeland* and in some parts of Jutland, and on the islands of *Samsø* and *Bornholm*. It is largely used in brew for beer the common beverage of the country and is also sacrificed into flour and groats. Rye the principal product of the soil, is grown throughout the whole peninsula, in *Holsten* and *Lansburg* and in the islands of *Funen* and *Seeland* and some of the islands on the W. coast. From this grain the greater part of the bread used in Denmark is made. Wheat is grown chiefly on the marshes on the E. coasts of *Schleswig* and *Holsten* on the islands of *Lolland* and *Langeland* and on large estates in other quarters of the kingdom. Oats are raised in almost every part of the country but the best are produced in Jutland. Large quantities of all these grains are exported annually. Buckwheat is cultivated in Jutland, in the central part of the duchies, and in the island of *Funen*. The quantity produced is sufficient for the demands of the country but little remains for exportation. The cultivation of rapeseed which has been found to be a profitable crop, has been greatly improved and extended of late years, especially in the east parts of the duchies. Potatoes, which were introduced into Denmark early in the present century are now very generally cultivated, the annual produce being estimated at 6,046,000 tons. But as the white turnips are also grown, and various kinds of vegetables in considerable quantity, but horticulture is on the whole, still in a backward state, especially in *Seeland* and *Seeland*. Its otherwise, however with herbage plants and grasses, which are now carefully cultivated. Beans, peas, and turn are also extensively cultivated throughout the whole country and form an important article of food little being left for exportation. Flax, hemp, hops, tobacco, madder lavender and mustard-seed, are grown, but not in sufficient quantities to supply the home demand; the deficiency being supplied from other countries. The places most remarkable for the production of fruit are the islands of *Funen* and *Alsen*. But cattle-breeding, grazing, and the dairy occupy the greatest share of the farmer's attention in Denmark; 23,000 oxen, 7000 cows, and 10,000 calves, besides immense quantities of pork, and smoked or hung beef, being annually exported from the country. A great increase has of late years taken place also in dairy produce, particularly butter of which 45,684 tons are made annually. Of this quantity, 8634 tons are exported. Nearly the half of the butter exported is produced in *Holsten*; the remainder is supplied by *Schleswig* and Jut-

land. Considerable quantities of cheese are also exported, chiefly from Helsingør and Schleswig. The rearing of horses is on the decline, in consequence principally of the greater inducement to cultivate the dairy. The Danish horses have long been famous for their strength, symmetry, docility and bottom and are especially adapted for cavalry. The old Danish breed are found chiefly in Jutland. Those from the islands are said to be of Tartar descent, and are small but strong and active. Private societies have lately been formed for the improvement, or rather restoration, of the Danish horse, which had been rapidly deteriorating. About 10 000 are exported annually from the mainland and about 1000 from the islands, the greater part from Funen. Sheep raising is also on the decline in Denmark, although considerable improvement has of late taken place in this branch of husbandry particularly as regards the quality of the wool. The rearing of hogs is much attended to the greatest number are reared in the vicinity of the woods in L. Jutland, and afterwards fattened on the farms of the duchies. About 12 000 are annually exported to Hamburg while the export of fard amounts to 3087 tons, which article Jutland produces nearly as much as the duchies. The rearing of bees occupies a large share of attention, particularly in the duchies and in the island of Funen, and the production of honey and wax is rapidly increasing. Of the latter 58,000 lbs are now exported annually while formerly both honey and wax were imported into the country.

Fisheries.—The fisheries were formerly a more important branch of national industry than now. Two causes have contributed to this result—the extension of agricultural pursuits and the decay of the herring fishery, which has fallen off greatly within the last 20 years. In 1838 the cured herrings exported amounted to about 126 000 tons, which in 1845 had dwindled down to 7680 tons. The quantity now taken hardly suffices for the consumption of the country. The principal fishing ground is between the mouth of the Schlei and the peninsula of Arnis, those of the Lammund and N parts of the E coast, being now unimportant. Next to the herring (L. turbot, turbot and salmon are the most abundant sorts of fish. Oyster beds occur on the E coast of Jutland, near N. extremely and near the island of Læsø. Fish ponds were at one time very general over the country, and are now chiefly confined to Holstein. The fishery of Denmark are considerable, the principal station being the island of Anholt.

Manufactures.—These are comparatively insignificant and do not comprise any peculiar or national manufacture. The people themselves have an objection to this species of industry more particularly to the introduction of new manufactures in which they cannot be got to engage with the cordiality and energy necessary to the success of such undertakings. Still some advance has been made of late years in the quantity of goods manufactured but from the inexperience of the workmen and other causes, the Danes are unable to compete in lowness of price with the foreign manufacturer though they can equal him in some instances in point of quality. Although as already mentioned Denmark has no peculiar manufactures, there are one or two articles which have attained a considerable reputation these are the woollens and earthen wares of Jutland, the former a domestic manufacture the wooden clocks of Bornholm and a superior kind of stove made in Copenhagen. Rarities in Jutland and Odensee in the island of Funen, were formerly celebrated for the manufacture of gloves but the peculiar kind of leather from which they were made, and in which their excellence consisted is now prepared in other countries. The domestic manufactures of Denmark include yarns, knitted and woven woollen goods, thin fabrics earthen wares, wooden shoes &c. The knitted woollen jackets of Jutland were sent in great quantities to Copenhagen whence they were exported to various countries, particularly to the States of America, until the operation of a new tariff excluded them from that

market. Almost all other kinds of trade manufactures are confined to the towns. These consist chiefly of furniture, the principal seat of which is Copenhagen of the articles, brassware, comb, saddlery, dressers, needles, and articles of turnery in wood and ivory. There are a considerable number of iron foundries in Denmark, 12 of which are in Copenhagen, and some of them extensive establishments. The sailing of old woollen rags forms a considerable branch of industry in several towns in Jutland, giving employment to a number of people. The wool thus obtained is mingled with pure wool and the cloth manufactured from the mixed material finds, on account of its low price, a ready sale in foreign markets. The manufacture of paper is also pretty extensive, and has of late years been greatly improved and extended. Carriages, musical instruments, tobacco pipes, both wax and tallow, and soap, are amongst the principal manufactures of Denmark. There are also a number of thriving sugar refineries in Jutland, Schleswig and Holstein. Glass is manufactured in some extent, but the finer wares in it of material are imported. There are some extensive tanneries some brassy distilleries, chiefly confined to the towns and some considerable manufactures of carpets, hats, oil cloth, watches, philosophical instruments, paper-hangings &c. Amongst the various trades are type-casting, wood-cutting, book-binding, copperplate-engraving and printing. The people of Denmark take their own bread, brew their own beer and spin the greatest portion of the woollen yarn, afterwards knitting into stockings or woven into cloth by the village weaver. The women make up their own dresses, and frequently those of their husbands, the latter make the wooden shoes and all yarn, and manufacture the greater part of the house furniture and farming utensils. Several of the manufacturing establishments of Denmark belong to the Government, and are carried on on its account, but as might be expected with so little success that they are being abandoned one after another. Amongst these establishments are a royal porcelain manufactory in Copenhagen and a royal cloth manufactory in Træsnor which supplies cloth for the army.

Trade and Commerce.—The chief imports are iron, timber, coal, wine, salt, tobacco, coffee, tea, and sugar. What is exported and in what quantities, with the total value of the exports and imports may be seen in the following tables—

Quantities of the PRINCIPAL and OTHER ARTICLES EXPORTED FROM THE KINGDOM OF DENMARK PROPER, in each year from 1847 to 1855 and of the DUTIES OF SCHLIG WIG and HOLSTEIN in 1855

Canals and Railroads.—There are altogether four canals in Denmark two on the mainland, and one in each of the islands of Seeland and Funen. The Schleswig and Holstein Canal is between Kiel Fjord, at a point 3 m. N. of the town of that name, and Randers, on the Eyder where it joins that river and thus communicates with the North Sea. It is 10 ft.

deep, 100 ft. broad at the surface, 44 at the bottom, and is about 18 mi. long. About 2'000 vessels pass through this canal annually of which one-half are under foreign flags. The Steckensund Canal one of the oldest in Europe connects the Elbe with the Trave, joining the former above Lüneburg and the latter above Lühbeck. Its general breadth is about 17 yards, but so shallow that it will not carry vessels drawing more than 4 ft. of water and so inadequately supplied with water that it is navigable only twice or thrice a week. The canal in Funen connects Odense with the sea, and that in Seeland forms a communication between the lake Havel and the Baltic. There are two railroads one on the mainland from Altona to Kiel, with branches to Glücksbadi and Rendsburg, and one on the island of Seeland from Copenhagen to Roskilde, to be continued to the Great Belt.

Money, Weights, &c.—The current money of Denmark consists of the species dollar—46.60 the Rigsbank dollar—2.54. 50. the mark—44.60 the skilling—about 3d. Accounts are kept in the last three, one Rigsbank dollar being equal to six marks, and one mark equal to sixteen skilling. Paper dollars are in extensive use. The commercial pound weight is heavier than the English weight of that denominated 100 lbs Danish being equal to 114½ lbs avoirdupois. The principal measure used throughout Denmark for corn is the barrel or tonde which contains 77½ Danish cubic inches or 848½ English cubic inches, and consequently is equal to nearly 4 bushels. The Viertel, used for wine and liquor is equal to 2-64½ Prussian gallons. The long measure is the Rhineland foot which equals 12.356 English inches. The Danish mile is 4.684 English miles. Sixteen Danish sq. ft. are nearly equal to 1 English sq. ft. A tonne or tonde of hard corn is as much land as can be sown with one tonne of rye one of barley or two of oats.

People, Marks of Society Manners, &c.—The population of Denmark is composed of Danes, Germans, Frieses, and Angles with some 70,000 or 80,000 Jews, Swedes, Finns, and Esquimaux. The Danes occupy the islands, Jutland, and a small part of Schleswig. They have regular and well formed features, fair or brownish hair and blue eyes, with muscular frames, they are kind-hearted honest and simple-minded and continue to maintain their ancient reputation of being bold and hardy seamen the vast number of islands of which the kingdom consists and the numerous sea-arms intersecting its continental portion necessitating a certain amount of acquaintance with seafaring in a large proportion of the agriculturists, tends markedly to keep up the maritime spirit. The German population is settled in Holstein, Lauenburg and the greater part of Schleswig. The Frieses and Angles, two German tribes, inhabit the W. coast of Schleswig and the islands of the German Ocean. The Jews, who are of German descent, are confined to Copenhagen, Altona, and a few other towns. The inhabitants of Denmark have been divided into five classes—the nobility who have privileged seats in the kingdom from which they derive their nobility the titular nobility which includes the orders of knighthood of the Elephant and of Dannebrog, counts, barons and the higher officers of state the inferior clergy, lawyers, and students the merchants and citizens of great towns, the sea men and population engaged in agriculture. The nobility and gentry are addicted to display in their style of living, and are remarkable for their hospitality which is indeed a characteristic of the nation. The food of the lower classes consists chiefly of oat-cakes, rye-bread, fish and cheese but the tables of the wealthier classes are spread with all kinds of luxuries. The language is Danish a mixed Scandinavian and Teutonic dialect, spoken by two-thirds of the inhabitants and almost exclusively in the islands and in Jutland. German spoken by the remaining third of the inhabitants, and over Holstein, Holsten and Lauenburg. In some of the S. localities, Frisian is spoken.

Government, Laws, Religion, &c.—The government of Denmark was originally an elective monarchy the right of election being vested in the three estates, the nobles, the clergy and the commons. But in this arrangement the nobles retained and exercised a power preponderant to the interests of the state, and offensive to the people. Taking advantage of the popular discontent they convened the parliament of the Crown assembled in 1520 in presence of the deputies of the clergy and commons to make the crown hereditary and thus circum-

scribe the influences of the nobles. This proceeding was followed, in 1661 by the Act of Sovereignty which conferred absolute power on the monarch. The power thus conferred had long been used with singular moderation but in 1848, when consequent on the sudden changes in France, almost the whole continent of Europe was convulsed the Danish constitution was greatly modified and new belongs to the class of hereditary constitutional monarchies. By a charter finally adopted by the King and diet, June 5, 1848, it is declared that the executive power is in the King alone, the legislative, in the King and diet jointly. The person of the King is inviolable, but he rules by a responsible ministry. He must be a member of the evangelical Lutheran church, which is declared to be the religion of the state. The diet consists of the Landsting and the Folkething—the former a kind of senate or upper house, and the latter a house of commons. To the Landsting any male subject is eligible who is 41 years of age, does not labour under mental incapacity and either pays 300 riksdollars (232 1½ 2d) of direct taxes or enjoys a yearly income of 1200 riksdollars (2186, 5s) To the Folkething any male householder 25 years of age, is eligible, provided he does not labour under any incapacity which would deprive him of the right of voting. This right is the same in regard both to the Landsting and the Folkething and belongs to every householder who has reached his 20th year who is not in the actual receipt of public charity or who if he has at any former time been in the receipt of it, has repaid the sum so reserved and who does not labour under mental incapacity. The members of the Landsting hold their seats for eight and those of the Folkething for three years. The diet meets annually on the first Monday of October provided the King does not summon them on an earlier day. The *Knights of Soloway* and *Holstein* have reserved their own separate institutions and laws and several districts and towns have their own peculiar provincial laws. The laws of Denmark are equitable, brief and explicit, and their administration prompt and effective. In 1795 tribunals of conciliation were established, with the view as the name implies of reconciling parties by amicable arrangement without going into court, and in the great majority of cases the mediation is successful.

The Lutheran is the established religion but unlimited toleration is extended to every sect including the Jews, who by a decree of March 29 1814 were admitted to an equal participation of civil rights, in regard to the exercise of trades &c. with the other subjects of the state, but though citizens they cannot themselves be elected as representatives of any class. The bishops are nominated by the Crown. The superintendents of the clergy amount in number to between 1500 and 1600.

Education, Literature, Art, and Science.—Few countries in proportion to their size have done so much for education, literature, and art, as Denmark. At the head of the educational institutions stand the university of Copenhagen and the Holberg academy at Sorø. In the 64 provincial towns, are 20 schools, in which the learned languages are taught, and 180 town, free and upper grammar schools besides a number of private establishments. In the secondary are 2504 schools in schools or *Folk-skolen*. For the formation of teachers there are five normal schools. Education is very generally diffused and a fondness for reading which prevails, if attested not only by the great number of parochial and other associations for the purpose of procuring works in the various branches of literature and lending them out among the members, but also by the number of books which individuals in the humblest walks of life, both in towns and country manage to collect for their own private use. The literature of Denmark is not much known in the other countries of Europe, but contains the names of several writers of common fame. Others may be mentioned Oehlenschläger whose reputation as a dramatic writer stands high not only in Denmark but also in Germany. Ingemann, who has had considerable success as a novelist. Blegsgaard who has written valiantly and well both in Danish and German; and Hans Christian Andersen, whose delightful tales are well known in this country through the medium of translations. In science Denmark early attained considerable eminence in the person of Tycho Brahe, and still continues to maintain a high reputation in various departments of scientific inquiry. In art, Thorvaldsen has given her a first place, and taken the most

effectual as well as periodic means of enabling her to keep it, by the bequest of her works, by the study of which a succession of worthy followers is in course of being trained.

Army and Navy.—The land force of Denmark, in time of peace, consists of 25 000 men, in time of war increased to 75,169. The army is recruited by conscription. The period of service is eight years, commencing with the 20th year of the recruit's age, four years in the line, and four in the reserve. After this period they serve for other eight years in the class called *Forsættent* similar to it is *Forsættent* Landwehr and are subsequently enrolled in the reserve force, in which they remain till the termination of their 45th year. The regular troops in the W India colonies amount to about 800 men. The navy consists of six ships of the line, of 84 guns each, and one of 66 guns; seven frigates of 40 and 48 guns, four corvettes of 20 and 28 guns, five brigs of from 12 to 16 guns with several smaller vessels, and a number of bomb-boats.

Finance.—The revenue of the kingdom amounted, in 1846, to £1,800 950 and the expenditure to £1 792 688 leaving a balance in favour of the former of £33 110. The national debt amounted, on Jan. 1 1844, to £19,513,322, being less than it was some years formerly but in 1860 it amounted to £12 600 000. The principal branches of revenue are the land tax, and the customs and excise. Next to these are the woods and forests and other Crown property house tax lotteries and tax upon rank and salaries &c. The annual cost of maintaining the army & navy is £441,555.

History.—The three kingdoms of Denmark, Sweden and Norway were anciently called *Scandinavia*. At this remote period Denmark was divided into a number of petty states inhabited by a fierce and warlike people, whose principal occupation was piracy. On the decline of the Romans, the Danes, Swedes and Norwegians under the general name of Normans began to make themselves known to and dreaded by the more southern nations, whose territories they invaded and plundered. In 892 they landed in England and there established two kingdoms. Two centuries afterwards, Canute King of Denmark, completed the conquest of England and subdued a part of Scotland. He also introduced the Christian religion into his dominions and thus effected a great change in the general character of his people. Canute died in 1036 leaving a powerful kingdom to his successors. After the extinction of the princes of the family of Sicoild, the Danes elected Christian I Count of Oldenburg in 1448. This Christian was the founder of the royal Danish family which has ever since kept possession of the throne, and from which in modern times, Russia, Sweden, and Oldenburg have received their rulers. He connected Norway Schleswig, and Holstein with the crown of Denmark. In 1726, Denmark united with the crown the county of Rantzau. In 1761 Holstein-Tonin; and in 1773, Holstein-Gottorp. In return for the latter by a treaty with Russia, it ceded the counties of Oldenburg and Delmenhorst which were acquired in 1687. Denmark siding with Napoleon during the continental war had her capital bombarded by the British in 1807 and her territory occupied after the battle of Lelburg in 1812 by the Northern powers, who were united against France. She now concluded a peace with England and Sweden, January 14 1814 at Kiel; entered into an alliance against France, and contributed a body of troops to the allied forces. She was obliged to cede Heligoland to Great Britain (retaining in exchange the W India Islands) and Norway to Sweden (for which she was compensated by Swedish Pomerania and Rugen). A peace was concluded with Russia in February 1814. January 14 1816, Denmark ceded Swedish Pomerania and Rugen to Prussia, and received for them Lauenburg and a preliminary compensation. June 8 1815 the king entered into the German confederacy with Holstein and Lauenburg and received in the tenth place and three votes in the general assembly (the *plénium*) after which by the appointment of a deservential commission, preliminary measures were taken to introduce a representative government into Holstein. In March 1848, the duchies of Schleswig and Holstein revolted from Denmark ostensibly in consequence of its having been proposed in a new constitution submitted by the King dated January 25 1848, that the representatives of the duchies should act with the representatives of Denmark, the people, mostly German in their language and predilections being

desirous rather of joining the new German empire. But the real question at issue was one of succession, the King of Prussia and several of the powers composing part of the German Confederation alleging that the duchies of Schleswig and Holstein, which had hitherto been regarded as important portions of the kingdom of Denmark, were male fiefs and did not admit of the succession of females. On this plea, which had for its ultimate object the separation of the duchies from Denmark by preventing the former from descending along with the latter to a queen the power above named invaded Denmark, and a scene of hostilities was the result highly creditable to Danish skill and prowess, though often of a very sanguinary character. But in July 1849 a treaty of peace was signed by the King of Russia and the German Confederation on the one part, and the King of Denmark on the other which terminated the interference of the former in the quarrel. The duchies however continued the contest on their own account until defeated at the battle of Alsen, fought on July 26 1860 when they finally submitted to the authority of their sovereign, the King of Denmark.—(*See Denmark's Danish Slave, Jour of Statist Society Foreign Quarterly Magazine's Commercial Statistics &c.*) [*See Item*]

DEAN, par Irel Canaan 11 600 ac. Pop. 4645

DENNEWITZ, a vil Prussia, gov Potsdam d of and 4 m. W Jüterbok. It contains a church, and is memorable for the victory gained here in 1815 by the Prussians Sweden and Russians under King Bernadotte, over the French under Marshal Ney. A monument marks the spot. Pop. 230

888 DENNY a par and small in Scotland co. Stirling. The *raiments* which presents great variety of soil is nearly 6 m. long by 4 m. broad area about 9000 ac.—The town situated 7 m S Sidling r bank Carron near the Scottish Central Railway is somewhat irregularly built, but the houses, mostly of two stories have a substantial and respectable appearance. It has an Established, a Free and a United Presbyterian church, a parochial school and library and a number of benevolent societies. It is a thriving place, being surrounded by mills and manufactories of various descriptions, including oat-mal and barley mills paper-mills, one for crushing dye-stuffs, and several for spinning wool. The wool len manufactures is extensively carried on for Glasgow houses, the principal articles being fancy shawls, lincey-woolseys and scarves. In the vicinity are also several hosiery, and printworks. The traffic of the town is considerable, and it has two fairs annually. Pop. 4754

DEWY a vil and parochial chapelry England co. York (W Riding) the former 60 m N York. It has an ancient chapel with a tower place of worship for Primitive and Wesleyan Methodists a meeting house for the Society of Friends a free grammar school and a national school. The manufacture of woollen stockings was formerly carried on here to a great extent but has of late years nearly disappeared. Cattle fairs are held four times, from February 14, to May 12. 1 op. 1880

DENTA or GREYTT a market to Hungary Thidhar Demile, co. of and 30 m S. Lemesvar on the Beava. It contains a Greek non-united church and has a weekly market and several annual fairs. Rice is grown in the district. Pop. 6110

DENTII LA a small state, Senegambia, between the rivers Gambra and Falemé, and S. of London. It is extremely mountainous and abounds in iron.

DENTON a vil and chapelry England, co. Lancaster 5 m. S.E. Manchester. The manufacture of hats is carried on on a large scale. Pop. 3148

D'ENTRECASTEAU.—1 A channel formed between the S.E. cape of Van Diemen's Land, and Bruny Island. It is about 40 m. in length to a N.E. and N.N.E. direction having

several bays and harbours on the E side, and two on the W. Muesel bay and Meorbae bay where ships may be sheltered from nearly all winds. The steels afford anchorage in many places, in from 0 to 8 fathoms. There are several lakes in it, but not very hidden ones. — 3 D'Entrecasteaux lakes, 8 S W. Taper is about lat. 10° S. and lon. 150° 30' E. They are yet but little known. — 3, a point, W. Australia, co. Lenark lat. 34 43 S. lon. 116 E. Heavy breakers here and all along this coast for a considerable distance E. and W. of this point.

DENVER, per Eng. Norfolk 8149 so. Pop. 942. DENZLINGEN a vil. Baden, circle Upper Rhine, hall, of 4 m. E. Emmendingen. It is a long straggling place, and hence sometimes takes the name of Langendenzlingen [Long Denslingen]. It contains a parish church, and two chapels, and has several mills. Pop. 1461.

DIOGHUB, a place of great sensitive Hindoostan at the N W extremity of Bengal, dist. Berhoom lat. 24 33' N. lon. 86° 40' E. At a particular season of the year it is thronged by pilgrims of both sexes, upon each of whom a small tax is levied by the Government.

DIOLS, or BORNO DIO [anc. Dofam] a tn. France dep. Indre, 14 m. N. W. E. Chateauroux, on a kind of peninsula formed by the Indre and Angoule. The town is said to be of Roman origin and even its present disposition attests its former extent and importance. A ruined castle, still to be seen was long the chief stronghold. Diols has some trade in wool. Pop. 2180.

DIOPIAH per Eng. Norfolk 1641 so. Pop. 494. DIOTSUHI an elevated table land, Little Tibet S. of the valley of Ikarado lat. 34 30' N. lon. 75° 20' E. It is about 30 m. long and 15 m. broad 12 000 ft. above sea level, and inhabitable in winter on account of the excessive cold.

DIPEPDE per Eng. Suffolk 1593 so. Pop. 49. DEPESTER ISLANDS, a group of about 17 is. S. Pacific Ocean lat. 8° 4' S. lon. 178° 29' E. (a) One of them is of considerable size the others are small and low. Few of the natives are above the middle age their skin is rough and coarse to the touch they are tattooed, and wear mats made of the pandanus leaf the fringes of which are all dyed of various colours while the mat itself is ornamented with large coloured patterns some in squares, others in diamond forms, producing at a little distance a pretty effect. On the lobes of the ear is bored, and distended to the size of an inch in diameter around the orifice small rings of tortoise shell are inserted so neatly made that the place where they are joined cannot be discovered. One female only was seen by commander Wilks, who describes her as being prepossessing in her appearance, with a pleasing expression of countenance, and a modest demeanour her arms beautifully tattooed.

DEPTFORD a tn. and naval arsenal England, co. Kent and Surrey r. bank, Thames, 4 m. E. London at the mouth of the Ravensbourne. It is irregularly built, but paved and lighted with gas, and well supplied with water. It has two parish churches and several dissenting chapels also two free schools, a dispensary a savings bank, a mechanics institute and two hospitals belonging to the Trinity House corporation, one of which was founded in the time of Henry VIII. The possessions in both these hospitals consist of decayed pilots and masters of ships, or their widows. The dockyards, for which Deptford is so celebrated were established by Henry VIII. They comprise a space of 31 ac. within which are large workshops of all descriptions requisite for fitting out ships of war several ranges of storerooms, and the victualling office. The manufactures include anchors and steam engines for the merchant service, pottery, ropes, and soap. Deptford unites with Greenwich Woolwich, Chertsey, and Plumstead in returning two members to the House of Commons. In Hayes Court, the mansion of the Evelyns, the Carr Peter the Great, resided while studying naval architecture in the dockyard. Pop. 27 896.

DEPTFORD (St. Pauli) per Eng. Surrey 999 so. Pop. 20 895.

DEPUCH an isl. N. W. coast, Australia lat. 20° 58' 24" S. lon. 11 46 E. (a) of a circular form, nearly 8 m. in circumference, its most elevated summit 514 ft. above sea level it is composed of a vast pile of large blocks of greenstone, heaped up in ragged and irregular masses, with small inter-

vals covered with a slight sprinkling of soil that nourishes a few stunted gum trees shrubs, and a coarse wiry grass. On the N. E. side of the island, there is a very good and well sheltered anchorage off the sandy beach. The flat surfaces of the rocks of this island are covered with representations of animals, birds &c. executed by the natives who would appear to have been in the practice of exercising this art in this particular place from time immemorial. The method pursued in tracing the different subjects, appears to be by cutting the surface of the rock with sharp-pointed pieces of the same stone and as the exterior of all parts of it is of a dark redish brown colour the contrast becomes great when that is removed, and the natural colour of the greenstone exposed. Many of these representations exhibit more labour and observation than is usually allowed to be possessed by the natives of Australia.

DERA FATI KHAN a tn. Afghanistan Daman near r. bank, Indus lat. 31 7' N. lon. 70° 38' E. It is clean, has a well-supplied bazaar and is altogether a thriving place. The vicinity produces cotton grain of various kinds, indigo and some sugar and opium. Pop. 6000.

DERA GHAAZI KHAN an island tn. Afghanistan in a low alluvial tract, r. bank Indus and at the distance of about 4 m. from the river lat. 30° 5' N. lon. 70° 42' E. 40 m. S. W. from the city of Mooltan. It is a large, populous, and commercial place, though ill built and dirty. The bazaar contains 1000 above a great portion of the inmates of which are engaged in weaving and selling cloth. There are here manufactures of silk cotton and mixed fabrics of silk and cotton called *koygases* also coarse woollens. The entire value of all these manufactures is estimated at 200,000 rupees (£20 000) annually. The town contains numerous ruins of mosques. The surrounding country is unhealthily during the hot season, but fertile producing excellent fruits in great abundance, also sugar cotton and indigo. Pop. about 25 000 of which nearly one-half are Hindoos the rest Malomestans.

DERA ISMA'IL KHAN an island tn. Afghanistan, r. bank, Indus, 196 m. N. from Dera Ghazee Khan lat. 31 50' N. lon. 70° 58' E. It is well laid out, but ill built of unburnt brick. It has an extensive trade in white cotton cloth grain and salt. Pop. 8000.

DEBAND or DEBAND a small tn. Afghanistan, Daman 80 m. S. W. Dera Ismael Khan lat. 31 45' N. lon. 70° 32' E. the place of residence of the Dera Ismael Khan and other caravans. It contains some large old houses and a small bazaar the former are deserted by their Hindoo owners, and are now in a state of decay. The neighbourhood is agreeable but the heat is very great.

DERAH or DERAH a large vil. Persia, Khurraman 7 m. S. E. Beeroon on the S. base of a fine limestone hill surmounted by a ruinous fort, with a few gardens and corn fields but the chief produce of the vicinity though but scanty is cotton and turnips, which last forms the principal article of food of the inhabitants for many months. There is a great abundance of large game in the neighbourhood especially wild asses. *Asafetida* grows in considerable quantities both on the hills and in the plain.

DERPND or DERPND an auc. and decayed city, Russia, the most important in Daghestan, W. shore of the Caspian Sea lat. 41 52' N. lon. 46 58' E. It is in the form of a parallelogram about 5 m. long by 3 m. broad, pleasantly situated on a declivity rising gradually from the margin of the sea. It is surrounded by strong walls, built of large square stones, some of them cubes of 6 ft. The streets are very narrow and the houses almost universally of one story with a terraced roof. On the summit of the hill on the declivity of which the city stands there is a fort or citadel of a triangular figure. Little trade is carried on here, owing to the poverty of the surrounding countries, and the shallow harbour but a great quantity of cotton is grown in the vicinity in which there are also many fine gardens and the inhabitants prepare rose-water oil, and manufacture copper and iron vessels and sell woollen stuffs. Derband was for many centuries considered the key of the Persian empire in that quarter. The inhabitants consist of Georgians, Armenians, and Jews. Pop. (1849) 10 711.

DERBY a central co. England, having N. York, E. Nottingham, S. Warwick and Leicester and W. Stafford and Chester; greatest length, N to S, 65 m. breadth, generally

from 15 to 20 and 25 m. area, 1098 sq. m. or 657 920 ac. The S. and S.E. parts of the county are low or slightly undulating and are for the most part fertile and well cultivated. The N. portion of the county and forms the commencement of the great central range which continues N. to the borders of Scotland. Though presenting no remarkable elevations, the highest not much exceeding 1900 ft. this hilly part of the county called the High Peak, is remarkable for the remarkable beauty of its scenery. Some of the higher ranges here have a bleak and barren appearance, but the dales and valleys are singularly beautiful presenting the pleasing combinations of clear streams, verdant meadows, and luxuriant foliage, enclosed by rocky heights which improve the general effect by force of contrast. The principal rivers are the Derwent, the Trent, and the Dove the latter remarkable for the beauty of its scenery and for the clear blue tint of its water. The other lesser streams are the Wye the Erwas and the Rother. The climate is on the whole healthful though somewhat cold and bleak in the higher districts. In the S. and E. parts most kinds of grain are grown particularly wheat and barley beans also are raised in considerable quantities. Oats are the principal crop in the N. and hilly districts, but the land there is mostly in pasture and both in the N. and S. dairy husbandry is carried on to a large extent, upwards of 2000 tons of cheese being annually sold out of the county. In the High Peak considerable numbers of sheep are reared of a small size. The horses of the N. parts are of a different breed from those of the S. the latter being strong and heavy, while the former are light and slender and are much employed in the Peak for carrying limestones their agility in ascending and descending the steep mountains being remarkable.

Derbyshire is singularly rich in minerals coal lead iron gypsum, and marble are wrought to a great extent. Zinc and copper are also found, but in comparatively small quantity. The coal field is calculated to extend to 190 000 ac. In various parts of both the High and Low Peak a beautiful calcareous variable black and variously coloured is obtained. The floor upon which the county is so famous abounds most in the neighbourhood of Cheltenham a locality also noted for its cavers. It is found suspended round the sides and tops of the limestone caverns, in a variety of fantastic forms and is fashioned into numerous ornamental articles. Small detached crystals called Derbyshire diamonds, specimens of chalcedony Jasper terra vert are found, and more rarely opal. In the mountainous districts, typical mineral springs are numerous the most celebrated are those of Matlock, Buxton, and Bakewell. There are also calcareous springs, which furnish wood and other substances numerous in them. The manufacture of Derbyshire is very considerable especially of silk and cotton the chief seat of the latter being the parish of Glossop, in which are more than half the mills in the county. There are numerous factories for the weaving and printing of calico, some bleaching grounds, and factories for weaving cambric, fustian muslin, and tape, and for making candle wicks. Machinery stocking frames and agricultural implements are also largely manufactured. There are also numerous tanneries and paper-mills in different parts of the county. Hare are made for exportation, and a superior porcelain is manufactured at Derby. The county is intersected by numerous canals and railways the principal of the former is the Trent and Mersey Canal the latter comprise the Birmingham and Derby Grand Junction Railway the North Midland Railway and the Midland Counties Railway.

Derbyshire is divided into six hundreds and 134 parishes and returns six members to Parliament—four for the county and two for the borough. Consistency for the county (1861) N. division, 5993 S. division, 9999 total, 12 992 Pop. (1841) 278 917 (1851) 398 064

DERBY is an ancient and market in England cap above sea level, bank, Derwent, here crossed by an elegant bridge of three arches 110 m. N. N. W. London and 80 m. S. S. E. Manchester. It is pleasantly situated in a wide and fertile valley open to the S., and, where modern, is well and regularly built but in the older quarters the streets are narrow and winding. All of them, however are clean, well paved and well lighted and to the old market, a new one communicating with it, and very commodious has recently been added. Most of the private houses are of red brick the public edifices are of

stone. Of these the most important are the church of All Saints, on the E. side of the town, near the river, a large and handsome edifice, in Roman Doric, light and airy in the interior which contains some interesting monuments, and has a beautiful screen of rich open tracery, and surmounted by a beautiful unadorned tower erected in the latest style of gothic about the time of Henry VIII. and nearly 180 ft. high the church of St. Alkmund, of florid gothic with a tower at the W. end, terminating in a beautiful spire 207 ft. high the church of St. Werburgh, consisting of a nave, chancel and aisles in the Tuscan style, with a fine gothic tower and good organ the church of St. John, an ancient gothic structure, with square embattled tower four other handsome Established churches, the R. Catholic church, one of the most imposing structures of the town erected in 1838 at a cost of £7000 the town hall a handsome edifice, with a bell tower the county hall assembly rooms the ra, 10 infirmary and jail the last well arranged and provided with every convenience for classifying the prisoners. In addition to the churches already named the Wesleyan Methodists have three the Primitive Methodists two the Independents two, and the New Connexion Methodists, Baptists, General Baptists, Quakers, Unitarians and New Jerusalemites, one each. The principal educational establishments are—the free grammar-school one of the oldest endowments in the kingdom, and having 10 exhibitions to Emmanuel college, Oxford a national and several British schools, a dame's a Wesleyan Methodist, and two infant schools. A handsome building has been recently erected for a normal female school. There is also a town and county library. The benevolent institutions include a number of almshouses and hospitals. One of the most valuable possessions of Derby is its arboretum which it owes to the munificence of its citizen Joseph Strutt. It originally covered 11 acres of ground to which 5 additional acres have since been added and has been tastefully laid out in walks and planted with trees and shrubs, so as to combine instruction with amusement. Free access is accorded to the public at least twice a week and to the subscribers of a small concert at all times. Derby is well situated both for manufactures and trade. The Market is a small town, which traverses the town and is crossed by numerous bridges, for sale of valuable water power a canal recently opened, gives a navigable communication with the Trent and Mersey and three important railways, the Derby and Birmingham the Midland Counties and North Midland have here a common station which is one of the most extensive in the kingdom.

The principal manufactures of Derby are silk, porcelain earthenware, jewellery and ornamental articles made of the various kinds of iron found in the county particularly of the floor iron called blue John red and white lead, lead pipe sheet lead cast iron ribbed stockings bobbin-net, and other lace. There are also several printing and publishing establishments. Silk throwing introduced into Derby at the beginning of last century by a mechanic named Iombe, who brought the art from Italy is still carried on here to a great extent. The weaving of process-goods in silk was introduced about 1838 or 1824. Since then saratoga, grove-de-maps, and other rich silks of superior quality are produced in numbers and to an extent that silk fabrics have become the staple of the town. The working of lace by machinery is also a thriving business. A few years since there were 200 lace-machines at work in the town and 17 silk mills. The porcelain or china manufacture was introduced about the year 1750 and has since attained a degree of excellence unsurpassed anywhere else, either as to fineness of material or brilliancy of colouring. It is now however in a somewhat declining state. The paper manufactures are curious and interesting. There are also a patent sheet manufactory some extensive foundries, and iron and the forges, where malleable iron has sheet-plates, tin plates, &c. are formed and manufactured into steam-bollers, gasholders, &c. The materials for the lead works are brought from the Peak hills. Derby has four weekly markets and nine annual fairs is the seat both of county and borough courts, and possesses a philological and agricultural society, a mechanics institute, athenaeum, &c. It is one of the oldest towns in the kingdom, and is supposed to owe its origin to a Roman station, Dervadico, situated at Little Chester on the opposite side of the river, where the foundations of a Roman bridge still exist, and various coins and other antiquities have

been found. In the time of the Saxons it was called *Nær wurdige*, and under the Danes took that of *Deorby* which with a slight change it still retains. Among its natives are the *Lancaster* by whom the London College of Physicians was founded. William Hutton the antiquarian and topographer and Richardson the novelist Barker who afterwards came to be Lord (Lancaster) and first Earl of Macclesfield, commenced it here, as an attorney. Derby retains two members to parliament constituency (1850, 2104 Pop. 40,609).

DERBY HAYEN a vil. England Isle of Man 2½ m N. E. coastline. It has an excellent and commodious harbour.

DERBYHAM, several places, Illegary particularly—1. A market in Co. Bihar. It contains a Protestant and a R. Catholic church. In the neighbourhood are four lakes from which, by the evaporation of the water in summer, a good deal of soda is obtained, and another lake called *Phingot*, celebrated from the earliest times for its baths. In the same locality pearls are found, which though small are equal in luster to those of the East. Pop. 5390.—2. A vil. Hither Thosia Co. Heves, about 15 m. W. W. Erlau. It was founded by a colony of Bohemians and contains an elegant chateau. Pop. 1067.

DEREHAM (East) a market tn. and par. England, co. Norfolk. The town, beautifully situated on a rivulet, nearly in the centre of the county 10 m. N. W. Norwich is now considered one of the handsomest market towns in Norfolk although at one time one of the dirtiest, and still very filthy & ruinously drained. It consists chiefly of a spacious market place and three long, straight, and well kept streets, lined with handsome houses and shops well paved, lighted with gas, and amply supplied with water. It has assembly rooms, and a neat little theatre. In the church, which is an ancient structure, in the collegiate style, with a tower in the centre the remains of Lower the poet are buried in 1800. There are besides places of worship for Independents, Wesleyans, and Baptists, a national British and other schools and several friendly and benevolent societies. There are several brewers and maltsters, a sack manufactory and two iron foundries. The making of mill machinery, agricultural implements, and carriage building are also amongst the trades of the place while a brisk traffic is carried on in cattle pigs and corn, especially on market days. Market day Friday fairs in July and September. There is a station here on the Eastern Counties Railway. Dereham was nearly destroyed by fire in July 1851 and again in the reign of Charles II.—The parish contains 522 ac. of fertile and highly cultivated land. Pop. 4285.—(Local Correspondent.)

DEREHAM (West) par. Eng. Norfolk 2440 ac. P. 648. **DERENBURG** a tn. Prussia, prov. Saxony gov. of and 8½ m. S. W. Magdeburg on the Havelnau. It is surrounded by an old wall with three gates contains a church, chapel, townhouse, and hospital and has a distillery a paper and numerous other mills. In the neighbourhood is the strong castle of Koenigsstein. Pop. 2572.

DERENDIAH a small tn. and castle, Asiatic Turkey pach Room and Syvas, 56 m. E. of Siraz. The town stands on a platform of the rock on the summit of which the castle is situated. It contains only about 40 houses, and is abandoned in summer by its inhabitants, who then retire to the gardens lower down the valley. The rock on which the castle stands is semicircular limestone, forming cliffs of from 50 to 100 ft. in height and rising 300 ft. above the river's bed. It is accessible only in one direction.

DERETSKE, a market tn. in Hungary Thibet Thaum, co. Bihar about 15 m. S. Debreczen. It contains a Protestant and a R. Catholic church. Pop. 5507.

DERG (Lough) a lake Ireland, co. of, and 7½ m. E. by S. Duagall about 5 m. long and 2½ m. broad at the broadest part. The shores are steep, and the general scenery around wild, dreary and desolate. The lake is studded with islands, one of which called *Stanton Island*, is famous as the scene of a R. Catholic pilgrimage. From the 1st to the 15th of August it is thronged with devotees from all parts of Ireland between 10,000 and 15,000 visiting the island annually. It lies within ½ m. of the S.E. shore and is about the extent of an acre. There are two small chapels on it, one of which is appropriated to the penitents, a house for the officiating priests, and a few cabins. The pilgrims remain on the island from three to

nine days, and their only food during that time is bread and water.

DERIAHI one of the Marian Islands S.E. coast of Arabia, at the entrance of the bay of Curia Maria lat. 17° 35' N. lon. 38° 55' E.

DERMBACH a tn. in Saxe-Wurmer obliq. place hall of same name near the Fulda, 60 m. S. W. Weimar. It contains a Protestant and a R. Catholic church a castle, and a savings bank and has several mills, and four annual fairs. A great number of wooden lard pipes are made in the neighbourhood. Pop. of tn. 1080 of hall, 6400.

DERDAH a seaport in Tripoli, at the mouth of a large river, about 1 m. from the coast, 450 m. W. E. W. Alexandria, and 550 m. E. Tripoli lat. 33° 46' N. lon. 27° 40' 45' E. (a). The town is built on four separate quarters on both sides of the ravine, backed by lofty rocks. The streets are tolerably regular but dirty, the houses low and small, and, being built of pebbles, cemented with clay and ill put together have a very mean appearance. They are however surrounded with gardens producing abundance of dates, grapes, melons, figs, bananas, oranges, plums, and other fruits and are well sheltered by thick groves of date trees. The town is abundantly supplied with water from a copious stream that gushes from the rocks above it, and which after passing through several streets, irrigates the gardens and corn fields in the neighbourhood. In the centre of the town is a ruined fortress, and a handsome mosque, built by one of the former Beys, a native of Egypt. The harbour is extremely insecure, but there is a good roadstead ½ m. off shore, as well as some shelter for small craft close in shore, with the wind from N. N. W. to S. E. The town is wholly undefended both by sea and land. It has some small export trade in corn and wool the produce of the inland country. Derdash has greatly fallen off since it ceased to be the seat of the Government of Tripoli, and its property has likewise been much injured by visitations of the plague. Pop. 6000.

DERDAS, a market tn. Dalmatia, circle of and 51 m. S. E. Zara, cap. dist. of same name, agreeably situated r. bank Gicoba. It contains a parish church, which was once a Turkish mosque, and the ruins of a castle, picturesque seated on a lofty and rugged precipice, on three sides almost inaccessible. It was formerly a large Turkish town, with 10,000 to 15,000 inhabitants. It is now a mere village. Pop. 1010.

DERNYE a tn. Austria, Croatia, belonging to the reg. marshal dist. of Vukovar on the Dra a river which there has a ferry about 4 m. from Newstadt. It contains a R. Catholic parish church and has 6 mills. Pop. 1669.

DERR, or *Derri* a tn. Arabia, and the modern capital of that country r. bank Nile, about 70 m. N. E. Ispahambol, lat. 23° 30' N. lon. 22° 30' E. It is a mere assemblage of mud cottages surrounded by a thick palm grove. Dates of superior quality are grown in the vicinity. Pop. 3000.

DERREYEH (Ed) or *Desaveri* a fortified tn. Arabia cap. Negd, dist. El Kharij on the caravan line between the Red Sea and the Persian Gulf, 60 m. N. W. Mecca; lat. 25° 15' N. lon. 46° 56' E. This town is situated the base of Mount Khour in a fertile valley and was once the centre of Wahabite power but, in 1819 was taken, and almost destroyed by Ibrahim Pasha Pop. about 13,000.

DERRINISH, two la. Ire. 1.—1. Co. of and 10 m. N. Sligo, near the entrance to Milkhaven, containing about 76 ac. of land.—2. Co. Mayo in Clew Bay containing about 52 ac.

DERRY co. and city Ireland. See *LONDONDERRY*. **DERRY** a rivulet, Ireland, co. Wicklow, Carlow and Wexford, rising 2 m. S. E. Hacketstown, and after a course of about 15 m. falling into the Slaney 1½ m. below Clonegal.

DERRY with an affix, numerous par. Ire. 1.—(Agha) Antrim 13,480 ac. Pop. 5113.—2. (Bruck) Fermanagh 4656 ac. Pop. 342.—3. (Colony) Limerick 1719 ac. Pop. 488.—4. (Grath) Tipperary 8777 ac. Pop. 942.—5. (Kilgheen) Antrim 7643 ac. Pop. 2400.—6. (Loran) Londonderry and Tyrone 12,100 ac. Pop. 7581.—7. (Lorap) Wicklow 42,966 ac. Pop. 4216.—8. (Nahoon) KILBEGG 8840 ac. Pop. 1691.—9. (Nahoon) Antrim 15,049 ac. Pop. 6348.—10. (Pahoon) Monagh 1951 ac. Pop. 282.—11. (Pahoon) Cork 1828 ac. Pop. 459.—12. (Pahoon) Fermanagh 21,079 ac. Pop. 7605.

DEBSINGHAM, par. Eng. Norfolk; 8473 ac. Pop. 812. **DEBTINGEN** three places Germany.—1 A market town. Baden circle Lower Rhine, half of, and 3 m. E. Wertheim. It contains a parish church and has two mills. Pop. 960.—2 (Old and New) two contiguous villages Württemberg, circle Danube, half of, and not far from Ulm. They contain a parish church. Pop. 818.—3, (Old) A. in Württemberg Neckar circle, half Metzingen near the Baden frontier. It has a church. Pop. 1290.

DEBVENICH an inlet, Adriatic Sea, near the coast of Dalmatia, dist. of and 12 m. S.W. Traw and immediately W of the island of Zraco. It is inhabited by a few fishermen.

DERVOCK, a post in Ireland, co. of and 31 m. N.W. Antrim, consisting of two streets, one on each side of the Bush. Near the town is the parish church, a handsome structure as also a R. Catholic chapel and Presbyterian meeting-house. On the banks of the Bush are extensive corn and four mills 1 op. 899.

DERWEN par. Wales, Denbigh; 8912 ac. 1 op. 584. **DERWENT**, several rivers, Eng.—1 co. Cumberland, rising at the head of Borrowdale, flowing N through the lakes of Derwentwater and Bassenthwaite-water and thence pursuing a W. S. W. direction to the Irish Sea, which it enters near Workington. Its principal affluent are the Greta and Cocker and the town of Cockermouth is situated on its L. bank. The waters of this river are remarkably limpid and its banks are throughout adorned with scenery of the greatest beauty.—2 co. Derby rising in the high peak, towards the N. extremity of the county and after a course chiefly S. E., of about 60 m. past Chatsworth, Matlock, Belper and Derby falling into the Trent on the confines of Leicestershire. Its upper vale is very much admired for its picturesque beauty. The Wyre is its principal affluent.—3 co. York (E. Ridgeway) rising in the woods near Harwood dale, and after a circuitous course chiefly S. E. of about 60 m. falling into the Ouse at Thimby where it is navigable to Malton a distance of 27 m.

DERWENT a river Van Diemen's Land rises in an unexplored region N.W. of the co. of Norfolk probably in about lat. 43° 30' S. On entering the county just named, it pursues a tortuous S. E. course, and latterly expands into a spacious estuary opening to the S. Pacific Ocean. At its entrance between Cape Pteron on the W. and Cape Direction on the E. it is about 4 m. wide, and continues to retain this width for 6 or 8 m. when it diminishes to about 2½ m., and latterly to somewhat less than a mile with exception of the indentation near the head of the estuary called Prince of Wales Bay where it again expands to a width of about 2 m. Seven miles from the entrance an opening to the E. occurs which conducts to a pretty extensive expanse called Ralph's Bay. The tide in Derwent river is irregular rising at times 7 or 8 feet, but usually only 4 or 5 feet the stream is generally weak, seldom more than half a knot. In the upper part, where the water is fresh, flocks of black swans formerly used to feed among the long grass which grew on the mud banks. A lighthouse, elevated 70 feet above the sea, has been erected on Iron Pot Island, at the entrance of the Derwent exhibiting a fixed light, which may be seen from 13 to 15 m. distant from a ship's deck. The estuary separates the districts of Highwood and Hobart Town.

DERWENT WATER, or **KESWICK LAKE**, a beautiful and picturesque lake, England on Cumberland forming an expansion of the Derwent, and having the town of Keswick on its N. W. shore. It is about 3½ m. long and 1½ broad has rocky and precipitous banks, and is adorned with several richly wooded islands and a singular mass of soft land which occasionally floats upon the surface, and at other times sinks below it. The waters of this lake are sometimes liable to an unaccountable agitation, and frequently rises in the calmest weather continues in this state for hours together. Near the N. E. corner of the lake is the celebrated cascade of Lodore.

DES MOINES, a riv. U. States, Iowa, rising in the Cotton des Prairies, and after a S. E. course falling into the Mississippi at the foot of the Des Moines rapids, near the confines of Missouri. In the rainy season it is navigable for steamboats 100 m.

DESAGUADERO—1 A vast depression or inter-alpine valley in Bolivia and Peru, between two huge ridges of the Andes, into which the great chain divides, near the well-known city of Trujillo lat. 12° 30' S. and again unites at the peak of

Vilacota, lat. 14° 30' S. lon. 78° 50' W. The westernmost of the longitudinal ridges which bound the valley in that direction, and form part of the boundary line between Peru and Bolivia runs parallel with the shores of the Pacific Ocean and is called the Cordillera of the coast whilst the eastern ridge is known by the general name Cordillera, or properly speaking, Bolivian Cordillera and its N. prolongation, Cordillera Real, comprising the snowy ranges Carabaya and Apolobamba the highest peak of the latter having an elevation of 17 880 ft. The great valley or table land occupying the intermediate space between the limits above defined is about 400 m. in length with a breadth varying from 80 to 80 m. It comprises an area of 150 000 sq. m. and includes the great lake Titicaca, 12 850 ft. above sea level, and the smaller lake Aullagas or Uros 570 ft. below the level of the former and which receives the superfluous waters of Titicaca by the river Desaguadero, its only outlet. The river is of considerable depth but its velocity is scarcely 2 m. an hour. Its whole length from the village Desaguadero, at the S. extremity of Titicaca, to the N. end of lake Aullagas, is about 180 m. where it emerges from lake Titicaca it is crossed by a bridge built by the fifth Inca of Peru for the passage of his army. The average elevation of the valley or table-land of Desaguadero above the level of the sea is about 12 900 ft. From its great elevation the heat here is never great, nor is the cold very inclement except during the nights from May to November. This season which is the winter is extremely dry the sky is cloudless and neither rain nor snow are known to fall. But the latter proceeds and follows the rainy season which begins at the end of November and continues to the beginning of April. There are no trees in the valley but the lower districts are covered with the most beautiful green turf. Cultivation is extremely limited wheat barley and rye are sown but they do not ripen and are not green as fodder for the llamas. There are however extensive plantations of quinoa (*Chenopodium quinoa*), Lima and of potatoes which are found growing wild in some of the more elevated places. There are here no peculiar seasons for sowing or reaping, both these operations going on simultaneously throughout the whole year. Numerous herds of llamas feed on the coarse grass with which the higher ridges in the valley are covered Quacuac alpaca, and vicuñas are also met with, but no other wild animals, excepting a peculiar kind of hare and a small animal of the family *Reithrodontomys*, which is some place has so burrowed the soil as to render travelling on horseback unsafe. The condor is frequently seen on the surrounding mountains.

A lake is the S. of Chilo in America, somewhat of the form of a boot the limb of which is 85 m. long and the feet about 12 m. its breadth nowhere exceeding 5 m. At its S. E. end is the volcano of Osorno and from its N. W. extremity issues the river of that name which falls into the Pacific.

DESHOROUGH a vill and par. Eng. co. of and 14 m. N. N. E. Northampton, on a sandstone rock. The weaving of silk and worsted employs a portion of the inhabitants and a number of females are engaged in the making of lace and winding cotton. Area of par. 3410 ac. Pop. 1380.

DESHKIN, a town, Brazil, gov. of, and 34 m. N. N. E. Orel 1 bank Oka. It contains a chapel and has some trade in salt, but the inhabitants live chiefly by agriculture. Pop. 1000.

DESLADA one of the Lizard all belonging to the French Caribbean Sea E. from Guadalupe lat. 1° 10' N. lon. 61° 12' W. (p.) It is about 10 m. long and hardly 5 broad rises with a steep ascent, and then extends in a table land which consists of limestone rocks in which many caverns occur, but it is without water. The soil is in some places of a deep black, and fertile, in others it is sandy and unproductive. This island was the first of the Caribbean islands seen by Columbus on his second voyage in 1494.

DESEMBOQUE, a town, Brazil, gov. Minas Geraes, 8 bank Velhas about 400 m. S. W. town It contains a parish church and a primary school. Some of the inhabitants are employed in making cloth or in spinning wool and cotton others in agricultural labour including the making of cheese and rearing of cattle. In the neighbourhood are mineral springs, considered very efficacious in cutaneous affections. Pop. town and district, 5000.

DESENZANO a brand port, kingdom of Italy gov. Milan prov. of and 16 m. E. S. E. Brescia, at the S. W. extremity of

lake Garda, at the foot of a hill crowned with an ancient castle. It is well built with wide and clean streets, and possesses several churches, a convent, hospital, a philosophical society, a gymnasium and clerical seminary. The port has considerable traffic in grain, wine, oil, silk, and fish. Four well-attended fairs are held during the year for cattle and general merchandise. Pop. 5437.

DESERT a name sometimes given to the newly organized Mormon territory in the U States of N America. See TAB.

DESERT several pars. 1st 1—1 Cork 725 ac. Pop. 411—2 Croy Tyne 14 399 ac. 1 op. 5866—3, (t-Egypt) Doregal 7501 ac. Pop. 1004—4, (t-Ism) Londonderry 5561 ac. Pop. 2204—5 (t-Martin) Londonderry 9580 ac. 1 op. 3693—6 (t-More) Cork 3045 ac. Pop. 708—7 (t-Ophir) Londonderry 11,489 ac. Pop. 8745—8, (t-Serpes) Cork 15,761 ac. Pop. 3553.

DESEKIAS (Tas) shows rocky tide. Atlantic ocean S E Madeira, lat. 35° or Agulhas Point 32° 31' 15" N lon. 16° 50' 45" W (a). The northern is called Chico, the centre one Deserta Grande, and the S one Bugio. They have no permanent inhabitants, but are occasionally visited from Madeira by fishermen, herders with goats, sheep and cattle and by parties in quest of archery. Chico is nine-tenths of a mile in length, and one-fourth of a mile in breadth at its N end but at the S it terminates in a very narrow point. It is a table-land surrounded by high rocky cliffs. The E shore runs nearly in a straight line, the W is more indented and at this side the low landing places in great width. The soil is light mingled with rocks and stones, and covered with long, coarse dry grass, and some wild herbs. Its most elevated summit is 546 ft. above sea level. The Deserta Grande is the largest and most elevated of the three islands. Its shores are generally steep and rocky and high bold cliffs of rock characterizes the greater part of them. It is upwards of 6 m in length and about 1 m in breadth. Its most elevated peak is 610 ft. above sea level. The Bugio is about a mile in length, and the same in breadth. Its highest peak is 610 ft. on the N part of the island is 1819 ft. above sea level.

DESFOUR par Eng. Leicester 3830 ac. Pop. 1025. **DESFOUR**, or *Desfour*, city Pers. prov Khuzestan 30 m N W Shushtar lat. 32° 5' N lon. 48° 11' E. It is a bank, river name here crossed by a handsome bridge of 20 arches the foundations of which are of stone, and very ancient, the upper portions of brick of a more recent date. It is the principal market of Khuzestan, although in many respects inferior to the larger town of Shushtar its bazaar being less commodious, its houses not so well built, and its streets narrower. In the vicinity are numerous interesting remains of antiquity including the beds of large canals, supposed to be of Sassanian origin. The neighbourhood is well inhabited and abounds in villages. Here the ladage which is manufactured in Khuzestan is raised and orange and lemon trees find a favourable soil. The local governor of Anshan generally resides here. Pop. 14,000 or 15,000.—The river on which the city stands has its source in the mountains to the W of Bourgoird, prov Irak Ajami lat. 33° 50' N lon. 46° 40' E and after a S and S E course of 150 m. falls into the Karoon lat. 31° 38' N lon. 48° 58' E. 22 m S Shushtar.

DESHI PYAZ, a large vil. Persia, Khuzestan 150 m S Mashad. It is surrounded by an enclosed garden of nut berry and fruit trees. The products of the vicinity are fruit, silk, a little cotton and opium. It contains about 100 families of Kizil-bashes.

DESHIMA or *Desima* an artificial fan-shaped isl Japan close to the town of Nangasaki. In the years 1685 and 1686 the Japanese, being desirous of assigning a fixed residence to the Portuguese, who still remained in their country in spite of the cruel persecutions to which they were then subjected, compelled them to construct their own island at the mouth of its favorable position in front of Nangasaki, whence it derives its name, which signifies Fore Island and the excellent arrangement of its stores, soon became of great importance to the prosperity of the mercantile relations of the Portuguese with Japan and the loss of liberty which they sustained was considerably alleviated by the spur thus given to their commerce. This prosperity however did not long continue for in 1693 a general sentence of banishment was issued against the Portuguese; and the Dutch, who had already, from

a spirit of rivalry, longed to locate themselves at Nangasaki, instead of Fancio (to which their own factories and those of the Portuguese had hitherto been confined) availed themselves of this opportunity to effect their purpose, and in 1641 we find them settled at Desima. The artificial island was constructed from the earth of a hill in the neighbourhood. A wall of the basaltic rock, 6 ft. above high water, protects it from the encroachments of the sea and a gate shut at night separates the inhabitants from those of the town of Nangasaki, which see.

DESIRO [anc. Desirom] a tn kingdom of Italy prov of and 10 m N Milan. Its houses are well built and it has a handsome church, hospital almshouse, and elementary school. In the vicinity are delightful gardens and vineyards, with fine trees and fountains. The inhabitants are chiefly employed in agriculture, and raising domestic cattle. Pop. 4334.—(Dese, des, Desia.)

DESIRO (Port) a harbour Patagonia, E coast, lat. 4° 45' S lon. 65° 15' 30" W (a). formed by a river of the same name. It is of difficult entrance, from its narrowness and the strength of the tide but there is good anchorage off the mouth. The country around is a parched barren desert with some straggling tufts of brown grass and a few stunted bushes. Of edible vegetables there are few or none but wild fowl, fish and shell-fish are plentiful. The natives are hostile to strangers and spare no white man who is so unfortunate as to fall into their hands, in consequence of the treatment they have received from the Spaniards and their descendants. The river was examined by Captain Klug for 16 m. but is believed to be navigable to a much greater distance.—(Fitzroy's *Sailing Directions for S. America* King's Sailing Directions for F and N Patagonia.)

DESKFORD par Bent Beauf 5 m by 3 m Pop. 917. **DESSA**, a riv Russia, which rises in gov. of, and about 50 m. E of the town of Smolensk, flows S E through that gov. and gov. Orlov. It reaches Brzansk, where it suddenly turns S S W and continues its direction into gov. Tchernigov, which it traverses easterly first S W and then W to Tchernigov. It now resumes its S S W course, and reaching the frontiers of gov. Kiev joins bank Diaper nearly opposite the town of Kiev. It is navigable nearly throughout its whole course, which exceeds 600 m. Its principal affluents are on the S the Rouda and Snov and on the N the Snopel, Velma, Buira, Navia, Nerusa, Ivot, Seim and Ostor. It has been proposed to unite the Ukra with the Dnna, and thereby give a continuous water communication between the Caspian the Black Sea, and the Baltic.

DESOLATION (Kare) a promontory W Greenland Davis Strait, forming the S.W. extremity of the Isl. Narsarsuaq lat. 60° 55' N lon. 49° 36' W (a). A headland of Terra del Fuego on an Isl. on the W coast lat. 54° 48' S lon. 71° 37' W (a).

DESSAU a tn Germany cap. duchy Anhalt-Desaun in a beautiful valley 1 bank, Mulde which is here crossed by a bridge, and joins the Elbe about 3 m. below 35 m. N Leipzig on the railway between Berlin, Anhalt and Leipzig. It consists of the town proper surrounded by walls with six gates, and of four suburbs, and is generally well built, containing several spacious squares, and a number of well formed and well-lighted streets. The principal buildings is the great place close on the Mulde originally built in 1470 but reconstructed at a much later period, not possessed of great architectural merit, but surrounded with fine gardens, and containing both a picture gallery and a library in which are numerous MSS. of Luther. The other note-worthy buildings are the palace of the dukes, the towerhouse, the palace church (Schloßkirche) with a curious pulpit of the Last Supper by Cranach, the town church St. George's church St. John's church, the St. Catherine church, the synagogue, theatre, library museum and other schools the musical academy the poorhouse, house of correction and several hospitals. The manufactures consist of woollen and linen cloth, hats, leather tobacco, mineral and other instruments, and there is an extensive weaving as well as several other mills and an important corn market. The ground around Desau originally a sandy waste, has been completely reclaimed, and is now covered with beautiful gardens, forming the chief attraction of the place. The celebrated Mendelssohn was born here. Pop. 12,500.

DESTERRO, a tn. Brazil, cap. prov. Santa-Catharina, near the centre of the W coast of the island, which gives that province its name. It stands on a tongue of land which projects W into the bay and is defended by two forts. Its situation is unhealthy and it is very poorly built—the streets being very irregular and badly paved. Scarcely any of the buildings deserve notice but among others may be mentioned the governor's palace, courthouse, arsenal, parish church, and hospital. In 1898 a dreadful thunderstorm destroyed part of the town and committed great ravages both on the island and the mainland. Pop., tn. and dist., 6000.

DESVRES, a tn. France, dep. Pas-de-Calais, 12 m. S.E. Boulogne. It is agreeably situated in a well watered district in the neighbourhood of an extensive forest. It was formerly a place of some importance, surrounded by fortifications, and defended by a strong castle but is now comparatively insignificant. It has some manufactures of coarse woollens, leather felt, and other articles. The possession of Desvres was lately contested during the Anglo-Norman wars. Pop. 2816.

DETHWICK LKA, a vil. and chapelry England, co. of and 14 m. N by W Derby. The village, situated in a valley, has a furnace for smelting lead-ore and a mill on a large scale, for spinning worsted and cotton. The Cromford and High Peak Railway passes within a quarter of a mile. Pop. 688.

DETMOLD, a tn. Germany, cap. Lippe-Detmold 1 bank, Weser, 50 m. S.W. Hannover. It is entered by three gates, is divided into the old and new towns, the former very poorly and the latter regularly built, contains a palace, a fine old castellated building with four wings and a vast round tower or donjon surrounded by well-arranged gardens, three churches a gymnasium, normal, industrial, and other schools, an orphan hospital infirmary and house of correction. The manufactures consist of woollen and linen cloth and leather and there are both marble and gypsum quarries. A few breeding studs are kept here. In the neighbourhood, on the Gröben berg the culminating point of the Teutoburg Wald a natural statue, the hammer and copper 45 ft. high, placed on a circular pedestal of solid sandstone, 90 ft. high has been erected, by subscription among the princes of Germany to the Hermann or Arminius, by whom Varus and his Roman legion were destroyed. Pop. 4716.

DETROIT, a tn. U.S. States, N. shore of Lake Michigan, opposite the W extremity of Manitoulin or Drummond Island lat. 45° 57' N lon. 84° 4' W.

DETROIT a tn. U.S. States, cap. of Michigan, r. bank of a river or creek of the same name here about 3 m. wide, 7 m. below the outlet of Lake St. Clair and 20 m. above the N.W. end of Lake Erie lat. 42° 30' N lon. 82° 10' W. It stretches about 1 m. along the river and for 2 m. backward is of a rectangular form. Thereafter it narrows, 300 ft. wide, divides into triangular portions and terminates in a large open area, called the Grand Circus. It has several public squares the chief of which is called the Campus Martius. The public edifices deserving of notice are the state-house, the city hall and the bank of Michigan. There are 33 churches several markets, two banks a theatre, numerous public gardens, mechanic hall state post-office several newspapers and benevolent societies, including two orphan asylums also several literary and scientific associations. It has extensive manufactures of machinery, shawls, ploughs, &c. and about 10 000 000 ft. of lumber are sawn up annually. Detroit is well situated for trade its navigation by river and lake, is open for eight months yearly and by the Michigan Central Railway it has extensive inland communication. In 1852 the registered shipping of the port was 43 936 tons. The exports coastwise amount to about 2800 000 and the imports to about 23 100 000 annually. Detroit was founded by the French Canadians in 1682, and was incorporated as an American city in 1815. Pop. (1858) 84,486.

DETROIT River, a river N. America, forming the communication between Lakes St. Clair and Erie, and part of the boundary between Upper Canada and the U.S. States. It is 98 m. long, 3 m. wide at Detroit, but gradually becomes wider as it descends towards the S. Among the lakes formed by it are Grose and Fighting Islands, situated near its mouth. It is navigable for ships of any tonnage. Its banks are chiefly inhabited by French Canadians whose houses, surrounded

Vol. 2.

with fruit trees, present a pleasant spectacle in passing through the strait.

DETTA, a vil. Hungary, co. Tolna, near the Danube, 6 m. S.E. Szekes. It contains a Protestant church and has good fishing in the Danube. Much wine is produced in the district. Pop. 1686.

DETTA, or GEMOU a market tn. Hungary Thikler Thassa, co. of, and 28 m. S.E. by E Temesvar on the Berava. It contains a R. Catholic parish church. Rice is grown in the district. Pop. 1450.

DETTLEBAH, a tn. Bavaria, Lower Franconia, ep. dist. of same name, r. bank, Main, over which there is a ferry 9 m. E.N.E. Würzburg. It contains two churches—one of them attached to a Franciscan monastery and the object of numerous pilgrimages an hospital and poorhouse and has considerable manufactures of cloth a trade in wine and agricultural produce, numerous mills a weekly market, and five annual fairs. Pop. of tn. 2445 of dist. 10 367.

DETTINGEN, several places, Württemberg partitioned into—1. A vil. circle, Dettlingen, dist. of and 3 m. S.E. Kirchheim. It contains a parish church, and a cotton mill. Both wine and fruit are produced to some extent in the vicinity. Pop. 2383.—2. (von der Ernt) a vil. circle, Schwarzwald dist. Urach, 10 m. E. Tübingen, 1 bank, Erms. It contains a parish church and a small castle and has a large carriage and wagon factory a polishing a saw and an iron mill. Much wine and fruit are produced here. Pop. 3851.—3. A vil. circle Jaxt, dist. of, and 6 m. S.W. Heidenheim. It contains a parish church. Pop. 1437.—4. (bei Zettlingen) a vil. circle Schwartzwald, ep. dist. of same name. It contains a parish church. Pop. 920.

DETTINGEN a vil. Bavaria, Lower Franconia dist. of, and 9 m. N.W. Aschaffenburg r. bank Main. It contains a parish church and has a granite quarry but only de serves notice on account of the victory gained here in 1748 by the English and Austrians over the French. Pop. 602.

DETTINGEN-HOES, a vil. and par. Switzerland, co. of and 16 m. N.E. Aarau, r. bank, Aare. It stands in a beautiful district contains a parish church and has some manufactures of linen, and a bleachfield. Pop. 870.

DETTVA a vil. Hungary Huttar Danube, co. Szabolcs a lofty mountain valley 5 m. from Nagyec. It contains a hand some parish church. The inhabitants are Slovaks. Pop. 7340.

DETWILLER (German Detweiler) a vil. France, dep. Bas-Rhin, 4 m. E.N.E. Saverny, r. bank, Moselle. It has manufactures of cotton and woollen stuffs and some cotton mills.

DEURAE a very old vil. Holland, prov. N. Brabant, 28 m. S.E. Hertogenbosch. It has a beautiful R. Catholic and a Reformed church and a school. Its inhabitants are chiefly engaged in agriculture and turf-selling. Pop. 1750.

DFUSEHILL, par. England, Salop. 487 a.s. 1000 DEUTSCHEN, a tn. Holland. See DOETZINGEN.

DEUTSCHEROD a royal free tn. Bohemia, circle of and 23 m. S.E. Cassau on the Savaia. It has two churches, five churches a gymnasium, barracks, hospital a paper mill vinegar factory and some manufactures of cloth and four annual fairs. Pop. 2445.

DEUTSCHENDORF or POTZAN a tn. Hungary Thutler Danube, co. Zips. In a plain, r. bank Paprad here crossed by a stone bridge 72 m. E. by E. Grazov. It contains a Protestant and two R. Catholic churches and has manufactures of linen paper and copper-ware, several distilleries a weekly market and an annual fair. Pop. 1870.

DEUTSCHHAUSE (Moravian Zlissow) a tn. Moravia, circle of, and 18 m. N.E. Olmitz, in a mountainous district on the high road to Austrian Silesia. It contains a parish church and has a weekly market and four annual fairs. Pop. 1602.

DEUTSCHKRONE ABERKRONE, or WALCH, a tn. Prussia prov. W. Prussia, gov. Marienwerder, cap. circle of same name, 72 m. N.W. Posen between the lakes of Artna and Ladau. It is the seat of several courts and public offices, contains a gymnasium and synagogue, and has manufactures of woollen cloths, dye-works a trade in horses and cattle, and eight annual fairs. Pop. 8000.—The town area 614 ges m. in dist. and mostly watered by the Kłodz, Pilawitz, and Dabrowa, contains numerous lakes and rears many cattle. Pop. 44,506.

DEUTSCHLAND See GERMANY

DEUTZ, a city of Cologne with which it communicates by a bridge of boats, 1400 ft. long. It is strongly fortified, as part of the defenses of Cologne—forming in fact, a *fort-de-poit*. It contains a R. Catholic parish and another church the ruins of an old Benedictine abbey a large barracks with magazines of artillery and two extensive establishments and has important manufactures of porcelain, valves, ribbons, soap, and playing cards. The harbour is good, and contains numerous shipping particularly in winter. Deutz is a very ancient place, and is said to owe its origin to a castle built on its site by Constantine the Great. The finest view of Cologne with its ranges of buildings stretching 3 m. along the river is obtained from the extremity of the bridge on this side. For plan of town, see COLOGNE. Pop. 2890.

DEUX PONT, a city in Bavaria. See ZWIRBACHEN

DEVA.—1 A small town in port, *Assam*, *Assam prov* *Dist* *Assam*, 28 m. E. N. E. Bikaner. It is a river its mouth. It has tolerably well-made streets, two squares, a large and magnificent church, townhall, two schools, an hospital, prison, and convent. Iron is wrought in the vicinity to some extent, but the inhabitants are principally occupied in agriculture and fishing. Its trade consists in the export of fish, bread, vegetables, fruits, iron, grain, &c. and the import of oil, wine, sugar, tobacco, coffee, soap, *artichokes*, *barley*, *apples*, &c. Pop. 3300.—2 A small river in Eastern India, which falls into the Atlantic, after a course of about 30 m.

DEVA (Latin *Devapala* German *Devierick*, or *Schleswig*) a market in Austria Transylvania on Hanyard bank, Maros, 3 m. W. Hermannstadt. It contains two castles, one of them a more rarely frequented seated on a rocky eminence and supposed to be of Roman origin. A Protestant, R. Catholic, and Greek church. The district is famed for its peaches. Many Roman coins of Augustus, and a later date, have been found here. In 1550 John Tokis defeated the Turks. Pop. 4000.

DEVAPRAYAGA a town in Hindostan in Gurwal 12 m. W. Surugger lat. 30° 9' N. lon. 78° 53' E. at the junction of the two rivers Bhagirathi or true Ganges and the Almogunda, the union of which forms that part of the Ganges held most sacred by the Hindoos, by bathing in which they suppose themselves purified from all their former sins. The town is built on the scarp of a mountain, about 100 ft. above the water the mountain rising about 800 ft. higher. The houses, generally two stories high, are built of large stones cemented with coarse lime, and covered with shingles. In the upper part of the town stands a temple sacred to Ramachandra, constructed of large blocks of cut stone, piled up, without mortar, to the height of 60 ft. The image is of black stone and about 6 ft. high.

DEVENISH.—1 An old Ireland co. Fermanagh in Lough Erne, 2 m. N. W. Enniskillen area about 113 sq. and containing some interesting remains of ancient religious establishments.—2 A par. E. of the above 30 619 sq. Pop. 6641.

DEVENTER, a town in Holland prov Overijssel 8 m. N. Zutphen, r bank, *IJssel*, where it receives the *Beek*. The streets of this ancient fortified city are generally narrow but the market places large and wide. Successive changes in the fortifications have reduced the gates to seven. An extensive prospect is enjoyed from the ramparts but the favourite promenade is the Werf, on the further side of the *IJssel* whose fine old *haden* trees were destroyed by the French in 1813 but it is now laid out with great taste in the English garden style. The townhouse is of great size is in the *atheneum* has its library. The courthouses and prison are handsome structures. In the wretchedness, a large, old, isolated building The Reformed have two churches, the Lutheran one, the *Memorials* one, and the R. Catholic one. The Jews have a small synagogue. A great resort to the town on market days makes it then a very bustling place. Though no longer the third commercial city of Holland, it still derives great advantages from its harbour on the *IJssel* It exports 600 000 lbs. of butter and 305,000 *Danish* *oaken*, annually has a royal Turkey carpet manufactory an iron foundry a stocking manufactory and various other industrial establishments. Among its public institutions are the great hospital for old people, a larger orphan house, St. Elizabeth's

both a hospital for the insane, and four other hospitals, including a military one. The *atheneum* comprises a drawing school and a lecture room, and a hall for the chemical and physical society. The Latin school has six classes, under four masters. There is also an industrial school with 500 scholars, a fine arts society a natural history and chemical society a department of the public utility society and of that for the encouragement of industry and 8 other schools with 2200 scholars. Pop. (1850) 14,878 of whom 10 (50) are Protestants, 3000 R. Catholics, and 380 Jews.—(Van der Aa.)

DEVIEREAUX (84) par England, Hereford; 1080 sq. Pop. 207

DEVIRILLI, two par. England co. Wiltshire—1 (Longbridge) 4156 sq. P. 1878.—2 (Monsieur) 1785 sq. P. 808

DEVIRON or DOVIRAN a river Scotland, co. Aberdeen and Banff. It rises in the parish of Cairnab W. coast Aberdeenshire, flows in a winding course N. E. past Kintilly and Drumblair, and enters the M. sea at Banff, after a course of more than 40 m. It abounds with salmon and trout and lead ore has been observed on its banks. It has many small affluents, the chief of which are the Beggs and Isla.

DEVETTER, or DEVEZSKA, a market in Hungary Timar Danube, co. of and 23 m. W. Veszprim ap. dist. of same name, 81 m. E. W. Pesth. It contains a parish church. Pop. 3890

DEVICOTTA a fort and seaport in, of S. Hindostan Car Nicobar, lat. 11° 37' N. lon. 73° 12' E. on the Caracendal coast at the mouth of the Coleroon. The fort is situated on a small island. The approach to the port is very dangerous, owing to an extensive shoal (Coleroon Shoal) which projects 4 or 5 m. from the entrance to the river.

DEVILS, with various affixes a name applied to a great variety of places in different quarters of the world including—1 (Devil) a harbour on the S. side of Tierra del Fuego, in Christmas Sound lat. 55° 10' S. lon. 70° W. so named by Cook in 1774 on account of its gloomy appearance. It is surrounded by high and savage rocks, which drive it of the rays of the sun—2 An isl. off the coast of French Guinea, lat. 6° 16' N. lon. 52° 45' W. (i.e. 3, *Des Montagnes*) A mountain range, Ireland co. Tipperary and partly on the confines of King's co., rising to the height of 3084 ft. They extend 8 W. to N. E. for about 24 m. and separate the basin of the Suir from that of the Blinn—4 (Devil) A small lake, Ireland co. Kerry near the summit of Mangerton Mountain at an elevation of between 2000 and 3000 ft. above sea level. It is about 1 m. long and fully one-third broad, and in its centre is upwards of 150 ft. deep.—5 (Devil) A mountain, S. Africa Cape Colony lat. 33° 57' 11" S. lon. 18° 31' 45" E. (i.e. 2) having a height of 3315 ft.

DEVIL LE-LAZ-ROUEN a vil. France, dep. Sarre-Inférieure, about 3 m. N. W. Rouen, in a rich valley watered by the Caillie. It is an active, stirring place with manufactures of plain and printed cottons chemical products and paper dye-works with numerous cotton and other mills. P. 8810

DEVIZES, a par. bar. and market in England co. Wiltshire, a busy town on a commanding eminence, 33 m. W. by S. London. It consists of several streets, diverging from a spacious market place, well paved and lighted with gas. Some of the houses have an antique appearance, being built of timber and plaster but most of the others are handsome modern buildings. It has two handsome parish churches, and places of worship for Presbyterians, Baptists Independent, Unitarians, Wesleyans, and the Society of Friends a townhall house of correction, and county bridewell. In the market place is a handsome cross, erected in 1815. It has a British school, and several charity schools, one of which called the Bear Club Charity was established in 1760 and is liberally supported several almshouses, a dispensary, and a mendicant society. The woolen manufactory, once very considerable here, have been extinct for several years. Three silk manufactories have been recently established, and there is a factory for silk throwing, about half a mile from the town. The weaving of crepe and surmount is on the increase but mending is carried on less extensively than formerly. A large woollen manufactory has been long established. Markets, Monday and Thursday six times annually—the largest on the 20th April. The borough returns two members to the House of Commons, constituency 358. The municipal government is vested in

a mayor six aldermen and eighteen councillors. Devon is supposed to owe its rise to a castle built here in the reign of Henry I and dismantled in the reign of Edward III., and hardly any trace of which now remains. In the reign of Henry VIII it was celebrated for its market, which is still the largest in the W of England Pop 6554—*Local Correspondence*.

DEVON is a maritime co. England bounded, W by Cornwall E. by Somerset and Dorset N by the Bristol Channel and S by the English Channel. Greatest length, N to S, 72 m. extreme breadth, 67 m. area, 2585 sq. m. or 1 654 400 ac. It is the third largest county in England, and the fourth as regards population. It is in general hilly and a large portion of it is occupied by the barren region of Dartmoor—an elevated tract, partly covered with masses of scattered granite, and partly consisting of heath and bog. This waste, which is upwards of 20 m. long and from 10 to 15 m. broad supports only a few thousand sheep and cattle, and some wild dwarf colts. The Vale of Exeter comprising from 120 000 to 130 000 acres, presents a remarkable contrast to this sterile tract, being one of the most beautiful and fertile districts in England. The S. extremity of the county limited anteriorly by a line drawn from Torkey to Plymouth Sound, called *South Hams* comprising about 240 sq. m. is also extremely fertile, being so rich and productive as to be distinguished by the name of the garden of Devonshire. Following the sinuosities of its bays and inlets, Devonshire has about 312 m. of sea coast—73 m. the N. or Bristol Channel, and about 140 on the S. or English Channel. The former is, for the most part, steep and rocky the latter is lined with cliffs throughout its whole extent. The principal bays are Bideford Bay on the N. coast, and Tor Bay on the S. coast. The mineral productions of Devonshire, considered as objects of trade and manufacture, are principally tin and copper which are wrought to a considerable extent. Granite, freestone, limestone, and slate are abundant and many thousands of tons of porcelain clay are annually shipped for the Staffordshire potteries, and other places.

The climate of Devonshire is remarkably mild in the S. part of the county on which account it is much resorted to by invalids having pulmonary or inflammatory complaints but it is bleak and piercing in the higher regions of Dartmoor. In the N. and E. parts it is somewhat colder than in the S. and it is there only that winter assumes any degree of severity. The rivers are numerous and some of them of considerable size the principal are the Axe or Exe Teign Dart, Plym, falling into the English Channel and the Tavy and Tawne, falling into the Bristol Channel.

Notwithstanding the general fertility of the soil and the mildness of the climate, agriculture is still in a very backward state in this county attributable, in part no doubt, to the general preference given to dairy husbandry to which indeed it is best adapted from the extent and richness of its grass lands. The principal productions of the arable lands are wheat, barley, beans, pease potatoes and a little flax. Butter cheese and live stock are the staple products of the county nor must that peculiar delicacy of its dairies, the elevated cream of Devonshire, be overlooked. The butter is of excellent quality and brings a high price in London, where what of it is sent but the cheese is in general poor being made mostly from skimmed milk. The cows used for the dairy are mostly of the breed of the county and of a red or fawn color. They are handsomely shaped, but have too great a tendency to fatten to be good milkers, but their beef is of superior quality. A great many oxen are reared and exported annually from the county especially from the N. districts they are famed for their docility and activity at work, and their aptitude to fatten. The breeds of sheep are excellent, both as regards flesh and wool they are reared mostly on the hills and more elevated districts—the low moist lands not being favorable to them, although they fatten rapidly on their rich herbage. The whole stock has been estimated at 880,000 and the annual produce of wool at 15 600 packs. In some districts considerable numbers of pigs are reared not inferior in quality to any in England. The farms in this county are generally small 150 to 200 acres, of which the greater part is in pasture, being considered a large farm. The older orchards is another source of income to the Devonshire farmer but its value has decreased nearly a half within

the last few years owing, it is said to the great age of the trees. An orchard produces 10 to 15 hogheads an acre, which generally sells at 25s. to 30s. a hoghead, the cost of preparing it being from 1s. to 1s. 6d. A large portion of the cider produced is consumed by the farm labourers. The people are generally frugal and industrious, as is strikingly exemplified in the number of depositors in savings-banks, who are four times more numerous in Devonshire, in proportion to its population, than in Lancashire, although in the former a farm labourer receives but 9s. per week while in the latter there is a larger amount of wages in circulation in proportion to the population than in any other part of the world.

The principal manufactures of the county are coarse woolen goods—druggists serge long cloths &c.—exported mostly to foreign countries. The trade has declined much of late years but is still considerable. Broad and narrow cloths are made in some parts, but not to such an extent as formerly. Carpets, in imitation of Turkish and Persian, are manufactured at Axminster beautiful cushion-laces at Hamerton and, in several towns, large quantities of shoes are made for the Newfoundland market. Linen is manufactured at Crediton and Plymouth.

Devonshire returns 22 members to Parliament—four for the county two for the city of Exeter two each for seven boroughs and one each for those of Ashburton and Dartmouth. Pop 667 000.

DEVON—1 A river, Bedford co. Forth and Clack namers, rising in the Obed hills parish of Blackford, and after a course of nearly 30 m. successively E. S.E. N.W. by W. and S. falling into the Forth a little above Alloa. The Devon is not navigable but it has been celebrated for the beauty of its scenery and for the remarkable hills at Crook of Devon—2 A co. of Van Diemen's Land. It comprises three hundreds and twelve parishes. It contains three towns—Exeter, Tor, and Liffracombe.

DEVON WORK, a duct of Arctic America, on the N. side of Barrow's Strait, and 100 miles from the W. Wellington Channel and E. Baffin Bay. Intercepted by the parallel of 73° N. and between the meridians of 78° and 92° 30' W.

DEVONPORT a maritime fortified and naval arsenal England, co. Devon S. division on the E. shore of the estuary of the Tamar upon that part of it called the Hamoaze, which forms the harbour 218 m. W. by S. London and 14 m. W. Plymouth lat. 50° 24' N. lon. 4° 12' W. finely situated on an acclivity commanding an extensive and beautiful view of the sea and surrounding country. It is of an oblong form principal streets show, it and well kept paved and lighted with gas houses of stone and generally well built. The footpaths are of marble obtained in the neighbourhood, and have a very beautiful appearance when washed by a shower. Water is obtained from Dartmoor. A wall 12 ft. high defends the town on the N. E. and S. sides while it sees entrance is protected by heavy batteries. Outside the wall is a line or breastwork with a fosse excavated in the solid rock from 12 to 20 ft. in depth. The principal public buildings consist of the churches are the guildhall, decorated with a noble Doric portico public library ornamented with an Egyptian facade mechanics institute temperance hall royal British female orphan asylum, and the post office. Near the guildhall there is a handsome fluted column, of the Doric order erected to commemorate the naming of the town anew seconded by a flight of 140 steps, and from the summit of which a magnificent view is obtained. There are six churches, two chapels, and a licensed room for Divine services in the tower besides two Baptist chapels, three Calvinist, two Independent one Bible Christian one Moravian one Protestant one Tabernacle, one Unitarian four Wesleyan and one Mormonite. The educational institutions comprise 13 principal schools of various descriptions, for boys, including a national, and a naval and military free school, and five principal schools for young ladies. The literary and scientific institutions are a mechanics institute, young men's society the Christian young men's society and working men's society charitable and benevolent associations, the royal British orphan asylum royal dock-yard orphan asylum, provident society public dispensary and several other minor but not less useful charities. It is, however, in a naval arsenal the largest by far in Great Britain, that Devonport

attracts attention and from which it derives its chief characteristics. The water works of one kind and another constructed for Government purposes, cover not less than 858 acres, comprising one of the finest dock yards in the world, and which will be equalled in magnitude by another now (1861) in process of formation, for the equipment of men-of-war steamers. The two dock yards will comprehend an area of about 150 ac. An additional space of 10 ac. is occupied by the works of the Board of Ordnance, including a spacious gunwharf, and a barge capable of accommodating upwards of 1000 tons. Devonport has no manufactures worthy of notice, but is almost wholly dependent on the royal arsenal, a large proportion of its inhabitants being dock-yard artisans and labourers. The remainder is composed chiefly of sailors wives and children, shoemakers, small shopkeepers and pensioners from the army and navy. The moral condition of Devonport is represented as very bad and the density of its population greater than that of any other place in England, there being no fewer than 26,000 persons living on one-fifth part of a square mile, giving 10 individuals to each house; the proportion in Liverpool being seven, and in Manchester but six.

Down to the year 1824 Devonport was known as Plymouth dock but in that year it obtained the name it now bears. The christening or new naming the town was performed with great ceremony. To commemorate this event, a fluted column, of the Doric order elsewhere mentioned was erected. The harbour of Hants is about 4 m. long and half a mile broad, its greatest depth at high water is between 16 and 20 fathoms at low water level it is a magnificent repository for ships of war of all classes, and is capable of accommodating the entire British navy at once. It returns two members to the House of Commons. Registered electors 1850 2410. Pop. of bor 50 189 of which 27 000 reside within the fort sea-wall.

DEVIA TABOUR or LUKA; TABOUR, a populous town, Abyssinia, 25 m. E. Lake Dembea lat. 11 55' N. lon. 37 45' E. It is built on a plain of irregular surface, and occupies a large space the houses being very much scattered and greatly resembling ruined windmills. Its churches are numerous, and tolerably elegant and it is inhabited exclusively by soldiers and families of earl virtues. The environs are infested with hyenas and tigers and abound with game. —(Combe et Tambour's Voy en Abyssinie.)

DEVYNOCK a vil. and par Wales, co. of and 7 m. W. Brecknock. The village is pleasantly situated at the extremity of the ale of Benney Area of par 28,983 sq. m. 1969

DEWCHURCH two pars England Hereford 1—1861 Lat. 51° 53' N. Pop. 276.—2 (Mach) 4678 ac. Pop. 620 DEWCHURCH, a harbour and vil. Hindostan, Malabar coast on the Concan, lat. 15 23' N. The harbour is formed close under the N. E. point of the island at the mouth of a small river and has three or four fathoms water where a ship may lie sheltered from the S. W. monsoon.—The village, on which there is a fort is situated on the S. side of the entrance of the river and appears as part of the main, being nearly joined to it.

DEWCHURCH, par Eng Dorset 8090 ac. Pop. 443

DEWSAHL a considerable Hindoostan prov Aymer 36 m. E. Jypore lat. 28 50' N. lon. 78 12' E. on the declivity of a hill the summit of which is crowned with an extensive forest. It is surrounded by a ruined wall and presents other evidences of antiquity and of former importance. It is a kind of second-rate place of pilgrimage, where a Hindoo fair and festival is occasionally held.

DEWSALL, par Eng Hereford 676 ac. Pop. 80

DEWSBURY a market tn. and par England co. York, W. Riding. The town, 20 m. S. W. York, is situated at the base of a hill, rising from the Calder, and presents a very striking and somewhat interesting appearance when approached by the Wakefield road, which runs to a considerable height above the level of the town. It has several good, but irregularly formed streets; is well lighted with gas, but very indifferently supplied with water. It has an ancient parish church and four other places of worship connected with the Establishment all of recent erection and chapels belonging to Independent, Wesleyan, Primitive and New Connection Methodists, Baptists, R. Catholics, and the Society of Friends. To most of these places of worship are attached a burying-

ground, and week-day and Sunday schools, for the children of both sexes; two charity schools, one of them the Wheelwrights Charity was founded in 1737 for the instruction of 100 boys and 100 girls. There are also a mechanics institution library and reading-room a parochial library and news room. Of late years, Dewsbury has been rising into importance as a manufacturing town, and has now several extensive and thriving establishments for the manufacture of blankets, woollen cloths, carpets &c. One of its principal manufactures is shoddy, a cloth made from old woollen rags which having been again reduced to wool by the aid of machinery, is re-spun with the addition of a little fresh natural wool, re-dyed and ultimately re-produced in the market as an entirely new fabric. Great improvements have recently been effected in this singular manufacture, from which many useful and even elegant articles are now made. Upwards of 2000 persons—men, women, and boys—are employed in the manufactures of the town. Numerous good roads excellent inland navigation by river and canal and communication by railway with Manchester Leeds York &c. afford Dewsbury great facilities for trade. There is an elegant station here for the London and N. W. Railway and a neat building, recently erected, for the county court. At Kirkstall, in the parish of Dewsbury is shown the tomb of the renowned freebooter Robin Hood who occasionally resided, and is generally believed to have died there. Area of par 9768 ac. Pop. of par (1851) 28 103 of township, 14 049.—(Local Correspondent.)

DE WITTS LAND the tract of country W. coast, Australia, lying between the Tropics of Capricorn and lat. 1° S. It was discovered by De Witt in the ship Flamingo, in 1623, and called after him.

DE WITTS ISLANDS off the S. coast of Van Diemen's Land between S. Cape and S.W. Cape. The nearest is about 6 m. from the mainland the most remote about 10 m. They lie between lon. 146° 20' and 146° 28' E.

DEYNZE, or DEYNEN [anc. Domes] a tn. Belgium prov E. Flanders 9 m. S. W. Ghent, on the Lys, and near the railway between Ghent and Courtray. It has two churches, the chief of which St. Peter's Domes is an antique Gothic edifice several primary schools and benevolent institutions manufactures of starch and tobacco large glass distilleries and several breweries dye-works, tanneries, &c. The trade in linen, grain and cattle, is important. Pop. 8000

DEYRAH a tn. Hindoostan prov Gujralr plan centrally situated in the centre of the valley of Deyrah Doon lat. 30 18' N. lon. 77 45' E. It is well built of stone, and has a neat bazaar composed of large huts, and a Sikh temple with six dependent edifices.—The valley which is about 26 m. long by 12 m. to 15 m. broad exhibits great variety of surface and soil is watered by numerous rivulets, swarming with fish resembling trout and abounds in game of all kinds from the tiger to the quail.

DEZA a tn. Spain Old Castile, prov. of and 85 m. S.E. Borja on a rugged hill. It contains a parish church town house, primary school and prison and has manufactures of linen and hempen cloth, a dye-works, several flour-mills, and some trade in corn and cattle. Pop. 1244

DEZFOUL a tn. Persia. See Dizevur.

DHALAO, an isl. Red Sea, off the coast of Abyssinia, N. W. extremity of Dahlak about 10 m. from the mainland lat. 15° 46' N. lon. 40° 6' E. (n.) It is 120 m. in circumference, and of irregular form; its S. side is 25 m. long and its greatest breadth 18 m. It is principally composed of coral rock, interspersed with spots affording a supply of good grass in the many season. The only animals seen on the island are asses, goats, sheep, and antelopes the latter are numerous. There are several towns and villages on the island, of which Doobelloo, on the S. side, has the principal trade and best appearance most of the houses are built of coral, others of stone; the coral walls are 10 ft. high, with sloping grass tops, the plastered houses having square tops. The trade of Doobelloo is principally with Lobela and Ghassan whence millet and dates are imported in return for the produce of the pearl banks, such as fish, sharks fins the horny part of shell-fish turtle, and pearls. The supply of water obtained in the rainy season is preserved in tanks, but there are numerous wells besides in various parts of the island. The principal town and port was formerly Dhalao at Kaboor

at the S. end of the island but it has now scarcely water nor solvent to admit small vessels and is therefore going to decay. It has still however four mosques, two of which have domes, and two burial grounds, and many vestiges of its former importance. This island is surrounded by a great number of islets and small islands distinguished by the general name *Dahese Islands*.

DIAMONER a fortified is. Hindooistan, prov. Malwa lat. 24 11 N lon 75 57 E. The is. is in a triangular form, on a small eminence the ramparts are in some places 50 ft. high, and in general 15 feet thick, with large towers. The town is encompassed by a loose wall mostly in ruins.

DIHAR, or **DIHARATWAGAR**, an anc. city Hindooistan prov. Malwa; lat. 22 21 N lon. 75 20 E, which at one time contained a much greater extent of ground than it does now. It is at present about three-quarters of a mile in length by half a mile in breadth, and is surrounded by a mud wall. It contains some good buildings, and is watered by several large and two small tanks. The plain or fort stands on a rising ground apart from the city and is surrounded by walls 80 ft. high, fortified with towers at intervals. Opium is extensively cultivated in the surrounding territory. Inhabited houses between 5000 and 6000. It is said to have contained formerly 30 000.

DIHOFAR, **DIHAFAR** or **DIHAFAR**—A fertile and populous dist. S. coast Arabia, commencing at Ras-el-Ahmar in lat. 16 35' N and lon. 54 1' E, and adjacent to it, if not comprised within the country named *Mahrat*. In this district there formerly stood a town of the same name, enjoying commercial importance and celebrity the total disappearance of which has been but recently ascertained. Dihofar has been always considered in the place referred to in the book of Genesis (x. 20) in the words: "As thou goest unto Saphar a mount of the east." It was in its immediate neighbourhood also, that the Arabs placed the tomb of the prophet Hifid, whose name is associated with the earliest traditions of that race. The only descriptive account which we have of the town of Dihofar is that given by Ibn Khaldun, who visited it in the middle of the 14th century. At that time it carried on a trade with India, exporting horses and importing rice, the voyage, with a fair wind, being made in a month. Its chief distinction, according to the intelligent Arab traveller was its extreme filth had small and multitude of flies—all ascribable to the great quantities of dates and figs exposed for sale in the market. The inhabitants lived chiefly on fish, which they dried in the sun, and they not only ate it themselves, but also fed their horses and cattle with it. They manufactured silk and cotton stuffs, and cultivated among other things, the plantain and the coconuts. Though gentle in manners, and courteous to strangers, they never yielded to oppression or political encroachment, and had successfully resisted every attack on their independence. Such was the state of Dihofar in the 14th century. But in the beginning of the 17th century when the Jesuit missionary Pedro Paez, was brought a captive into that place, it was subject to the Sultan of Babel whose capital was in Hadramaut. With its independence it lost probably its vital principle, but its total disappearance was never suspected by European geographers until even Lieut. Wallace, on board the vessel engaged in surveying that coast, returned in 1839 to write these words: "The next morning found us off Dahir a small town and fort which gives their name to the contiguous district. But the fact is, that there is no town of that name on the coast. The fertile plain S.W. of Mirbat remains, indeed the ancient appellation of Dihofar; but instead of a single large town it now exhibits a cluster of villages formerly united under one ruler but at present independent one of the other. These are Adhahat, Tahir, Haidah, El-Hafid, Akkad, and Robah. The largest of these villages is Adhahat, between which and El-Hafid, lie the ruins of an ancient city called El-Bahid, were a fresh-water lake, were it said to have formerly communicated with the sea, and to have formed the harbour of Dihofar. There are several fresh-water streams in this district, and it is not improbable that when their waters were all consumed in irrigation, the mouth of the inlet by which they had discharged themselves into the sea became filled up. Fresh provisions are easily procured here: the district produces coarse frankincense and gum arabic, which, with ambergris and tortoise-shell, procured on the coast, are sent to India.

The port of Dihofar is Mirbat or Morbat, in 16° 59' 15" N., and 54° 42' 40" E., a wretched village, with a population of 500 but having a secure and capacious harbour.—(Lanc. Criticism, I. N. *Proceedings of the Geo. Soc. of Bombay* Capt. Haimes in *Four Voy. Geo. Soc.* vol. xv. F. Fremont's *Journal Asiatique*, tom vi. (3d series) Wollast's *City of the Gulphs*.)—Another celebrated city named *Dihofar*, existed in Yemen, and is said, by Arab writers, to have been the residence of most of the kings of that country. Niebuhr when at Yarn, learned that the ruins of Dihofar were but half a day's journey to the S.W. They were afterwards visited by Dr. Pococke who there first made the discovery of Hamyarite inscriptions. The ruins in question are probably about 80 m. S.W. by N. Aden. This Dihofar was apparently the Sapphara metropolis of Ptolomy and Sapphar Regia of Pliny.—Niebuhr's *Description de l'Arabie* V. Zach's *Monatliche Correspondenz*, vol. xxviii.

DIHOLFOOR, a tn. Hindooistan, prov. of and 34 m. S.S.W. Agni; lat. 26° 48' N lon 78° 1' W. Situated within a mile of the Chindal river, which is here about three-quarters of a mile across in the rainy season. The town is of considerable size and the country in the vicinity productive.

DIHURUMPOOREE, a locality in Hindooistan prov. Malwa, r. bank, Nerbudda lat. 22 10' N lon 75 28' E.

DIABLEEETS (Moor) a remarkable mountain in Switzerland Bernese Alps, near Valais 11 m N W Sion, and nearly the same distance N.E. St. Maurice, summit 10 680 ft above sea level; lat. 46° 18' N lon 7° 11' E. It is normally terminated in five peaks, but three of these have fallen and the two that remain remain separate or later to follow. The mountain is composed of limestone strata, much damaged and steeply inclined. The lower beds being soft and shaly are disintegrated by the infiltration of water from the vast glaciers on the N.E. and after the supports and foundation are thus removed large masses are detached from the mountain into the valley beneath, forming land-slips of the most tremendous kind. During the last century two catastrophes of this kind occurred—one in 1714, and another in 1745. By the former, the surrounding district was shaken as with an earthquake thick clouds of dust rose high into the air masses of rock were hurled to a distance of several miles and trees were thrown down by the current of air alone produced by the fall of the avalanche. Many human beings and cattle perished at the same time. By the fall of the peak in 1745 the course of the Liserne was arrested, and two small lakes formed which still exist.

DIADIA a tn. Turkish Armenia, 72 m. S.S.W. Livan r. bank Euphrates. The houses are partly of wood and partly of stone and have a mean appearance. It is defended by a fortress having towers at intervals. Pop. about 8000.

DIALA or **DIHALAN**, a river Asiatic Turkey pass Bagdad an affluent of the Tigris, formed by the junction of the Shihwan, Holwan and various other intermediate streams, all flowing from the mountain regions of Kurdistan. It obtains the name of the Diala from the junction of the Holwan about lat. 34° 15' N lon 45° 11' E. from which, with some pretty wide deviations, it flows S.S.W. and falls into the Tigris about 10 m below Bagdad. It is supposed to coincide with the ancient Gydnus.

DIALIGUELY, a tn. W. Africa, Bondon country 1 bnk, Palend lat. 14 28' N lon 12 10' W. It is a considerable place and has many inhabitants (Foulahs), mostly employed in cultivation.

DIAMANT (Lis) a tn W. India, lat. Marungue, on a bay of its own name. The vicinity is rocky but produces the manihott root abundantly.

DIAMANTIA, a coast in Naples, prov. Calabria Citra, 80 m. N.W. Cosentino. In the vicinity vines and excellent grapes are produced. Pop. 1700.

DIAMANTINA, two places, Brazil.—[formerly Tazoco] a city prov. Minas-Geraes in a valley surrounded by mountains the capital of the Diamond district, about 80 m. N.W. Serro or Villa do Príncipe; lat. 18° 18' S. lon 48° 50' W. It is built in the form of an irregular amphitheatre the streets are irregular and wide, but badly paved. There are, however, many fine houses, of two and three stories in height both within the city and in the suburbs, all of wood. From its elevated position, and from the houses being whitewashed and intermingled with several churches,

rising above each other on the steep face of the locality the city presents a very imposing appearance when viewed from a distance, an effect which is not lessened by the profusion of orange and banana trees that surround or are interspersed with the houses in the suburbs. The churches are handsome buildings, one called *Santa Senhora da Moura*, belongs to the negroes from the coast of Africa. Over the high altar of this church is seen the figure of a black virgin. Most of the houses have a small garden attached to them in which all the common European vegetables and flowers are produced, also several kinds of European fruits, such as apples, peaches, &c. The city is abundantly supplied with excellent water from springs that take their rise in the mountain on which it is situated and has a primary school for boys and girls, and an hospital. Many of the shops present a very attractive appearance, being well stocked with European and other goods. The country around is so rocky and barren, that almost all articles of food are brought from a distance of from 30 to 60 m. and exposed to sale in two large market-places, called *Intendencia*. Owing to the elevated position of the city the climate is, in general, mild and healthy although sometimes so cold as to render a fire agreeable.

The inhabitants of the place are almost all employed directly or indirectly in the gold and diamond trade, the vicinity being rich in these precious minerals. The diamond washing, which was formerly a monopoly of the Government, is now open to any one who chooses to risk his time and capital in the pursuit. Those of the inhabitants who possess slaves employ them in the washings, in which it has been computed, there are in all upwards of 10,000 persons employed within the district a space comprising about 42 sq. m. The women of Diamantina are remarkable for beauty and the men are described as a fine race. Pop. of town about 6000 of dist. 14,000—(Kardner's *Travels in Brazil*).—A. in prov. Mato Grosso, at the confluence of the Ouro and Diamantina about 150 m. N. W. Cuiabá. It stands on a height, and contains a parish church and a primary school. It owes its name to the diamonds found in its neighbourhood. The district is noted for being rich in diamonds and gold. Pop. dist. 4500.

DIAMANTE, NÉQUO, or NEQUO, a large river La Plata, an affluent of the Rio Negro, having its source on the S. slopes of the Chilian Andes, about lat. 36° 18' S. lon. 6° W. from which it flows S.E. and falls into the Rio Negro at lat. 38° 20' N. lon. 68° 30' W. its whole course being about 110 m. The two rivers though running in the same channel after they have joined may be distinguished from each other by their different colours, the negro being pure whilst the Diamante is muddy and disagreeable to the taste. Villarrojo asserts that it is nearly as large as the Rio Negro, and much larger than the Colorado. It is much interrupted by small islands, overgrown with stunted willows. The lowlands along the shore have a most sterile aspect, and are again bounded by a steep range of red cliffs, which have in some places the appearance of ruined castles and in others that of brick kilns.

DIAMOND CAPE, the extremity of a promontory Lower Canada, at the confluence of the St. Charles with the St. Lawrence, the river occupies 535 ft. above the St. Lawrence. On this promontory stands the citadel of Quebec. On the W. and nearly on a level with the ramparts are the plants of Abraham, where, in 1691 General Wolfe fell.

DIAMOND HARBOUR, a harbour Hindoostan, in the River Hoogly 84 m. S.E.W. Calcutta lat. (Bamphore) 22° 11' 12" N. lon. 88° 10' E. (N.). At this place the East India Company's ships usually discharge their outward and take on board the greater part of their homeward cargoes, their loading being completed in fewer rods. There are here Government warehouses for ships' stores, rigging, &c. Provisions of very indifferent quality are obtained from the neighboring villages, at high prices. A brick road, elevated to a considerable height above the adjacent rice fields, forms a communication with Calcutta. Diamond Harbour is singularly unhealthy, especially in the months of July, August, and September during and after the periodical rains. The rice grounds in the neighbourhood are in a high state of cultivation, and yield abundant crops.

DIAMOND ISLAND E. coast, Bay of Bengal, off the extreme S.W. point of Burma lat. 17° 51' 30" N. lon. 94° 17' E. (N.) about 32 m. S. Cape Negrais. It is about

1½ m. in length low covered with trees, surrounded with dangerous reefs, and abounds with turtles of the largest size.

DIAMOR, par Isl. Month 5468 ac. Pop. 445

DIAMPER, a tn Hindoostan, Travancore prov. of and 14 m. E. Cochin lat. 9° 55' N. lon. 76° 29' E. A celebrated synod was held here, without effect, by a Portuguese archbishop for the conversion of the Nestorian Christians of this part of India to the R. Catholic faith.

DIANO a tn Naples, prov. Principato Citra, 46 m. S.E. Salerno in the fertile valley of Diano at the foot of Monte Mutilo, and near the Calore. It has a strong castle, five churches rich in monuments three convents, and a theological seminary. Pop. 6980

DIANO 1 ALBA [anc. *Dianium* *discretem* Pompejanorum] a tn kingdom of Italy Piedmont, prov. of, and 8 m. S. Alba, on an elevated and agreeable site surrounded by many highly cultivated hills. It has two churches, two squares, a cemetery the remains of an ancient castle, and a beautiful esplanade planted with trees, and commanding a fine view of the country. An annual fair is held in November. Pop. 2900

DIARBEKIR, a peak, Asiatic Turkey Armenia, E. of the Euphrates, which forms its W. boundary mostly between lat. 35° and 39° N. lon. 38 and 42 E. The country is of difficult access, exceedingly mountainous interspersed with narrow and fertile valleys, replete with the most beautiful and romantic scenery. The inhabitants, mainly Kurds, live by agriculture and cattle-rearing. Diarbekir is partly in ancient Mesopotamia.

DIARBEKIR, cap. of and near the centre of the above peak lat. 37° 55' N. lon. 38° 51' E. on a high bank overlooking the Tigris, between which and the elevation on which the city stands there is a tract of meadow ground, forming an extensive garden watered and filled with the greatest care, and fertilized with the richest manure. Diarbekir is surrounded by a lofty thick wall constructed of rectangular blocks of a black porous stone regularly laid. The streets are paved but narrow and dirty. The best houses are built of the same material as the walls, which is quarried near the city sometimes interspersed in building with a white limestone, most of them however are of rough stone overlaid with a plaster of mud and straw. Some of the mosques are variegated in the manner above mentioned, the main body of the edifice being constructed of the black stone, and of the minarets of the white. A part of the bazars and several handsome khans, are also built with the black stone. There are 20 mosques, five Christian churches, a synagogue 39 baths, 15 caravanserais, and a number of bazars. The principal mosque was formerly a Christian church. It is called the Great Mosque and is the finest remnant of antiquity in the place. It has a large square tower now used as a minaret. The Armenian cathedral and Chaldean church lately erected are also handsome structures the latter is superbly ornamented with foreign paintings. The city is well supplied with the comforts of life, and with not a few of its luxuries. Ice obtained in the winter is preserved in the open air by piling it in conical heaps and covering them with straw. In the summer it is sold so cheaply in the market, that the poorest man may cool his drink with it. The gardens in the vicinity furnish the city with a variety of excellent fruit, among which the melons are particularly celebrated. Water is abundant, a fine aqueduct on arches bringing an ample supply which is afterwards distributed by numerous stone fountains in the streets. The bazars, also are well stocked with every description of goods. Extensive manufactures were formerly carried on here in iron, copper, silk, wool cotton, and leather but these as well as the general trade of the city have been latterly much deteriorated. It has still however some commerce with Syria and Aleppo, taking from the latter annually goods to the amount of about £2000 Pop. about 18 000 or 14,000—(Southey's *Hamilton's Asia Minor*).

DIDEN par Eng Hants 8397 ac. Pop. 497
DIBONG RIVER, a river Tibet one of the head streams of the Brahmaputra. It flows from the N.E. and enters Upper Assam, about lat. 26° N. See *BRABALPOOTRA*

DICKELVENNE a vil and com. Belgium, prov. E. Flanders (Ghent) a bank Scheldt with manufactures of linen cloth, shawls, &c. and flour wind-mills. Pop. 1683

DICKLEBURGH par England Norfolk 2248 ac. Pop. 559.

DICOMAKO [see *Dicomanum*] a tn. Tuscan prov. of and 18 m. N.E. by E. Florence, at the confluence of the Dicomanio with the Arno. It is well built, with wide and clean streets, and possesses two parish churches, and a considerable manufacture of silk and paper. Pop. 1480.

DIDAM or *Dra*, a vil. Holland, prov. Gelderland, 6 m. S. Dordrecht, with a rather large balanced and a highly decorated E. Catholic church. Pop. 700.

DIDBROOK par. Eng. Gloucester 2578 ac. Pop. 178.
DIDDEH a vil. W. Africa, Boudou country situated about 7 m. W. bank Falemé lat. 15° 52' N. lon. 12° 18' W. It is a large and thriving place, built in a wide and fertile plain adorned with many palm trees, but water scarce and bad. There is a *soa* or rude fort here and a mosque of some beauty. The houses are clean and neatly kept their inhabitants (Serruolles) industrious and hospitable.

DIDDLEBURY par. Eng. Huntingdon 1450 ac. P. 216.

DIDDLEBURY par. Eng. Salop 5635 ac. Pop. 881.
DIDGUL, or *Livina Turus*, a small branch of the Tigrids Asiatic Turkey plain Bagdad leaves the main stream at Bamara. lat. 34° 20' N. and flowing E. joins the Euphrates canal midway between the Tigrids and Euphrates. Entire length about 85 m.

DIDIER, several localities, France, the chief of which is St. Didier le Sévère, dep. Haute Loire 14 m. N. N. E. Yssandon. It was once of some note, contains an antique church and has manufactures of paper and ribbons, and some silk mills. Pop. 1999.

DIDLING par. Eng. Sussex 814 ac. Pop. 102.

DIDINGTON par. Eng. Norfolk 1854 ac. Pop. 59.

DIDMARTON par. Eng. Gloucester 719 ac. Pop. 101.

DIDSBUURY a vil. England co. Lancaster 6½ m. S. Manchester r. bank Mersey. The houses are well built of brick, water abundant. It has one church two Wesleyan chapels a national day and Sunday school and a Wesleyan institution for the education of preachers. The people generally are employed in agriculture. Pop. 1449. — *Local Correspondent*.

DIF [see *Des Augustins*] a to France dep. Drôme, r. bank Drôme 26 m. E. E. Valence. This ancient town is finely situated in a valley enclosed by hills, and is surrounded by walls flanked with towers. The chief offices are—the cathedral the Calvinistic church the building once the bishop's palace and the St. Marcel gate is a well preserved Roman construction. There are some manufactures of woollens and silks silk spinners, tanneries, paper mills, &c. Raw silk and good wine are produced in the environs, which are also rich in other produce. Die is the seat of a sub-prefecture, and court of first resort. Many Roman remains exist here. During the wars of religion in France Die became a stronghold of the Protestants. While the Edict of Nantes was respected, it flourished but after its revocation it soon dwindled away. Pop. 3823.

DIE (St.) [see *Deves Deadend*] a tn. France, dep. Vosges (Lorraine) on the Meurthe 25 m. E. N. E. Epinal. It is agreeably situated at the foot of Mount Ornion, and is a handsome well-built town, with clean regular streets. It gives its name to a halogroin and is the seat of a court of first resort and a communal college; but none of its buildings are of any note. It however possesses a public library of nearly 10,000 volumes, and was long famed for its abbey of Juniville, which ceased among its abbots Pope Leo IX. nine priors of the house of Lorraine and a great number of bishops. It has manufactures of various kinds of cotton goods and a trade in corn cattle, fax hemp cotton cloth, paper ironmongery & planks, &c. In the neighborhood are iron and copper mines, brickworks paper mills and quarries of variegated marble. Pop. 6433.

DIEBURG a tn. Hesse-Darmstadt prov. Starkenburg, r. bank, Gersprenz, 10 m. E. N. E. Darmstadt. It consists of the town proper and three suburbs contains a castle, parish church, chapel, house of correction, and old Capuchin monastery and has manufactures of steel and tinware red and white leather, a paper, oil and several other mills and five annual fairs. Distance to Hesse origin. Pop. 5100.

DIEDITZ, or *Dreden*, a tn. Moravia, circle of, and 16 m. E. N. E. Brum, on the Haana. It stands in a beautiful valley contains a parish church and school, and has several mills. Pop. 1865.

DIEGO ALVAREZ. See *GOUDER'S ISLAND*.

DIEGO GARCIA. See *CHASON ISLANDS*.

DIEGO RAMIREZ ISLAND, a group of rocky isles,

S. Pacific Ocean, S. W. Cape Horn; lat. 56° 25' S.; lon. 68° 44' W. (n). They resemble the top of a ridge of hills showing above water and broken through by the sea. The two largest are about 200 ft. high and are covered with tussock grass. On one, the second in size, there is a shingle beach where a boat may be landed in safety and a limited supply of good water may be obtained. The sea breaks furiously on the W. shore, covering the whole island with its spray and no sheltered anchorage for a vessel can be had. The rocks appear to be composed of greenstone or very hard sandstone.

DIEGO (RAN) a tn. and harbor Upper California lat. 32° 41' N. lon. 111° 11' W. The harbor is commodious, and being completely landlocked, affords secure anchorage in all weathers but at the entrance is an extensive bank of kelp (*Fucus giganteus*) to avoid which by ships of large burthen a circuit of about 3 or 5 m. is necessary. — The town consists of a few houses of indifferent appearance, and the only trade carried on in it is in hides and tallow. The principal obstruction to the trade and prosperity of this place is the want of fresh water which even at the predio 3 m. from the port, is very indifferent. The station formerly established here has fallen into decay. — (Belcher.)

DIEGO SUAREZ BAY or *Baia de Suaz* Madagascar near Cape Amber N. extremity of the island lat. 12° 13' 48' S.; lon. 49° 28' 30' E. (a). The entrance into the bay is narrow being but about ½ m. wide, with 24 fathoms water but the bay itself is spacious and farther in, branches off into four different harbours, each capable of containing the largest fleet. The land around rises into high rugged and lofty mountains of volcanic formation, with brittle slopes beneath on which innumerable wild cattle may be at times perceived grazing.

DIELKIRCH a to Holland duchy Luxembourg in a beautiful valley 1 bank Sauer 17 m. W. Luxembourg. It is an old and poorly built place, in the seat of a court of law and several public offices contains a townhouse, parish church E. Catholic seminary three schools, a prison, and an old Franciscan monastery carries on a trade in cloth leather and gypsum, and has several mills, and four annual fairs. P. 2400.
DIELSDORF a vil. and par. Switzerland cant. of and 8 m. N. W. Zurich at the W. foot of the Lepargy. It contains a parish of arch, said to be nearly 1000 years old and an orphan hospital and has some good limestone quarries in the neighbourhood is a workhouse for the whole land of Regensberg to which Dilsdorf belongs. Pop. 642.

DIEMEL a river Germany flows on the confines of the principality of Waldeck and the Prussian prov. of Westphalia. It flows N. E. then S. E. past Warburg and again N. E. to Kassel, where it joins the Weser on its N. bank. Total course, 46 m.

DIEMEN'S LAND (Van) See *VAN DIEMEN'S LAND*.
DIEPENHEIM or *Dienp* a tn. Holland, prov. Overijssel, 17 m. E. by S. Deventer near r. bank Schipphak. It has a townhouse, church and school and manufactures some calicoes. Pop. 1389.

DIEPHOLZ, a tn. Hanover principality Hoya, chief place on. of same name, 60 m. W. N. W. Hannover on the Hunte. It contains a castle, and has manufactures of woollens and linen cloth. Pop. of tn. 2523 of co. 21,453.

DIEFFE a seaport to France dep. Seine-Inférieure, on the English Channel, in a hollow between chalk hills, at the embouchure of the Arques, 83 m. N. Rouen, and 93 m. N. W. Paris lat. (W. jetty) 49° 56' N. lon. 1° 5' 16' E. (n). The houses in general not lofty are built of brick, many having balconies, and roofed with tiles; the streets are tolerably wide and regular. The Grande Rue, above 1 m. in length runs parallel with the sea from the harbour to the castle, and has some tolerable shops. The part of it next the port has the best private buildings and houses. The general appearance of the whole place is respectable even superior when compared with most other French maritime towns; but almost the only public edifices worth special notice are the two Gothic churches, St. Jacques and St. Rami. The former was begun in the 13th century and though of unequal merit, is a fine building. St. Rami's founded in 1223 is built in the mixed Gothic-Barbaric. The air of the place is pure, and

water abundant the latter is brought to the town by an aqueduct 3 m. long, on a solid rock, which supplies 68 public, and numerous private fountains. To the W of Dieppe proper is the suburb La Barre and on the opposite side of the harbour La Pallet, which communicates with it by a stone bridge of seven arches, and is inhabited chiefly by sailors and fishermen. The port is spacious and the depth of water in the basin sufficient for vessels of at least 500 tons but the entry to it is difficult. It is formed by two jetées, with several quays, faced with masonry and is defended by an old castle and a modern citadel. On the W jetty is a lighthouse 32 ft. high. Dieppe is the chief watering-place of France, and is much frequented by visitors in summer but still more towards autumn, during the recess of the Legislature, and vacation of the colleges and Government offices at Paris. The great baths, constructed on the shore in 1832 form a luxurious retreat for bathers and invalids, and include a theatre, &c. Dieppe is the seat of a court of first resort, and a state chancery of commerce, and has an exchange and a customhouse, a commercial college, a school of hydrography a school for teaching lace-making, &c. and a public library (5000 volumes). The manufactures include works in ivory the most famed in Europe works in horn and bones, lace making sugar-refining, shipbuilding, &c. There is a busy fisheries especially for supplying Paris with mackerel herring &c. and the oyster beds in the locality are very extensive. The foreign trade of Dieppe has been almost extinguished by the ruin of La Havre but its port is much frequented by coasters. The yearly customs receipts amount to £25,000. There is constant intercourse between this port and Brighton by steamers. Dieppe was the chief early port of France, and its inhabitants the most enterprising in trade colonizing. It was bombarded, and much damaged by the English and Dutch combined fleet, in 1694. It was in a decayed state during the wars of the revolution and empire and owes much to the Duc de Berry, who first made it fashionable as a bathing place. Pop. 16,504.

DIERDORF a tn. Prussia, gov. of and 11 m. N N E. Coblenz, in a fertile district, on the Moselle. It contains a Protestant and a R. Catholic parish church, a synagogue, and a castle with fine gardens and has manufactures of ironware, a silk-works, several tanneries, and mills. In 1795 a battle was fought in the vicinity between the French and Austrians. Pop. 1200.

DIEËN properly **DIEËNEN** a vil. Holland, prov. Gelderland in the elure. 9 m. N E. Arnhem with a school a vinegar factory and a liquor distillery. The inhabitants are mostly engaged in agriculture. Pop. 1800.

DIEËNBURG a vil. Baden, circle Middle Rhine, on a mountain slope. It contains two churches, and a synagogue, and has several mills. Coal is worked in the neighbourhood. Pop. 3100.

DIEËNBACH — 1 (*Other*) a vil. and par. Switzerland, can. of, and 11 m. S E. Bern in a fertile valley. It contains a number of handsome buildings, the principal of which are the parish church, and chapel of ease, and the old castle of Diebenack, surrounded by fine gardens. Agriculture, and the raising of fruit, are the chief employments but there are also some woollen manufactures and many of the poorer classes spin wool. *Single* a celebrated writer on systematic theology was minister here. Pop. 6914; Protestants — 2 (*Other*) a vil. near the foregoing hill. *Other* Pop. 1384.

DIEËNEN a market tn. Upper Bavaria, on the S.W. shore of Lake Ammer 26 m. S.W. Munich. It contains a handsome parish church, and has considerable manufactures of earthenware. Hops are grown in the vicinity. Pop. 1800.

DIEËNEN a seaport, but pretty situated, vil. Holland prov. N Brabant, 15 m. N W Hertogenbosch, on the Diemel. It has a large market-place, planted with trees, a church, and an annual fair. Pop. 540.

DIEËNENHOFEN a tn. Switzerland, can. Thurgau, cap. hill of same name, S. m. R. Schaffhausen, pleasantly situated on a high overlooking L. Constance, here covered by a covered wooden bridge of five arches. It is surrounded by ancient walls, flanked with towers, and, except the lower part, is well built, with regular and spacious streets. It has a townhouse, of recent construction and a church used in common by Protestants and R. Catholics but the building most deserving of notice is the Hof, with its old towers of

unhewn stone, the residences of the Truchsesses of Dillingen. The inhabitants are chiefly employed in agriculture, including that of the vine, and cattle-dealing, particularly sheep, which they purchase in Württemberg and Bavaria, and ultimately dispose of in France, often taking them as far as Paris. They have also tanneries, and engage in the transit trade between the Lake of Constance and Schaffhausen. Pop. 1617.

DIEËT a tn. Belgium, prov. S. Brabant, 61 m. S. N. R. Brussels, traversed by the Dessel, which there forms several islands. The improvements which its fortifications have recently received, have made it a place of great strength. The church of St. Sulpician is the only remarkable edifice. It has a college, several schools, and some benevolent institutions several manufactures, that of history of considerable extent; but the chief products of the place are beer and gin. The former in particular bears a high name, and is largely exported. Dieux was once a feudal barony of which the princes of Orange were lords. The town was taken, in 1705 by Marlborough, retained the same year by the French, and dismantled. Pop. 7319.

DIEËTENHEIM a vil. Württemberg circle Dautem, 1. bank Iller 14 m. S. S. E. Ulm. It contains a handsome parish church and a castle but was almost entirely destroyed in the Thirty Years war. Pop. 1251.

DIEËTFLER a tn. Bavaria, circle Regau, on the Ludwig Canal and at the junction of the Lahr with the Altmühl 21 m. W. Ratibon. It contains four churches a Franciscan monastery and poorhouse and has tile-works, and two mills. Pop. 957.

DIEËTikon a vil. and par. Switzerland, can. of and 8 m. W. N. W. E. Zürich, at the confluence of the Rappach or Rapp with the Limmat. It contains a parish church, which is used in common by Protestants and R. Catholics, who are nearly equal in number and has some tanneries. The district is fertile, and produces a good deal of corn. Several combats took place here, in 1794, between the French and Russians, generally to the advantage of the former. P. 1025.

DIEËTLINGEN a vil. Baden, circle Middle Rhine 12 m. S. E. Carlsruhe. It contains a parish church and has quarries of limestone and marble. A good deal of excellent wine is produced in the vicinity. Pop. 1840.

DIEËTWEIL — *Grass*, a vil. and par. Switzerland, can. of and 8 m. N. N. E. Luzern, near L. bank, Rhodan. It stands in a beautiful and fertile valley contains an old church, picturesquely situated on a height, and a handsome school-house and has manufactures of linen and some trade in cattle and swine. Pop. 2297.

DIEËTZ, a tn. Nassau, cap. hill of same name, picturesquely situated on both sides of the Aar at its junction with the Lahn, which is here crossed by a bridge, 21 m. N. W. Wiesbaden. It consists of the old and new town, contains a R. Catholic, and two Protestant parish churches, a Latin school, and a work house. On a height above the town is the old castle of the Counts of Nassau now converted into a prison and at a short distance is the site of an Oratorium belonging to the duke, but not inhabited and no way remarkable. Pop. 3040 of bad. (area, 51 sq. m. sq. mi.) 14,877.

DIEËTZENBACH a vil. Hesse-Darmstadt, prov. Starkenburg about 1 m. E. Frankfurt-on-the-Main. It contains a R. Catholic parish church. Pop. 1259.

DIEËL or *Yew* (anc. *Yew*) an isl. can. and com. France dep. Vendée, about 18 m. from the coast and 15 m. S. W. the Isle Noirmoutier lat. 46° 40' N. lon. 2° 30' W. area, about 14,500 ac. The soil is sandy the whole island being a mere mass of granite, on its W. side, steep, and inaccessible but on the E. so low as to afford a tolerable harbour. The inhabitants mostly subsist by fishing. There is a small town here called the *Isle Duce*. This rocky island is defended by a fort and several batteries. It was taken by the English in 1795. Pop. 3492.

DIEËULEFFT a tn. France, dep. Deuane, 18 m. E. Montcaumon, at the confluence of the Pave and Ahrue in a valley shut in by two lofty hills. It is the greatest manufacturing locality in the department, but has no public or other buildings of any note, excepting a handsome Protestant temple and its dependent model school. The chief articles made in Dieuleufft are — pottery (to the value of £200,000 yearly) woollen cloth, serge, molasses, leather blankets, sheets, &c. There are also several tanneries, glassworks, and dyeworks. Two

mineral springs in the place are much resorted to by tourists. During the religious troubles in France, the town was a Protestant stronghold and its possession was keenly contested by R. Catholics and Huguenots. In the commune is a natural grotto, known by the strange name of *The Tom Jones*. Pop. 3041.

DIEUZE, or *Dessa*, a tn. France, dep. Meurthe, 26 m. S.-N. E. Nancy on the Sella and the Sept. It possesses a communal college, and has several tanneries, but the chief product of the locality is wool, the wool of which long worked by the state and yielding to the amount of 8000 tons yearly were farmed to a company in 1842. The site of the town is said to be that of *Doom-Pagi*, mentioned in Caesar's *Commentaries*. Pop. 1863.

DIEZE, *Drima*, or *Dime* river Holland, prov. N. Brabant, formed by the junction of the *As* and the *Dommel* at Herengembois, whence it flows N. W. past Overcar and falls into the *Mosa*.

DIFFANE ISLAND Red Sea, one of the Dahlak group, 84 m. from the nearest shore. It is a low coral island, intersected by small salt-water creeks, filled with mangrove trees, and surrounded by a reef.

DIGBY par Eng. Lincoln 2382 ac. Pop. 448.

DIGBY a small tn. Nova Scotia, pleasantly situated on the S. W. side of the basin of *Annopolis*, 110 m. W. S. W. Halifax. The fishing is actively prosecuted here, and some trade is carried on. A steamboat plies regularly between this and St. John's, New Brunswick.

DIGGER ISLANDS, a group of three small isles. Arctic Ocean S. W. side of Hudson's Strait, W. of Cape Wolstenholme, and S. E. of Mansfield Island lat. (W. extreme) 62° 37' N. lon. 74° 18' W. [n.]

DIGHTON a part of entry U Boston, Massachusetts, 41 m. S. Boston, on the Taunton, which is navigable to this place for small craft. Pop. 1278.

DIGNANO a tn. Austria, Styria, on a hill, 47 m. S. E. Trieste. It contains a collegiate church, with some good pictures, and an elementary school. In the seat of district courts and offices, and has an important trade in wood, and chiefly in Trieste and Venice. The buildings of the old Franciscan and Capuchin monasteries are now used as barracks. The vine and olive are extensively cultivated in the district. Pop. 3600.

DIGNE (anc. *Dumet*) a tn. France, cap. dep. Basses-Alpes on the Rhône; lat. 44° 5' N.; lon. 6° 19' E. picturesque situated on a projecting mountain slope but its houses are mean, and its streets crooked and ill kept. It is the seat of a suffragan bishop, a communal college, a theological seminary, &c. Its chief manufactures are articles in leather, and its trade is in dried fruits particularly prunes and pistachio nuts, honey wax, woolens and linen cloth, hemp, hemp and clover seed, cutlery and kid-skins. At a little more than 1 m. from the town are several hot saline springs (temperature 104° F.) and four baths, used for affections of the skin, wounds, paralysis, &c. The environs of Digne are very attractive, and the valley of the Rhône picturesque. Pop. 3780.

DIGOU, or *Demoua*, a tn. central Africa, Bornou, between Adgha and Kouka, the capital, about the 12th parallel of lat. Pop. 60,000.

DIGOUIN (anc. *Dunopolitana*) a tn. France, dep. Seine-et-Marne, 14 m. W. Charolais, advantageously situated on the Loire, and at the head of the Canal de (note, which connects that river with the Saône. It has manufactures of earthen ware, cutlery and canvas bagging, also large building-yards, lime-kilns, &c. There is an active transit trade, much of the *Macdonald* and *Chillemans* wines being landed here. Pop. 2603.

DIGSWELL, par Eng. Hertford 1835 ac. Pop. 228.

DIGUE (La) an isl. Seychelles Archipelago Indian Ocean lat. 4° 21' S. lon. 55° 55' 15" E. [n.] It is surrounded by a reef, and the landing is difficult. It is inhabited by 200.

DIEHWID par Wales, Cardigan 8215 ac. Pop. 489.

DIHONG RIVER, a river Tibet, supposed to be the head stream of the Brahmaputra. See *BRASAPUTRA*.

DIJON (anc. *Dino*) a tn. France, cap. dep. Côte-d'Or; lat. 47° 19' 19" N. lon. 5° 2' 15" E. on the railway from Paris to Lyons in a fertile plain, at the foot of a range of vine-clad slopes, near the confluence of the Ouche and its tributary torrent the *Saône* the former of which waters it on the N. while the latter traverses it in several directions, in artificial subterranean channels. The view of Dijon on approaching it by the Paris road on the N. W. is very striking.

DIJON as seen from Mont Mouton.—From *Holland's Voyage Pittoresque* in Bourgogne.

It is of an oval form and is surrounded by a lofty wall, with five gates. The ramparts are finely planted and along with other plantations both within and without their enclosure, furnish a series of beautiful promenades. Dijon is, in general well built. The most of the streets are regular and spacious, and lined by handsome houses and fine hotels of brown freestone. Many of the buildings belong to the period when Dijon was capital of the dukedom of Burgundy and are remarkable for the massiveness and solidity of their construction. The chief public edifices are the cathedral of St. Benigne, a building of vast extent, with little architectural beauty and a lofty wooden spire above 300 ft. high; the church of *Notre Dame* in the present Gothic and remarkable alike for the delicacy of its ornaments, the beauty of its portal and the boldness of its construction; the church of St. Michael with two richly decorated towers surmounted by octagonal cupolas and with a portal on which *Bambin* has levitated all the ornaments which his luxuriant imagination could devise the ancient palace of the dukes of Burgundy at a later period the *Palais des Etats*, and now used partly as the *Hôtel de Ville*, partly as a museum which is rich in monuments of the middle ages and a library containing 40,000 printed volumes, and from 500 to 600 MSS. and the theatre, adorned with a peristyle of Corinthian columns, and, after that of Bordeaux, the finest building of the kind in France, out of the capital. The *Palais de Justice*, containing the law courts, was formerly the parliament house of Burgundy. The botanical garden, founded, in 1723 by one of the magistrates, whose centenary forms one of the principal ornaments, and the neatly laid out cemetery on the Paris road, are objects of public interest, and deserving of notice. Dijon is the seat of a bishop, a court of appeal for departments Côte-d'Or, Saône-et-Loire, Saône-et-Loire a court of first resort and commerce, and a chamber of commerce and is well provided with establishments both benevolent and educational. Among the former are the general hospital, the hospital of St. Anne, the orphan asylum, &c. among the latter the *Académie Universitaire*, with 16 professors the college royal, the *Faculté de Droit*, attended by 400 law students the *École des Beaux-Arts*, a diocesan seminary a secondary school of medicine, and a primary normal school. The manufactures of the place chiefly consist of cloth, hosiery, blankets, wax-candles, mustard vinegar, chemical products, paper hangings, &c. There

are also numerous gunneries, several brass, iron, and type foundries, machine factories, distilleries, woollen, cotton, and oil mills. The local traffic is considerable, particularly in the wine of Burgundy the trade in which is concentrated here. The other articles of trade are leather, grain, flour, wine, wool, hemp, and wool. The localities, however, are very attractive, including a public park and ornamental grounds, while, a few miles to the N.W., the Val de Saône opens into several places of romantic beauty. Many ancient men were natives of Dijon: the celebrated Bonnet, Crillon, Beaumont (Beaumont, the antagonist of Milton) Fieser, Rameau, Guyton-Morveau, &c. St. Bernard the famous founder of Cîteaux, was born in a neighbouring village and a bronze statue of him has lately been erected in a new quarter of Dijon, called the St. Bernard suburb. Dijon is a very ancient city, and is believed to be of Roman foundation. The annals of the middle ages give consistent evidence of its importance, in early times, as the capital of a principality the rival of ancient France in extent of territory and occasionally its superior in power. After the death of its last independent duke (Charles the Bold, slain in 1477) his Burgundian possessions having merged into the French dominions, the comparative importance of Dijon immediately sank. Pop. (1846) 26,674.

DIJONNAIS, a small sea-dist. France, forming a da. province of the old prov. Bourgogne, and now included in dep. Côte-d'Or. Dijon was its capital.

DILHAM par Eng. Aorfolk 1863 ac. Pop. 604.

DILHORNE, par Eng. Stafford 8445 ac. Pop. 1615.

DILIGENT STRAIT a channel or passage, Bay of Bengal, between the S.E. coast of the middle Andaman and some contiguous islands, and a group or chain of larger islands from 9 to 15 m. off, extending from lat. 11° 46' to 12° 20' N. It is from 6 to 8 m. wide except towards the middle, where it is only 2 or 3 m. in width between the nearest islands. The islands which form the E. side of this strait are generally high covered with wood, and connected together by reefs.

DILLENGRUB a town, Saxony, cap. hall of same name, r. bank, Dille, 41 m. N.W. Frankfurt-on-the-Main. It is the seat of a high court of appeal and of a criminal court. It contains a M. Catholic and two Protestant churches, a castle, school and orphan hospital and has manufactures of tobacco, a copper furnace, a potash work house works, and an oil and saw mill. Pop. of in 1851 of half area of geo. sq. m., 16,800.

DILLI or **DILLAY** a town, Indian Archipelago, N.W. coast, 2d. Timor Portuguese possessions lat. 8° 35' S., lon. 125° 54' E. (N.) in a low situation overlooked by high lands, which renders it difficult to be perceived until closely approached. Fine buffaloes, hogs, and vegetables may be got here, also rice and poultry but the latter are neither cheap nor abundant. The sea wind, setting in regularly during the day renders this place very of access during the S.E. monsoon. Dill, whether juicy or not, is considered more unwholesome than any spot in the E. sea. It is subject to fevers, both remittent and intermittent, at all times of the year there being no peculiarly healthy or unhealthy season.

DILLINGEN a town, Bavaria, circle Swabia, cap. hall of same name, l. bank, Danube, here crossed by a bridge, 24 m. N.W. Augsburg pleasantly situated, surrounded by walls on a dilapidated state, and well built. It contains four churches and two chapels, a castle, once the ordinary residence of the bishop of Augsburg a library, formerly a Jesuit college, a gymnasium, ecclesiastical secondary school and Latin school, a synchrotron, barracks, orphan, and two other hospitals; and has manufactures of woollen and linen cloth, a paper-mill, building docks, and some shipping trade. Vines and hops are extensively grown in the vicinity. The university founded in 1553, and long under the management of the Jesuits, was abolished in 1802. Pop. of in 1843; of hall, area, 48 geo. sq. m., 15,511.

DILLINGER a vil. France, prov. Lower Rhine, gov. of and 19 m. E. by R. Trèves, at the confluence of the Rhine with the Moselle. It contains a R. Catholic parish church. There are iron-works in the vicinity. Pop. 661.

DILLY or **DILLY MOORE**, a headland, S. Hindostan, which may be considered as marking the limit between the coasts of Canara and Malabar; lat. 13° N. (lon. 75° 16' E. It is very conspicuous, and may be seen from sea, in clear

weather, from a distance of from 24 to 37 m. The contiguous coast, being low and woody is not seen for which gives the mount the appearance of a high island when viewed either from the N. or E. On the extremity of the headland there is an ancient black-looking fort.

DILMAN a town, Persia, prov. Azerbaijan, 75 m. W. Tabriz, and 80 m. S.W. Khos in the fertile and fertile valley of Belmas. It is a new town, there being an old one of the same name, now almost in ruins, about 4 m. W. from it. It is of considerable extent and is surrounded by gardens. The harvest is poor and ill supplied, but the streets are clean. Pop. estimated at 15,000.

DILN (Hungarian, *Doko-Bango*) a mining town, Hungary, Hither Danube, co. Rumb 3 m. from Böhmstätt. It is a place of some antiquity and rose to considerable importance in the times of Bela III. but has since greatly decayed. It contains a handsome church, and has several stamping and gold-washing mills and smelting furnaces. Pop. 1689.

DILWYN par Eng. Hereford 6067 ac. Pop. 1112. **DIMITROVKA** a town, Russia, gov. of and 67 m. S.W. Orel r. bank Oshetina, at its confluence with the Marma. It contains two churches, and has manufactures of various kinds, but the inhabitants live chiefly by agriculture. Pop. 8000.

DIMITITANA, a town, Greece, Moraa on an affluent of the Caranara, one of the principal branches of the Rhipia, 15 m. N.W. Tripolizza. Before the Russian invasion in 1770 this town was one of the most important places in the country.

DINAGEPOOR (anc. *Dinagopur*) an island dist. Hindostan prov. Bengal, between lat. 24° 46' and 25° 18' N. lon. 88° and 89° E. bounded N. by Rangpoor and Purneah, S. by Mahabady and Myrmanagah E. by Rangpoor and Myrmanagah and W. by Purneah and Boghpoor. Greatest length, S. to N. 108 m. greatest breadth, E. to W. 55 m. Area, 5574 sq. m. The surface is unbroken but in no part attains a greater elevation than 100 ft. It is everywhere intersected by rivers, the principal of which are the Attri, Mahanda, Jazma, Korotya, and Teesta, all of which are navigable by large boats during the rainy season when also some of the small streams in the valleys form sheets of water of 50 and 60 m. long, and 3 or 4 broad. The soil is generally of a very light ash colour. Rice is the principal crop, and is abundant or otherwise, in proportion to the quantity of rain that falls. The average produce is between 85,000,000 and 37,000,000 mounds annually (575,714,985 cwt. and 26,428,823 cwt.). Indigo is next in importance. Hemp, sugar and cotton are also raised but in small quantities. The first is cultivated for its leaves and bolls, which have an interesting quality. The climate is extremely variable, and at particular seasons, very unhealthy. The chief natural vegetable productions are the banyan tree, which here attains great size and beauty; the papal tree (*Ficus religiosa*), the bread-fruit tree, the fig, and the fig tree. Fruits of the latter wood are often used in house-building and being thruse into the ground, take root both branches, and produce a very pleasing effect. The herds of oxen and horses are both miserable, the latter being sold from 4s. 6d. to 11s. 6d. each. Swine are more numerous than sheep. There are few herds of prey in this territory. Tigers, leopards, wolves, and hyenas are almost unknown and elephants and rhinoceroses rarely seen. With buffaloes, otters, porcupines, and ichneumonians are numerous and bears are met with in some particular localities but are of an inoffensive kind. Water-fowl, abundant, and fish are to be had in great plenty when the rivers are low which they generally are for eight months of the year. The principal towns are Dinagepoor, the capital, Malda, Gaur and Rayganah, besides a number of villages. The whole population has been reckoned at 8,000,000 but there is reason to believe that it has increased since this estimate was made. Seven-tenths are Mohammedans, and the remaining three-tenths Hindus.

DINAGEPOOR (Dinagopur the above of Bengal) a town Hindostan, prov. Bengal, one above district, lat. 25° 25' N. lon. 88° 45' E.; r. bank of a branch of the Attri river, 205 m. N. Calcutta, and 100 m. N.N.E. Moorshabaddi. The town consists of four portions, with a square in the centre surrounded with shops. The houses are mean, being mostly mere huts. The European residences and offices are among the exceptions; but even these are in exceedingly bad towns.

as regards their architecture, though large, and sufficiently commodious. It is the seat of the British judicial and revenue courts, but is on the whole, a very poor place. Pop. computed at 20,000.

DINAN (anc. *Dinemas*) a *tu. France*, dep. *Côtes-du-Nord*, on the *Renne*, 84 m. E by S. *Renne*. It stands on a steep hill nearly 900 ft. above the river; is surrounded by high old walls, pierced with four large gates and outwardly has an imposing look, but the interior is by no means prepossessing. The older streets are narrow crooked and dirty and many of the houses mean, several being craggy wooden constructions. There are, however four open areas in the place one of a good size and in the better quarters are several good houses, built of granite or with stone fronts. Dinan was formerly defended by a strong castle, part of which now serves as a prison. The ancient boulevards, planted and partly laid out as gardens, afford agreeable walks. The church of St. Sauveur is a beautiful edifice, of ornate Gothic, with a fine spire. The church of St. Malo has a fine choir. The only other noteworthy edifice is the *Tour de l'Horloge*, which is of great height, and built of granite. Dinan has a court of first resort, a theological seminary and a communal college. Its manufactures consist of fine linen and millcloth, cotton and woollen goods, muffs, slip shoes, and best-root sugar. It has also some large building yards, numerous salt refineries, limekilns, &c. Being situated near the embouchure of the *Renne*, and at the head of the canal *Ille-et-Renne*, it has a considerable coasting and inland trade. In 1841 the gross customs were about £2410. In the environs which are very attractive, are chalybeate springs much resorted to. During the middle ages, Dinan was often besieged. It was taken by *duquesclin* in 1373, by *De Clisson* in 1379. *Duclos*, *Mahé de la Bourdonnais*, and *Drouais* were born here. Pop. 7700.

DINAN 1. a *tu. Belgium* prov. of, and 14 m. E. *Namur*, on the *Meuse*, a little below the junction of the *Lesne*. It is hemmed in by limestone rocks one of which, of a pyramidal form, is crowned by the *minaret*. The public squares are three in number and the principal street lies along the river which has finely-wooded banks, and is traversed by a handsome stone bridge. The principal buildings are the church of *Notre Dame*, a Gothic structure, and the townhouse, once the

ing to old chronicles its name is derived from the goddess *Danza*, who was worshipped and had a temple here. As early as the 13th century it was strongly fortified, and deemed impregnable. In 1456, Philip the Good, Duke of Burgundy attacked it with 50,000 men and a formidable artillery took it by assault, gave it up to pillage for three days, then moved it to the ground and, taking 800 of the inhabitants, tied them by trees, back to back and threw them into the *Meuse*. It was rebuilt in 1493, but has since been twice taken by the French namely in 1654 and 1675. Pop. 5654.

DINAPUR, a *tu. Hindoostan* prov. *Bihar* *r. bank*, *Ganges*, about 12 m. N.W. *Patna* and 290 m. N.W. *Calcutta* lat. 25° 27' N; lon. 86° 5' E. This is a great English military station. It contains three extensive squares of barracks, uniformly built but of one story only. They are however handsome being ornamented with arched windows, and pillars between them. The squares are crossed by walks of pounded brick, as a substitute for gravel which is not to be had in this part of India. There are also extensive barracks for the native troops. The cantonments are capable of accommodating between 5000 and 6000 troops. Around the station are a great number of good bungalows with small parks and gardens and along the bank of the river extends the bazaar or town of *Dinapore* upwards of 1 m. in length and like many of the Indian towns a confused assemblage of thatched huts and ruined brick buildings, seldom more than one story high.

DINARIC ALPS. See *ALPS*, p. 102.
DINAS, par. *Wales*, *Pembrokeshire* 2326 ac. Pop. 856.
DINAS MOWDDWY a market *tu. Wales* *co. Merioneth* 8 m. F by E. *Dolgelly* on the *Carlisle* at its junction with the *Dovey* consisting of one principal street the houses of which are rather of a mean appearance. Market on *Saturday* several fairs annually.

DINDER par. *Eng. Somerset* 1071 ac. Pop. 270.
DINDIGUL a *tu. of S. Hindoostan* cap. dist. of same name, 162 m. N.E. *Capa Comorin* lat. 10° 33' N; lon. 78° 2' E. It is a clean and neatly-built little town, particularly the bazaar which is lined on both sides with trees. A small population of native Christians a branch of the *Malabar R. Catholics*, reside here, and inhabit a picturesque quarter of the town where their houses are distinguished by a little more at the top. There is a fortress here of considerable strength. Pop. 2300.

DINDING ISLANDS, a group of small islands *Malacca Strait*, lying off the *Perak* river; lat. 4° 30' N lon. 100° 32' E. *Pulo Danding* as a beautiful granite island 50 ft. high and covered with thick woods from the margin of the sea to the summit.

DINDFORD par. *Eng. Hereford* 1618 ac. Pop. 350.

DINGELSTADT — 1. A market *tu. Prussia*, gov. *Erft*, 11 m. W.N.W. *Mühlhausen*, *r. bank*, *Unstrut*. It is surrounded with walls, contains a parish church and has manufactures of woollen and cotton goods, and four annual fairs. Pop. 2489. — 2. A *vil. Prussia* prov. *Saxony* gov. *Magdeburg*, circle of, and near *Obernieder* on the *Elbe*. It contains a parish church and has limekilns, and an oil and other mills. Pop. 1571.

DINGESTOW par. *Eng. Monmouth* 1890 ac. Pop. 322.

DINGLE, a market *tu. and seaport*, *Ireland*, *co. Kerry* on a hill-slope, N. side bay of same name, 188 m. E.W. *Dublin* lat. 56° 9' N lon. 10° 16' W. The streets are irregular but contain many respectable-looking houses, with gardens attached and, as a whole, the town presents rather a pleasing appearance. It is much frequented for sea-bathing. It has a parish church and a handsome R. Catholic chapel national and parochial schools, a summary and a dispensary. The harbour only suited for small vessels is both difficult and dangerous to make during strong W. winds. Cows and butter are sent to *Liverpool* and from coal salt, and otherware imported. A well-supplied market is held on *Saturdays*. Dingle is a constabulary police and coast-guard station. It was in former times much frequented by the *Spaniards* who

DINANT — From *Arncliffe's View* on the *Meuse* *tu.*

palace of the *Princes of Liège*. Dinant possesses a court of first resort, a college, a superior primary school two hospitals and several other benevolent institutions. The principal manufacturing establishments are paper-mills, numerous breweries, soapworks and refineries. It has also manufactures of hats, stained paper, woollen stuffs, vinegar, hydromel, cards and cutlery together with a glass-house for window glass and marble saw works, &c. Its gingerbread, composed of rye-flour and honey, and known under the name of *Dinant cookies*, is famous, and has a large sale. In the vicinity are quarries of a bluish building-stone, and of black marble. The environs, which are extremely picturesque, and have often employed the artist's pencil, furnish a number of beautiful walks. The existence of Dinant dates from the sixth century and accord-

comes to fish in the bay and to trade with the Indians. A number of persons of that nation also settled on the coast and many of the natives, and also of the old houses, display marked indications of Spanish origin. Area, 5097 ac. Pop. 3587; of ts. 3255. — The bay is spacious, extending 14½ m. from Dumoulin Head, on the N., to Bear Head on the S. while land at extends 21 m. with a gradually-diminishing breadth of from 14½ to 6 m. beyond which it is prolonged for a considerable distance under the name of Castellan Harbour. At its entrance, on the N. are the Blaquet Islands, and as it has no other protection against the fury of the Atlantic, it has frequently been the scene of disastrous shipwrecks. Its principal places of safety in rough weather are Castellan Harbour at its head and the harbours of Dingle and Ventry both on its N. shore. The rivers Lene and Mame flow into it. The fisheries in the bay are valuable.

DINGLEY par Eng Northampton 1817 ac. Pop. 141
DINGOLFINGEN a tn. Lower Bavaria, on a steep height, above a bank last here crossed by a bridge, 10 m. W. S. W. London. It is an old but well-built place, is the seat of a law court, and contains three churches. Pop. 1887.

DINGWALL, a royal burgh, market tn. and par. Scotland, co. Ross, at the head of Cromarty Firth, 11 m. N. N. W. Inverness, at the foot of Strathpeffer. The parish contains about 5600 ac and the town, erected into a royal burgh in 122 consists of a main street, running E. and W., and a few smaller streets branching off from it. Lighted with gas and adorned with rows of poplar trees. It has a parish and a Free church, and an Episcopal chapel, a well-attended parochial school, a townhouse, an antique edifice with a spire, a commodious new prison and handsome county buildings. A limited trade is carried on, chiefly in exporting corn, timber bark, and other products of the country and importing lime, coal, and general merchandise, for the supply of the surrounding districts. Close to the town is a small harbour admitting vessels drawing 9 ft water. Pop. of par 2364 of burgh, 1950.

DINTON two par. England — 1 Northumberland 5538 ac. P. 688 — 2 York (W. Riding) 1540 ac. P. 285
DINKELSBURG, a tn. Bavaria, Middle Franconia, esp. dist. of some castles, on a royal hill above a bank W. of it, 44 m. S. W. Nuremberg. It is surrounded with walls in the seat of a law court, contains a handsome parish and several other churches, a Latin school, orphan asylum, and two hospitals and has important manufactures of woollen hosiery coarse linen straw hats, paper and stone slabs for tables, a dyework brewery and several mills. It suffered much during the Thirty Years War and is in a declining state. It came into the possession of Bavaria in 1805. Pop. of tn., 5819 of dist., 10,478.

DINKLAGE, a vil. Dutch Oldenburg circle of, and 8 m. N. W. Vechta. It contains a parish church and a castle, and has a trade in cattle, and four annual fairs. Pop. 1884.

DINDRAYE (Low) a vil. and par. England co. of and 22 m. S. by E. Durham. 1150 ac. It has a sulphurous spring, much resorted to during summer. Pop. 187.

DINSLAKEN a tn. Rhineish Prussia, gov. of and 25 m. N. Düsseldorf, on the Rhine. It contains a Protestant and a Catholic church and has manufactures of woollen and hem cloth, hosiery, muskets, lace, and watchwork, a bell-foundry, tanneries, and three annual fairs. In the 18th century it was often the residence of the youngest son of the Duke of Cleves. Pop. 1701.

DINTELOORD (more commonly **FINDELSTADT**) a vil. Holland, prov. N. Brabant, 17 m. W. by N. Breda, on the Diemel. It consists of two rows of houses, separated by a rocky market-place at whose S. end is built the elegant Reformed church, and beyond the church is the harbour. It has a cattle fair and weekly cow markets. Pop. 1000.

DINTON two par. England — 1 Bucks; 4100 ac. Pop. 848 — 2 Wilt; 4066 ac. Pop. 538.

DINKERLO a vil. Holland prov. Gelderland, 26 m. S. E. Arnhem, on the Rhenish frontier. It is an open, good-looking village, with a church in the centre of it, and a school in which Dutch, French, and English are taught. It has several fairs, at one of which, held in September, large quantities of home-grown hemp are sold. Pop. 790.

DIOGOUTROU a vil. W. Africa, on the Senegal, facing Arronche (which see). It is large and populous, is

surrounded with fine trees, including the tamarind, palm, &c., interspersed with patches of miller's thistle.

DIOIS (Lat), a dist. France, belonging to the former prov. of Dauphiné, and now included in dep. Drôme. Dis was its capital.

DIOIMA, a river Russia, which rises in the N. slope of a mountain range, called Obchtchik-Stret, gov. of, and about 80 m. N. N. W. Orenburg flows easterly through that government in a N. N. E. direction, and at Oufa, joins, I. bank, Biela, after a course of about 200 m.

DIOEDE ISLANDS, a group, Arctic Ocean, Behring's Strait, consisting of three islands, as first named by Capt. Cook, and subsequently confirmed by Capt. Boscawen who gave the name of Fairway Rock to the E. one; lat. 65° 38' N.; lon. 165° 45' W. that of Krusenstern, its original name, to the centre one, lat. 65° 45' N. lon. 165° 42' W.; and that of Ratmanoff to the N. W. lat. 66° 51' N. lon. 165° 53' W. — (See *Our Boy Goo See*.)

DIONIS (St. Baccus), par. Eng. Middlesex. P. 748
DION-GROVE, a market tn. Hungary. Higher Theres, no. Borsod, in a valley on the Balinka, 60 m. N. W. Debrecen.

It contains a Protestant and a Catholic church, a synagogue, and a rabbi's castle; and has manufactures of various articles in wool, a mineral spring, and a trade in fruit and wine. The Balinka is a fine rushing stream. There are gold and silver mines in the neighbourhood. Pop. 8790.

DION-ÉZÉC, two market tns. Hungary — 1 Higher Danube, co. of, and 27 m. E. Proszberg on the Dnubig. It is inhabited by a colony of Swabians, and contains a parish church. Pop. 1714. — 2 Thüher Thales, co. Bihar r. bank, E. 38 m. S. E. Debrecen. It contains a Protestant, a Greek Catholic, and a Greek non-united church. Much white and tobacco are produced in the district. Pop. 8500.

DIPIGNANO a vil. and com. Naples, prov. of and 8 m. S. by W. Cosimo. It stands at the foot of the Apennines, and contains five churches and two convents. Pop. 3319.

DIPFOLDISWALDE, a tn. Saxony circle of, and 12 m. S. by W. Dresden, cap. bail. of same name, r. bank, Wausenitz. It is well built, contains two churches — one of them an old gothic structure, with a fine altar-piece — a castle, and townhouse, and has a blacksmith, numerous mills and a quarry which furnishes good grinding stones. Pop. of tn. 2729 of bail. area, 54 sq. m. 14,100.

DIPSO a tn. Greece, in Negropont or Euboea, on the channel of Talanda, 80 m. N. W. the town of Negropont. It is supposed to replace the ancient Oedipades, famed for its hot baths.

DIPTFORD, par. England Devon 4154 ac. P. 747

DIRECTION — 1 A group of small islands on the E. coast, Australia, near Cape Flattery; lat. 14° 25' S. lon. 145° 30' E. They are within the Great Barrier Reef, and about 80 m. from the mainland. High, of a conical form, and can be seen from a distance of 15 or 18 m. — 2 A group of islands, a few m. from the bar at the entrance of Corner Inlet, Gipps Land New S. Wales. — 3, An isl. Indian Ocean, one of the Keel rag group lat. 12° 54' S. lon. 69° 55' E. (n.) — 4, An isl. entrance of China Sea, off the N. W. coast of Borneo lat. 0° 15' N. lon. 105° 2' E. (n.) It is of a conical form in the centre, and may be seen from 80 to 25 m. off — 5, A cape, E. coast, N. E. Australia, Cape York Peninsula lat. 12° 51' S.; lon. 145° 30' E. (n.) — 6, A cape, Van Diemen's Land, forming the E. entrance to the Derwent river lat. 43° 2' S. lon. 147° 34' E.

DURELLO (anc. *Achéate*) a river Sicily which rises in the mountains of Licodia, on the frontiers of prov. Catania, and, entering prov. Syracuse flows W. S. W. past the town of Bassari, and after a course of about 50 m., falls into the Mediterranean, 24 m. W. N. W. Modica. Again it is found on its banks.

DIRE HARTOG ISLAND, Australia, N. W. coast S. from Natoketia Channel, one of the entrances to Shark Bay; lat. 35° 51' S.; lon. 115° 54' E. (n.)

DIREKLAND, a vil. Holland, par. of Holland, 26 m. S. W. Rotterdam. It has several spacious streets, a church, a weighhouse, a tradeshouse, saw-mill, and a harbour communicating E. with the Haringvliet. Pop. 5090.

DIRLETON, a vil. and par. Scotland, co. of and 6½ m. N. by E. Haddington. The former district on its entrance, about 1½ m. from the sea, consists of neatly built cottages,

with gardens attached to these, richly ornamented with flowers and shrubs. Area of par 7600 ac. pop. 1634.

DIEMSTEIN, a tn. Bavaria, Palatinate 6 m. S. S. W. Worms. It contains a castle, once the residence of the bishops of Worms and has manufactures of earthenware, and a sulphur spring. Pop. 3049.

DIERSCHAU, a tn. Prussia, gov. of, and 20 m. S. S. E. Danzig, 1 bank Vistula, here crossed by a bridge, which is defended by a tower. It is surrounded with walls in the east of a district and lower down, contains a Protestant and a R. Catholic church; and has considerable manufactures of leather a trade in wood, and 5 annual fairs. Dierschau is on the railway from Berlin to Danzig. Pop. 3094.

DISAPPOINTMENT ISLANDS.—1 An Isl group S Pacific Ocean, Low Archipelago; lat. N W island, 14 12' S; lon 141 12' W (N) discovered by Byron 1785 who gave them the name they now bear on account of the ungracious reception given him by the natives, which he probably contrasted with the attractive and promising appearance of the islands. The one which he visited is about 6 m. in circumference, and of most beautiful aspect, being surrounded by a beach of the finest white sand, within which runs a grove of tall trees that extend their shade to a great distance the whole combined making the most pleasant island scenery that can well be imagined.—2 One of the Boston Islands, N Pacific Ocean lat. 27 15' N lon 149 51' W.—3 An Isl S Pacific Ocean lat. 50° 38' S lon 126 23' (N).

DISCO, a large isl. belonging to Denmark, N extremity of Davis's Straits, or S. part of Baffin's Bay separated from the W coast of Greenland by Weygott Strait lat. (S. point) 69° 11' N lon. 53° 20' W (N). It contains stone quarries and coal mines; possesses valuable fisheries and with a number of small surrounding islands, forms a division of the Inupiat coast of N. Greenland. On its S W part has the Danish colony of Godhavn.

DISCOVERY BAY, S. coast, Australia, between Cape Bragueraville and Northumberland. It is a long open indent about 50 m wide, and affords no shelter to shipping beyond that of a mere roadstead. Centre lat. 38° 5' S lon 141° E.

DISCOVERY PORT, a harbour Oregon, near the head of the straits of Juan de Fuca, stretching inland for 8 m., to the parallel of 48° N., and having an average width of 3 m. It is completely covered by Protection Island to the N and could easily be rendered defensible against the most formidable attack. The principal objection to it as a harbour is the great depth of water, which, in the middle, is no where less than 40 or 50 fathoms, and is often as much as 16 fathoms close to the shore. Its shores are abundantly supplied with shell fish. There is no permanent settlement of Indians here, but a few miserable lodges are occupied by individuals of the Chalkum tribe, who live chiefly on fish shell fish, and potatoes.

DISEWORTH, par Eng. Leicester 1830 ac. P 617 **DISMAL SWAMP**, a large morass, U States, commencing a little S of Norfolk, Virginia, and extending into N Carolina. Length S to S 80 m. breadth, 10 m. area, 150,000 ac. It is mostly covered with trees of enormous size, with an undergrowth of brushwood so dense as to be completely impenetrable. It contains Lake Drummond 15 m in circumference, and is intersected by Dismal Swamp Canal, 23 m. long, 64 ft. deep, and 46 ft wide at the top, which connects Chesapeake Bay with Albemarle Sound.

DIANA, a tn. Russia, gov. of and 100 m. N N E. Minsk. cap. circles of same name, at the mouth of the Duna. It is a new town which has advanced with great rapidity and has some shipping and a considerable trade. Pop. (1849) 5208.—The **CHENNA** is well watered, produces excellent flax and hemp, which are largely exported to Riga, and is extensively covered with brushwood and small trees but has not much good timber.—The **NIVNA** rises in a lake of same name, in the N E. of gov. Wilna, flows E. across the N of Minsk, and joins I bank, Dwina, at the town of Duna, on the W frontiers of Vitepsk, after a course of about 90 m.

DISE, a market tn. and par England, co. Norfolk, on the slope of a hill, at the foot of which is a small lake or mere, on the N side of the vale of the Wensley 18 m. S by W. Norwich. It has 13 streets, wide, well paved, and lighted with gas. Many of the houses are exceedingly neat, and the shops well stocked. The church of St. Mary is a large and handsome gothic structure, with a square tower at the W

end, containing a peal of eight bells. There are, besides, a handsome gothic chapel belonging to Independents, and places of worship for Wesleyan Baptists, Presbyterians, Unitarians, Primitive Methodists, and the Society of Friends; also a grammar school, national, British, and foreign daily schools; a literary and scientific institution and public library and several charitable and benevolent institutions. Dis is formerly noted for the manufacture of Suffolk hempen cloth, woven partly, and knit hosiery, but these branches have late much declined. There are two extensive brush manufactories, two large breweries, and extensive malting establishments. The mare, already mentioned, covers about 7 ac. and its banks are mostly laid out as ornamental gardens it is from 17 to 19 ft deep, and is well stocked with eels and other fish. Market-day Friday and two fairs annually Area of par 8627 ac. pop. 368.—(Local Correspondent).

DISEH, an Isl Red Sea, W of Dankali coast, about lat. 15° 15' N lon. 40° 25' E. one of the pleasant spots in the Red Sea. It is about 3 1/2 m long and about 5 m broad, high and consisting of a number of similar hills, in perpendicular strata, with a few straggling trees. The central part is a plain covered with grass. There are some springs of good water on the island, about 5 m. from the beach also a village, consisting of 10 or 12 houses, built of laminated stone. Bullocks sheep and goats are abundant, but the inhabitants are not anxious to dispose of them.

DISEH, a vil. Hauser, principality of and 14 m. S. E. E. Ombeliek, at the foot of the Paraguru. It is an old place, which was once defended by a strong castle. It contains a church and two schools. Pop. 1650.

DISENTIS, MOWRA, a tn. Switzerland on Glacera, 8800 ft. above sea level, on a gentle slope near the confluence of the Furber and Middle Rhine 84 m W S W. Chur (Vulve). Above it rises Mount Valais, the forests of which protect it from avalanches. Disentis has a gymnasium, and a central school with eight teachers, but its chief attraction is an ancient convent of Benedictines which said to have been founded in 600 by Sigibert a Scotsman, a pupil of St. Columba and the superiors of which were once princes of the empire. It was almost destroyed by the French, in 1794 but has still some monks, who serve as priests in the neighbourhood. The caverns of Disentis exhibit some of the finest Alpine scenery. Pop. 1426.

DITMARSH or **DRUMMER** (German, *Ditmarschen*) a dist. Denmark, Holstein, divided into the N and S. Ditmarschen, and consisting of an extensive tract lying between the mouths of the Elbe and the Läger and along the German Ocean length N to S, 85 m. average breadth 20 m. area, 574 sq. m. The whole surface is composed of a low mountainous flat so little raised above the sea, that it is only defended from its encroachment by a succession of lofty and strong embankments, similar to the well known dikes of Holland. Where the ground is liable to be flooded, it is covered with extensive swamps where the only improvement which can be introduced is to convert them, by means of drainage and embankment, into productive meadows. Where the ground rises to a higher level its quality is seldom improved, but becomes sandy, and forms a fertile heath. But, notwithstanding of these large deductions, there still remains considerable tracts of rich alluvial soil, on which heavy crops, particularly of wheat, beans and hay are regularly raised. The N Ditmarsh is divided into 31 parishes or Kirchspielvogts and the S Ditmarsh into 12 parishes united par. 61 688.

DITTEAH, a tn. and fortress Hindoostan, presid. Bengal prov. of, and 220 m. W N W Allahabad lat. 25° 45' N lon. 78° 25' E. The town is about 1 1/2 m. long and nearly as much in breadth. It is surrounded by a stone wall, well built, the houses chiefly constructed of stone, and covered with tiles.

DITTERIDGE, par Eng. Wilt 874 ac. Pop. 119.

DITTEBACH, or **STAMOW**, a vl. Bohemia, strale, Chrudim, in a valley about 40 m. W Olmutz. It contains a church and a school. Pop. 1105.

DITTFLET a tn. Prussia prov. Saxony circle of and 27 m. S.W. Magdeburg r. bank, Bode. It has several breweries, breweries, and distilleries, and corn and flax are grown in the vicinity. Pop. 7200.

DITZENGEN a tn. Württemberg, circle Neckar hall Leoben, with several mills. Pop. 1393.

DIU or **DIU ISLAM** and **HEAD**—1. An isl. Hindoostan, belonging to the Portuguese, off the E. extreme of Goceat, from which it is separated by a very narrow channel, about lat. 8° 45' N. lon. 71° 0' E. It is 7 m. in length. R. and W. stretching parallel to the coast, of which it seems a part. On a point on the E. end of the island stands the town of Diu well fortified, and surrounded by a wall, with towers at regular distances. Promotions are plentiful and although the island appears unfit for cultivation, the market is well supplied with vegetables from the main. Water brackish excepting that procured during the rainy season which is kept in tanks or reservoirs for general use. Pop. 4000—2. **DIU HEAD** is the southernmost point on the coast of Goceat lat. 8° 42' N. lon. 70° 55' E.

DIVEN a market in Hungary co. Neograd 14 m. S.E. Alt-Sohl. It contains a chateau and the ruins of an old castle, picturesquely situated on a rocky eminence and has extensive glass-works, a mill, and an annual fair. The district is densely wooded. Pop. 1066.

DIVINA (Kin and Naer) two adjacent vils. Hungary Hither Danube, co. Trencsin, on the Waag about 3 m. from Soina. They contain a parish church and have a united pop. of 1882.

DIVOR or **DIVORON** a vil. Austria, Salzeburg, co. Symria, at the foot of the mountain of Symria, about 22 m. S.W. Peterwardein. It contains a Greek parish church, and has four annual fairs. Pop. 1462.

DIVISCHAL or **DIVISCHAU** a tn. Bohemia, circle Kautzin, 80 m. S.E. Prague. It contains a deanery church, school and townhouse. Vegetables are extensively cultivated in the vicinity. Pop. 1800.

DIXAN a tn. Abyssinia, kingdom Tigré, about 40 m. S. Arkako lat. 15° 10' N. lon. 38° 25' E. on the declivity of a hill commanding an extensive view of the country around. The houses are flat-roofed, and without windows, and instead of chimneys, have two pots of earthenware rising out of the roof, but so narrow as to give vent only to a small portion of the smoke. The only public building is the chapel, a mean-looking edifice, with a conical thatched roof and mud walls. Some trade is carried on in tobacco pepper looking glasses, small, spades, and large beads. White cloths are preferred here to all other colours. The people are in general idle, ignorant, dirty and of very dark complexion.

DIX COVE, a British African settlement, coast of Upper Guinea, Atlantic territory about lat. 5° N. lon. 1° 57' W. The settlement consists of a town and fort. The cove is nearly 400 yards wide, and about the same length, but full of rocks; they have, however, sufficient room in some places to moor boats or very small vessels. At low water and with fresh E. breeze, the sea breaks actively over the cove but it seldom happens that the natives cannot get off to a vessel in their season. The town is on the N. side of the cove, and extends from the fort to a piece of water which is stagnant, except during a portion of the rainy season, when it is always tainted by alligators. The fort is of a square form standing on ground about 30 ft. above the sea, and its battlements about 60 ft.

DIXMUDE (Flemish *Dampden*), a tn. Belgium, prov. W. Flanders 20 m. S.W. Brugge, r. bank, Yser which has been made navigable. It has a large and handsome gothic church, with a stone roof-terrace of beautiful workmanship, and over the altar a picture of the Adoration of the Magi a masterpiece of Jordaens. It has also a chapel, a communal or townhouse, hospital, two orphan asylums, a jail, and several primary schools. It has some breweries, tanneries, a silk-rearing and a bleachfield, with works for making starch, lignum, chocolate, hats, and coarse pottery also small bark, and oil mills. The trade consists in butter of excellent qua-

lity grain, horses, and cattle. The town was first walled in the 10th century, and was fortified in 1270 and 1411. In 1818 upwards of 800 houses were burned. It was often taken and retaken by the Germans and French. Pop. 3468.

DIXON'S ENTRANCE a strait, W. coast N. America, between Queen Charlotte's Island and the Prince of Wales's Archipelago lat. 54. 8° N. lon. 132. 10° W. It is about 100 m. long, W. to E.

DIXON (Newroz) par. England, Monmouth; 3848 ac.

DIYALAH a river Asiatic Turkey. See **DIYALA**.

DIZFUL, a tn. Persia. See **DAMRU**.

DIZIER (Dr.), (anc. *Desiderius Pannus*) a tn. France, dep. Haute-Marne, arrond. Yancy r. bank Marne, where it becomes navigable, 35 m. S.E. Chalons. It is long and narrow but not unhandsome, the streets being wide and clean and many of the houses well built. The only edifice worth special mention are the church which has curious gothic windows, and the townhouse, which is rather handsome, and of recent construction. St. Dzier has a court of commerce and a communal college. It has manufactures of cotton cloth and coats also some iron-forges and foundries, and a little book-binding and it carries on a busy trade in wood, iron and grain. The town was once fortified, and remains of a strong castle yet remain, but the ramparts have been laid out in public walks. In the environs which are thickly wooded, are several blast-furnaces, and other iron-works. In 1564 it was besieged and taken by the Emperor Charles V. Napoleon lost the allies in two battles fought here, January 27 and March 27 1814. Pop. 6450.

DJAGARAGA a tn. Java, prov. Madureh, 48 m. S.E. Samarang. It is a considerable place, with good bamboo-woven houses, and near it a large market-place and elegant mosques. The inhabitants cultivate rice and cotton extensively and trade on them and in thread and wood. Pop. 6000.

DJEMILIAN an em. city Algeria, prov. of and 60 m. W. Constantine. It contains numerous interesting monuments of antiquity including a Christian church a quadri lateral temple, with six columns a theatre the market place, with a temple dedicated to Victory and a triumphal arch erected in honour of the Emperor Caracalla, which it is proposed to transport to Paris. Djemiliah was first occupied by the French in December 1833, and again in May 1839.

DJINDI or **DJINDI** a tn. Java. See **JUMBA**.

DJINDJELI a tn. Algeria. See **JUJELI**.

DJIMAJA or **JAKAJA** ISLAND China Sea, one of the Amboina lat. (S. point) 2° 50' N. lon. 105° 55' E. (a.) It is about 12 m. long with several small islands nearly joining each other off its N.W. extremity. It has a peak on it and a bay on the N. side with sails and reefs, about 1 m. distant, on the W. side and soundings of from 24 to 35 fathoms near them.

DJOCJOKARTA or **Onojojo-Karta** a prov. at Java cap. same name, bordered, S. by the Indian Ocean, W. by Bagien, N. Kadoe and Boornkara, and E. Boornkara. Its only high mountain, the volcano Merapi is 8150 ft. high. It has no large river. Its forests abound in djaco (teak) wood its natural fertility would render it more valuable, but for the impracticable country that bounds it on the land side, and the want of any good harbour on the coast yet iron mines, and tobacco begin to be extensively cultivated on lands allocated to Europeans. This province once a kingdom was the focus of the rebellion in 1825. Pop. 235,000.—The rivers which is the seat of a native militia and a Dutch settlement, in large and regular. The sultan's water-palace is a curious town of itself with subterranean approaches walls and towers. The resident's shade is in a fort which commands both the palace and the town. There are here a church, school, and shot-foundry. Besides the European guards of honour the sultan has a guard composed of young Javanese, armed with lance, sword, and pistol, who perform service on horseback as well as on foot, and from amongst whom he frequently selects his wives. Pop. 30,000.

DLE-POLE a vil. Hungary, Hither Danube, co. Trencsin, about 10 m. from Bilitz. It belongs to Prince Esterhazy, and has a R. Catholic parish church. Pop. 3114.

DLUHA, or **DLMA**, a vil. Hungary Hither Danube, co. Arad, on a river of the same name, here crossed by two bridges, 9 m. from Kútina. It contains a church. P. 1037.

DMITROV a tn. Russia, gov. of and 45 m N Moscow esp. dist. of same name, r bank, Jackoma, at the confluence of the Netoka. It covers a large space, much of which is occupied by gardens, but is poorly built. Contains seven churches, five of stone and two of wood, a convent, and district school; and has manufactures of woolen and silk goods several tanneries and tallow-melting establishments a considerable trade chiefly in linen, wax, tallow and agricultural produce, and an annual fair, which lasts a week. Porcelain is manufactured in the vicinity. Pop. (1880), 5284.—The church area, 707 geo. sq. m. has an undulating surface is well watered and well wooded, has good arable land, and rears great numbers of cattle. Pop. 55,341.

DMITROVSK a tn. Russia, gov. of, and 45 m S. N. Orel, l. bank, Neruss. Pop. (1881) 4014.

DNIÉPER, or **DNIEPR** (anc. *Tyrrus* and *Danaster*) a river Russia, which rises among forest marshes, near Dolnoprovo, gov. of Smolensk lat 50° 40' N lon 38° 40' E. and, after a course of more than 1000 m. falls into the Black Sea, by several mouths below Kherson. Its general direction is N to S but its lower course deviates much to the E., reaching to the S.W. with a curving sweep. It traverses the provinces of Mohilev, Minsk, Tchernigov, Kiev, Ekaterinoslav and Bessarabia. Chief tributaries, r side the Bereza, Prypiet, and Ingoulis. l. side, the Sog and Dniestr. The Dniester though a large stream, can scarcely be called navigable. About lat 43° 20' S. it runs through a rugged bed of granite for about 44 m. in which space it descends several cataracts and rapids here are 14 chief falls, besides many others. Having cleared the rocky obstructions the chafed river spreads out into a great number of water-courses forming an immense labyrinth of woody islands (Rus. *Flozida*) below which the scattered streams unite and, at Solokoff commences the navigation downwards, carried on by a few flat-bottomed boats, laden with building timber and minerals from the interior of the country. In 1853, some attempts were begun to overcome the natural obstacles of the river but they proved abortive. Even the more easily improvable lower course, which might be of vast use in developing the resources of the surrounding lands, has been left nearly in a state of nature. A magnificent wrought-iron bar-chain suspension bridge, the largest hitherto executed, is (1861) in process of erection over the Dniester at Kiev, by the English engineer Charles Vignoles by command of the Emperor of Russia. The bridge will cost \$400,000. It is 1 m. in length, and 50 ft. broad and the metal employed, all manufactured in England weighs 8500 tons. On the Kiev side of the river a drawbridge with an opening 50 ft. wide, allows vessels to pass up and down the stream. The river here is 25 ft. deep in summer but spring floods raise it to 35 ft. and even 60 ft. The bridge will be completed in the autumn of 1864. The river abounds in fish of the same kind as those in the Volga, but the produce of the Government fisheries is much less. The mouth of the estuary is defended by the fortresses of Ochakov and Kakhovka. The Boryssienas was already reckoned the greatest river of the ancient world, after the Nile. The Greeks had very exaggerated ideas of the fertility and beauty of the surrounding lands of its lower waters, but of its sources and early course they knew nothing. Near its embouchure was the Milesian colony of Olbia, founded for trading with the wandering races of the interior.—(*Honnades de Hal*).

DNIESTER, or **DNIEPR** (anc. *Tyrrus* and *Danaster*) a river Europe, which rises on the N. side of the Carpathian Mountains, near Turka Austrian Galicia lat 48° 13' N lon. 23° 40' E. and, after a course of nearly 600 m. N.W. to E.E., falls into the Black Sea at Orvidopol, in gov. Kher son and forming in its course the boundary between the Russian gov. of Bessarabia, on the W. and the gov. of Podolia and Kherson, on the E. It passes by Sambor Halles, and Maryampol in Galicia. Khotin, Mohilev and Bender, in Russia. Principal tributaries, on the r. bank, the Boryssienas and Borna l. the Berea, Podhoros, Moudak, and Ingoulis. There is no ascending navigation, and little of any kind. The mouth is much encumbered with muddy flats and sandbanks.

DO FORTO DA PONTA DO ROIO, a port Cape de Verde Isles, lat. 8. S. Antonio. It is not, however strictly speaking, a port, but merely a part of the coast where the bottom is

good. To this place all vessels to and from the island trade and here, situated on a point of land, are the customhouse and warehouses. The landing-place is excellent, being a natural basin in the rock. Wood, water and every refreshment, can be obtained here at reasonable rates.

DOAB (Sanskrit, *Two Waters*) a name in Hindoostan applied indistinctly to any tract of country between two rivers. The tract between the Ganges and the Jumna is usually called the Doab, other similar tracts have their distinctive name, as the Jalandhar or Jullundur Doab, between the Beas and the Sutlej the Bari Doab between the Beas and Ghara and the Ravos the Shamsuli Doab, between the lower courses of the Chenab and the Ghara, the Rotchna or Rakhna Doab, between the Ravos and the Chenab the Jindat or Jind Doab, between the Chenab and Jullundur the Bhal or Sind Sagur Doab, the N. part of the tract between the Indus on the W. and the Jullundur and Chenab on the E. and the Jambha Kuch Doab, the S. part of the same tract.

DOADFOOTRA see SHAWULFOOTRA.

DOAGH GRANGE, a par and vil. Ireland, co. Antrim

2304 sq. Pop. 1871

DOANG, a principal in Mohilla (which see)

DOB-TISZA, a market in Hungary Thutur Thutur on Szabolcs, on the Thutur 13 m. S.W. Tokay. It contains a Protestant church. Pop. 2274

DOBASNITZA or **DORASCHITZA** a vil and seaport, Austria, Myra, cap. dist. of same name 21 m S.E. Vienna. It stands on the N.W. side of the lake of Voga, and contains a parish church and a Tertian monastery. The harbour admits only small vessels. Pop. 2160

DOBELN a tn Saxony circle of and 86 m S.E. Leipzig, agreeably situated on an island formed by the Mulde and Mühlgraben a kind of natural canal. It consists of the town proper and several suburbs and is for the most part, well built, contains two churches, and a well-endowed hospital, and has manufactures of woollen and linen cloth, brass, hats, and shoes, several bleachfields several woads and other mills a considerable trade in butter a large weekly corn market, and three annual fairs, partly for general goods but chiefly for horses and cattle. Fruit, hops and vegetables are extensively grown in the vicinity. Pop. (1848) 7188.

DOBERAN or **DORASCH** a tn. Mecklenburg-Schwerin, cap. hall of same name, agreeably situated in an undulating and well-wooded district, within sight of it a Baltic, 9 m W N.W. Rostock. It is regularly built contains a ducal palace, built in the Italian style, having a fine hall and theatre, and surrounded by a garden and park; a fine old gothic church with many monuments of the grand ducal family; and another palace, built near a triangular space within the town called the Kamp and furnished with numerous decorations. Dobran is much frequented on account of its bathing establishment, which is situated about 1 m. from the town where the greater part of the visitors prefer to reside, though lodging houses have been built on the shore, at a place called Der Heilige Damm from a huge bank of shingle said to have been thrown up by the sea in a single night, and affording effectual protection against its inundations. The bathing establishment, which is very complete, is provided both with sea and sulphur baths and furnishes more than the usual sources of amusement. It annually attracts about 1600 visitors. Pop. in 3725 dist. 10743

DOBLING (Duna) a vil archduchy Austria, below the Dan about 8 m N Vienna. It stands in a beautiful district covered with fine villas and gardens and is a great holiday resort and summer residence of the inhabitants of the capital. Pop. 1700

DOBOKA, a co. Austria, Transylvania, bounded N by Bistritz and Szabolcs N.E. Galla Galla, and Cukstulst, S. Thorenburg and Klausenburg and W. Hungary area, 887 geo. sq. m. It is very irregular in shape, forming a belt of land, stretching E to W for 110 m. with an average breadth which does not exceed 8 m. near the centre it is little more than 1 m. across. The surface is mountainous being covered, in the N. by lofty ridges of mountains, apparently new ridges from the action of rock salt and the salt springs which abound in it. In the W. the mountains are calcareous. Between the mountain ridges are numerous valleys, some of them flat, extensive, and of considerable fertility. The principal streams are the Szamos and the Bistritz. The

surface is well adapted for the plough, but many of the lower slopes are covered with vineyards. The pastures also are good and rear great numbers of cattle. For administrative purposes, the co. is divided into two circles, an upper and a lower subdivided into eight districts. The capital is Raab. Pop. 66,900.

DOBOZ, a vil. Hungary. Thibet Thien, co. Bekes, on the Black Kirta, about 4 m. from Gyula. It contains a Protestant parish church. Pop. 1714.

DOBRA, a m. Russian Poland, 24 m. N. E. Kalisz, near the river Tulejyna. Here are made some linen, woollen &c. Pop. 2123, a third of whom are Jews.

DOBRA [Latin, *Donagora*] a market tn. Austria, Transylvania, co. Hiesel, on a small stream of same name, near the Maros, 75 m. W. Marmarostsch. It stands on the frontier, is defended by a fort, and contains a R. Catholic and a Greek non-anted church.

DOBRAN or **DOBNARY** a tn. Bohemia, circle of, and 10 m. S. S. W. Pisek. It contains a parish church, chapel, school hospital townhouse, and barracks and has several mills, and four annual fairs. Pop. 1835.

DOBRALC, or **LIEBENTHAL**, a vil. Bohemia, circle, Chudowa, about 40 m. N. E. Königgrätz. It contains a parish church, paragon, and mill. Pop. 2175.

DOBRAWITZ, or **ROTHEN-DONAWITZ**, a tn. Bohemia, circle, Bausitz, 30 m. N. E. Prague, chief place lordship of same name at the foot of Mount Cumbow. It contains a castle with five gardens, a church, townhouse, and hospital and has manufactures of beet-root sugar and four annual fairs. Pop. of tn. 1161 of lordship 7115.

DOBRIGNO a vil. Austria, Illyria, is the island of Veglia, 34 m. S. E. Trieste. It contains a parish church and a chapel on the top of a lofty height, and has extensive salt-works. Coal is worked in its vicinity. Pop. 1709.

DOBRILUCK, a tn. Prussia, prov. Brandenburg, gov. of, and 75 m. S. W. Frankfurt on the Oder at the confluence of the Dohr with the Little Elster. It is well built, contains a market, church, and town-school and has manufactures of woollen and linen cloth and a distillery. A good deal of tobacco is grown in the vicinity. Pop. 1145.

DOBRINCZE, or **DOBRESKE**, a vil. Austria, Slavonia, co. Syrmia, in a plain, 2¹ m. S. S. E. Peterwaradin. It contains a Greek parish church. Pop. 1906.

DOBRONIELITZ, a vil. Austria, Moravia, circle, Olmütz, in a mountainous district, about 7 m. from Proseus. It contains a castle, church, and school and has a brewery and two mills. Pop. 864.

DOBRONIL, a tn. Austria, Galicia, circle, Sanok, about 14 m. S. Przemysl. It contains chiefly of a large, unweaved and unspun coarse, lined by houses, most of which are occupied by Jews and has two important annual cattle markets. There are salt mines in the vicinity. Pop. 1600.

DOBRONA, or **DOBNARIVA**, a market to Hungary. Higher Danube co. Szol, on the small stream Myerovicska, about 65 m. N. by W. Puch. It contains a Protestant and a R. Catholic church and the ruins of an old castle. The inhabitants are Slovaks. Pop. 1162.

DOBROKOZ, a market to Hungary co. Tolna, 84 m. S. S. W. Puch, r. Iszák, Kapos. It contains a R. Catholic church, and the ruins of an old castle. Much tobacco is grown in the vicinity. Pop. 3560.

DOBROSLAWITZ, a vil. Austrian Silesia, circle, Teschen, in a mountainous district on the Schwarzwald, about 41 m. N. E. Olmütz. The inhabitants are Bohemians. Pop. 1422.

DOBROTA, a vil. and seaport, Austria, Dalmatia, pleasantly situated on a gulf of the same name, dist. of, and 2 m. N. Cattaro. It is a well built, cheerful-looking place, with houses of stone, roofed with tiles, and frequently surrounded with walls, as a protection against the Montenegrin robbers. Outside a parish church, seated on a projecting tongue of land, backed by neat houses and gardens; and has a harbour, which is one of the best frequented in Dalmatia. Pop. 1400.

DOBRSCHITZA, or **DOBRONITZA**, a tn. Bohemia, circle of, and 14 m. E. N. E. Königgrätz, on the Little Goldbach. It consists of the town proper and four suburbs, contains a church, chapel synagogue, townhouse, and hospital; and has several mills, a trade in cattle, a weekly market, and an annual fair. Pop. 2442.

DOBBEYN two places, Russian Poland.—1 A tn. w. w. of, and 20 m. W. N. W. Plock, on a height above r. bank, Vistula. It contains two churches, a synagogue, and old monastery; and has a distillery. A brewery some general trade, and an annual fair. Pop. 1459, of whom 659 are Jews.—2 A tn. w. w. of, and 50 m. N. W. Plock, 1. Iszák. Drowerz. It has a church and a synagogue, and manufactures of woollen-cloth and leather. Pop. 2540.

DOBSCHAU **TORESCAU**, or **DOMAZA**, a market tn., Hungary co. Gomor in a narrow valley hemmed in by lofty mountains, 14 m. N. W. Rozsnya. It contains a Protestant and a R. Catholic church, and a gymnasium; and has a paper and other mills. Copper silver iron, and schist, are worked and smelted in the neighbourhood. Pop. 5410.

DOCE, a riv. Brazil which rises in the mountains in the S. of prov. Minas-Geraes about 40 m. E. the town of Barbacena, and proceeds N. sometimes under the name of Chapote receiving several streams on both banks, but particularly the Piranga, on the left. On reaching Santa-Ana-de-Dourito it turns N. E. and is augmented by the Turvo, on the r. bank, and the Guellacho, on the left. Still pursuing the same course, it receives the Paranaíba, the Santo Antonio, and the Correntes, all on the l. bank. On the junction of the last, its course becomes almost N. towards prov. Espirito Santo, which is first separated from prov. Minas-Geraes, and afterwards traverses, receiving, on its r. bank, the Camú and the Munda. It ultimately falls into the Atlantic in lat. 19° 35' S. Its direct course N. E. is 320 m., but its whole course, including windings, cannot be less than 600 m. Its navigation is very much interrupted by cataracts.

DOCHART a loch and river, Scotland, co. Perth. The loch 44 m. W. Perth, is about 3 m. long has bushy wooded banks, and contains a curious floating island, and an islet, with the remains of an old castle.—The river issues from the E. end of the loch, and flows N. E. 8 m. through Glen Dochart, into Loch Tay.

DOCKING par Eng. Norfolk 6113 ac. Pop. 1640.

DOCKLOW par Eng. Hereford 1715 ac. Pop. 199.

DOCKUM a tn. Holland, prov. Friesland 18 m. N. E. Leeuwarden, on the Ee, which divides it into two unequal parts. It is hexagonal in form, surrounded by a wall with six bastions, one of which now serves as a place of sepulture and formerly had four gates. It has a handsome townhall, an elegant white-house an exchange, a theatre, a hospital, and a R. Catholic church an orphan hospital, a clergy and a Latin school, and several common and boarding schools. By means of the Ee Dockum communicates with Leeuwarden on the one side, and the rest on the other vessels of considerable size coming up at high water. There is also canal communication with Groningen and in the centre of the town is a commodious harbour. Dockum has three fairs for cattle and horses. Does a good trade in cattle, flax, oil, and shrimps and carries on boat-building, sail-making, the manufactures of beer, gun, and earthenware, and wool-combing, &c. Pop. 8900.

DODA, a tn., N. Prussia, r. bank, Chosch, lat. 55° 2' N. lon. 15° 18' E. well and well built, with a good bazaar and a square fort, having a tower at each angle. The Chosch is here 60 yards broad, and is crossed by a floock, or bridge formed by a cable stretched from bank to bank, and traversed by a suspended seat, drawn backwards and forwards by means of a rope.

DODBROOKE a vil. and par England co. Devon, 16¹ m. S. S. Plymouth. The village is indifferently built, but well supplied with water and noted for its white ste. Markets for cattle are held monthly. Dr. Wolcott the natural poet, better known under the assumed name of Peter Pindar was a native of this place. Area of par 464 ac. Pop. 1503.

DOHARAB, an isl. Red Sea E. side lat. 16° 18' 30" N lon 41° 59' E. It is low and sandy, about 2 m. in length, N and S and is surrounded by a reef, nearly 2 m. wide, with 6 to 14 fathoms close to it.

DOHVA a to. Saxony circle of and 10 m. S.E. Dresden in a beautiful and fertile district, r bank. Might be the valley of which previously narrow begins here to widen out. Having been mostly burnt down in 1813 the far greater number of the houses are of recent construction, and well built. It contains a parish church with a lofty tower 400 ft. high, and a fine old altar-piece and a well-endowed hospital and has two annual fairs. Pop 1384

DOHUT (Do-hut two frontiers) a to. Hindostan prov Malwa lat. 25° 55' N lon 74° 20' E. It is of considerable extent, well built, and amply supplied with water Bung a thoroughfare for the inland traffic between the provinces of Upper Hindostan and Malwa. It is also much frequented by the traders of the interior. It commands the principal pass into Goojerat, from the N.E. The present fort formerly a caravanserai is said to have been built by Aurangzeb. It is 450 ft. high, has two strong gates and contains a mosque and two wells.

DOFUL, an isl. Red Sea N.W. Dhalat lat. 15° 55' N lon 59° 40' E. It is low of a quadrilateral form, 9 m. in circumference, with some down palm on it. On the N.W. side are a small village and mosque, with about 100 inhabitants and on the E. are three or four wells of fresh water during the rains, but brackish in the dry season, barely affording sufficient for the natives who subsist by fishing.

DOKO a pigmy race of negroes, inhabiting a region of tropical Africa S. of Abyssinia the extent of which is marked by the intersection of the 3d parallel of N. lat with lon. 37° E. They are four feet in height, of a dark olive complexion, and perfectly wild. They live in rude wigwags, constructed of bent canes and grass, far in the depths of the dense forests of bamboo with which the country is covered. They have no king no laws, no arts, no arms; possess neither flocks nor herds are not hunters, do not cultivate the soil, but subsist entirely on fruits, roots, snails, serpents reptiles and honey. They beguile serpents by whistling and, having torn them piece-meal with their long nails devour them raw. They climb trees in search of fruit with all the agility of monkeys. Both sexes go perfectly naked and have thick pointing lips, diminutive eyes, and flat noses. The hair is not woolly and in the females reaches to the shoulders. The men have no beard. The nails, never pared, grow both on the hands and feet like eagle talons and are employed in digging for ants. They are ignorant of the use of fire. They have no religion but possess a glimmering idea of a Supreme Being, to whom when overtaken by any misfortune, they pray standing on their heads. Being much esteemed for their docility and usefulness, they are carried off in great numbers annually by the slave-hunters to whom, when taken, they are barely subsist, and rarely attempt to escape. The Dokos are supposed to be the paganes of the ancients. — (*The Ethiopians of Ethiopia*, by Major Harris, vol. ii. chap. 8.)

DOL, an m. to. France, dep. Ile-et-Vilaine, 13 m. S.E. St. Malo, at the intersection of several great roads, and on a height overlooking marshy plains, which, where drained, are of great fertility. The site is unwholesome, and the town,

built of dark-colored granite, occasionally whitewashed, is old, mean, and dirty. The Grande Rue, however, is spacious and regularly built, and the church of grey granite and once a cathedral is the finest public edifice in Brittany. Having once been a strong and important place, old walls and deep fosses are seen on every side of Dol but the ghosts of its former ramparts now form public walks. There are many angular houses in the town, with far-projecting fronts, in the narrow streets, and a communal college. Some salt is drawn from the surrounding marshes and the district produces much extra grain, flax, &c. There find an outlet by the port of Vivier. Dol was taken and razed many times during the Middle Ages, and the troubles of the League. In 1793 the Vendéens repulsed the republican forces in an assault upon it. Pop. 3851.

DOL-BEN MAEN par Wales, Carnarvon. Pop. 882.
DOLCEAQUA (anc. *Dulicacopia*) a tn. kingdom of Italy Piedmont, prov. of, and 7 m. W. by N. San Rameo, in a mountainous district, on the Nervia, which divides it into two parts, one denominated La Terra the other the Borgo, connected by a bridge of one arch. It has two churches, a local court, a customhouse, and other Government offices. In the vicinity are the ruins of an old castle. Pop. 4000.

DOLÉ (anc. *Dolens*) a tn. France dep. Jura built on a vineyard slope rising from the Doubs, and on the canal between the Rhone and the Rhine. 36 m. S.E. Dijon, 987 ft. above sea level. It is well and rather regularly built, adorned with public fountains, and surrounded with fine promenades. The principal church, on the public square, is a lofty gothic edifice, consisting of three naves, supported by enormous pillars. The town-district is an antique construction, now serves as a prison. The other chief buildings are the law courts, the new prison, the college, the two hospitals, and poorhouse, and the bridge over the Doubs. Among the antiquaries are the ruins of a castle, built by Frederick Bar baron, in the 12th century also of an amphitheatre, aqueduct and other Roman constructions. Dolé is the seat of a subprefecture, a court of first resort and of commerce and possesses an agricultural society a commercial college, a public library with 8,000 vols.; a museum, &c. The manufactures comprise French linen from worms (saves, furnaces, &c.) optical instruments, wax candles, rangers &c. and there are several tanneries, iron-forges, and tile works, with marble quarries in the vicinity. The trade, both by the canal and the river is considerable, and consists of grain flour and wood wine, brandy vinegar coal iron marble, mill-stones, &c. The environs are very beautiful and present numerous pretty villas, surrounded with gardens and vineyards. Dolé was founded by the Romans, and, at later times, was the capital of Franche-Comté till its annexation to the kingdom of France. In 1442 it became the seat of a parliament and a university established by Philippe-le-Bon. Before the Jesuits were expelled from France they had a leading college here, the buildings of which still remain. It is the fortifications, once of great strength were dismantled in 1674. Previously it had been besieged taken, and retaken several times, alternately by Germans and French. Pop. 6987.

DOLÉ (LA) a mountain, Switzerland, can. Val de, forming part of the principal chain, and one of the loftiest summits of the Jura, about 7 m. W. of the lake, and 15 m. N.W. the town of Geneva. It is 6009 ft. high, and is easily ascended from the village of St. Carpien. The magnificence of its view attracts the general tourist, whilst its richness in Alpine plants makes it particularly interesting to the botanist.

DOLGELLEY *Dolgellau*, or *Dolgellau*, a market tn. and par., N. Wales, co. Merioneth. The parish is about 16 m. long, and from 3 to 4 m. broad. The town is beautifully situated in a narrow vale, at the N. skirts of Cader Idris, on the river Gwynn or Wison, 46 m. W. Rhreabry. The narrow and irregularly laid out streets, houses generally small and ill lit, though some handsome dwellings have been erected of late years to the improvement of the appearance of the town. There are here a parish church, and four dissenting chapels and a national, a British, and a free grammar school. The principal public buildings are the county hall and, markethouse, and townhall. Dolgellau has extensive tanneries; and manufactures of Welsh flannels and

hosiery, and more especially of a kind of woollen cloth called *waite*, exported chiefly to America, from London and Liverpool. These cloths are worn in the houses and cottages of the weavers. Market-day Tuesday and six fairs annually. Area of par. 25 607 ac. P. 3419. (Local Cor.)

DOLGOI a name, in Russian, signifying lung, and given to several small islands Russia, particularly—1 An Isl. gov. Archangel, in the Arctic Ocean, 50 m. N. Walgais Island.—2 An Isl. in the mouth of the Neva at the entrance of the Gulf of Finland.—3 An Isl. in the Caspian Sea, S.E. the mouth of the Volga, belonging to gov. Astrakhan.

DOLLA, or *Dolla* a market tn. Hungary Thidus Thidus, co. Marosvás, in a plain surrounded by wooded heights, on the Dolha or Borsava, 30 m. from Salgot. It contains a Protestant and a R. Catholic church and has a potatoe work, and an annual fair. The inhabitants are Russians. Pop. 886.

DOLINA, a tn. Austria, Galicia, circle of, and 22 m. S.E. Fry. It contains a R. Catholic and a Protestant church; and has extensive salt-works. Pop. 8200.

DOLITZ (Russian) a vil. Saxony circle of, and R. Leipzig, a bank, Prussia, with a mill on its castle, and numerous pretty country houses, chiefly occupied by the Leipzigers. Pop. 930.

DOLLA, par. Incl. Tipperary T354 ac. Pop. 1147.

DOLLAR a vil. and par. Scotland, co. Clackmannan, the former 11 m. E. by N. Stirling pleasantly situated on a rising ground but deriving its chief interest from its celebrated academy founded by a Mr. John Mason, a native of the parish, who, from being a poor shop boy on board of a coasting trader became a man of large fortune. He left a sum of £50,000 to be used for the benefit of the Dollar academy. The building erected in 1819 is a handsome structure on the Greeny side 186 ft. in length, and 63 ft. in breadth with a portico in front, supported by six columns. The principal branches taught are English, writing and arithmetic Latin, Greek modern languages geography botany drawing and mathematics. There is also a female teacher of sewing and fancy work for the girls of the parish. The fees paid for education rise by a graduated scale corresponding to the supposed ability of the parents to pay so that the poorer boys obtain at sufficient education for its facilities at 8d. per quarter for each class attended, but if more than one child be attending the school at a time the second and others are admitted at half price. Within a short distance of Dollar are the ruins of an ancient residence of the noble family of Argyll, called Castle Campbell. Pop. vil. and par. 1874.

DOLLART (Tine) [*Latin Dolus Dolus* or *Dollarius*] a gulf, North Sea, at the mouth of the river Ems which passes through it between prov. Groningen in Holland and E. Prussia in Hanover. It was frozen by the burning ice of the ice in 1277 and again in 1580. By these floods, 84 large villages and numerous hamlets were submerged and thousands of human beings and cattle destroyed. Much land has, however been gained back from this gulf, and now forms numerous fertile polders.

DOLLOVA a vil. Hungary Rspan, dist. Temesvar 21 m. E. N.E. Belgrade. It contains three Greek non-united churches, and has 10 flour-mills. Pop. 3065.

DOLM a small tn. Norway coast of Trondhjem, near the island of Iktren and between it and Froym; greatest length 1 m. breadth about 1 m. Its surface is sterile and mountainous. Two summits one on the W., and the other on the E. side, rise, here and precipitous, to the height of nearly 8000 ft. The only inhabitants are a few fishermen.

DOLMATOV a tn. Russia, gov. of, and 800 m. E.S.E. Perm, L. bank, Incl. It contains a fine monastery and has an annual fair which is numerously attended by dealers from Siberia. Pop. 1600.

DOLLO a tn. Austrian Italy gov. of, and 12 m. W. Venice, on the Brentone, here crossed by a handsome bridge over its junction with the Brenta. It is the seat of a court of law and several public offices. It is surrounded by many fine villas of the patricians and citizens of Venice contains a parish church and two public theatres and has an annual fair. Pop. 5600.

DOLOL, a vil. Senegambia, near L. bank, lower Senegal. The inhabitants are industrious cultivators, and sell much of their produce to the French colonists of St. Louis.

DOLONNOOR, in Mongolia. See **CHAO-NAM-NAM-SOON**.
DOLORA, 1, A. in Spain, Valencia, prov. of, and 24 m. S W Alcala. It is fertile plain. It has three squares, a church, two schools, a prison, public granary and cemetery. The inhabitants are chiefly engaged in husbandry raising silkworms, and spreading oil and wine. Pop. 2489.
 — 2 A vil Mexican Confederation, state of, and 24 m. N W Guazacozaco. It is also, with various affixes the name of several places in different parts of what once formed Spanish N America.

DOLPHINTON par Scot Lanark 2926 sq. Pop. 805.
DOLTON par Eng Devon 2568 sq. Pop. 266.

DOLWYDELLAN par Wales, Llanerbyn 14,384 sq. Pop. 777.

DOMANIS, or **DOMANNA**, a market tn. Hungary. Hither Danube, co. of, and 80 m. E N K. Trentschin. It contains a parish church and two castles, one of them a ruin. Pop. 1270.
DOMBEGYHAZA a vil. Hungary co. Omsad near Batszoja. It contains a Protestant church and stands in a fertile district, in which much tobacco is grown, and great numbers of cattle are reared. Pop. 1191.

DOMBIA, a dist. France, long forming a sovereign principality which belonged to the Dukes of Bourbon, with whom it remained till 1681 when it passed to the Duke of Maine, a natural son of Louis XIV. Its sovereignty merged in that of the Crown in 1762. It formed part of the diocese of Lyons, and is now included in dep. Ain. Trevoux was its capital.

DOMBO DUNOVA, or **DUNOVS** a vil. Hungary Thither Theres co. Marmara, is a little plain, enclosed by hills about 16 m. N N E. It contains a Greek Catholic church and has a saw mill. Pop. 1627.

DOMBOVAR, a market in Hungary Thither Danube co. Tolna near a bank, Kapos 21 m. N W Fiskirchen. It contains a parish church and the ruins of an old castle, which made a considerable figure in the wars with the Turks having often defied all their efforts to take it. Pop. 1530.

DOMBROWICK, a tn. Russian Poland woiwode Masovia, about 84 m. W Warsaw. It contains two churches, and has seven annual fairs. Pop. 1119.

DOMBURG a vil. Holland prov. Zealand on Isl. Wal chaven 9 m. N W Flushing. It has a townhall Reformed church school and elegant baths, and is much frequented, as a place of recreation by the inhabitants of the island more especially those of Middelburg. Pop. 600.

DOMENIGA (SANTA) a tn. Naples, prov. Calabria Citra 3 m. E. Sculles. Pop. 3106.

DOMENEVE, a cape, Russia, gov. Comland, in the Baltic W side of the Gulf of Livonia, or Riga, S. of the Isle of Oesel lat. 57° 45' N lon. 22° 23' E.

DOMFRONT (Latin, *Domfrontensis*) a tn. France dep. Orne, picturesquely situated on a steep rock, almost perpendicular on its W side and bathed by the Varenne, 86 m. W N W Alencon. The interior is very dull houses ill built, streets narrow steep, and crooked water scarce and bad air pure but too keen for delicate constitutions. The only buildings worth noting are the antique church of Notre Dame, and the ruins of a strong old castle. Domfront is the seat of a sub-prefecture, a court of first resort, and a communal college. Its manufactures consist of laces, ticks, druggs, serges, &c. and in the vicinity are forges glass works, and paper mills. The articles of trade are linens, cattle and leather. Domfront was founded early in the 11th century, and was formerly a coveted stronghold. It was besieged and taken in 1593 by King Philip Augustus in 1556 and 1418 by the English in 1574 by the forces of Catherine de Medicis, from the Huguenots in 1589 from the League, by Henry IV. Pop. 2068.

DOMINGO (SAN), a fortified city Hayti and the metropolis of the E. division of that island on the S. E. coast, at the mouth, and on r bank, Ouanza lat. 18° 28' N lon. 69° 50' W (s). It is surrounded by a thick wall the houses are neatly built, the streets straight and spacious, with foot ways of brick. There are here a fine cathedral, some handsome churches and convents an hospital barracks, and arsenals. The fortifications by which the town is defended are judiciously constructed. The harbour is commodious, and ships may lie close to the shore to take in their loading. San Domingo had formerly a considerable trade in jerked beef, cattle, and hides but it is now very limited. This is the oldest Euro-

pean city in the New World having been founded in 1502. During the 16th century it was at the height of its prosperity but since that time it has greatly fallen off in population and commerce. Pop. estimated at 10,000 to 15,000.

DOMINICA a British W India Isl. one of the Lesser Antilles, Leeward group, between the islands of Martinique and Guadeloupe, from both of which it is nearly equidistant, 25 to 30 m.; lat. (N point) 15° 33' N lon. 61° 18' W (s). It is about 29 m. in length N to S and 19 m. in breadth E to W area 186,456 sq. Its appearance, when viewed from the sea, is rugged and mountainous but it contains many fertile valleys. Its highest summit has an elevation of 6000 ft. being greater than that of any of the other W India islands, with exception of Cuba, Hayti and Jamaica. The slopes of the mountains, which occupy the whole interior of the island, from N to S are very steep and terminate in bold and precipitous coasts. The island is of volcanic origin and contains several solfataras and has numerous sulphurous and thermal springs—the latter are said to be sufficiently hot to coagulate an egg and are believed to possess great medicinal virtues. Dominica is one of the best watered of the Leeward Islands, having at least 50 streams, besides numerous smaller rivulets. The soil, though somewhat stony is fertile but has been found better adapted for the production of coffee than sugar. The shores are but little indented and are on braly without harbours but on the W side there are several good anchorages and bays, the coast being all along bold and clear of danger. The principal bay is Prince Rupert's at

the N W and of the island much resorted to for its safety convenience, magnitude and depth of water besides abounding in wood and fresh water. On the W coast, calms frequently occur which sometimes extend 6 m. to sea. The climate is extremely hot, and is considered unhealthy. The woods afford large supplies of excellent timber including rosewood, gum-trees, &c. The principal produce consists of rum, coffee sugar molasses, cacao arrow-root and wool. Great quantities of honey and wax are also obtained in the cliffs of trees and other places, the produce of the European bee which was brought to the island, and which now swarms in the woods. The exports, in 1849, were 246,523 and imports £50,584. The revenue for the same year amounted to £2877 and the expenditure to £10,589. The government of the island is under the governor-in-chief of the Leeward Islands administered by a Lieutenant-governor a legislative council, an executive council, and a representative assembly.

The laws in force are the common statute law of England. The principal towns are Roseton, or Charlotte Town on the S.W. side and Port Antonio, or Prince Rupert's Town, considerably to the N. of Roseton. The latter consists of about 500 houses, and contains a Protestant church, some 20 Catholic and dissenting places of worship, four public or free schools, supported by the bishop of the diocese and an infant school. Dominica was discovered by Columbus, in 1493, and was claimed subsequently by England, France, and Spain, but was finally ceded to Great Britain in 1763. The population on the island is stated at 22,300 of whom 10,596 are males, and 11,604 females.

DOMINICA [native, Obeahua] one of the Marquessa Islands, S. Pacific Ocean lat (N point) 8° 34' S. lon 139° 4' W. (N.) the largest of the group being about 18 m long and the same in breadth. It is crowded with rugged hills, rising in ridges directly from the sea, and separated by deep valleys, which as well as the sides of the hills, are clothed with wood.

DOMINICK (St.) par Eng. Cornwall 3226 sq. P. 862. **DOMITZ**, a town in Mecklenburg-Schwerin, cap. hall of same name, on the Elbe at the confluence of the Elde 84 m. S. by W. Schwerin. It is built in the shape of an irregular square, and is surrounded on the S. and E. sides with an earthen rampart flanked with bastions, and defended on the W. side by a citadel, situated on an island in the Elbe. It contains a church, townhouse and barracks and has manufactures of linen & small building, yarn, wine, shipping a considerable trade and four annual fairs. Dominick suffers much from the inundations of the Elbe. Pop. of town 2545, of hall June 48 pro sq. mi. 5167.

DOMNEA, a town in France, dep. Dordogne, 1 bank Dordogne 26 m. S.E. Périgueux. It is picturesquely situated on one of the highest and steepest hills of the department, and was once a place of great strength and much more importance than at present. Its ancient walls and fortifications, extending to a considerable distance around its present site, may still be traced. It has monthly fairs, one of them, for cattle, is of some consequence. Pop. 1144.

DOMMEL (anc. *Duisseld*) a river Holland. It rises in Belgae Lutberg flows N. into N. Brabant to Eindhoven, thence directly N.W. to Harlingenboech, where it unites with the Aa, whose name it takes, and falls into the Maas at Crevecoeur after receiving several affluents of which the most important are the Little Dommel and the Tongelose, on the right, and the Eikenriet and Ley on the left. It is not navigable but propels numerous mills. Course very crooked direct distance from source to mouth about 40 m.

DOMMITZSH a town in Prussia, prov. Saxony gov. Merseburg, 7 bank, Elbe, 7 m. N.W. Torgau. It consists of the town proper and a suburb contains a church and an hospital and tile-works, extensive potteries, and has three annual fairs. Pop. 1979.

DOMNAU a town in Prussia, gov. of, and 24 m. S.E. Königsberg. It is the seat of a court of law contains a church and an hospital and has a trade in horses and cattle, and four annual fairs. Pop. 1281.

DOMO, or Domo d'Ossola (Latin, *Ossola, Oculina*) a town, Savoy, in France, dep. Novara, formerly cap. of and prov. Ossola, but now in prov. Pallanza, 7 bank Tosa, 28 m. N. by E. Turin. It stands on the great Simplon road, in the centre of a plain, 1000 ft. above the sea, and surrounded by lofty mountains is the seat of a superior court of law and several public offices consists of the town proper and a suburb, and is on the whole well built, having several good streets, and one large, and six minor squares. It contains a handsome parish church, consisting of three naves, separated by rows of pillars, and adorned with numerous fine frescoes; a Franciscan church and convent, several elegant palaces, of which that of the Della Milla family is most deserving of notice, a courthouse, a large and well-constructed prison, an hospital, a superior school or college, kept in the old palace Melisaris and an old castle, now occupied as private buildings; and has manufactures of cotton, hosiery, and articles in wood; a weekly market, and two annual fairs, each of which lasts eight days. Pop. 2200. (Ossola).

DOMS a town in Hungary, co. Güns, on the Danube, about 19 m. N.W. Pest. It contains a handsome church, built on the ruins of a celebrated old monastery and in the

neighbourhood, on Mount Arpa, is an old feudal castle. Pop. 1067.

DOMREMY-LA PUCCELLE, a vill. France, dep. Vosges, 7 m. N. Neuchâteau near Vaucouleurs. It is built half way up a hilly mountain slope, in a beautiful valley watered by the Meuse. The small houses which form the central street are neat, and their outer walls generally covered with espalliers, which give the place a pleasing aspect. The celebrated Joan of Arc was born here in 1412 in a cottage which is still standing. It had formerly been a stable but now serves as a girls' school for young girls. In 1820 a fine public fountain, with a marble bust of the heroine, was raised in front of it. Pop. 519.

DOMBIANSE, a market in Russia, gov. of, and 40 m. N.W. Perm. In its vicinity are extensive iron-works. Pop. 1600.

DON [ana. *Tonale*] a river Russia, which issues from Lake Ivan-Ozera, in the gov. of Tula, lat. 53° 47' N. lon. 38° 15' E. and flows S.E. through govt. Riazan, Tambov, Voronezh and Don Cossacks to within 37 m. of the Volga, where it turns abruptly S.W. for 226 m. and falls into the Sea of Azov, near the town of Azov, by three mouths, only one of which is navigable, whole course nearly 800 m. The chief tributaries are, 1. Junk, the Donets and Voronezh. 1. The Kleper and Manditch. The delta of the Don is an expanse of sandy flats, occasionally quite submerged round with reeds, running 28 m. up, and 22 m. wide at the coast line. notwithstanding the shallowness of the channel, its vessels drawing 6 ft. water being able to get up in more than about 80 m. namely to Rostoff or Azov, it has by far the most busy trade of all the rivers of S. Russia. The navigation is nearly all downward indeed and can only take place during spring floods nevertheless, by means of its lower course in connection with the Volga, the S. provinces of Russia receive most of the Siberian produce they need and also the manufactures they require from the interior of the empire. The extensive and productive fisheries of the Don likewise add much to the traffic upon its lower waters.

DON — 1. A river England, co. York, which rises near the borders of Cheshire flows E. to Lonsdale, thence S.E. to Sheffield, and thence N.E. to Goole, where it joins the Ouse after a course of about 86 m. Its principal tributaries are the Rother the Dearne, and the Went and the chief towns on its banks are Penisthorpe Sheffield Rotherham, and Doncaster. By means of artificial cuttings and canals it has been rendered navigable to Sheffield a distance of nearly 40 m. — 2. A river Scotland on Aberdeen rising in several small streams flowing from the hills between cos. Aberdeen and Banff. It flows tortuously S. through the whole breadth of Aberdeenshire, past Towie, Alford Moraymark Inverury and Kintore and falls into the N. Sea, 4 m. N. Aberdeen, after a total course of 62 m. Its principal tributary is the Urie which joins it at Inverury. Its salmon fisheries are of considerable value.

DON (La) a river France which rises at Yvette, on the E. frontiers of dep. Loire-Inférieure, flows almost due E. across that department, and joins 1. bank, Vilaine, about 5 m. N.E. Redon after a course of 56 m., of which about 10 m. beginning near Gueméné, are navigable.

DON BENITO an *encomienda* in Spain Extremadura, prov. of and 49 m. E. Badajoz. 35 m. S. Trujillo, near 1. bank, Guadiana. Most of the houses are substantially built, and form wide, clean, and tolerably well paved streets. The town contains three squares, the principal one of which is large, has a public promenade in the centre, and is lined with handsome buildings, among others the townhall, prison, and a convent. Its other public edifices comprise two chapels, two hospitals, 11 schools, a barracks, townhouse, and extensive cemetery. The supply of water is copious but its quality indifferent. Manufactures—cloth, paper, wine, and oil. The weaving is principally performed by female Trade—in cattle, grain wool, fruits &c. Annual fair in September. The Guadiana affords great facilities for the transportation of its agricultural and industrial produce to Mérida, Badajoz, and other points. Pop. 14,610.

DON CUSACKA. See COSACKA.

DONA (SANTA), or FOMBO, a vill. and par. Austrian Italy gov. of, and 20 m. S.W. Udine, on a creek of the Taglia. It contains a parish church and two churches. Pop. 3680.

DOÑA MENCIA is in Spain Andalusia, prov. of and 24 m. S.E. Cordova, on a hill-slope. Its houses are well built; it has a townhall a normal and a female school, a parish church, and two hermitages and a public walk, adorned with two stone fountains. The inhabitants, though chiefly engaged in agriculture, have seven oil and eight flour mills. They also make wild soap, and have 20 establishments for distilling brandy which is exported to a considerable extent. Pop. 4280.

DONARD a par. and vil. Ireland co. Wicklow 17,048 ac. Pop. 132. —1 (Wicklow) 3175 ac. Pop. 291.
DONAU see DAVON.

DONAUERBACHEN a tn. Baden-Lake circle cap. town, of same name, at the confluence of the Rhine and

Rhine 29 m. E. by S. Freiburg. It contains a palace the residence of the Prince of Fürstberg a plain modern edifice, with a library and picture gallery a handsome parish church gymnasium and theatre, and has manufactures of linen and some general trade. In the corner of the palace garden is a basin filled with clear sparkling water which is conducted for about 50 yards by a subterranean channel into the Rhine and thence to be the source of the Danube, because there the stream first begins to bear that name. Pop. of tn. 8050 of hall 6928.

DONAUSTAUF a market in Bavaria, circle Regens, 1 leuck, Danube, here crossed by a bridge 6 m. N. E. Rasthorn. It contains two castles one of them a well preserved ruin picturesquely situated on a height which overhangs the town and commands a fine view. Two churches and a poor-house. On a neighbouring height stands the Valkilla or Walbilla a large imposing Grecian temple of the Doric order intended as a national monument and temple of fame for Germany. Pop. 1161.

DONAUFÜRT to Bavaria, circle Swabia, cap. dist. of same name at the confluence of the Werra and Danube, both of which are here crossed by bridges 26 m. N by W Augsburg. It lies on the side of a hill in the form of an amphitheatre is surrounded by a wall, and is well built. It is the seat of a court of law and several public offices contains four churches, two chapels a town-house, a Latin school hospital Dominican monastery and the buildings of a fine old Benedictine abbey and has manufactures of linen and leather some shipping a considerable trade in corn, flax linen wool and cattle, and several annual fairs. The heights of Schellenburg in the neighbourhood are memorable for the entrenched camp which the Bavarians had formed upon them and the fire of it by Marlborough a few weeks before the victory of Blenheim. Donauwörth is very ancient, and rose to be a free imperial city. Its inhabitants early embraced the Reformation but, in consequence of some violent proceedings in 1607, subjected their town to the ban of the empire. The severity of the punishment led to the formation of the Protestant League and in opposition to it, of the Catholic Union and thus indirectly was one main cause of the Thirty Years War. Pop. of tn. 3700 of dist. (area, 72 sq. m.) 18,450.

DONCASTER, a market to and par. England co. York, W Riding. The town 142 m. N. W. London and 25 m. E. Leeds is pleasantly situated on bank Don, here crossed by two handsome stone bridges. Doncaster may be described generally as well built and handsome. The streets are for the most part straight, broad and well paved and the principal supplied with excellent sewerage they are also well lighted with gas. The parish church is a large and magnificent ancient cruciform structure, having a richly ornamented tower 151 ft. high, and containing many interesting monuments and relics of antiquity. Christ Church is a handsome modern fabric built at a cost of £18,000. Besides these two churches there are a large Wesleyan chapel a commodious Independent chapel and several smaller ones belonging to the Primitive Methodist, Baptist, and Unitarian respectively also a R. Catholic chapel. The other public buildings are the mansion-house, an elegant edifice of the composite order the townhall a new and handsome building the district jail, public library news-room, corn exchange covered market, lyceum and the bathing room situated near the mansion-house a small but handsome edifice, with Ionic columns. The cross a remnant of an ancient one, taken down in 1793 is a very elegant structure. The principal educational institutions are a grammar school a national school a British school, and several daily schools. There are numerous charitable institutions, a dispensary and the Yorkshire Institution for the instruction of deaf and dumb children, liberally supported, and occupying a large and commodious building called Eastfield House, in an airy situation near the race course. The manufactures of Doncaster are considerable consisting mostly of a little cotton and wool spinning, and glove and stocking knitting by the labouring population. There are, however, some small ironworks, ropework, machine works, and a flax and flour mill. It has also a considerable trade in corn by the Don which is navigable for vessels of 80 tons as the up as Sheffield, or about 20 m. beyond Doncaster. The celebrated race of Doncaster with which that name is now inseparably

assembled, commenced on the Monday of the third week of September and continue for five days. The race course, nearly 2 m. in length, is about 1 m. from the town, on the road to London, and is one of the finest in the kingdom. The grand stand is an elegant and commodious structure, erected by the corporation which subscribes, besides, £280 per annum rent and shows liberal expenses, amounting to upwards of £250. The whole cost of forming, and subsequently improving the race course, was £177 when the grand stand was erected, is said to amount to about £20,000 all defrayed by the corporation. The celebrated St. Leger stakes were established in 1776, and received their name from their principal founder Colonel St. Leger who resided in the neighbourhood of the town. For this race, 15 to 30 horses are generally entered, although there have been frequently three to four times that number. In 1803, the King's plate of 100 guineas, was removed from Bedford to Doncaster. The race attracts visitors from all parts of the kingdom, from Ireland and even from foreign countries.

Under the Municipal Reform Act the borough is divided into three wards, with six aldermen and 18 councillors. It has also a commission of the peace. The income of the borough is between £10,000 and £11,000. Doncaster was originally a Roman station, being at a point where one of the great Roman roads crossed the river Don and is called *Dannum* in the *Itinerary of Antoninus*. From the Saxons it obtained the name of *Dons Castrum* whence its present appellation. Previous to the Reformation it was the seat of several monastic establishments, amongst which was the White Friary founded in 1350. The Grey Friary founded in 1310 and the Black Friary of uncertain date, with several chapels and hospitals. The cleanliness and elegance of the town the beauty of its situation, salubrity of its air and the abundance and cheapness of provisions render Doncaster one of the most desirable places of residence in the kingdom. There is a station of the Great Northern Railway in the town. Pop. 12,583. Area of par. 6,577 ac.

DOENCHERY, a hamlet, France, dep. Ardennes, S. m. W. Sedan, 1/2 m. Meuse. It is surrounded with walls, and generally well built and has manufactures of straw, iron-wares and sheet iron also a tannery and dyework. It was once a stronghold and retained an attempt of the Emperor Charles V. to take it. Pop. 2032.

DONDA CAPE Indian Archipelago, at Celebes, N. W. coast, S.W. Cape Rivers, and about 6 m. N.E. Cape Tennoel lat. 0° 48' N. lon. 119° 5' E.

DONDRAH or **DONDRAH HEAD** [anc. *Dondra*—the island's end] the S. extremity of an (Cyprus lat. 35° 55' N. lon. 30° 37' E.) a steep narrow and rugged promontory overlooking and about 1 m. E. of a low tongue of land covered with coco-nut trees. It was the site of the Ptolemaean capital during a part of the seventh century numerous remains of which still exist, including several hundred upright stone pillars interspersed among native huts, gardens, and coconut plantations they are cut into various shapes, and exhibit different sculptures. Near the sea shore is a group of plain stone pillars and on a low rocky point a single pillar over which the sea breaks under heavy storms, the remains of some ancient building. This solitary pillar the form of which is alternately octagonal and square is supposed to mark the utmost limits which remain of Vishnu's conquest and religion. Dondra is still held particularly sacred by the votaries of Vishnu, and still has a temple, with its priests and attendants. Near the ruins is a new village of some name, containing a Wesleyan school, and 900 inhabitants.—[Friedrich's *Cyprus Capten Gaster* etc.]

DONEGAL, a maritime co. Ireland, N.E. coast, prov. Ulster cap. Lifford having Lough Foyle, and the co. of Londonderry and Tyrone, on the E. Donegal Bay and the co. of Fermanagh on the S. and the Atlantic Ocean, on the N. and W. Greatest length 85 m. greatest breadth, 41 m. Area, 1,184,466 ac., of which 293,191 are arable the greater part of the remainder being composed of heathly mountain and bog. The coast is indented with numerous bays and arms of the sea the most remarkable of which, Lough Swilly penetrates 20 m. into the land. It is the most mountainous county in Ireland, and, in many parts, especially towards the S.W., the most desolate and dreary. There are, however, many fine fertile valleys, and the scenery in the rougher dis-

tricts is often magnificent. Some of the higher mountainous strata are elevated from about 3000 to nearly 3500 ft. The loftiest are Errigal, in the N.W., and Blinnisk in the S.E. The wildness and most romantic scenery is to be met with in the barony of Donagh, which comprehends the S.W. peninsula, in which the county terminates, a space of about 15 m. in length from Bannish Inlet (about 10 m. in breadth). The coast here is head, for several miles, with stupendous cliffs and precipices, rising in some places to the height of nearly 3000 ft. Several small islands are scattered along the N.W. coast, of which the N. Arran Islands are the most considerable. The streams and lakes are numerous but small; of the latter Lough Derg (which see) is the most noted. The climate is moist, the soil-solubly shifly granite, mica-slate, and limestone, and the principal crops oats, potatoes, and flax, though wheat and barley are also successfully cultivated in some of the more favoured districts, particularly in the baronies of Raphoe and Tyrnagh. The whole extent of land under crop, in 1851 was 477,453 ac. or about one-fifth of the entire surface. Spade husbandry is much employed, and agriculture generally is in a very backward state though improvement is going on in some quarters, of which may specially be mentioned the district of Gweedore (which see). The cattle are small and stunted though improved of late years by the introduction of Scotch and English breeds but the pasturage, in general, is unfitted for fattening and is used only for grazing sheep, young cattle and milk cows. The manufactures are limited, most of the cloth is descending, while that of woollen stockings, which affords employment to a great many females, is increasing. Cotton cords, velvet, fustians and checks, are woven for exportation and frizes for home consumption. There are several bleachfields in the county and numerous flour-mills. The herring fisheries are extensive and valuable employing in 1849 3180 registered fishing vessels, and 12,183 men and boys. Cod ling, haddock, turbot, and other flat fish abound on the coast, but little is taken beyond supplies for the neighbourhood. A considerable trade is done through the exports of the county Ballyshannon, Letterkenny, Bannaghmore, Donegal and Killybegs. Whisky is made in large quantities both licensed and unlicensed in particular the barony of Inishowen has long been celebrated for the superior quality of the spirit produced there and for the prevalence of smuggling amongst its inhabitants. The minerals of the county include marble of various and valuable kinds lead and copper ores, iron pyrites, manganese, pipe-clay &c. but none of these have yet been wrought to any advantage. 1 earl's mansions about it in the rivers, in which large and fine pearls are often found. The number of children attending public schools in 1841 was 14,085 but, in 1848, the number had increased to 21,014. Donegal contains six baronies, Donagh, Ballybeg, Linn, Kesh, Killybegs, Raphoe, and Tyrnagh and 51 parishes and returns two members to Parliament both for the county Registered electors (1850) 701 Pop. (1841) 296,448, (1851) 255,100.

DONEGAL, a market in and seaport Ireland, co. Donegal pleasantly situated at the head of bay of same name, at the mouth of the Lak, 29 m. N.E. Bally. lat. 54° 39' N. lon. 8° 7' W. (n.) It consists principally of three streets, radiating from a large triangular market-place, a well built chiefly of stone; amply supplied with water and has altogether a clean orderly and thriving appearance. It contains a handsome church, a R. Catholic chapel and Independent, Wesleyan and Presbyterian meeting houses a national and other schools, a workhouse fever hospital and dispensary. The trade of the place is rapidly increasing and considerable improvements have been made both in the town and harbor. There are two extensive establishments for making spades shovels, &c., two tanneries, rope walk, and stone and water power mills for grain. The female population is chiefly employed in sewing needle-work. Markets on Saturday and fairs the second Friday of every month. In the vicinity are the remains of a fine old castle belonging to the O'Donnells, Earls of Tyrconnell the ruins of a monastery founded by the same chieftains in the 15th century and a well frequented sulphurous spring. Donegal gives the title of Marquis in the peerage of Ireland, to the noble family of Chisholm. Pop. in 1841, 1860 in 1851, 1063.—[Local Correspondent.]

DONEGAL BAY an extensive indentation formed by the Atlantic on the W coast of Ireland, co. Donegal, Letterkenny, and Bally. It is 30 m. wide at its entrance between Tilly and Tully Head on the N., and Gage Point on the S.; while inland, it extends about 20 m. It receives several rivers and contains numerous inlets, creeks, and harbours.

DONEGORE, par. Irel. Antism. 1660 ac. Pop. 1840. The tower 33 m N by W Cork, lies on the Ashby here crossed by a handsome stone bridge of three arches. It has a neat and commodious parish church, with a tower, a handsome R. Catholic chapel, a nursery two public schools and a dispensary but no manufactures, and very little trade. In the neighbourhood are several corn-mills. Market on Saturday; annual fair August 12. In the vicinity are several interesting monuments of antiquity including Kilcolman castle, for a considerable period the residence of Edmund Spenser the poet. Area of par 30,443 ac. Pop. 4846; of tn. 1808.

—(Local Correspondent.)

DONELIZ, or **SARATON-DONELIZ**, a river Russia, which rises in gov. Kozlovsk about 16 m. N.W. Karocha. flows first almost due N. passing the towns of Belgorod and Tivry at the latter of which it becomes navigable then E.S.E. separating gov. Kozlovsk from Ekaterinopol and Ekaterinopol from Voronezh and Don Cosmaki traverses latter gov. and finally about 40 m. N.R. Novo-Tshekuk, after a course of nearly 400 m. joins r. bank. Don whose volume it doubles. Its principal affluent is the Oskol on the left. It flows generally through a fertile country in a deep and majestic stream and is of great navigable importance.

DONG-NAI—J. A. prov. Annam cap. Saigon, bounded, N by Cambodia, E. by Champa, S. by China Sea, and W by the Gulf of Siam. length, N to S about 800 m. greatest breadth, N.W. to S.E. 180 m. It is watered by the Mekong and its numerous branches, by the Dong-Nai and by other streams of less importance. It is generally mountainous and wooded, and abounds in game. The inhabitants, among whom it is reckoned that there are 16,000 R. Catholics, are chiefly occupied in hunting.—2. A tn. above prov. 13 m. N.E. Saigon.

DONGEN a vil. Holland prov. N. Brabant, 6 m. N.E. Breda. r. bank, stream of same name. It contains chiefly of one long street, and has a Reformed and a R. Catholic church and a school. Pop. 580.—The straits runs near the frontiers of the Belgian prov. of Antwerp, flows N. in a crooked course, is navigable for small vessels and falls into Hollands Dijk at Grootendijkberg.

DONGES a tn and com. France, dep. Loire-Inférieure 8 m. S.W. Saumur at the edge of some extensive marshes which bear its name, r. bank, and near the mouth of the Loire. It has some trade in corn wine and cattle and particularly in linens, which to the value of about £4000 are said to be sent every year to England. Pop. 2700.

DONGO [ann. Advancum] a vil. and com. Austrian Italy gov. Milan prov. of, and 30 m. N.E. Como, at the foot of a mountain which rises above the W shore of lake Como. It contains a parish church, situated almost close upon the lake and has manufactures of cotton and of mathematical instruments; and extensive iron and copper foundries, which derive their supplies of materials from copper and iron mines worked in the vicinity. Pop. 1299.

DONGOLA a prov. Upper Nubia cap. New Dongola, ill-defined but generally represented as lying between lat. 17° 50' and 19° 30' N. It consists of an extensive plain of about 180 m. long but of quite a limited breadth, embracing both banks of the Nile by which it is traversed throughout its entire length, meandering in its course the island of Argu (Sudd) and. Nearly all the fertility of the province, however, is to be found on the l. bank, the r. being almost entirely covered with drifted sands. Irrigated and enriched by the inundations of the Nile which covers the whole plain, presenting a watery surface of from 12 to 25 m. in breadth, the W side of the river is extremely productive, yielding two crops in the year—the one in January the other in May. The principal products are corn and dates, but cotton, saffron, opium, and indigo, are also grown and attempts have been made to cultivate the sugar-cane. The climate is agreeable, and, on the whole, healthy excepting during the rains, which fall in September and November, when fever is prevalent, though not of a dangerous character. On the rising of the

Nile, a retreating coolness is diffused through the atmosphere, and the general salubrity of the climate restored. The coolest heat is from March to July both inclusive. The chief domestic animals are horses and sheep. The former an Arab breed, highly esteemed all over the E. were nearly all destroyed in the recent wars. In the uncultivated portions there are hyenas, lions, and gazelles and in the river sturgeon, crocodiles, and hippopotami. The Dongolans are a purely Ethiopian race and distinguished from other Nubian tribes by their lighter colour and hair, they are represented as being nearly naked, and as being indolent, immoral, frivoli, greedy and selfish, they are Mahomedans, speak a language of their own mixed with a considerable number of Arabic words, and employ themselves in agriculture and cattle-rearing, and in trading especially in Egyptian and European goods and in slaves. Notwithstanding the fertility of the soil, they live in the most abject poverty being ground down and enslaved both by the Egyptian Government and by their native Malika. Pop. about 60,000.—(Four. Roy. Geo. Soc. Russag's Bazaar, Constantinople London.)

DONGOLA (New) or **MARAKAH** [Native *Al-Urdy*—the barracks] a tn. cap. above prov. about 500 ft. from l. bank, Nile and sufficiently elevated to clear the inundation of the river lat. 16° 52' 13" N. lon. 30° 47' 22" E. (N.) It owes its origin to barracks built after plans by the naturalist Ehrenberg in lieu of those destroyed at Old Dongola by the Mahomedans. It is the seat of a pacha, has Government offices, a well-supplied bazaar a coffee-house, indigo factory and bath. It is the meeting-place for the caravans from Kordofan and Senegal. Pop. 6000 or 6000.

DONGOLA (Old) a tn. formerly cap. above prov. r. bank. lat. 75 m. S.E.E. New Dongola. It was formerly an important commercial town but is now a miserable village. The ruins of the old town lie on a rock about 500 ft. high surrounded by fortifications built with a strength rarely met with in such countries. The palace of the ruler of Nubia may still be distinguished by its size and form. Pop. 300.

DONBESAD two par. Rag. Wilts.—1. (St. Andrew) 2540 ac. Pop. 381.—2. (St. Mary) 284 ac. Pop. 1891.

DONINGTON two par. Eng.—1. Salop. 1641 ac. Pop. 852.—2. (Lepw-Don) Lincoln 1890 ac. Pop. 489.

DONINGTON a tn and par. England on Lincoln the former on a plain, 9 m. S.W. Boston has tolerably well kept streets houses principally of brick well built supply of water abundant. It has a church an ancient manor with a gate and fine halls and three chapels, belonging to Puritan Baptists, Wesleyans and Primitiv. It contains three free schools, an almshouse, and other charities founded by bequest of Thomas Cowley in the early part of last century. The people are chiefly employed in agriculture, and in the trades common to a country town. Area of par 6180 ac. Pop. 1887.—(Local Correspondent.)

DONINGTON CASTLE a vil. and par. England co. and 17½ m. N.W. Leicester. There are some remains of an ancient castle on an eminence near the village three ancient fairs are held. Area of par 4350 ac. Pop. 3028.

DONKERBROEK, a vil. Holland prov. Zealand, 23 m. S.E. Leerdam, with a Reformed church and school, and 700 inhabitants, engaged in agriculture and cattle-rearing.

DONKOW a tn. Russia, gov. of, and 87 m. S. by W. Riazan, cap. circle of same name, r. bank, Don, at the confluence of the Voronezh. It contains six churches and a monastery and has some general trade, and an annual fair. Pop. 2500.—The circle, which it waters by the Don contains generally of a rich soil which yields heavy crops and rears many cattle but is poorly wooded. Pop. 18,000.

DONNA an isl. Norway coast of Nordland lat. 66° 16' N. lon. 12° 40' E. greatest length, N.E. to S.W. 19 m. average breadth about 6 m. It is only inhabited by fishermen.

DONNAI **DONG KAI** or **SAIWA**, a large river Annam, which flows past Saigon, to which place it is navigable, and falls into the China Sea at Cape St. James lat. 10° 16' N.; lon. 107° 7' E.

DONNAOE, an isl. Norway coast of Nordland, at the mouth of the Easen fjord lat. (centre) 66° 7' N. lon. 12° 45' E.; about 13 m. long by 5 broad. There is a village of same name on its E. coast, and one named Donnaen near the N.E. point. Inhabitants fishermen.

DONNAS or **DOUAR**, a vil Beridien Sines, Piedmont, on the Don-belt, here crossed by a wooden bridge. The inhabitants are chiefly engaged in agriculture. Pop. 1830.

DONINGTON two pars. Eng.—1 Hereford 808 ac. Pop. 113—2 Sussex 1029 ac. Pop. 184

DONNYBROOK a par and vil Ireland, co Dublin. The parish contains a number of small towns or villages, including Inverness, Marrow Begone and Neandymont area, 720 ac. Pop. 111. The village, 2 m. S. by E. Dublin, on the Dodder, here crossed by a handsome bridge, contains an elegant parish church, a spacious R Catholic chapel, a classical and other schools, a hat manufactory and several mills but is chiefly remarkable for the famous fair held annually during the week commencing August 26, and which was formerly the scene of riotous frolic and frequently of bloodshed. Pop. 1610

DUNOBOW a tn. Burnah prov Pegu 60 m. N W Rangoon lat. 1° 8' N. lon. 95° 55' E. Its formidable defences in 1825, when it was attacked by the British presented a remarkable specimen of the skill of the Burmese in erecting temporary defences. Pop. 111

DOONGERPOOR, a tn. Hindostan cap. of a small principality prov. Goughat, 35 m. W. E. Ahmedabad; lat. 25° 47' N. lon. 78° 55' E. The prince of this territory claims the highest consideration on the ground of caste, and are exceedingly penurious in exacting the defences due to it or high birth. The country was at one time overrun and impoverished by bands of Arabs and Scindias in the pay of the Moogoor chief but was rescued from this oppression by the British government.

DOONGNEY par. Ire. Wexford 1081 ac. Pop. 181

DOORA par. Ire. Clare 5918 ac. Pop. 1568.

DOORN, three rivers, Cape Colony, S. Africa.—1 (Great), Olmwilliam and Worcester districts, having its source in the latter lat. 33° 11' S. lon. 20° 50' E. whence it flows N. W. to lat. 31° 30' S. when it bends suddenly round to the S. W., and, after a course of about 12 to 15 m. in this direction, falls into the Elephant or Olifants river at Melkboom; lat. 31° 27' S. lon. 18° 30' E. Its entire course to this point being about 170 m. In its progress it is joined by several large tributaries the principal of which are the Tak or Oogelika, Tanguis, Swartkops or Oosters Kloof river and the Kloof Doorn river.—2 (Karoo) a river formed by the junction of two principal head streams one of which has its rise in the Karoo or desert plains N. from Olmwilliam district, the other in the latter territory. The junction occurs at lat. 30° 54' S. lon. 18° 45' E. from which point the stream flows S. S. W. and falls into the Elephant river at lat. 31° 27' S. Its entire length from the point of union is about 4 m.—3 (Kloof) a river has its source in nearly the same latitude with those of the Great Doorn, and about 20 m. apart. They also run nearly parallel courses till they unite at lat. 31° 50' S. lon. 18° 10' E. Length of course about 150 m.

DOORN a vil Holland, prov. of and 11 m. E. E. Utrecht, with a Reformed church a school and an annual fair, inhabitants agricultural. Pop. 1002

DOORNENBURG or **DOORNENBURG** a vil Holland prov Gelderland 8 m. E. N. E. Nijmegen near Runk, Rhine, with a R Catholic church and a fine castle. Pop. 600

DOORNRIK a tn. Belgium. See TOURNAI.

DOORNRIJK a vil Holland, prov Gelderland 36 m. N. W. Zutphen, on the shore of the Runder See. From the eruptions of which it is defended by a dike which however, in 1825 was partially destroyed in a storm, and much damage done to the village and surrounding country. There are here a Reformed church and school and, with the attached hamlets, 1,000 inhabitants.

DOOSHAKU or **JOLLAHARID** a tn. W. Afghanistan, 4 or 5 m. E. the Helmand river 760 m. W. Kandahar lat. 31° 58' N. lon. 61° 45' E. situated at the base of some hills, over which the road from Herat to Belochistan passes at the height of about 100 ft. It is surrounded by a mud wall surrounded by towers. Like many other Eastern cities it was of much greater extent formerly than now as appears from its extensive ruins. It contains 3000 inhabited houses.

DOR or **Doter** two rivers Italy Piedmont.—1 (Dora) (anc. Du Mojo) rises at the foot of little St. Bernard, on the E. slope of the Graian Alps flows E. past the town and through the Val d'Aosta, lat. about 2° 45' E. Chastillon when it changes its course to S. E. and continuing it through Piedmont, past Fort Bard and Ivrea, joins Isonzo, 36, about 4 m. W. Cossomano, after a course of 100 m.—2 (Riviera) (anc. Dora Minore) rises in the E. slope of the Cottian Alps, near the French frontier on the W. of prov Susa, flows first E. N. E. till it reaches the town of Susa, and then almost due E. across Piedmont, to its junction with Isonzo, 36, about 4 m. E. Ivrea, after a course of about 70 m.

DORAN, a tn. Persia, prov. Khorassan, at the junction of a small river of the same name with the Jirah 300 m. E. E. Daghdag; lat. 30° 45' N. lon. 49° E. It stands upon a marshy plain, is composed of houses built with sun-dried bricks, and having sloping roofs as defended by a fort and mud wall, and is surrounded by date plantations and has a considerable commerce by a canal which connects the Dorak with the Karun. Pop. 6000

DORAMA a tn. Arabia, prov. Nejd 38 m. W. Derrayah. The inhabitants live by agriculture and raising fruit, and by supplying the caravans which halt here on the way from Mecca to Persia. In 1818 it was taken and sacked by Ibrahim Pacha, whose nearly every individual was slaughtered, excepting about 300 females, reserved for the tents of a brutal sultan. Pop. 7700

DORAT (anc. Odrorum) a tn. France, dep. Haute-Vienne, on the Sèvre 39 m. N. N. W. Limoges. The site is fine, and the environs agreeable but there is nothing remarkable in the place except a large gloomy church of the 10th century, with turreted walls, in the form of a fortress. Its chief manufactures are wrights and measures, barometers, &c. Pop. 1852

DORCHESTER, a par. bor. and tn. England, cap. co. Dorset, and a station on the Dorchester branch of the London

and North-western Railway 118 m. S.W. London, about 6 m. from the coast of the English Channel. It is a generally situated on a gentle incline, the land, France, with open down, generally covered with sheep on the S. and W. diversified by open fields. The town, which is of an irregular quadrangular form, occupies the site of a Roman station, and consists of three principal spacious squares, crossing at right angles, and several smaller ones parallel to them, all clean well paved, and well lighted with gas. The houses are in general handsome, there being a much smaller proportion of the humbler class of dwellings here than in most other places. A beautiful avenue of promenade, shaded by rows of lime and yew-trees, leads nearly straight to the town. There are three churches, All Saints, Holy Trinity and St. Peter's, the first an ancient, and the latter two handsome modern structures. There are also several dissenting chapels. The other public buildings are the townhall, a handsome edifice the shire-hall a neat plain structure, with a Portland stone front, surmounted by a pediment a county jail and house of correction, built on Howard's plan; a small theatre, and a cavalry barracks. Amongst the educational institutions of Dorchester are a free grammar-school, founded in 1579 having two exhibitions to St. John's College Cambridge, a corporation school, and national English, and private schools. The charitable institutions comprise several almshouses, the Dorchester workhouse or hospital, erected in 1618 one of the first established in the kingdom; the workhouse for the union and several minor charities. Dorchester has no manufactures of importance, except ale, which has long been famous, and still maintains its character. The municipal government of the town is vested in a mayor, four aldermen, and 12 commoners. The sessions and quarter sessions for the county are held here and quarter sessions for the borough. The town has returned two members to the House of Commons since the time of Edward I. Registered electors (1850) 427.

Dorchester was an important Roman station, and was then strongly fortified and entirely surrounded by a wall and fosse. Many interesting Roman remains still exist in the vicinity the most remarkable of which is an amphitheatre about 4 m. S.W. from the town, the most entire structure of the kind in the kingdom. Founded in 1579 having two exhibitions to St. John's College Cambridge, a corporation school, and national English, and private schools. The charitable institutions comprise several almshouses, the Dorchester workhouse or hospital, erected in 1618 one of the first established in the kingdom; the workhouse for the union and several minor charities. Dorchester has no manufactures of importance, except ale, which has long been famous, and still maintains its character. The municipal government of the town is vested in a mayor, four aldermen, and 12 commoners. The sessions and quarter sessions for the county are held here and quarter sessions for the borough. The town has returned two members to the House of Commons since the time of Edward I. Registered electors (1850) 427.

DORCHESTER, a par and vill England co Oxford area, 3194 ac. The village the Dorset of the Romans and a place of great antiquity is situated on the Thames, here crossed by a stone bridge. It contains an ancient cruciform church a grammar-school and the remains of several ecclesiastical buildings. A fair is held on Easter Tuesday. The vicinity abounds in interesting Roman remains. Pop. 1061.

DORCHESTER, a seaport in U States, Massachusetts, 4 m. S. Boston. It is a busy seat of manufacture and trade, once small scale. Founded in 1639. Pop. about 5000.

DORDOGNE (La) [anc. *Dordonia*] a river France which is formed at the foot of Mount Dor dep. Puy-de-Dôme, by the union of the Dor and the Dore flows W. through a small portion of that department, then easterly S., forming part of the boundary between dep. Corrèze and dep. Puy-de-Dôme and Cantal. On reaching the N. frontiers of dep. Lot its course, though still very irregular, becomes almost directly due W. till it reaches dep. Gironde after having traversed dep. Lot and dep. Dordogne, to which it gives its name. It now proceeds N.W. to Bourges, a little below which it unites with the Garonne, forming the Gironde. Its whole course is about 290 m. of which 170 m. beginning at Meyronnes, are navigable. Its principal affluents, on the l. bank, are the Euse and Cère and on the r. bank the Dige, Lange Douvre, Vézère, and L'Isle. The navigation of this river has been improved, in recent years, by the removal of rocks which obstructed its channel.

DORDOGNE, a dep. France, formed of the ancient prov. Périgord, with small portions of Languedoc, Angoumois, and Vol. I

Beaune; bounded, N. by Haute-Vienne, E. Corrèze and Lot, S. Lot-et-Garonne, W. Gironde and Charente; greatest length N. and S. 70 m.; between lat. 44° 33' and 45° 40' N. and lon. 0° and 1° 20' E. area, 3492 sq. m., or 1,354,896 ac. The surface is generally rugged and hilly, being much broken by low ridges and steep precipices, none of which exceed 800 ft. A few of the heights are covered with vines, but the greater part of them are bare and arid, and not unfrequently from the abutments of plateaux, covered only with timber of stunted growth, or barren heath. The best land is along the banks of the Dordogne, in which the department owes its name and to the basin of which, with two very limited exceptions, it wholly belongs. That river traverses the S. part of the department from E. to W. and receives the rest of its drainage by the L'Isle and its affluents, especially the Dronne. The exceptions referred to are two very small portions of the department in the N. and S. as from the Charente and Gironde. The climate considerably varied by the nature of the surface, as on the whole mild and agreeable.

One remarkable fact connected with it is that during the last 80 years a considerable change has taken place the maximum heat, which previously seldom exceeded 79° now varying from 81 to 90° and the maximum cold, which used never to descend below 24° now frequently descending to 14° and occasionally even as low as 6°. Snow seldom falls but both winter and spring are rainy summer is very dry autumn is generally beautiful. Little more than one-third of the whole surface is fit for the plough and the corn raised barely suffices for the home consumption. The principal crops are rye, buckwheat, and maize. Nearly one-third of the surface is occupied by vineyards. Several of the red wines produced on the right, and white wines produced on the left of the Dordogne, bear a high name, but nearly one-half of the whole produce is consumed on the spot, and a proportion of the remainder is converted into brandy. More than one-sixth of the surface is covered with wood, of which there are several extensive forests. Among the trees of importance is the oak, which is an important article of food to the lower classes and that of the latter being extensively pressed for oil. To its domestic animals, especially horses, cattle, and sheep are usually of inferior breeds but considerable attention is paid to the rearing of asses and mules, which form the principal beasts both of burden and draught. Goats and swine are numerous and the rivers and lakes abound with fish. The principal mineral is iron, which is worked to a large extent, and, besides maintaining several blast furnaces on the spot, is exported to the départements. Some coal and lignite also are worked and there are good quantities of marble, alabaster, lithographic stone, and millstones. The manufactures, not of very much consequence, include coarse woollens, serge, bombazine, hosiery leather paper cutlery and iron the trade is chiefly in these articles, and in wine, brandy, oil, hams, truffled pâté, and poultry. For administrative purposes Dordogne is divided into five arrondissements—Périgueux (the capital) Bergerac, Nontron, Libereix, Sarlat—subdivided into 47 cantons, and 684 communes. Pop. 303,459.

DORDRECHT [Dordrecht] a city in Holland, prov. S. Holland, 14 m. S.W. Rotterdam bounded N.W. N.E. and E. by the Merwede and partly fortified on the S. or land side. It has 12 gates, and five harbours. The townhouse is an old, but carefully preserved building besides which it has a corn exchange, placed conveniently near the wharfs a weighhouse, a bank, and a national artillery arsenal. It had once three *doelen*, or houses of rendezvous for armed burghers. In front of one, beneath a large statue, the Reformed ministers first preached and baptised in 1573; and in the large hall the famous Synod of Dort met in 1618-19 to oppose the doctrine of Arminius. There, too, the provincial Synod of S. Holland met regularly until its meetings were transferred, in 1771 to the choir of the great church. The place is now decorated as a playhouse, for entertainments given during the fairs. Another of the *doelen* has been made the *arrondissement* court-house, and the third has its lower apartments occupied as a public school, and its upper by the working members of the *poetieve* society. The Reformed have three churches, among which the Great or St. Mary's is a fabric of large size, and great antiquity. 108

stone roof covered in Papal times 20 chapels and 40 altars. Its baptismal and communion vessels are of solid gold, and its pulpit is of white marble, and adorned with beautiful sculpture. There are also a Belgian Reformed, a Lutheran, and an elegant new R. Catholic church. The Jesuitists, though reduced to 100 in number have still a church and parson and the Jews have a synagogue.

The institutions of science and art in Dort are the literary society *diurna* and the art association, *schola*, which has a yearly exhibition. A branch of the public utility society, a seamen's college for the promotion of trade and navigation, a branch of the music society and of the Netherlands economical society. It has a classical an architectural, and six other schools. Among its charities are an orphan-house, an infirmary a lunatic asylum, and a sewing and knitting school several small almshouses, supported by private endowments, and branch associations of almost all the religious and benevolent societies in Holland. Dort is admirably situated for trade, being not only near the sea, but by the Rhine, the Maas, the Dort-sche-hal and other water communications, connected with an immense extent of inland territory. The number of vessels that arrived in its harbour in 1848 was 237 and

DORT from the Harbour.—From a Print by H. Auer.

in 1848, 253. It receives many of these floating islands of timber which descend the Rhine from Switzerland and Upper Germany. Hence an extensive trade in wood, employment given to 23 saw mills, and a large amount of shipbuilding. By the Rhine it receives large supplies, also of Rheinish and Moselle wine. By the Maas, Lugo and its neighborhood transports to its wharfs coal, iron and millstones. Dort has large dealings also in seeds, grain, oil, stock fish and flax. It has 21 oil-mills, and among many manufactures common to it with other Dutch towns, it alone has a steel-pen and a window-glass manufactory. Its markets are well supplied with provisions. The neighbouring towns furnish plenty of wild-fowl, salmon, sturgeon, and other river fish, as well as a variety of sea-fish, are generally abundant.

The Reformation at first encountered great opposition in Dort. In 1566, when Reformed preachers generally commanded large audiences outside the gates of Dutch towns, they met here with no success. This tardy reception of evangelical doctrine was redressed, by subsequent zeal. During the disputes about the stadtholdership, in 1672 the common people of Dort were violently attached to the house of Orange, but when those disputes revived, in 1788 and the court of France interested, Dort assumed an attitude of defence, and obtained advantageous terms from the advancing Prussians. On the night of the French public functionaries in 1813, its burghers showed great zeal in raising over the national flag of Holland and during a protracted interval, in which the French and Dutch contending elements, never fully supported the cause of national independence. P (1850), 50 678

DORT ABSEY par Eng. Harford 5890 ac. Pop. 588
DORT par Not. Inverness, 20 m by 4 m Pop. 1650.
DORTHEM, 2 places, Saxony.—1 A vil. cruce Zwolow, pleasantly situated in the deep valley of the Zwisitz 4 m. S.E. Stolberg. It has a saw and four other mills. The celebrated jurist, Samuel Puffendorf, was born

here. Pop. 630.—3, A vil. cruce Dresden, dist. of, and about 9 m. S. Freiburg, in the beautiful valley of the Elbe river. It contains a handsome church, and has some manufactures of linen, a considerable trade in butter and iron, two saw two oil, and two flour mills. Interesting fossils are found in the neighbourhood. Pop. 1260

DORGALI, a vil., Ital. Sardina, prov. of, and 14 m. S.E.E. Nuoro. It stands on an elevated plain, in a rugged and mountainous district, consists of houses built partly of stone and partly of mud and whitewashed, so as to present at a distance a very obtrusive appearance. It contains a parish, and several other churches, has some manufactures of woollen cloth, silk, and ironware and a trade in cheese, cattle, goats and swine. Pop. 8479

DORHEIM, a m. Hesse-Cassel, prov. Hesse, cap. hall of same name, on the Uss, 16 m. N.N.E. Frankfurt-on-the-Main. It contains a small castle and two churches, and has numerous distilleries. Coal is worked in the neighbourhood. Pop. 698.

DORJELLA a vil. Indian Archipelago cap. Wammer one of the Arru Islands. It is well built, in a square form has a battery and a small, but neat Christian church in which worship is conducted on Sunday by a school master from Amboina. The most of the inhabit ants are Christians.

DORKING a market to and par England, on Surrey The town 22 m. S.W. London pleasantly situated in a valley 1 bank, Mole, consists of three principal streets, clean, spacious, well paved, and well lighted with gas. The houses are neat and well built, and the whole appearance of the town is extremely pleasing. The church, which stands on the summit, is a commodious cruciform structure, and contains some handsome monuments. There are, also, several dissenting places of worship. The charities comprise two national schools, infant schools, some almshouses and funds for apprenticeship fees and marriage portions. In the High Street is the townhall a good substantial building. The chief trade of the town is in flour, lime and poultry, the latter of a peculiar breed having three claws. The Dorking fowls are celebrated for their excellence, and are in great demand for the London market. They are generally white, or of a partridge colour and are supposed to have been brought over by the Romans. It is a favourite resort of invalids from the metropolis, during the summer months. The custom of Borough English, by which the youngest son is heir to the copyhold estate prevails in this manor. Pop. of m., 2490 of par (area, 10 020 ac.) 5996.

DORMAGEN (anc. *Durnessaga*), a m. Prussia, gov. of and 10 m. S.E.E. Düsseldorf, near L. bank Rhine. It contains a R. Catholic parish church and has manufactures of linen, and several breweries and distilleries. Pop. 1233

DORMANS, a m. France, dep. Marne, 34 m. W by N Chalons, L. bank Marne. It is a seat of active industry has potteries, brick, and tile fields, iron tool factories linen weaving tanneries, and skineries, lime and plaster kilns, &c. There is an inland trade, on the river in grain wine wood, and charcoal. Pop. 1679

DORMINGTON par Eng. Harford 1861 ac. P. 189

DORMSTADT par Eng. Worcester 830 ac. Pop. 109

DORNACH or DORNACH, a vil. and par Switzerland, can Soleure, at the W foot of the Saltersthal in a beautiful district, near r. bank Rhine, here crossed by a handsome stone bridge, 5 m. S.E.E. Basel. It is well built, and contains an elegant church, in the cemetery of which a monument has been erected to the celebrated mathematician, Meissner who was buried in it. In the neighbourhood are an old Jesuit monastery, and the ruins of a strong castle, which after a valiant defence, was taken by the French, in 1798, and demolished. Dornach is celebrated as the scene of a victory gained by the Swiss over the Austrians in 1499. Pop. 708.

DORNACH or DORTY a vil. France, dep. Haut-Rhin, 9 m. N. Altkirch, on an affluent of the Ill. Pop. 5055.

DORNBERN Dornbach or Dornbach, a market to Austria, Tyrol, Vorarlberg, cap. dist. of same name, on the

Loos, at the foot of a mountain range, 5 m. S. Neugau. It is the seat of a law court and several public offices, contains a parish church, and has manufactures of muslin and calico, a considerable general trade, and the most important cattle market of the country. Pop. of m. 6000; of dist. town, 44 pop. m. 11 000.

DORNBURG, a town, Saxa-Wesmar on a steep hill above a lake, Saxa, here crossed by a bridge, 15 m. S.W. Wesmar. It is the seat of a court of law and several public offices, contains three churches one of which was often the residence of Goethe and has manufactures of linen and hosiery two tile-works, and two annual cattle fairs. Pop. 600.

DORNDORF, a town, Prussia, prov. Westphalia, gov. of and about 30 m. S.W. Münster on the Lippe. It is the seat of a law court, contains two E. Catholic churches a synagog, gymnasium, Franciscan monastery and hospital and has manufactures of woolen and linen cloth, a building dock, several dye-works and mills, a trade in linen and cattle and seven annual fairs. Pop. 2824.

DORNEY, par. Eng. Bucks 1550 ac. Pop. 866.

DORNEHAN, a town, Württemberg, circle Schwarzwald, 6 m. W. Sulz. It is situated in the Black Forest, and has manufactures of hydraulic machinery. It was almost burned down by lightning in 1718. Pop. 1600.

DORNO (Lahn, Dornau), a vill. and town, Sardinian States, Piedmont, 4½ of and 17 m. S.E. Ivrea, on the Tedioppan. It contains a Gothic parish church, and three other churches, and has a trade in wine, butter, cheese, corn, and cattle, and a much frequented annual fair. Pop. 3450.

DORNOCH, a small market in and royal burgh Scotland, co. Sutherland, N.W. coast of the Dornoch Firth 22 m. N.E. Inverness, on a low sandy beach, or downs, within 200 yards of the sea. Many of its houses are mean looking but some are well built, and the town is improving, and is supplied both with water and gas. It has a jail, only out in the country, a parish church, in a restored portion of the old cathedral, a handsome gothic Free church, and two schools. In the cathedral is the burying-place of the Sutherland family containing a beautiful marble statue of the late Duke. Dornoch was the seat of the ancient bishopric of Caithness and Gilbert Murray who was consecrated bishop in 1223 and is supposed to have built the cathedral was canon and under the name of St. Gilbert. It was constituted a royal burgh by Charles I. in 1628 and is governed by a provost, magistrates and council. Dornoch unites with Wick, Cromarty, Dingwall, Kirkwall and Tain, in returning a member to the House of Commons constituency 88. Pop. 451.—(Local Correspondent.)

DORNOCH, par. Scot. Sutherland 15 m. by 9 m. P. 2981.

DORNOCH FIRTH, an inlet of the N. Sea, N.E. coast of Scotland between the counties of Sutherland and Ross. At its entrance it is about 19 m. wide, and it stretches inland also 10 m. The navigation is much obstructed by sandbanks and at high water in spring tides, vessels of 600 tons can cross the bar. The towns Dornoch and Tain are on its shores.

DORNOCH, par. Scot. Dumfriesshire 24 m. by 6 m. P. 298.

DORNOSTETEN, a town, Württemberg, circle Schwarzwald, half of and 6 m. E.N.E. Freudenstadt. It stands at the foot of a lofty hill and has manufactures of articles in straw and a trade in wood. Pop. 1300.

DORNUM, a vill. Hanover gov. Aurich, 22 m. N.N.E. Emden. It contains a parish church and a castle of ancient date, which has been recently rebuilt, and has extensive gardens. Much fruit is grown in the neighbourhood. Pop. 1580.

DOROGA, a town in Hungary Thither Themas, co. Szabolcs, in a marshy district, about 30 m. N.W. Debrecen. It contains a Greek co. united, and a E. Catholic parish church, and stands in a district of great fertility with rich meadows but a deficiency of wood. Pop. 6640.

DOROGA (Kis and Nagy) two vills. adjacent to each other, Hungary Thither Dombó, co. Tolna, on the Sarva, which is here navigable about 82 m. S.E. Pesth. The former contains a E. Catholic and the latter a Protestant church. Pop. of Kis-Doroga, 1665 of Nagy-Doroga, 2664.

DOROGBOUJ, a town, Russia, cap. dist. same name, gov. of, and 65 m. S.E. Smolensk, on the Dnieper. It was partly burned by the French, in their retreat from Moscow Pop. 1850 667.

DORON, a small river France dep. Savoie, which rises in the Graian Alps, in the S. of prov. Tanaisius, flows easterly W.N.W. and, after a course of about 45 m. joins a lake, Lake, at Montiers.

DOROSMA, a vill. Hungary Little Komand, enclosed within co. Pesth, 5 m. W.W. Szeged. It contains a E. Catholic high school. Pop. 6000.

DOROSZLO, a vill. Hungary Thither Dombó, co. Bacs, on the Moskogi about 6 m. from Zombor. It contains a E. Catholic parish church and has a mill. Pop. 2325.

DORPAT DORPAT DORPAT DORPAT DORPAT (Latin Derpetus Lithuanian, Tšerpata) a town, Russia gov. Livonia, cap. circle of same name, at the foot of an oncoline, on both sides of the greater Rasebach here crossed by a stone bridge, 150 m. N.E. Riga lat. 58 22 N. lon. 26 42 E. The town is ranged in a semicircle, with straight and well kept streets the houses are generally of one story built of brick or wood, but have neat fronts, many being gaily painted. The public edifices, including the university buildings, are of brown stone, and built in a grand and pure style Dorpat is chiefly remarkable for its university which was founded in 1822 by Gustavus Adolphus, when the Swedes were masters. It was suppressed in 1606 by the Muscovites and reestablished by the late Emperor Alexander in 1802-3. To this institution is attached an observatory which the labors of Dr. Struve have made famous. Connected also with the university is the Professor's Institute, a kind of normal academy founded in 1828, for training superior students aspiring to professorships. The whole courses are open to pupils of all religious creeds about 30 professors or teachers or lecturers give instructions in ethics, law, medicine, natural philosophy and various branches of natural history to which great attention is here devoted. The number of students in 1848 was about 600; who have access to a library of more than 60 000 volumes, a museum botanical garden, &c. In the town is a gymnasium, or high school with several academies for special branches of science and morals. There are here halls for district law courts; the apartments of which are well lighted kept remarkably clean and to some extent, are handsomely decorated. Dorpat is an ancient town and in the 13th century was a place of so much trading importance as to be admitted among the Hanse towns. In 1228 it was taken by the Germans from the Russians the latter repossessed themselves of it in 1558. The Poles took it from the Russians in 1593 from whom again the Swedes took it in 1628. Peter the Great ultimately took it, and it has since remained in the possession of Russia. The vernacular language is Esthonian but that of the learned is German. Pop. (1861) 12 683.

DORRE, an isl. Australia, W. coast, forming part of the W. side of Shark's Bay lat. (S. point) 23° 18' S. lon. 119° 1 E. (L.) about 25 m. long and 5 m. broad.

DORRHA, a par. Ireland co. Tipperary 17 761 ac. Pop. 2662.

DORRINGTON, par. Eng. Lincoln 680 ac. Pop. 443.

DORSET, a maritime co. England, having the British Channel S. Wiltshire and Somersetshire N. Hampshire S. and Devonshire W. about 46 m. long and 80 m. broad area 645 840 ac. of which about 600,000 are arable meadow and pasture. The general surface of the county is undulating its principal elevations being chalk downs, in some places wooded, chiefly with hazel of which the former makes hurdles and the latter firewood. A range of chalk downs enters the county from Wiltshire, near Salisbury proceeds S.W. to the valley of the Stour from which again it extends S.W. and W. to the borders of Somersetshire beyond Corne Abbey, forming the North Downs. From the borders of Somersetshire, near Bournemouth another range of chalk downs, departing from the range in which the former terminates extends S. and E. for a considerable distance parallel with the coast, terminating near Corfe Castle at the entrance to Poole harbour, and forms the celebrated steep pastures, the South Downs. The highest point in the county is Pittenden Fen, 284 ft. W. from Bournemouth and is mostly the green sand formation. The coast line is irregular forming Poole harbour and Weymouth or Melcombe Regis Bay with two promontories Alum Head and Portland Bill, the latter on this island of same name. On the S. on the borders of Hampshire, and along part of the sea coast, is a

healthy women, about 20 m. in length, and 4 or 5 m. in breadth. The greatest part of the country however is in grass and is devoted either to the rearing of sheep or to the dairy system. The stock of the former has been estimated at 632,000 and the total produce of wool at about 10,000 packs. The dairies are generally large, and the butter produced of good quality but the cheese is indifferent, being made wholly from skimmed milk. Some excellent cider is made from the produce of the orchards in the vale of Blackmore. Wheat, barley and potatoes are raised to a considerable extent in various parts of the county. Some flax and hemp are also cultivated on suitable soils. Agriculture has made no great progress here, the farmers in general displaying a reluctance to abandon old practices, and adopt new. The climate is mild, dry and salubrious, but the harvests not remarkably early though in the more sheltered parts vegetation is sufficiently forward. The principal rivers are the Stour, the Frome, and the Piddie, which have all a course N.W. to S.E., and the latter two falling into Poole harbour. Another creek nor ever of any kind are found in this county but its quays have been long celebrated yielding the well-known Portland stone, so named from the island where it is chiefly developed and large quantities of which are sent to various towns in the S. of England, and to France, Ireland, &c. Pipe clay plastic clay and potter's clay also abound of the last a considerable quantity is annually sent to Bournemouth, for use in the finer sorts of earthenware. The principal manufactures are those of flax, carpets, dacks, &c. carried on chiefly at Bournemouth, Bournemouth, Bridport, &c. There are also silk manufactories at Sherborn and Gillingham, woollen mills at Fortington and Lyme Regis, and livery woollen broad cloths are made at several places by hand-looms. Shirt buttons are manufactured to a great extent at Shaftesbury and Blandford; flannel, called awamkin at Sturminster, gloves, parchment, cottons, and blankets, are also manufactured in the county. Both the strong beam and six of Dorchester are celebrated. The fishery, especially the coast area of various kinds, but mackerel is the most abundant. Large quantities of these are taken near Abbotsbury and along the shore from Portland to Dorset. Herrings and salmon are also caught. Near the mouth of Poole harbour is a prolific oyster bank from which vast quantities are taken, and sent to various places. Dorset is divided into nine divisions—Blandford, N. and S., Bridport, Cerne, Dorchester, Shaftesbury, E. and W. Sherborn and Sturminster, and it contains 275 parishes. It returns 18 members to Parliament—three for the county two for each of the boroughs of Bridport, Dorchester, Poole and Weymouth, and one each for Shaftesbury and Wareham. Pop. (1841) 175,043 (1851) 184,207.

DORSETTOWN, par. Eng. Gloucester 910 ac. Pop. 115. **DORSTEN** a tn. Prussia, prov. Westphalia, gov. of, and 35 m. S.W. Münster. It is the seat of a court of justice, contains two R. Catholic churches, a synagogue, gymnasium, Franciscan monastery and hospital and has manufactures of woollen and linen cloth, a building-yard, several mills and a dyewalk. It trades in linen and cattle, and seven annual fairs. Pop. 2844.

DORSTONE, par. Eng. Hereford (586) ac. Pop. 448. **DORST**, a tn. Holland.

DORTMUND a tn. Prussia, prov. Westphalia, gov. Arnberg, cap. circle of same name, in a fertile district on the Cologne and Minden Railway 47 m. N.E. Cologne. It is surrounded with walls five gates, but is poorly built. It contains a R. Catholic, and four Protestant churches, of which the *Reinoldskirche*, a large edifice and the *Marionkirche*, a beautiful Gothic structure of the 13th century are deserving of notice. A gymnasium, porcelain, private lunatic asylum and two hospitals, and has manufactures of woollen flannel, and cotton cloth, silk, and tobacco extensive breweries and vinegar works, a trade in corn and colonial produce and four annual fairs. Dortmund is the seat of several courts and public offices. It early became a place of some importance, rose to be a free imperial town and joined the Hanseatic League. With the dissolution of this league, its prosperity began to decline, and during the Thirty Years' War its trade was almost ruined. In 1802, it came into the family of Nassau-Diet, and was given to Prussia in 1816 at the Congress of Vienna. Pop. 7155. — The *circle*, area, 129

sq. m. is, for the most part, flat, though the surface is occasionally broken by few hills. It extends by the Lippe, Ruhr, Rhine and Moselle produces all kinds of grain rears many cattle, and has not only much wood but several coal mines. Pop. 44,306.

DORTON par. Eng. Bucks; 1481 ac. Pop. 139. **DORNBACH** a vil. Württemberg circle, Jett. dist. of, and 9 m. N. Künigsheim. It contains a parish church, and a synagogue. Pop. 1480.

DORNBACH a vil. in Spain, New Castle, prov. Toledo, 6 m. S. Ocaña, on the high road from Madrid to Granada. It is tolerably constructed, and contains a parish church, a chapel, townhouse, two schools, prison, and cemetery. The inhabitants are almost exclusively employed in husbandry. Pop. 2437.

DOS-HERRIKAS, a tn. Spain, Andalusia prov. of, and 7 m. S.E. Sevilla, 4 m. from the Guadalquivir. It has a square, a parish church, townhouse, prison, two schools, and a cemetery contiguous to the church. The inhabitants are occupied in tillage, cattle-rearing, and expressing wine and oil. Pop. 849.

DOSA-JAM, a vil. Hungary co. of and about 26 m. E. Pesth dist. Jaug on the Tarna. It contains a parish church. Pop. 2504.

DOSSENFIM a vil. Baden circle, Lower Rhine, bail. of and 4 m. N. Heselberg. It is situated between two hills and contains a parish church. Churches are very abundant in the neighbourhood. Pop. 1425.

DOSOLO a vil. and one township of Italy gov. Milan prov. Cremona, dist. of and 7 m. E. by N. Veduggio, 1 bank. It is not far from the junction of the Oglio. It stands in a district which is fruitful in corn and wine but is often inundated by the Po, and contains two parish churches. Pop. 3848.

DOTTIS, a market in Hungary co. Comarn, esp. dist. of same name, 57 m. W. N.W. Pesth. It consists of two parts, the one situated on a hill, and the other on a lake and separated by the remains of a Roman castle, once the residence of King Mathias Corvinus. It contains a castle, with a fine English garden, a Priory college, with a gymnasium, a high school, and military hospital, and has warm baths, manufactures of woollens and stone ware, numerous mills, and an important fair. The chief curiosity of the place is its extensive cellars, and the vast dimensions of some of the caukes. There are some Roman antiquities in the neighbourhood. Pop. 4870.

DOUAI (Lain, *Duagum*) a tn. France dep. du Nord, on the Scarpe, which communicates by canal with the Scheldt, 18 m. S. Lille, on the Great N. of France Railway. It is irregularly fortified, being surrounded by old walls flanked with round towers, and defended by a detached fort, and is generally well built, having well formed streets and a large and handsome public square. The ramparts furnish a beautiful promenade. It contains a handsome parish church a fine old Gothic townhouse, with a picturesque looking balcony, a college or seminary at which a great number of English and Irish R. Catholics have been educated; a library of 30,000 volumes, and a number of valuable MSS. A museum, library of objects of natural history, a library, theatre, theatre and Government treasury, and has manufactures of tapestry lace, embroidery lace and sewing thread leather ordinary and Morocco delft and earthenware, glass paper starch, refined sugar and salt. There are also numerous cotton and other mills, linen bleachfields, breweries, distilleries, and oil-works. The trade is very extensive and includes, in addition to the above articles, corn, oleaginous seeds, hops, wine, and particularly linen, which is sent either from all the surrounding districts. In addition to the fair, which is held every month, there are two, one of which lasts five and the other 14 days. Douai is the seat of a superior court for départements du Nord and Pas de Calais, and of a court of first resort; and possesses an exchange, a society of agriculture, science, and art, a medical society college, university academy and school of artillery. It is one of the most ancient towns in France, and existed in the time of Julius Caesar who mentions it as a place occupied by Calais. It had acquired considerable importance, and was strongly fortified in the sixth century. Its possession was afterwards strongly contested by the Flemish and French, by whom it was repeatedly taken and retaken. It was finally secured to the latter by

the peace of Utrecht. At present it is not in a thriving state, and covers a much larger space than its population requires. Pop. 1849, 18 988.

DOUARNENEZ (Latin, *Dornenez*), a small seaport, France, dep. Finistère, on the S.E. shore of a bay of same name, 18 m N.E. Quimper. It is a poor place, ill built, and ill cleaned, but has a small harbour at which about 500 small vessels are annually fitted out for the various fishery. The church of Plouard in the vicinity is one of the finest specimens of civil architecture in Brittany. Pop. 1852, 2000.—The *bay* of Douarnenez, one of the largest and most beautiful on the W coast of France, is about 15 m. long, and has an average breadth of about 8 m. The greatest depth is from 27 to 50 fathoms. The shores are generally steep and arid. The roadstead near the town admits of vessels of all sizes but the shelter is imperfect, and access is scarcely practicable except during the N. or N.E. winds.

DOUBOVKA a European Russia, gov. of, and 180 m S.W. Saratov r. bank Volga. It is an entrepôt for all the produce of the N. of Russia sent by land to Kalschinsk, on the Don, for the use of the S. provinces. There is a trade in wood, grain, oil, iron and manufactured articles. 1 pop. 1800.

DOUBES (anc. *Dubus*) a river France, which rises in the dep. to which it gives its name, near La Mouthé, at the foot of Mount Rixen belonging to the chain of the Jura. It flows first N.E. along the E. frontier of the department which it separates from Switzerland enters that country and making a sudden turn by which it seems almost to retrace its steps re-enters the department, flows circuitously N. then W. S.W. passing Besançon, Beaune, and Dole, and joins the Rhone, about 14 m. N.E. Châlon. Its whole course is about 300 m. It is extensively used for floating, but is not properly navigable except at those points where it communicates with the Rhone and Rhone canal. Its principal affluents are the Damescote, Halls, Bevaune, and Lona.

DOUBS a dep. France bounded N. by Haute-Saône and Haute-Rhin E. and S.E. Switzerland, S.W. and W. Jura, N.W. Haute-Saône between lat. 46° 30' and 47° 20' N., and lon. 6° 50' and 7° 40' E. length N.E. to S.W. 65 m. average breadth, about 35 m. pop. 9028 m. Its surface is generally mountainous, being traversed by four chains of the Jura in directions parallel to each other and to the main chain of the Alps. The principal summits are the Mont d'Or 4950 ft. and Bouchet on the Swiss frontier 5248 ft. The general inclination of the department is from E. to W. It is drained chiefly by the river to which it owes its name, and which increases it in a very remarkable manner first from its source in a N.E. and afterwards, as if retracing its steps in a S.W. direction. The only other river of any consequence is the Ognon, like the Doubs itself a tributary of the Saône, but the small streams which fall down from the mountain ridges, and pursue their course through the valleys formed by them are very numerous, amounting, it is said to more than 150. Of perhaps still more importance than the river is the canal which connects the Rhone with the Rhine. The temperature is very variable and the climate, determined in a great measure by the elevation of the surface, more rigorous than the latitude might seem to indicate. In the E. of the department where the loftiest summits are the snow lies till April or May. There the air though keen, is pure and healthy. In the lower ground much rain falls. Only about one-third of the whole surface is arable, and nearly one-fifth is absolutely waste. The far greater part of the remainder is covered with forests, chiefly of hardwood but several of the highest slopes are covered with pines, many of which attain a height of 150 ft. On the lower slopes, the walnut abounds a gigantic size, the ordinary orchard fruits thrive well, and the vine is cultivated to some extent. The cereals produced fall considerably short of the home consumption. In addition to these, the principal crops are maize, potatoes, hemp fax and medicinal plants. Considerable attention is paid to the rearing of stock. Both horses and horned cattle of good breeds are exported, and much dairy produce is employed in making Gruyère cheese. Rivers and lakes are well supplied with fish. The minerals include numerous rich mines of iron which is worked and smelted to some extent in the department. Traces of argillaceous lead have been discovered, but the only mine which had been opened has been abandoned. There is some coal and a good

deal of lignite. Gypsum and marble are abundant everywhere. The manufactures consist chiefly of woollen and cotton cloth, hosiery, iron and steel ware, leather, clocks, tawdry glass, oil, liquors, and vinegars, and the trade is chiefly in iron, cast and malleable; the above articles of metal furniture, cattle, horses and cheese. For administrative purposes Doubs is divided into four arrondissements—Besançon the capital Beaune-les-Dames, Montbéliard and Pontarlier subdivided into 27 cantons and 640 communes. Pop. 1852, 847.

DOUBTFUL ISLANDS.—1 An Isl. S. Pacific Ocean lat. (E. point) 17° 20' S. lon 143° 28' W. (n) Be called by Capt. Cook.—2 A small Isl. S. Pacific Ocean near S. coast, Australia lat. 24° 24' S. lon 118° 34' E. (n) Be named by Vancouver from his uncertainty whether or not it was connected with the continent.

DOUDEVILLE, a tn France, dep. Seine-Inférieure, 24 m N.W. Rouen with manufactures of coarse cottons, brickfields, lincolns, &c. Pop. 1785.

DOUE a tn France, dep. Maine-et-Loire, 23 m S.F. Angers. It is the seat of a communal college, and has several famous old mines, and extensive quarries with some trade in grain, iron, wool, and cattle. The town is very ancient, and contains a fine fountain and some remarkable ruins, including an amphitheatre (some say Roman, others early French), and a few remains of a palace inhabited by Dagobert. In the environs are various natural groves. Pop. 8063.

DOUGLAS, a tn and par Scotland co Lanark. The town 85 m S.W. Edinburgh, has narrow streets and many of the houses have an antique appearance. It has an Irish island and a Free church, and several friendly societies. St. Rule the former church of Douglas was of great antiquity a small spire and aisle still remain. The latter was the burying-place of the once great and powerful family of Douglas and contains a number of interesting and beautifully sculptured monuments among which is that of Sir James Douglas the Good Sir James of Scottish history the friend and companion in arms of Robert Bruce. In the vicinity of the town stands Douglas Castle, the Castle Dangerous of Sir Walter Scott's novel of that name, near the site of the ancient edifice, which was accidentally destroyed by fire in 1760. Douglas has no trade being inhabited almost wholly by mechanics, labourers, and handloom weavers.—The town occupies the S.W. extremity of the county area, 86,518 ac. Pop. 2611.

DOUGLAS, the principal town of the Isle of Man, finely situated, S. end of a semicircular bay S.E. coast of the island lat. 54° 10' N. lon 4° 20' W. The older streets of the town are narrow dirty and irregular but some of the more modern are handsome and spacious. There are three Episcopalian chapels in the town, and a Scotch chapel, four Dissenting places of worship, and a R. Catholic church. A Lancasterian and a daily national school various charities, and several libraries and news-rooms. The custom house and market-house are both very handsome buildings the former was once the residence of the Duke of Athol. The harbor is dry at low water and the entrance rather difficult in stormy weather. The port, situated by Government, is 350 ft. in length and 40 ft. in breadth, and has a light-house at its outer extremity. Vessels drawing 10 ft. water may enter during high tides, and those drawing 14 ft. during spring tides. It is the only port in the island at which goods imported by license are allowed to be landed, and is on this account the chief establishment of the customs department. There are here a House, and a paper and woollen manufactory. From the beauty of the surrounding scenery the salubrity of the air and the cheapness of all the necessaries of life, Douglas has become a favorite resort for sea-bathing for which class of visitors it is amply provided with every sort of accommodation. Pop. 9680.

DOULLENS, an arr. in France, dep. Somme, 1 h. bank, Arras, 18 m N. by N. Amiens. It is a military post, and defended by a Citadel overlooking one of the finest in France. The boulevards which surround it form agreeable promenades. It has manufactures of canvas and best-root sugar turneries a cotton spinning &c. with trade in canvas bagging out-lets, hemp fax and madder. Pop. 2419.

DOULTING, par Eng. Somerset 3600 ac. Pop. 657.
DOUNE, a small market tn. Scotland, co Perth, 7 m. N.W. Strirling near 1 h. bank, Tith. It consists chiefly of one

main street, with some minor ones diverging from it and the houses mostly of one story are of stone, and in general have a respectable appearance. It has a handsome Established church and a Free church. Doune is famous for the fair, of which there are six annually, the principal, called Lather Fair for sheep and black cattle, is held in November. Close by the village and picturesque situated on a steep, green bank, overlooking the well-wooded Tuth, is the ancient castle of Doune, a large and imposing ruin, with a spacious square tower 80 ft. in height and another of 40 ft. It was frequently occupied in the 16th century by Margaret, daughter of Henry VII. and widow of James IV. It was also the residence, occasionally of Mary Queen of Scots; and was in possession of the rebels in 1745, under the command of Macgregor of Glenogle. It has long been the property of the Earl of Moray to whom it gives his second title, Baron Doune. Many of the inhabitants of Doune are employed in the neighbouring cotton-factory at Dunrobin. Pop. (1841) 1559.

DOUR, a town and com. Belgium, prov. Namur, 8 m. E.S.E. Mons. It is small, but well built and flourishing, and contains a K. Catholic church and Protestant temple several schools, and a literary society. In the environs are several ruins of great interest, and the remains of an old fortified manor, with many glass panes, wearing blackening tanning leather-dressing, &c., are carried on. Pop. 6250.

DOURAK or DORAK, a town Persia, prov. Khorasan, 200 m. S.W. Isfahan, at the conference of the Jureh and Durak rivers. It has manufactures of silk handkerchiefs and Arabian cloths. Pop. 8000.

DOURDAN [Latin *Durdanum*] a town France, dep. Seine et-Oise, in a wide and beautiful valley on the Oise, 25 m. S.S.W. Paris. It was once a place of considerable importance and was defended by a strong castle, of which some remains still exist. It contains an ancient and well-preserved Gothic church and has manufactures of silk and woollen hosiery a trade in wool and corn, and three annual fairs. La Bruyère, author of the celebrated work, *Les Caractères* was born here. Pop. 3233.

DOURGA STRAIT lat. 34° 30' S. lon. 150° 10' W. The N.W. entrance is about 12 m. wide the W. point being in lat. 34° 37' S. lon. 150° 46' E. and the E. point in lat. 34° 32' S. lon. 150° 54' E. This channel was long supposed to be a large river and was not determined to be a strait till 1835. The portion of the S. entrance has not yet been ascertained. The shores are peopled by the aborigines of the coasts of Papua, who possess small canoes, and are armed with bows, arrows, and spears.

DOURGNE, a town France, dep. Tarn 8 m. S.S.W. Castres, at the foot of the Montagne Noire. It has manufactures of coarse woollen cloth, and in the vicinity are quarries of fine marble. Pop. 1009.

DOURO [Portuguese, Douro Spanish, Duero etc.] one of the largest rivers of the Spanish peninsula traversing E. to W. one half of Spain, and the whole of Portugal. It rises in the Sierra de Urbión, Old Castile, on the frontiers of provs. Soria and Burgos, flows S.E. and S.S.E. past the town of Soria, and at Almaraz, lat. 41° 30' N. lon. 2° 24' W., turns W., flows in a winding course through prov. Soria, the S. part of Burgos, the centre of Valladolid and Zamora, in which last, lat. 41° 45' N. lon. 6° 10' W., it turns S.W., forms the boundary between Spain and Portugal for about 50 m. distant thence when it turns due W. crosses the whole of Portugal and falls into the Atlantic 3 m. below Oporto, after a total course, direct distance, of about 800 m. or including windings, of about 500 m. The only large towns close upon its banks are Zamora in Spain, and Oporto in Portugal. As affluents, it receives in Spain the Pisuerga, Tago, and Esla on the right, and the Bragança and Tormes on the left bank, besides numerous smaller streams. Its principal affluents in Portugal are the Sabor Tua, and Tamega on the right, and the Turen, Osa, and Távora on the left. The Douro rises generally through deep valleys, in a confined channel, with great rapidity. It is navigable upwards, for small vessels, about 70 m. and boats of light draught may even proceed 30 m. higher though it might be rendered navigable, according to Forrester as far as Ylreside, on the Spanish frontier. The Spaniards make considerable use of its waters for floating down flax, grain and other produce, in a clandestine manner into Portugal. But the little navigation carried on is subject to frequent interruptions, from the swelling of the river by rains and melted snow. The Douro passes through some of the most fertile and picturesque parts of Spain and Portugal; and on its banks, in the latter country, are produced the famous wines of Oporto.—(Macle's *Tourist's Map of the Douro*, &c.)

DOURO, a recently formed prov. Portugal composed of three districts—Oporto, which previously belonged to the old prov. Entre-Douro-e-Minho, and Aveiro and Coimbra, formerly the sea-board districts of prov. Beira; bounded N. by prov. Minho, N.E. Trás-os-Montes, E. Beira, S. Estremadura, and W. the Atlantic sea, 2816 sq. m. The interior is partly mountainous, being traversed in the N. by the serra Catherine, and in the S. by the serra Alentejo, but the surface has a general slope towards the sea as indicated by the E. direction of the rivers. Of these the principal are the Douro to which the prov. owes its name the Vouga, and the Mondego. Pop. 207,885.

DOUVAINE, or DOVAINE [Latin *Duvana*] a vil. and com. Savoy, prov. Chablais, 10 m. N.E. town and 3 m. E. lake of Geneva. It contains a parish church with a very ancient choir and a cloister, an elementary school, and the remains of an old fortified castle, and has two annual fairs. Most of the inhabitants are employed in cultivating the vine. Pop. 1150.

DOUVE (La) a river France, which rises at a place called Fontaine-Douve near the village of Telleray, arrond. Cherbourg, dep. Manche flows S.E. through that department and falls into a bay in the English Channel, a little below Caerleon after a course of 25 m. In spring tides it is navigable as far as St. Saviour-le-Vicomte, about 19 m.

DOUYER, or DOUYER-DE-DELIVRANCE [anc. *Dobris Videsseum*] a vil. France, dep. Calvados, 7 m. N. Caen. It contains an ancient parish church partly in the Romanesque style and has manufactures of tulle, lace, and blonde and three annual fairs. Pop. 1811.

DOUW (PULO) DAW DAUW or DAO an Isl. Indian Archipelago, 35 m. S.W. Timor lat. 10° 48' S. lon. 122° 41' E. Properly speaking it is no more than a barren rock yielding only spelt and native beans still so attached are its inhabitants to it, that they refused the offer of transportation to it. The natives are spirited and well made and also courageous seamen making extensive voyages in their canoes, and purchasing, in return for articles in gold and gold thread, in the making of which they are especially skilled, linen, iron, utensils, and other necessaries. From the neighbouring island of Roti they obtain cotton which they manufacture into a good cloth. They are governed by a rajah. Pop. 5000.

DOUADOLA a town Tucumán prov. of 40 m. N.E. Florence, r. bank, Montone on a declivity surrounded by an ancient castle. It is well built, partly surrounded by a wall and contains two churches a public granary and some oil-mills. Pop. 1197.

DOVE, a river England, rising in the hills of the Peak of Derbyshire, forming part of the boundary between the counties of Derby and Stafford and after a course of 83 m. through highly picturesque scenery including the beautiful and romantic valley of Dove Dale, falling into the Trent below Burton.

DOVER [Latin *Dubris*, French, *Douvres* Spanish *Duro*] a town England on Kent, one of the Cinque ports, 67 m. S.W. London, or 88 m. by the South-eastern railway which here terminates. It lies on the coast of the strait of Dover lat. (middle) 51° 7' 48" N. lon. 1° 19' 30" E. (a.) opposite Calais in France, from the coast of which it is only 21 m. distant, and at the mouth of a deep valley formed by a depression in the chalk cliffs which abut on the sea on either side of the town. It is irregularly built, and none of its public buildings are remarkable. The principal street is about a mile long, and from it diverge other smaller streets, all paved and lighted, but the last part, called the new town, faces the sea, along the shore, and includes the marina parade, &c., where elegant modern houses have been built for the accommodation of sea-bathing visitors, considerable numbers of whom resort hither during the season. It has three Episcopalian churches, and places of worship for Baptists, Independents, Friends, Unitarians, Methodists and R. Catholics a charity and several old schools, several almshouses and minor charities likewise an ancient townhall, custom-house,

streets, theatre, assembly-rooms, reading-rooms, baths, and an elegant station at the terminus of the South-eastern railway. Ship-building, and sail and rope-making are carried on, but the chief dependence of the town is on summer visitors, and on the passenger traffic to and from Calais and Ostend, with which there is regular communication by steamer. In 1849 the total number of steamers arriving and departing was, British upwards, 781 tons, 87,581 upwards, 784; tons, 87,639 Foreign, upwards, 566 tons, 74,587; inwards, 565 tons, 74,568. Of other vessels, the total number was, upwards, 568; tons, 11,678 inwards 560 tons, 34,545. In both cases the larger portion being coasters averaging under 50 tons each. The harbour is small, and the entrance difficult, and though much money has been expended on it, the improvement has been only partial, and the mouth is continually liable, during S.W. winds, to be choked up by the movable bar of shingle at its mouth. Operations are in progress to form here a harbour of refuge, for which Government have authorized the construction of works that will cost £2,500,000. In October 1851, continuous communication was established between England and the Continent, by electric telegraph, by means of a sub-marine wire laid across the channel from Dover to Ostend.

The celebrated castle of Dover stands on a chalk cliff about 250 ft. in height, about $\frac{1}{4}$ m. N.E. the town. The old and new buildings together occupy nearly 30 ac. and consist of

THE TOWN AND CASTLE OF DOVER.

a heterogeneous assemblage of fortifications of all styles and ages—Roman, Saxon, Norman, and modern. Presenting it is said, some of the earliest specimens of regular masonry in this country, and the entire appearance being striking and picturesque. The lord warden of the Cinque Ports at Cowes, Shikpoore's Cliff is situated at a huge distance from the town, and is perforated by a tunnel on the South-eastern railway. In May 1857, a huge mass of this chalk cliff scaled off, and fell to the base. The mass was 354 ft. in height, 15 ft. thick, and was calculated to contain 49,000 tons of chalk. Shortly after another fall of 10,000 cubic yards took place. The cliff is 850 ft. high and though sufficiently remarkable in form, does not bear out the magnificent description of the poet.

Dover is the principal station and seat of government of the Cinque Ports, and has returned two members of Parliament since the time of Edward I. Registered electors (1850) 2903. Pop. in and port 23,444.

DOVER, numerous places, U. States of America, picturesque. —1 A vil. and township, Maine, the former 83 m. N. N. E. Augusta. It contains two printing-offices, each with a weekly newspaper and has several mills. Pop. 1597. —2 A vil. and township New Hampshire. The village, 35 m. E. Concord, on bank Piscataqua, at the lower falls of Caneboe, is one of the most beautiful and flourishing towns in the state. It has a court-house, a jail, a bank, several churches, and extensive manufactures, comprising two tineries, a distillery, dyeing and printing establishments, grist and saw mills, cotton and woolen factories, and three printing offices. A considerable

amount of shipping is owned here. Pop. (1840), 6458. —3 A vil. and township, New York. The village, beautifully situated 74 m. S. by E Albany contains two churches, an academy and several manufacturing establishments. Pop. of township, 3000. —4 A township, New Jersey 85 m. S. E. Trenton. Pop. 2755. —5 A tn. Delaware cap. of the state, on elevated ground, 67 m. E. S. E. Baltimore. The streets are wide, and cross each other at right angles; houses neatly built, chiefly of brick. The state-house is a handsome structure, on the E. side of a large public square; and there are, besides, three churches, an academy and a splendid monument to the memory of Col. John Mifflin, who fell in the battle of Princeton. The chief trade is in flour with Philadelphia. Pop. 3790.

DOVER (Strait or) (French *Pas-de-Calais* and *Fretum Galliarum*) the strait which separates England from France, and connects the English Channel with the N. Sea. It extends on the English side from Dengemess N. E. to the N. Foreland, both in co. Kent and from Cape Gris Nees (dep. Pas-de-Calais) to Calais, on the French side. It is 22 m. long, and at the narrowest part 31 m. broad.

DOVERA a vil. and town, kingdom of Italy gov. Milan prov. of and 4 m. N. N. E. Lodi. It contains two parish churches, and is famous for its cheese known by the name of stracchino. The district produces much corn and flax, and has rich pastures. Pop. 1688.

DOVERCOURT par Eng. Essex. 2986 ac. Pop. 1065.

DOVERDALE, par Eng. Worcester. 748 ac. Pop. 34.

DOVERIDGE par Eng. Derby. 4278 ac. Pop. 66.

DOVEY or DRY, a river N. Wales, co. Montgomery and Merioneth rising near Bela, and after a S.W. course of about 30 m. falling into Origen Bay 7 m. N. Aberystwith. It receives the Afon, Ddraig, and other tributaries, and is navigable for about 12 m. from its mouth.

DOVEY FELD DOVER FIELD or DOVEFELS, a mountain range, Norway forming the central part of the Scandinavian system, and extending in an N. N. E. direction from the valley of Lamså, near lat. 62° N. where the Langfeld range terminates to the Sykkedal, lat. 60° N. where the chain of Kælen or Kjølen begins. It is generally composed of gneiss and micaceous schist, and possesses, in Mount Sneekasetten, which has an altitude of 8120 ft. the highest summit in the Scandinavian peninsula. This mountain rises its gigantic mass above the lofty plateau on which the chain rests, till its snowy heights are lost among the clouds. Four passes lead across the Dovey Field range. The most frequent of these is in the line of road which leads from Christiansia to Tromsø, by the E. side of Sneekasetten. Its greatest height is 4300 ft.

DOWLETABAD, Dacca (the Fortunate City) an island in, and fortress, Hindostan, prov. of, and 10 m. N. W. Aurangabad; lat. 16° 51' N. lon. 75° 16' E. It is one of the most remarkable fortresses in India, and stands upon an isolated rock, 200 ft. some accounts say 500 ft. high, and, for about one-third of its height, as perpendicular as a wall, and presenting no visible means of reaching the summit, which is only to be attained through an excavation in the heart of the rock, the entrance to which is at first so low that a person is obliged to stoop nearly double, but it afterwards enlarges into a passage about 12 ft. high and the same in breadth, but so dark as to require the aid of lighted torches. About 100 yards from the summit is a large tank, cut out of the living rock. There are only two or three pieces of cannon in the

fortress. The view from the summit is extensive and beautiful. In 1806, this fortress was taken from a powerful Hindoo chief by the Emperor of Delhi's troops and soon thereafter

carried on in the houses of the small farmers, the two parts being generally combined. The fisheries of the coast are considerable. Cod, haddock and all sorts of both round and flat fish, abound. Herrings are also

THE PEAK OF DOWLISH—From Gleanings, Dictionary of History and Geo.

the Emperor made a fruitless attempt, in which he almost ruined Delhi to make Dowlish the seat of government. About 1555, it fell into the hands of Akbar, Mughal Shah of Almolungger and in 1554 it passed into the hands of the Mughals, from whom it was taken by Nazam of Math and has since continued in the possession of the Nazam of Hyderabad.

DOWLISH, two par. Eng. Down, Somerset.—1 (W. & A.) Pop. 3-2.—(West) Pop. 69. Landed area, 1182 ac.

DOWN par. Irrel. Down 11 485 ac. Pop. 857

DOWN a maritime co. Ireland, prov. Ulster, having N. Antrim and Belfast Lough W. Armagh and S. and E. the Irish Sea. Greatest length N. E. and N. W. about 20 m. greatest breadth about 25 m. area, 611 130 ac. of which 514,190 are arable. The S. part of the county is occupied by a group of mountains, called the Mourne Mountains amongst which are some of the highest summits in Ireland the principal of these, Slieve Donard, is 2809 ft. high. There is another smaller group of hills towards the centre of the county. With exception of these, and a few other detached hills, the surface is, on the whole, level and the soil various, but in general tolerably fertile, especially on the banks of the larger streams, all of which, however, as well as the lakes, are small, but most of them abound with fish—pike, trout, eels, perch, and roach. The Lurgan skirts the county on the N. and the Bann on the S. The minerals include limestone, copper and lead ore, coal, chalk, freestone, and slate of these two last, and limestone, there are several extensive quarries in various parts of the county. The climate is, on the whole, remarkably healthy though somewhat cold especially in spring. Agriculture is to a comparatively advanced state and is improving. Draining and irrigation are both practised extensively and judiciously. Oats, wheat, and barley are the three chief grain crops. Potatoes and turnips are cultivated largely amongst the small farmers and the latter to a considerable extent. Dairy husbandry is also much attended to and great quantities of butter produced a part of which is sold fresh in the towns, but the greater portion is salted and sent to Belfast and Newry for exportation. The breed of cattle has not been much improved but those of sheep and pig have been considerably especially the latter. The breed of horses is, in general, good. The houses of the farmers have, many of them, a neat, clean appearance, being built of white-washed, but the habitations of the poorer classes are here, as in other parts of Ireland, sufficiently wretched, although the population may on the whole, be considered as in rather a better condition than in most other Irish counties.

The staple manufacture is that of linen, including cambric sheetings, Artie, damasks, and every description of household linen. The manufacture of cotton has also made some progress here. A coarse woollen cloth and blanketing are manufactured to a considerable extent, and the weaving of stockings is very general. The weaving trade is mostly

DOWNHAM three par. England.—1 Cambridge 9789 ac. Pop. 2290.—2 Essex 2223 ac. Pop. 250.—3 (Sutton) Suffolk 5060 ac. Pop. 70

DOWNHAM (Mansur) a town and par. England, co. Norfolk. 38 m. W. Norwich a station on the E. Anglian Railway on the bank of a hill E. of the River Ouse. It consists of three streets, well paved houses well built, and is abundantly supplied with water. The church, dedicated to St. Edmund, is an ancient Gothic structure, with a low nave, battled tower, surmounted by a spire. There are, besides, places of worship for various dissenting bodies. It has several schools and minor charities, a union workhouse, an extensive mustard manufactory and a large bull foundry, and in the neighbourhood corn-mills, sawmills, and a brewery. The parish was long celebrated for its better large quantities of which, amounting to about 80,000 acres annually were sold as Cambridge better. The market for this commodity has ever been removed to Swaffham. Market day Saturday with three fairs annually—March 8, May 8, and Nov. 13. The first is a horse fair and one of the largest in the kingdom. Area of par. 2490 ac. Pop. 3265

DOWNHAM par. Eng. Somerset 1825 ac. Pop. 250 DOWNHAM par. Eng. Downham par. England York (N. Riding) 5815 ac. Pop. 250

DOWNRINGS par. Irrel. Kildare 4729 ac. Pop. 1007 DOWNPATRICK a maritime town and par. bor. Ireland, cap. co. Down 21 m. S. by E. Belfast, in a steep valley near the embouchure of the Quoile river at the head of a W. branch of Lough Strangford. It is divided into the English Irish and Scotch quarters, and consists of four principal streets, meeting in the centre, and interspersed by several smaller. In the centre is the market-place, and from this point the town runs on the steep declivity with which it is surrounded. The houses are, in general, substantial and well built, and the streets well paved, with an ample supply of water. The most remarkable edifices are the cathedral, a restoration of a more ancient structure the county court-house, the jail barracks, infirmary and fever hospital. The latter two are large handsome buildings, and were both erected in 1832. The infirmary stands on a gentle eminence a little E. of the town. There are here also a parish church R. Catholic chapel, two Presbyterian, and three Methodist meeting-houses, a dissenting, and several other schools, a public library and reading room, almshouses, widow houses, &c. The linen manufacture is carried on to a considerable extent; and there are two breweries, some tanning and soap-making and an active retail trade with the surrounding country and a weekly market, well supplied with all kinds of provisions. About 1 m. from the town are commodious quays, at which vessels of 100 tons burthen may load or discharge. The principal imports are iron, coal, salt, timber and bark. The exports are wheat, barley, oats, cattle, pigs, potatoes and kelp. There are six fairs annually.

Downpatrick claims to be one of the oldest towns in Ireland, having been the place of residence of the ancient native kings of Ulster and the chosen residence of St. Patrick, who founded two religious establishments here, and presided over them till his death, in 463, when his remains were deposited in the abbey of Down, as were, subsequently, those of St. Bridget and St. Columbkille. About 1 m. to the E. is Strual Hill, much resorted to by the lower orders of St. Catholics during midsummer for the performance of penance. Downpatrick returns one member to the House of Commons. Registered electors (1865) 197. Pop. 2837.

DOWNS (Tus) a well known roadstead of the E. coast of England, between the N. and S. Foreland, on Kent, and opposite Margate, Sandwich, and Deal. It affords a safe shelter for shipping, the Goodwin Sands forming a breakwater. Several hundred small of vessels may be often seen here at one time, waiting for a favourable wind.

DOWNTON a bor in and par England, co. Wilt. The town is a pleasant vale, 1. bank Ave., 6 m. S.E. Salisbury consists principally of one long straggling street, stretching E. to W. houses in the cottage style, of brick, and generally with thatched roofs. supply of water abundant. It has a large cruciform church, with a central tower a chapel of ease, and places of worship for Baptists and Wesleyan Methodists two free and several other schools, and two lending libraries. Straw plait and lace are manufactured to some extent. Downton sent two members to the House of Commons from the time of Edward I. till its disfranchisement by the Reform Act. Two fairs annually. Area of par 18 321 ac. Pop. 8998. [Local Correspondent.]

DOWNTON par Eng Hereford 1801 ac. Pop. 99

DOXA, DOXAS or **HISKANEZAS**, a tn. Bohecia, circle Buzulu on a lake of same name, 38 m. N.N.E. Prague. It contains a parish church, townhouse, school, and hospital and has manufactures of cotton cloth. A good many of the inhabitants are employed in knitting stockings. On a tongue of land projecting into the lake are the ruins of the old castle of Kinschka, and on an island in it are the ruins of a large old building which gave the name of House solomon, because having been used as a granary the whole of the corn was eaten up by mice. Pop. 1946.

DOYLESTOWN a tn. U. States, Pennsylvania, on a commanding eminence 100 m. E. Harrisburg. It has a jail, courthouse, three churches, and an academy. Pop. 2127.

DOWNTON par vil Eng Gloucester 1703 ac. Pop. 499

DRAA or **Dema** [anc. *Edra*] a tn Palestine a few miles S.E. Mansera in a deep valley. The ruins of the ancient city cover an extent of about 2 m. in circumference, the principal being an immense rectangular building, with a double covered colonnade all around, and a eastern in the middle. This seems to have been originally a Christian church, and afterwards a mosque. Near the town, in the hollow of the mountains, is a large reservoir cased with stone, close by which are the ruins of a large building with a couple of light materials.

DRAUND a tn Afghanistan. See **DERAUND**

DRAU, a river France, which rises in the dep. Haute-Alpes, flows with an impetuous course W and N.W. enters dep. Isere, and falls into the river Isere, near Grenoble, after a course of about 87 m. It furnishes fine pebbles and in its banks are numerous mines of anthracite coal.

DRACHENFELS [Dragon's rock] one of a group of mountains, France, gov. Cologne, called from their number the Siebenbürgische Berge; Montaine, and forming the grand commencement of the famous scenery of the Rhine, about 8 m. S.E. Bonn. The Drachenfels, standing on the right of the river above which it rises about 900 ft. is the most conspicuous, both from its shape, and the old ruined castle of Drachenfels which crowns its summit, and commands a magnificent view extending as far as Cologne, 20 m. off. Lake the rest of the group, it is evidently of volcanic formation, consisting of lava, trachyte, and basalt, ejected through the overlying rocks. On its side is the quarry out of which the cathedral of Cologne was built. The mountain takes its name from the shadowy legend of a dragon, which tempted a cavern within it, and was at last killed by the heroed Siegfried, the hero of Vol. I.

the Niebelungen lay. The wine which grows upon it gets the name of Dragon's Blood and Drachenscheide.

DRADE a river France, which rises in the forest of Drabalen, gov. of, and about 40 m. S. Kella flows chiefly only S.E. W. expanding into, or communicating with several small lakes and passing the towns of Falkenberg, Densberg and Newedel, and after a course of about 90 m. joins a bank Netze.

DRAGOMESTRE [anc. *Astoria*] a tn Greece, prov. Achaia, and Euboea, on a bay of same name, a inlet of the Ionian Sea, 23 m. N.W. Missolonghi, with important fisheries. The bay stretches 4 m. inland, and has a breadth of about 2 m.

DRAGONEIRA an isl. Mediterranean belonging to the Balearic group about 2 m. W. Majorca. It is about 8 m. long by 2 broad, and is of considerable height towards the N. where the coast is precipitous. On the S. it slopes gently to the shore. There are two towers upon it one of them on the very summit.

DRAIONI [anc. *Cimbabue*] a tn Naples, prov. Terra di Lavoro, at the foot of Mount Trebalano 13 m. N.N.E. Capua. It contains four churches. In the vicinity are marble quarries. Pop. 1893.

DRAGON'S MOUTH [Spanish, *Boca del Dragon*] a strait, between the island of Trinidad, W. Indies, and Punta de Paria or Paria, on the coast of Venezuela, connecting the Gulf of Paria with the Caribbean Sea. It is about 12 or 15 m. across at its narrowest part, and is, by tides divided into four channels, named, respectively Boca Grande (great channel) nearest the S. American coast, and the widest of the four. Boca de Navio (ship's channel) Boca de Huervo (egg channel) and Boca de Mucos (ape's channel). There is a strong set of the tide through all these channels, causing a considerable obstruction in the water, and rendering the navigation more or less difficult. The depth of water is great, being often 100 fathoms in mid channel. Two hours after flood-tide commences or one hour after ebb commences would appear to be the best times for navigating these channels. Boca del Dragon was discovered and passed through by Columbus on his third voyage, A. D. 1498, and so named by him from the formidable nature of their navigation. (See *Geog. Directions* &c.)

DRAGOR, a seaport Denmark, S.E. point of isl. Angmer with a roomy harbour of refuge very important for small craft. The inhabitants are chiefly seamen and pilots, but also carry on weaving and bleaching and possess 60 small vessels. Pop. 1800.

DRAUGHTEN a market in Holland prov. Friesland, 15 m. S.E. Leeuwarden. It is a large flourishing place and has a handsome and handsome Baptist church, four schools, a handsome electric courthouse, and a branch of the General Utility Society. Boat-building, tanning rope-making, weaving watch-making lime-burning, and a good deal of trade are carried on. Three cattle and horse markets annually. Pop. 4500.

DRAHI IGNAH [anc. *Dracoman*] a tn France, dep. Var on the Pte. a branch of the Arudy 41 m. N.E. Toulon. It is seated in a beautiful vine-clad valley at the foot of the Maubert the environs being according to Count Chaplain one continued English landscape garden. The town is not handsome or regularly built, but has some interesting edifices and objects as the parish church, law courts a medal prison the majestic clock tower an hospital a spacious public wash-house, and a number of public buildings. The public library contains 8000 volumes and annexed to it is a museum of antiquities, with a cabinet of medals and some good pictures a cabinet of natural history a botanic garden &c. In the Fort quarter is a saline-sulphureous spring, originating a stream abundant enough for several mills, &c. Dragulgan is the seat of a prefecture, a tribunal of commerce, a consultative board of manufactures, a communal college, &c. and has sawparks, silk-mills, tanneries, distilleries, and oil-mills with a considerable traffic in wine and olive oil. The town is said to have been founded in the fifth century and was early one of the chief towns of Provence. It was last fortified in 1815 and its possession was much coveted during the political and religious contests of France. Pop. 7580.

DRAHOTUSCH a market in Austria, Moravia, circle, Prezan. 1. bank, Booschau, 23 m. E.N.E. Olmutz. It con-

tain a parish church, chapel and the ruins of an old castle, and has four annual fairs. Pop. 1148.

DRAINIE, par. Scot. Elgin, 4 m. by 9 m. Pop. 1866.

DRÄKENHED, new town, S.E. Africa. See QUATRA.

DRAKE-TOWN par. Irel. Meath 2693 m. Pop. 436.

DRAKE a tn. European Turkey Macedonia lat. 41° 5' N lon. 24° 10' E. It has manufactures of cotton cloth and tobacco, with the ruins of an ancient town in the vicinity.

DRAMANET a tn. Senegambia, r. bank, Senegal kingdom of, and 6 m. S.E. Gambia. It has some trade with Timbuctoo. Pop. 4000.

DRÄMBURG, a tn. Prussia, gov. of, and 51 m. S.E.W. Ahtle, cap. circle of same name, on the Drave. It is surrounded by walls with three gates, and is defended by a fort. It consists of the old and new towns, separated from each other by the river and communicating by a bridge, contains a church and an hospital, is the seat of courts and offices for the circle, and has manufactures of woollen goods, ordinary and white leather gloves, hats and fire-arms. Pop. 2900.

—The **circle**, area, 544 sq. m., is flat and fertile is entered both by numerous streams and lakes and rears great numbers of cattle and sheep. Pop. 37,029.

DRÄMBEV or **DRAM**, a seaport, Norway land Bank road, in a valley on both sides of the Drammen, where it crosses the Drammensfjord, one of the arms of the Gulf or Fjord of Christiana lat. 59° 39' N lon. 10° 28' E, 26 m. S.E.W. Christiana. It consists of three villages or settlements—Fransøen on the N. bank, and Stenså and Tungen on the S. bank of the river which is here crossed by a handsome bridge. Drammen possesses a gymnasium (Larvic-dialekt) two public, and three free schools, and several charitable institutions. Its manufactures consist of leather ropes, sail cloth, tobacco, &c. in which there is an active trade and it has distilleries and potteries. Shipbuilding is also carried on but the principal trade of the town consists in the exports of timber much of it in the form of latten staves, and hoops iron so bars, pigs, and nails small and cobble. The number of vessels that arrived, in 1842 was 518, ton. 92,671 departed, 654, ton. 108,951. Thus port is the second in Norway for the extent of their vessels can land alongside the quays. Pop. (1840) 9065.

—The **river** is formed by the junction of the Sigdale with the Sarum River about 16 m. N.W. the town. These streams with their affluents, including numerous lakes, drain a district of country fully 80 m. sq.

—The **Fjord** or **Fron**, is a narrow estuary about 20 m. long, joining the Gulf of Christiana, to the N. of Holmsund.

DRAGANA par. and tn. Irel. Tipperary 5427 m. Pop. 1551.

DRANSFELD a tn. Hanover gov. Hildesheim, is a place 7 m. W.S.W. Göttingen. It is a very old place, has well garnished streets, and contains a church, townhouse, and four mills. Pop. 1342.

DRANSE—1 (Falesand) a river Switzerland, can. Valais. It is formed by two torrents, the one of which descends from the N. slope of the Great St. Bernard, and waters the valley of Entremont, while the other issuing from the glaciers of Chermonts, traverses the Val de Bagne.

After their junction, the united stream proceeds first W. then about due N. past Martigny and about 2 m. below that town forms a lake. Below the damming up of this river by glaciers has repeatedly formed a collection of waters, which ultimately bursting their bonds, have caused fearful devastation.

See **DRANSE** (VALAIS).—3 (Savoyard) a river Savoy which rises in Mount Morgane, prov. Chablais, and flowing circuitously W.N.W. through that province, falls into the Lake of Geneva on its N. shore, 3 m. N.E.E. Thonon, after a course of about 77 m. Its current is very rapid, and is often interrupted by enormous masses of rock.

DRAFFENTOWN a market tn. Ireland, co. of, and 27 m. S.E. by R. Londonderry with a parish church, school, and work-houses. Weekly market on Wednesday, and fairs monthly. Pop. 368.

DRAHNBHOFEN or **TRAHNBHOFEN**, a vil. Archduchy of Austria below the Enns, dist. Puchberg, on a small stream of same name, 40 m. N.N.E. Vienna. It contains a parish church. Pop. 1232.

DRAUGHTON par. Eng. Northampton; 1477 ac. P. 333.

DRAVE [see *Drusus* German *Drum*] a river, Austria, which rises at the E. extremity of the Tyrol, at the foot of the Hohe Tauern in the Fiemerthal, and flows S.E.E. across the N. of Tyrol and the S. of Austria, forms the boundary between Hungary on the left, and Croatia and Slavonia on the right, and after a course of about 800 m., joins the Danube, 14 m. below Essek, near the castle of Erdosy. It receives numerous streams, among others, on the right, the Gail, Drun, Pläivilca, Bednja, Rastra, and Karaschka, and on the left, the Mohl, Guck, Levant, and Mar the last being by far the most important of its affluents. The widest towns which it passes in succession are Lienz, Villach, when it becomes rapid, Maribor, Wenden, and Laibach. Its banks are generally narrow, being bounded in by mountain ridges, by branches of the North and Styrian Alps on the N., and of the Carstic Alps on the S. It is very rapid in the upper part of its course, and subject to sudden floods, which bring down masses of debris and trees, greatly impeding its navigation. On reaching Slavonia, it begins to run between flat banks, which, notwithstanding the lofty dykes which line them, it often overflows, and not unfrequently causes great devastation. It abounds in salt, and some gold is washed from its sands.

DRAVE par. Eng. York (W. Riding) 6474 ac. P. 1389.

DRAVOT (MASSACHUSETTS) or **DRAVOT** in MAINE, a market tn. and par. England, on Salop. The town, pleasantly situated, r. bank, Teme, and 18 m. N.E. Shrewsbury has a church supposed to have been erected, with exception of the steeple, in the reign of Stephen places of worship for Baptists, Independents, and Wesleyan Methodists and a free grammar school founded in the reign of Philip and Mary and several other small charities and a national school There are some paper and hair-cloth manufactures, tanneries and some printing. Market-day Wednesday. Four fairs annually.

Dravot is supposed to have been the *Caer Dravot* of the ancient Britons, and one of their principal towns. On Rhineland, about 2 m. from the town, a sanguinary battle was fought between the hosts of York and Lancaster in which the latter were defeated. Area of par. 14,216 m. partly in Staffordshire. Pop. 494.

DREBACH DREIBACH, or **DREIBACH** (ONNE and NIEDER) a vil. Saxony circle Zwilckau, bail. Annaberg. It contains a church, which has been recently renovated; and has many factories of linen, lanklins flowerks, blacksmiths, a spinning and some iron and other mills. Pop. 3337.

DREBKAL, a tn. Prussia, gov. of, and 50 m. S.W. Frankfurt-on-the-Oder. It contains a castle, church, beggar school, and hospital and has manufactures of linen trade in cattle, and four annual fairs. Pop. 908.

DREGHORA par. Scot. Ayr 4477 ac. P. (1851) 1828.

DREHIDTARINA, a par. Ireland Limerick 906 ac. Pop. 539.

DREH a small vil. Scotland, co. of, and 4 m. N. Haddington, a station on the North British Railway.

DREHET, a vil. Holland, prov. Gelderland, 8 m. S. Eindhoven, on the Old IJssel, with a Reformed and a R. Catholic church, and a school, and inhabitants occupied in agriculture. Pop. 1100.

DREHGFURT a tn. Prussia, gov. Königsberg, circle of, and 11 m. N.N.E. Zantenburg on the Onest. It is the seat of a court of justice; and has manufactures of linen and leather, a trade in cattle, several mills, and three annual fairs. Pop. 1748.

DRENSTEINFURT a ta. Prussia, prov. Westphalia, 12 m. S.W. of Münster. It contains a castle, church, and chapel and has manufactures of linen and wooden clags, a trade in cattle, and two amusements. Pop. 1150.

DRENTHE, a prov. Holland, bounded E. by the kingdom of Hanover S. and W. by prov. Overijssel W. by Friesland and N. and E. by Groningen; between lat. 53° 35' and 55° 15' N. and lon. 8° 4' and 7° 4' E. greatest length N. to S. 49 m. breadth, 28 m. area, 945 sq. m. It is in general more elevated than the surrounding provinces, especially in the centre, from which the ground falls away on all sides so that no streams flow into the province, but numerous small ones flow out of it on all sides. There are also several small lakes. The soil is in general sandy and large portions of the province are covered with heath and moor; those parts which are elevated forming good land when cleared of turf which is extensively wrought. In the heath, also, large boulder stones are found much prized for building sea-dikes. The principal grain crops are rye and buckwheat, though barley and oats are also partially cultivated. Obley cole, and clover seed are also raised and excellent flax and hops are grown. Oak, ash, lime, birch, alder and other timber trees are considerable areas. The principal wealth of Drenthe, however, consists in breeding horses, sent as foals, to be reared in Friesland, raising superior cattle and sheep the latter yielding fine wool and excellent mutton; multitudes of swine, and poultry of all kinds, and bees. Manufacturing industry exists only to a limited extent, though some cotton and woollen weaving, boat-building, brewing, distilling, candle-making and oil-expressing are carried on. The climate is dry and healthy though somewhat sharp, and the people are in very comfortable circumstances. The soil is divided into three sections and subdivided into 80 communes and has 121 common schools, attended by 10,000 children. Pop. (1841) 72,484, of whom 87,698 are Protestants, 8264 R. Catholics, and 1401 Jews. Pop. (1850) 83,269.

DRESDEN one of the four great circles (Kreis-districts) into which the kingdom of Saxony is divided, bounded N. by Prussia, E. by Austria, S.E. and S. by Bohemia and W. by Silesia and Leipzig; area, 1270 sq. m. It mostly belongs to the basin of the Elbe, which traverses it from S.E. to N.W., and towards both banks of which the surface slopes down into tolerably level tracts of great fertility. In other parts it is very mountainous, particularly in the S.W. where it is covered by lofty ridges of the Erzgebirge which here attain a height of 2900 ft. It is much more pastoral than agricultural, and great numbers of sheep, horses, cattle, goats, and swine are reared. In some parts wood is abundant, but in others so scarce that several districts depend much of Bohemia for supplies both of wood and coal. The chief wealth of the circle is derived from its mines, which include silver, copper, lead, antimony, cobalt, iron, copper, coal, lignite, and marble; and though not so productive as in earlier times, are still worked to a great extent, and produce a large revenue. Besides the manufactures in metal, those of glass and porcelain are very important but, in other industrial branches, this circle scarcely equals any of the other three. For administrative purposes, it is divided into 17 districts (Amtshauptmannsch.) Pop. (1840) 461,042 of whom 478,686 are Lutherans, and 8267 R. Catholics.

DRESDEN (Latin, *Dreves* or *Dreves* French *Dreux*) a city of eastern Europe, cap. kingdom of Saxony on both banks of the Elbe, here crossed by a fine stone bridge. lat. (Frankfurt) 51° 15' N. lon. 12° 44' 47" E. (L.) 103 m. S. by E. Berlin, and 280 m. E. N. E. Frankfurt-on-the-Main. It lies in a picturesque and fertile valley in the Saxon wine district, and consists of the Altstadt (old town) with its suburbs Pirna, See, and Witzsch, and the adjoining new quarter of Friedrichstadt on the W. all on the l. bank of the river and the Neustadt (new town) on the r. bank. The Altstadt is composed of lofty houses, rising regular but

narrow and dingy though tolerably clean streets, presenting as in the market-places, more especially the new market surrounded by the principal hotels, and the old picture gallery some rather picturesque features. The suburbs and new

parts of the town, including the Neustadt, are more openly built; houses not so lofty generally of a pleasant exterior and frequently having gardens attached.

Though few of the buildings of Dresden present remarkable architectural features there are few so possessing so many attractive collections of art and antiquity. The principal edifices are the royal palace (Georgentempel) a large unassuming building, the new theatre one of the handiwork in Germany; the old picture gallery in the new market, the townhall in the old market, the houses of assembly several mint Marcolman palace, the new post-office, on the W. side of the city the Zwinger built in 1711 by Augustus II and intended for the entrance yard to a magnificent palace, which was never erected and consisting of six pavilions, united by a gallery of one story the Birth palace, and the Augustus or Japanese palace, in the Neustadt. The handsome bridge which unites the two sections of the city is 1420 ft. long and has 16 arches. It was originally built in the 12th century and was brought to its present form by Pöppelmann, in 1727-81. Devout blew up two of the arches in 1813 to cover his retreat and one of the same arches was carried away by a great flood in the Elbe, March 21, 1840, so which occasion much damage was done to the city and the country around. Dresden has 19 churches and chapels, of which the most important are the Frauenkirche (Our Lady's Church) on the left hand end of the accompanying illustration founded in the 11th century and whose large dome withstood the cannon balls of Frederick the Great. The R. Catholic church opposite the end of the bridge, adjoining the royal palace, with which it communicates by a private covered way a pretensions decorated, but tasteless building in the Italian style the Kreuzkirche (Church of the Holy Cross) and the churches of St. John and St. Sophia, the last seen in the view over the R. Catholic church. The numerous rich collections in the city include the following—the picture gallery in the new market, and for the better reception of which a magnificent new building is in process of erection, on the N.E. side of the Zwinger this collection, the finest out of Italy includes works by all the first Italian masters, and a very numerous collection of the Dutch masters; attached to this gallery is a collection of casts from the antique. The Zwinger contains the historical museum or Kunstkammer including a fine collection of warlike weapons, offensive and defensive a very complete collection of su-

garriage [Kupferstichsammlung] exhibiting a complete history of the art of engraving and a collection of casts in plaster from the Eliza marble. It formerly contained a small natural history collection, which, along with the wing of the

DRESDEN.—From Tietz's Compendium Aeneas

Zwinger containing it, and the opera house adjoining, was destroyed by fire during the insurrection of May 1849. In the lower floors of the royal palace are the celebrated Grüne Gewölbe (green vaults) containing the Saxon regalia, and a dazzling collection of jewelry and articles in gold and silver, ivory, pearl &c., gathered together by various Saxon monarchs. Among them are works by Michael Angelo, Peter Vischer Düringer &c. In the Augusteum, in the Konstadt, stand the Japanese palace from some grotesque figures outside, and built for a summer residence by Augustus II., are an interesting collection of antiquities, a library of 800,000 volumes, and 2800 MSS., and the famed collection of porcelain and terra cotta, including specimens from all countries, and of all ages, and presenting to the eye a complete history of the ceramic arts.

Dresden possesses an academy of art, and school for architecture. It had an academy of medicine and surgery prior to 1846, in which year it was discontinued by vote of the assembly leaving only in existence the veterinary school and botanic garden which were connected with it. It has likewise an institution for the blind, and one for the Jews; several hospitals for diseased persons, for the poor for foundlings, and for orphans and public baths for the poorer classes. Among its learned and other societies are one of economy and mineralogy founded in 1816 by Werner and now united in the natural history and medical society and societies for horticulture and botany, Saxon antiquities, statistics, &c. It is well supplied with educational institutions, among the principal of which may be named the military school, the gymnasium, the Kreuzschule, two normal seminaries for teachers, numerous public and private schools, free, and others for poor children.

The manufactures of Dresden are not important, the china, for which the city is famed, being made chiefly at Meissen 14 m. distant. To some extent, however, there are made articles in gold and silver, mathematical and surgical instruments, which bear a good repute, straw hats and plait, artificial flowers, palster's canvas and colours, white lead, mineral musical instruments, &c. Dresden has also a factory for cutting beads and stones, and in the neighbourhood there are cut mines, iron, and glass works, and manufactures of chemical stuffs. Its commerce is not great, any more than its manufactures, though of late years, and since the development of the railway system, the trade with foreign parts has considerably increased. A good deal of business is done with the upper parts of the Elbe, by means of the steamers, which ply so far up as Tschobitz, passing on their way through the Saxon Switzerland. Three lines of railway meet at Dresden and have their termini near each other in the Konstadt—the railway to Leipzig, then to Görlitz and Prussian Russia, and that to Prague.

The city is well supplied with beautiful and elegantly laid out walks. After the continental war the whole of the fortifications were thrown down, and their site converted into gardens and promenades; besides which, the Brühl terrace, in front of the Brühl palace, overlooking the Elbe; the great garden (Grosse Garten) in Pirna suburb, 5 m. in circumference and adjoining it the nursery of fruit trees the gardens of the Japanese palace, the gardens of the Marcellian palace, the botanical garden, Anton's garden, Prince Maximilian's garden, Strava's chemical mineral water establishment, &c. are all pleasant and favourite places of public resort.

Dresden appears originally to have been a village of Wendish fishermen, on the r bank of the Elbe, where the present Konstadt is situated. In the 11th century the village came to be on the l bank where the Altstadt now stands. In 1510 it was fortified, and in the beginning of the 18th century under Augustus I and II it attained its greatest point of splendor. Since that time it has been the theatre of many and important historical events. It suffered severely during the Seven Years war and during the French war it was alternately the headquarters of Napoleon and of the Russian and Prussian army September 9 1830, a popular revolution took place in consequence of which King Anton resigned in favour of his nephew and Saxony obtained a constitutional form of government. Another insurrection broke out in May 1849 when many lives were lost; the opera house and part of the Zwinger were burnt, and much damage done in various parts of the city. Pop. (1884) 66,182 (1846) 80,377 (1849) 94,099 of whom 66,181 Lutheran, 653 Calvinists, 441 R. Catholics, with a few German and Greek Catholics and Jews (1861). 128,152 —[Wigand's *Compendium Aeneas, Fürster a Deutschland, Private Information, Statistische Mittheilungen aus dem Königreich Sachsen*, 1861]

DREUMEL, a vil. Holland, prov. Gelderland, 17 m. W Nijmegen, with a N. Catholic church the ruins of an old parish church and a school. Inhabitants engaged in agriculture and cattle-rearing. Pop. 1465.

DREUX [anc. Dreuxacum] one of the oldest towns in France dep. Eure-et-Loire, on the Elise, near to where it joins the Eure, 30 m. N N W Chartres. It is built at the foot of a hill crowned by a disintegrated castle has many old buildings, among which are the parish church, an interesting Gothic edifice of the 13th century with a tower of the 16th and the Hotel de ville, of the 18th century containing a museum of antiquity &c. The castle above-mentioned contains a chapel, founded in 1142, to which has been added the costly mausoleum of the Orleans family finished by Louis Philippe not long before his expulsion. Dreux has a chamber of commerce several tanneries and some mills in grain and other provisions. When it was founded is uncertain, but it had its own counts, and a mint, A.D. 1031. It was long the capital of the county of Dreux, now merged in dep. Eure-et-Loire. It was taken and ravaged by the Anglo-Normans in 1186. In 1598 Henry IV took it by assault, after an obstinate siege of 18 days, in which its defences were much damaged, they were never repaired and the town soon thereafter decayed. Pop. 5647.

DREWENZ, a river E. Prussia, which rises in the E of gr. Königsberg a little W of Hohenselms Sows N W to Osterode, where it expands into a lake of some name, stretching irregularly E to W. On leaving from the S.W. extremity of the lake it flows first S.E. W past the town of Neumark, then turns W.E.W. passes the town of Stralsburg forms the boundary between Prussia and Poland, again enters Prussia, and joins r bank Vistula 4 to E Thorn, after a course of about 100 m.

DREWSTONKTON par. Eng. Devon; 8087 sq. P. 1282.

DREIBURG a m. Prussia, prov. Westphalia, gr. of and 89 m. S. Minden, on the Aa, at the foot of the Sallburg.

It was once fortified, but is now open, contains a R. Catholic parish church, a manufactory of fireworks a trade of brick, and two annual fairs. Its harbor, situated a little E. of the town beneath the old castle of Yburg, are much frequented. The water which supplies them is a chalybeate, said to be one of the strongest known. Pop. 2200.

DRIBY par Eng Lincoln 1388 ac. Pop. 98.

DRIEDORF, a *ts.*, duchy of and 25 m. N. E. Naumau it is walled contains two castles, both ruinous, and a Protestant church and having been almost burnt down in 1819 has been rebuilt in a much improved form. Pop. 648.

DRIEL, two *vics* Holland, prov. Gelderland—1 23 m. S. W. Arnhem, r. *banx* Maas, with a Reformed and a R. Catholic church. Pop. agricultural, 8115.—2 8 m. N. Nijmegen with a Reformed and a R. Catholic church, and a school. Pop. agricultural, 900.

DRIESEN a *ts* Prussia, gov. of and 64 m. N. E. Frankfort-on-the-Oder on an island formed by the Neime. Its fortifications have been demolished but it is still entered by six gates is the seat of a court of law contains two market places, a church, and a grammar school and has manufactures of woollen and linen cloth, a tannery brewery distillery and some shipping and general trade. Pop. 8665.

DRIETOMA a *vil* Hungary Riber Deme co. of, and 6 m. from Trentschin. It contains a parish church, and has several mills. Pop. 1719.

DRIFFIELD (GHEAT) a market in and township England co. York (E. Riding) the former pleasantly situated at the foot of the wolds 27 m. E. by N York, at the head of a navigable canal communicating with the Humber at Hull is a considerable shanty of one large and broad street, stretching N. to R. houses of brick, well kept plentifully supplied with excellent water and lighted with gas. It has an ancient parish church of Gothic and Saxon architecture, four Dissenting places of worship, a national school, at which upwards of 100 children receive instruction and three daily schools, a mechanics institution reading-room and dispensary. The principal manufactures are carpets woollens, and cotton goods, to a very small extent. Market-day Thursday. The Hull and Redding railway has a station here. Area of township, including chapelry of Little D. 10,058 ac. Pop. 4149.—(Local Correspondent.)

DRIOB, a dist. or settlement, British Guiana on the banks of the Upper Corentyn about lat. 2° 1' N. lon. 56° 38' W. The men are tall and well-made, from 5 ft. 5 in. to 6 ft. 7 in. in height, and ornament their bodies by tattoos, like the S. Sea Islanders. They also paint the whole body red but generally allow the face to remain of its natural colour sometimes however painting the half of that also red.

DRISHA E. par Ire Cork 89 085 ac. Pop. 5081.

DRÖBAK, a small *in* and seaport, Norway prov. Agderhus, 18 m. S. by W Christiania. It contains a church and carries on a considerable trade. Pop. 1500.

DROGHEDA, an *anc. ts.* par bar and seaport, Ireland co. Meath and Louth, on both sides of the Boyne, about 4 m. from its embouchure in the Irish Sea, 26 m. N. Dublin, with which it is connected by railway lat. 54° 48' 48" N. lon. 6° 21' W. (N.) Both portions of the town lie partly in both towns, and partly on rather steep acclivities. It consists of four principal streets which intersect each other at right angles, and of a number of smaller with numerous lanes and

alleys. The streets are all tolerably straight and regular but are very ill kept. The greater number of the houses are built of brick, and are in general substantial and well constructed. There are also a number of fine old family mansions in the town, but which are now inhabited by a somewhat different class from those by whom they were first occupied. The supply of water is very deficient, the greater portion being brought to the town daily on dooley carts, some being obtained also from a few public pumps. The streets are lighted with gas, but very scantily. As is the case in most Irish towns, Drogheda has extensive suburbs, composed of miserable cabins, which greatly disfigure the approaches.

There are in the town three places of worship belonging to the Established church one Presbyterian meeting-house, one Methodist, and several R. Catholic chapels. Several of these are handsome buildings particularly the parish church of St. Peter's and the R. Catholic chapel of the same name the former being an elegant Grecian and the latter a splendid Gothic edifice. The other principal public buildings are the townhall corn market, Smith's endowed school house, and the poorhouse. It has several schools, a few marble staircases, a newspaper, and a mechanics institute.

Flax and cotton spinning are carried on in Drogheda or its immediate vicinity to a very considerable extent there being several large mills on the banks of the Boyne near the town. There are also an extensive foundry and steam-engine manufactory two breweries, a number of tanneries several soap works and a small shipbuilding yard. Drogheda carries on likewise a pretty large export trade chiefly with Liverpool in which several first rate steamers ply. The exports are sent principally of corn meal flour cattle provisions, linen &c. imports of coal, manufactured goods and colonial produce. The number of sailing vessels belonging to the port, in 1848 was 46 tons. 4668 steamers, at 1555 tons. The harbour of Drogheda is formed by the waters of the Boyne 4 m. from the sea, and extends about half a mile below the bridge, with 16 to 18 ft. water abreast the quay. At the entrance of the harbour are three lighthouses. The navigation of the Boyne for barges of 50 tons extends inland to Navan 19 m.

Drogheda was a principal rendezvous for the forces which were so frequently returned in Ulster between the 14th and 17th centuries. On the breaking out of the rebellion in 1641 it was unsuccessfully besieged by the rebels in 1649 it was stormed by Cromwell and its garrison put to the sword and in 1690 it resisted the attack of a division of King William's army within 2 m. of its walls was fought the famous Battle of the Boyne. Drogheda was also the seat of many Irish Parliaments at various periods, particularly during the 15th century. Amongst the remarkable architectural antiquities with which this ancient town and its vicinity abound are Magdalen's steeple and Lawrence gate. The first is all that remains of a Dominican convent founded in 1224. It is a lofty square structure of light and elegant proportions built upon and entirely supported by a noble pointed Gothic arch and presenting, from its present isolated position, a very singular and striking appearance. The second Lawrence gate, is the only perfect specimen remaining of the ancient fortifications of the town. It consists of two lofty round towers, with the low gateway between in fine preservation. Pop. 18,345.—(Local Correspondent.)

DROHITCHIN or DROHITZ, a *ts.* Russian Poland prov. of and 55 m. S. W. Bialystok, sep. circle of same name r. bank Bag. It contains four churches, a Plarist college, with a gymnasium two monasteries, and a nursery Pop. 984.—The circular area 900 sq. m. is watered by the Bag and the Narew is well wooded and has much excellent arable and meadow land. Pop. 49 651.

DROHOBYCZ, a *ts.* Austria, Galicia, circle, Senior sep. lordship of same name, on the Tynianica 41 m. S. W. Lemberg. It consists of the town proper and eight suburbs contains two churches, one the handsomest: in the country a synagogue, Basilian monastery castle, and high school (and has an important trade, chiefly with Hungary in corn, leather linen earthenware, and particularly salt, obtained from salt springs in the vicinity. Pop. 7808.

DROITWICH a *para* bar and market in England, co. of and 6 m. N. E. Worcester agreeably situated in a narrow valley on the Salway. It consists of five principal streets, well

kept and lighted with gas, and has three established churches, a chapel of ease, and places of worship for Independents and Wesleyan Methodists. A charity school for 60 boys and 60 girls, several daily and national schools, an infant and a ragged school and an hospital for 80 old men and women founded in 1896 and a lunatic asylum. The principal trade of the town consists in the manufacture and export of salt obtained from brine wells sunk in the middle of the town. The brine contains 35 per cent. of salt, which is obtained by evaporation. About 1000 tons of salt are manufactured weekly the greater part of which is shipped for Gloucester and other places, by a canal 6 or 8 m. long, which communicates with the Severn, and is navigable for vessels of 60 tons burthen. Brine-baths, established here several years ago, have proved highly beneficial, especially to persons afflicted with gout and rheumatism. The brine springs were anciently called *ceches* (Naxos) whence the name of the town the prefix *Droth-*—right or legal—being supposed to refer to some exclusive privilege for the manufacture of salt obtained by the inhabitants. Salt has been manufactured from them for upwards of 1000 years, as appears from the grants of different Bishops king to the church of Worcester. Drothwich is supposed to have been the *Solana* of the Romans, and insulated pavement, and other antique Roman remains, are occasionally discovered. It sends a member to Parliament. Registered electors (1850) 388. Market-day Friday. The Drothwich station of the Midland Railway is 14 m. from the town. Pop. (1841) 2833. —(Local Correspondent.)

DROTHHAGEN a tn Prussia, prov Westphalia, gov Arnsberg, near the source of the Bigge, 35 m E N E Cologne. It contains a R. Catholic parish church, and has several inns, and three annual fairs. Pop. 497.

DROM par Irel Tipperary 4690 ac. Pop. 1400.

DROME—1 (anc. *Dromai*) A river France, which has its course wholly within the department to which it gives its name, and which it crosses E. to W. near the centre, rising near the frontier of Hautes-Alpes, flowing N.W. past Dromed ridge of hills, then first N. and afterwards W. by N. to its embouchure in the Rhone 13 m S. by W. Valence. Its total course is 68 m. through some most wild and picturesque scenery and fertile valleys. It is suitable for flotation nearly throughout, and considerable quantities of timber from the forests on its banks, are transported along it.—2 A small river esp. Calvados, which falls into the British Channel 31 m. N.W. from Caen after a N. course of 24 m.

DROME, a dep. France, bounded N. and N.E. by Isere E. Hautes-Alpes, S. Basses-Alpes and Vaucluse, and W. by the Rhone, forming the boundary between it and Ardèche between lat. 44° 7' and 45° 30' N., and lon. 4° 36' and 5° 46' E. Length, N. to S.E., 96 m., centre breadth, 47 m., area, 2508 sq. m. The surface is very much broken by mountains, forming ramifications from the Alps, and traversing it from N. to S. but has a general slope westward towards the 1 bank of the Rhone. The average height of the mountains is from 4000 to 5000 ft., and between them are narrow valleys, drained by numerous streams, which, with scarcely a short exception, flow W., and carry their waters to the Rhone. After the river forming, as already mentioned the W. boundary of the department, along which its course is almost due N. the most important are the Isere, in the N., and the Drôme, which gives it its name, and crossing it almost centrally from E. to W., divides it into two nearly equal parts. About one-fourth of the whole surface is waste,

and nearly one-third in wood. The greater part of the remainder is arable, but the soil possesses little natural fertility, being generally thin and stony, and the grain raised falls considerably short of the average. A considerable extent of ground is occupied by vineyards, and several of the wines produced are first class. Among them may be mentioned Hermitage, grown near Tain; and the wines of Dio, Domfres, Châteaufort, Montclarm, and Mureuil. The loftier summits and higher lands of the department are devoted to pasture, and, in summer are browsed by numerous flocks of sheep, sent chiefly from department Bouches-du-Rhône when, from heat and drought, its plains of *Cruu d'Arles* cease to be nourishing. Among the forest trees, oak, and beech prevail, but on the lower localities are extensive plantations of chestnuts and walnuts, the former of which are extensively used as food, while from the latter great quantities of oil are extracted. In many districts both the olive and the mulberry thrive well and large quantities of silk are obtained. The animal principally employed, both in agriculture and for burden, is the mule. Horses and horned cattle are few in number and of inferior breed, but the sheep, chiefly merino, or a cross with them, are very numerous and some of the flocks of which is much renowned are fed in large herds on the moor of the forests. Game including chamois, hare, and partridge, abound. The wolf is by no means uncommon, and eagles and vultures are frequently seen. The lakes and rivers are well supplied with fish. The minerals include iron and lead which are worked to several places copper of which only indications appear and coal, which, though as yet worked only at one spot is thought to form a considerable field. *Limons*, gypsum, and marls white and variegated, are common. The manufactures consist of coarse woollens, serge, printed flanne gloves, leather combs and mirrors, and there are numerous dyerworks, paper notions and silk mills boms and plaster kilns, brick and tile-works, several roperies and blast furnaces. The trade is chiefly in wine, brandy oil fruit, silk, wax, and honey. For administrative purposes, Drôme is divided into four *arrondissements*—Valence (the capital) Dio, Montclarm and Syon, subdivided into 28 cantons, and 361 communes. Pop. (1846) 320 076.

DROMEDARY a capr. S.E. cont. Australia lat. 36° 18' S.; lon. 150° 14' E. about 105 m. N. Cape Howe. It consists of a projecting headland having a double mountain over it, called Mount Dromedary.

DROMORE—1 An spacious city Ireland, co. Down, 16 m S.W. Belfast on the Lagan here crossed by two bridges. It consists of a square and five principal streets, and is rather neat and well built. In an open and spacious area stands the market-house, a substantial building. The parish church a small unpretending structure, contains the remains of Jeremy Taylor who was bishop of the see, and by whom it was built. There are also a R. Catholic chapel and two Presbyterian meeting houses, a district school and two widows houses. Weekly market, on Saturday for provisions, farming stock, and linen. A constabulary police force is stationed here. Near the town is a mineral spring of some repute and a Danish mound, 60 ft. high. Pop. 1872.—2, A par Irel Tyrone; 26 492 ac. Pop. 6091.

DROMENI (anc. *Dromonrium*, *Dromonrium*) a city, bishopric of Italy Peloponnes, prov. 64, and 18 m W N.W. Corin. picturesquely situated on an eminence at the confluence of the *Evros* with the *Murru*, here crossed by a lofty stone bridge, of three arches at the mouth of an extensive valley. It consists of the town proper surrounded by old walls, and of two suburbs to the east of a court of justice, contains a large parish church of three naves in a kind of bastard Gothic; another church belonging to the confraternity of *Gonfalone* a simple and elegant structure; a townhouse

a Hecoliteian monastery a college, with about 300 students, and an hospital, erected on the site of the old castle of Drumore, of which a majestic tower still remains; and has manufactures of hampden cloth and of saythes and scythes several silk mills, a trade in the above manufactures, and in corn cattle, sheep, and lamb wool and four fairs. Pop. 3365

DRONFIELD a town and par. England, co. Derby.—The town pleasantly situated in a valley formed by a branch of the Eother 7 m. S. by E. Sheffield, in small but neat, and is inhabited by many respectable families. The parish church beautifully situated on a hill near the town, has a fine tower and spire, chiefly in the decorated English style. There are places of worship, besides for Independents Wesleyan Methodists, and the Society of Friends also two free, and several other schools. Cutlery edge tools, agricultural implements, and saddlery ironmongery are manufactured here to a considerable extent. In the neighbourhood are iron and chemical works, and several corn mills. Coal abounds in the vicinity. Area of par 15,590 a. P. 5351

DRONNE, a river France, which rises about 18 m. S.W. Limoges dep. Haute Vienne, flows S.W. enters and traverses dep. Dordogne, and in part of its course, forms the boundary between it and the two Charentes enters dep. Gironde, and falls into the Gironde 25 m. N.E. Bordeaux, after a course of about 100 m. It is nowhere navigable except for a short space near its mouth.

DRONKIJ a vil. Holland, prov. Friesland 6 m. W. Leeuwarden on a canal, advantageously placed, and flourishing. It has a Reformed church and school a tle-work, and a corn-mill. Pop. agricultural, 1100

Several annual fairs; weekly petty sessions. Pop. 284.—(*Local Correspondent*)

DRUNG par Irel. Cavan 11 475 a. Pop. 4396

DRUBES, a people who inhabit the coast of Lebanon in Syria, but chiefly the S. part, E. and S.E. Beirut and of

for 8, as the district of Hasbaya, about the sources of the Jordan. Their territory contains several mountain districts, forming as many cantons, each under an entire of ancient family. Throughout this tract, a kind of republican independence is maintained under a hereditary chieftain. Their houses are generally comfortable, being substantially built of stone, and almost always whitewashed, although in their villages there are many clay built dwellings, but these, though humble are neat and clean. They are remarkable for patient and persevering industry for hospitality valour and love of country with extreme pride of birth. The Druse families frequently wear a blue jacket and petticoat, with some cotton attached to the hair; but their chief ornament is a singular conical shaped band of chased silver projecting about 18 inches from the forehead to which it is attached. It is also balanced by a heavy weight behind the head; it is not removed even at night, and in the day-time the costume is completed by throwing a piece of white cotton over it so as to envelope the whole person. Their religious rites are but little known, but they have a priesthood and abhor all religions excepting their own. They neither fast nor pray but believe in the transmigration of souls. Their language is Arabic. The capital of the Druses is Dair-el-Kamar (which see).

DUAGH a par and to-let Kerry 18 701 ac i 4068

DUBHEDDER or **DUBHEDDER** a vil Scotland, co Fife 6 m. S.E. Markinch r bank, Leven, near its influx into the Firth of Forth neatly and regularly built, and containing a R. Presbyterian church. R. chiefly hand loom weavers. 846.

DUBUEN a til, Prussia, gov. Memberg circle, Bitterfeld, r bank, West, here crossed by a wooden bridge, 17 m. W. N.W. Torzau. It is the seat of a law court and several public offices, contains a church and an old castle, and has manufactures of cloth, a trade in wood and three annual fairs. Pop. 8850.

DUBENETZ, a vil Bohemia, circle, Klatzgratz, about 6 m. from Jaromitz. It is divided into Upper and Lower Dubenetz, contains a parish church, and has several mills. In the vicinity are the ruins of the strong castle of Kalowitz. Pop. 1538.

DUBBOY or **DUBBOY**, an island in Hudson's bay, Gov. Gen. 20 m. N.E. Baroda lat. 22° 7' N. lon. 78° 57' E. It is more than 2½ m. in extent, the fortifications forming nearly an exact square. Some of the houses are well built, but the others are more huts, overshadowed by mangoes and tamarind trees, in which great numbers of monkeys harbour. It was formerly a place of much greater extent and importance than it is now, as the remains of its ancient fortifications, gates, and temples, indicate. The gaze of diamonds is a singularly beautiful specimen of Hindu architecture, and the sculpture so minute and exquisite, as to approach the classical handicraft of Greece. The ancient walls and towers were entirely built of huge square stones brought from a great distance. Within the walls is a tank filled with hewn stone, having a flight of steps all round, three quarters of a mile in circumference. This magnificent reservoir is supplied chiefly by the periodical rains and the opening of the aqueduct, by which it is filled, is celebrated by a festival of several days in the rainy season, the town is completely isolated by large lakes or sheets of water so that the cattle swim in and out of the town every morning and evening.

DUBHILL A.C. co. Antrim, (Gallies, circle, Strath, 1 bank, 15 m. W. W. Lough. It is situated in a wild and mountainous district, contains a handsome chateau, with fine gardens, and has valuable mill races, which were at one time, and might still be, extensively worked, but, owing to a scarcity

of fuel, are at present made to yield only about 2000 tons of malt. Dubhicko has also six annual fairs, chiefly for grain. Pop. 1050.

DUBITZA, DUBITZA, or DUBITZA, a market in Austria, military Croatia, 1 bank, Unna, opposite to the Turkish fortress of same name, 24 m. W. Gradiska. It contains a R. Catholic, and a Greek non-unionist parish church and a German school (Trivialschule) and carries on an important trade with Turkey in grain, fruit and cattle. Pop. 4000.

DUBITZA, a small tn and fortress, Turkish Croatia r bank, Unna, about 10 m. from its junction with the Save lat. 45° 12' N. lon. 16° 45' 45" E. remarkable for the obstinate stand which it made against the Austrians in 1788. Opposite the tn. 1 bank, Unna, is the Austrian tn. of same name. Pop. 9000.

DUBLIN a maritime co. Ireland par Lenster on the E. coast of the island, having the Irish Channel E. Mouth and Kildare W., Wicklow S. and Meath N. Great length N to S, 83 m. greatest breadth, 16 m. area 854 sq. m. or 326,416 aa. of which 196,063 are arable, 18 313 meadows, 8519 in plantations, and 1820 in towns, exclusive of Dublin city. In 1848 32,391 ac. were under crop, occupied as follows:—

What	Area	Turn ps	Area
Corn	16,418	Steads and other green crops	1,008
Barley, Bere, Rye	26,618		
Wheat and Beans	2,670	Hay	97
Potatoes	9,466	Meadow and Clover	39 117

The surface is level, rising at its S. boundary into a range of elevated hills the summit of the highest of which—Lippase—is 478 ft. above the sea. The elevated grounds above the coast, in the S. parts of the county are very picturesque, and are occupied by marine villas, and by seats of the nobility and gentry. The districts are comparatively level and tame, but are fertile and covered with a beautiful verdure. There are, in all, about 70 m. of coast, including the bays of Dublin, Killiney, Malahide, Bogerstown and Lough Shanny. Property is much divided. Farms near the city small but at a distance, larger. Agriculture is, on the whole, improving but is still in a very backward state. The prevailing soil is rich limestone and granite. The principal streams are the Liffey which intersects it W to E., and on which there is a considerable salmon fishery. The Dodder and the Tolka both fall into Dublin Bay—the former on the S., the latter on the N. side of Dublin city. Important water communications are, the Royal and the Grand canals, both entering in Dublin and visiting the Liffey with the Shannon. Neither minerals nor manufactures are important. In 1841 there were 12 461 children attending school and, in 1848, there were 129 national schools in operation, attended by 22,491 children. The country is traversed by four railways which link the canal centre in the capital—the Kingston, Drogheda, Midland Great Western, and Great South-western. The country is divided into nine baronies—Balrathmore E and W., Castlemock, Coolock Dublin, Nethercross, Newcastle Rathdown and Upper cross and returns two members to the House of Commons. Registered electors (1850) 2207. Pop. (1841) exclusive of Dublin city, 140,047; (1851) 146 531.

DUBLIN a city, capital, and cap of Ireland co. Dublin, the residence of the Lord Lieutenant of Ireland, the seat of the see of the archbishop of the R. province, and the centre of all the political, ecclesiastical, educational, social, commercial and military institutions of the kingdom. It lies at the head of Dublin Bay and mouth of the Liffey, lat. 53° 33' N. lon. 6° 20' W. 292 m. W. N.W. London 138 m. W. Liverpool, and 68 m. W. Holyhead.

General Description.—Dublin is divided into two nearly equal parts by the Liffey which intersecting it W to E, is embanked with granite, and lined on both sides with spacious quays, and spanned by nine bridges—seven of stone, and two of iron. The city is shaded, N and S by the Royal and the Grand Canals, and is nearly surrounded by a highway called the Circular Road from S to N in extent, which may be considered its entire circumference. Its length from E. to W. is about 2½ m., greatest breadth about 3 m., and the ground on which it lies rises gently to the N and the S.W., the S.E. portion was reclaimed from the river. It is paved, and lighted with gas, and supplied with water chiefly from

the Royal and the Grand Canals. The oldest part of it lies to the E. of the river W. of the castle, and is composed of narrow filthy streets lined by mean houses, and inhabited by a miserable squalid population, and those who sell them food and clothing. Even in the better parts, when turning off the main thoroughfares, similar dwellings, similarly trampled,

meet the eye. The more modern part of the city, however, is regularly and well built as need be. Its principal streets are broad, and present a fine appearance, being generally lined with handsome houses, but the domestic architecture, as a whole, is plain, and wanting in character. Excepting the public buildings which are of stone the houses are all of

brick. The main thoroughfare E. to W. is by the magnificent quays along the Liffey presenting indeed one of the finest features of the city, lined as they are by elegant buildings, but the stream being tidal and the sewerage of the city being conveyed into it, with tide and warm weather causes it to exhale something but badly odorous. The principal thoroughfare, N. to S., is towards the E. side of the city and is composed of Grafton Street, the busiest commercial locality in Dublin, connecting N. by Curlew Bridge with Sackville Street, justly esteemed the finest in the kingdom, being 650 yards, or rather more than a third of a mile long and 40 yards wide at its N. end, in Rutland Square, stands the Rotunda near its centre the Nelson column, and on its W. side the general post office, a fine Ionic building in granite, with a hexastyle portico in Portland stone. There are several other important thoroughfares,

among which may be named, Dame Street, in which are the finest shops in the city. All the principal streets are filled with passengers, and with cars innumerable, and present quite a busy scene. Dublin has numerous and fine squares the chief, on the S. side of the river, are St. Stephen's Green, one of the largest public squares in Europe being 1 m. in circumference, with a bronze equestrian statue of George II. in the centre; Merrion Square, in which is the neglected house of the scholar Daniel O'Connell.

Vol. I.

and College Park and Fitzwilliam Square. N. of the Liffey are Rutland and Mountjoy Squares in the highest and aristocratic parts of the city.

Public Buildings and Institutions.—Few cities possess more numerous or more elegant public buildings. In the centre of the S. side stands Dublin castle on a slight elevation. It is the official residence of the Lord Lieutenant, and is more remarkable for size than for architectural features. E. from the castle, and facing College Green is the Bank of Ireland

THE BANK OF IRELAND AND TRINITY COLLEGE, DUBLIN.—From the Rotunda and on W. side, by W. F. Wakeman.

formerly the Irish Parliament-house, the finest building in the city and in front of which stands the bronze equestrian statue of William III. It is a large and elegant structure, with a noble colonnade of Ionic pillars. At a right angle to the bank, and facing the same area, is Trinity College, an imposing modern structure of the Corinthian order. It was founded by charter of Elizabeth, 1592 and is attended by 1200 to 1400 students, and has attached to it two libraries,

one of 130,000, and the other of 30,000 volumes, and a museum. The Four Courts, stretching for 500 ft. along King's Quay on the Liffey have a beautiful portion of the Corinthian colonnade, and in the centre is surrounded by a

charitable and benevolent institution of various kinds in the city many of them on a very large scale, and all liberally supported; are exceedingly numerous; they include five hospitals, among which the Royal Hospital, for disabled soldiers, is a noble edifice, by Sir C. Wren; several infirmaries among which is the lying-in hospital the first of the kind in the United Kingdom, two lunatic asylums one of which St. Patrick's or St. John's hospital, was founded by Dean Swift, who bequeathed £10,000 for this purpose; several orphan societies, and female penitentiaries and upwards of 200 charity schools, of which two are model two for deaf mutes 27 for orphans, 24 where the pupils are lodged clothed, and boarded, and 123 day-schools and a number of other not less useful charities. There are within the city or its immediate suburbs, seven barracks or military stations, capable of accommodating 5500 men.

THE FOUR COURTS, DUBLIN.—Drawn from Nature and on Wood, by W. T. Williams

large circular lantern with twelve windows, and twenty four Corinthian pillars its buildings accommodate the four courts of chancery Queen's bench, common pleas, and exchequer. The most important of the other public buildings, many of which are elegant, are the custom house, with a noble cupola, 125 ft. high the King's Inns, the post-office, already alluded to the royal exchange, rotunda, coin exchange, commercial buildings, hench hall the mansion house, city assembly house, common house, Newgate prison, house of correction, or Richmond, Bencroft the Sheriff's prison, the h. and S. union workhouses, and the stations of the Drogheda, of the Midland Great Western, and of the Great South western Railways.

The principal ecclesiastical buildings are the cathedrals of St. Patrick and St. John's Trinity the latter commonly called Christ's church and the metropolitan St. Catharine cathedral. Besides these there are 20 parochial and as many non-parochial Episcopal churches—eight St. Catharine, besides a Jesuit church, six friaries, and eight convents four Presbyterian, two Unitarian three Independent, one Seceding two Primitive Wesleyan five Wesleyan Methodist, two Friends one Baptist, one Moravian one German Lutheran, and one Welsh Methodist places of worship, and a Jews synagogue. There are three cemeteries—the Golden-bridge Cemetery established for the burial chiefly of St. Catharine's Prospect Cemetery adjoining the botanic garden, comprises about 20 ac. is tastefully planted and laid out with walks and contains a handsome monument to John Philpot Curran. Mount Jerome comprises 27 ac., and is also well laid out.

The most important literary and scientific institutions are Trinity College, already referred to the royal Dublin society for improving husbandry and other useful arts in Ireland; the Royal Hibernian academy of painting, sculpture, and architecture, and the royal Irish academy for promoting the study of science, polite literature, and antiquities the archaeological society the society of Irish artists, the institution of civil engineers of Ireland, statistical society royal institute of the architects of Ireland, geological society of Dublin, royal zoological society of Ireland, Dublin natural history society the Dublin college historical society the Dublin university philosophical society the Dublin university reading society and the Dublin mechanics institution. The principal libraries are the library of Trinity College, already mentioned Marsh's library containing between 17,000 and 18,000 volumes; and the Dublin library society. There are one agricultural and two horticultural societies and a society for the promotion and improvement of the growth of flax. This society was established in 1841 and succeeded in raising the amount of the Irish flax crop, in five years, from 35,000 to 46,000 tons.

The surgical and medical institutions are the royal college of surgeons, King and Queen's college of physicians in Ireland, the school of physics, the school of surgery the surgical society of Ireland, and school of medicine of the apothecaries hall of Ireland. There are, besides, several associations for the promotion of medical and surgical knowledge. The

For public amusement and recreation there are three theatres, the music hall, the concert of various musical societies, and the Fortobello and Botanical gardens. In the vicinity also, up the Liffey a little N.W. of the city, is the Phoenix Park, a corruption of the Irish term *Phonach*, signifying a spring of clear water one of the most extensive and beautiful promenade of which any European city can boast. Its greatest length is about 2½ m., greatest breadth about 1½ m. area, 1769 ac. It is adorned with trees, and its surface picturesque broken by a number of small ravines through which streamlets seek their way to the Liffey. The park contains the viceregal lodge the residence of the Lord Lieutenant, a large and handsome building with fine gardens attached and an enclosed domain of 180 ac. the chief and under secretary's lodges, the Hibernian school for soldiers children, the gunpowder magazine, the military infirmary the constabulary barracks, the lodge of the park ranger and assistants, the Wellington testimonial an obelisk 205 ft. high the garden of the zoological society the review ground for the troops in the garrison and an enclosed cricket ground. Upwards of 1800 ac. are open to the public. Fine views of the city are obtained from various parts of the park, which is under the charge of the commissioners of woods and forests.

Government Courts &c.—Dublin is the seat of the viceregal Government, consisting of a Lord Lieutenant and privy council, appointed by the Crown, assisted by a chief secretary and secretary and a large establishment of inferior officers. The official residence of the Lord Lieutenant is Dublin castle, first appropriated to that purpose in the reign of Elizabeth, but his usual residence is the vice-regal lodge in the Phoenix Park. The corporation consists of the Lord Mayor chosen annually from among the aldermen or town councillors; 15 aldermen, and 45 town councillors. There are three divisional offices, in which magistrates act daily for the administration of justice. Several of the principal civic functionaries are appointed by the Lord Lieutenant, and hold their office at his pleasure. The supreme courts of the city are, the Chancery Rolls, Queen's Bench, Exchequer Common Pleas, Nisi Prius, and Admiralty. The other principal courts are the Consistorial and Prerogative courts. The prisons of Dublin are Newgate, Richmond, Bridewell, and Richmond female penitentiary.

Manufactures.—The manufactures are of little note, although formerly woollen cloth, linen, and silk, were manufactured in the city and vicinity to a large extent. The tabacots or poplins, a fabric of silk warp and woollen weft, for which Dublin has been long celebrated, are still in some request, though small compared to what it was formerly. Tanning and currying of leather cabinet and coach making are all carried on to a considerable extent. There are two malting bollocks, a number of foundries, breweries, and distilleries, and establishments for the manufacture of flint glass, salt cloth, canvas, tarpaulins, vitriol, vinegar soap, starch size, glue, paper, parchment, vellum, hats, and the celebrated Lanesfoot snuff.

Port, Trade, &c.—The harbour formerly a very indifferent one, has been lately so much improved that vessels of large burden may now be moored at the quays. The depth of the channel at low water springs is from 11 to 12 ft. and at high water springs, 28 to 24 ft. This has been attained by dredging the bed and mouth of the Liffey, and by building a protecting wall on either side of the channel that on the S. side stretching far out into the bay with a lighthouse at its extreme end. The docks connected with the customhouse, on the N. side cover an area of 8 a., have 16 ft. depth of water and 1800 yards of quay, with ample stores, and are capable of accommodating 40,000 tons of shipping. The docks on the S. side afford commodious wharves for upwards of 100 mtd. Considerable advantage has likewise been derived from the formation of the harbour of refuge at Kingstown, giving increased security to the shipping. The principal exports are linen, cattle, corn meal flour provisions, sheep hogs, beer woolen and cotton manufactures, tides, and eggs and the imports colonial produce, tea, timber and wine the last article having continued to increase in quantity during all the vicissitudes of the trade of the port. For a number of years back the trade of the port, both home and foreign, has been rapidly increasing. The tonnage registered in 1845-46 was 105,101 and in 1846-47 126,398. The following table exhibits the progress made since 1840 as respects the number of foreign arrivals and the gross amount of customs and excise duties collected—

	Yards from James's Fort.	Customs.	Excise.
1840	247	559,447	353,132
1841	327	627,570	344,540
1842	344	646,523	345,508
1843	392	624,857	379,626
1844	275	571,977	327,526
1845	326	1,032,096	380,708
1846	340	1,015,059	350,308
1847	348	1,064,476	351,560
1848	416	895,249	357,697
1849		9,581	354,128

Steam packets ply regularly to Holyhead and Liverpool London, Bristol, Cork, Glasgow &c. some of them sailing from Kingstown harbour and by the Grand and Royal Canals, connecting the Liffey with the Shannon, supplies are carried to the interior and grain, potatoes, &c., are brought to the capital.

Four railways diverge from Dublin—the Drogheda to the N. is connected with Ulster the Midland Great Western, connecting with Galway and Connaught the Great Southern and Western connecting with Cork, Limerick, and the S. W. and the Kingstown railway.

The environs of Dublin are remarkably beautiful although the city itself is somewhat unfortunate in its approaches none of which do it justice. The bay is noble and picturesque, and situated one of the finest in the United Kingdom. It is about 7 m. in breadth at its entrance, between Howth Head on the N. and Kingstown on the S. with a lighthouse. It extends inland for about the same distance and along the shores are the villages of Keshmara, Blackrock, Clonsilla, Rathfarnham &c. and terraces of handsome houses, and scattered villas and the Baginbun of Howth, on the N. and Killiney Hill and the White Mountain, to the S. form fine objects in the scene. In the centre flows in the Liffey and on either side the Dodder and Tolka. Attached to the city or nearly so, are the suburban villages of Ringsend, Irishtown Sandymount, Ballahide, Dromocherry, Ballynahinch, Rathfarnham, Harold's Cross, Delphian's Barn, Kilmasham, Island Bridge, Glasnevin, Drumcondra, and Clonsilla.

History.—The metropolis of Ireland claims a high antiquity having been in existence, as is alleged, since the time of Fomor, when it was called *Binnia*. Its original native name was *Druon-Coll-Cella*, or the Hill of basal wood. Another ancient name, still retained by the natives, is *Bally-Ath-Chath-Duibhne*, the Town of the Ford of Hardies on the Blackwater. By the Danish settlers it was called *Dreleir*. These latter names appear to be merely varieties of the Irish *Dubh-linn*, or Black Pool which is considered the correct etymology. In the earlier part of the 9th century Dublin was taken by the Danes, who insisted it for several centuries

thereafter. In 1169, it was taken by storm by the English under Strongbow who died there seven years afterwards and was interested in Christ church cathedral. From about this period, the history of Dublin is that of Ireland.

The city returns two members to the House of Commons. Constituents (1850) 17,648 and the University returns other two. Pop. (1841) 232,738 1851 258,361 —(Thom's Irish Almanac The Land We Live In M. Glanville's Dublin and its Environs &c.)

DUBNICZ, or **DUBNICA** a market to Hungary Higher Danube, on of, and 9 m. N.E. Trnava, near bank, Vag. It contains a parish church to which numerous pilgrimages are made and a castle, which possesses a fine library rich in MSS. and has four annual fairs. Pop. 1868

DURNITZ, a town to Turkey 22 m. E. by V. Ghustanail bank, Strona, at the foot of Mount Durnitz lat. 43° 13' N. lon. 28° 20' E. The inhabitants are chiefly supported by working iron mines in the neighbourhood. Salt is produced in the locality. Pop. 6000

DUBNO a town, Russia, cap. circle of same name, gov. Volhynia, 129 m. W. by V. Jitomir on the Irva lat. 50° 26' N. lon. 26° 40' E. It is irregularly built, with narrow crooked, and upturned streets, but contains several Greek and St. Catharine churches, a Greek school a dental residence, and a grammar school. There is a considerable traffic in corn, flax, tobacco fish and cattle and a large fair is held at Whitenside. Pop. (1866) 8350

DUBOISSAL, or **NOVO DUBOISSAL** a town, Russia, gov. Kherson circle of, and 40 m. N.W. Tiraspol agreeably situated, 1 bank Dniester at the foot of a hill surrounded by gardens and fine Lombardy poplars. It contains two churches and a synagogue. Trade in tobacco extensively grown in the district. In the vicinity is a monastery where almost inaccessible rocks, and need to furnish an asylum to the inhabitants during the invasions of the Tartars. Pop. (1850) 5220

DUBOVKA a town, Russia, Gov. Dniepropetrovsk. **DUBRAYA** a town, U.S. Hungary, co. Szabolcs, on the Murakos, north of the junction of the Mar with the Drava. Many of the inhabitants are employed as carriers and in gold-washing. Pop. 2026.

DUBROVNA a town, Russia, gov. of and 47 m. N.E. Mohilev 1 bank, Dniester. It contains a St. Catharine and four Greek churches, and a synagogue, and has manufactures of woolen and linen cloth plush woolen covers, and cloaks a considerable trade in wood, carried by successive floatage, first to Babnowitzsch, then to Vitsebsk, and finally to Riga. The fairs, three in number are important. Pop. (1861) 7114

DLBUQUE, a vill., U. States Iowa, on a terrace, bank, Mississippi 1660 m. above New Orleans lat. 42° 30' N. lon. 90° 40' W. It is regularly laid out, well built, and contains several churches an academy 1 school, reading-room and printing office, which issues a weekly newspaper and is the centre of a mining district, lead being found abundantly within the jurisdiction of the village. Pop. 1800

DUGATO (Cape) the S. extremity of Santa Maara, one of the Ionian isles lat. 38° 58' 30" N. lon. 20° 52' 45" E. (s.) It is the ancient promontory of Leucadia, which was commonly called the Lover's Leap. The position Syphax, who chartered a hypothesis passage for Phoenicia, is reported to have thrown himself from the top of this promontory.

DUGHS, or **DUX**, a town, Bohemia, circle, Leitmeritz, in a plain, 46 m. N.W. Prague. It contains two churches, one of them with a fine altar-piece an hospital and a castle, which possesses a picture gallery a library of 13,000 volumes, and other collections and has a dailiness a weekly market, and four annual fairs and in the vicinity a coal mine. Pop. 10380

DUGIE, an uninhabited isl. S. Pacific Ocean lat. 24° 48' S. lon. 124° 48' W. (s.) It is a low of coral formation, oval form, with a lagoon in the centre and about 5 m. in circumference. The highest part does not rise more than 36 ft. above sea level. The water here is so clear over the coral rocks, that the bottom may be distinctly seen at a depth of upwards of 30 fathoms.

DUCK—J. A river U. States, Tennessee, rising in a branch of the Omerfield Mountain, and after a W.N.W. coast of about 180 m. falling into the Tennessee, 72 m. S.W. Nashville. It is navigable for about 90 m.—S. As 1st British America, Lake Huron, 2nd S. W. Manitoba lat.

DUCKINGTON par Eng Oxford, 3440 ac. P 571

DUDCOTT or **DUDCOTE**, par Eng Berks 1094 ac. Pop. 341

DUDESTON a township, England, co. Warwick, forming the N.E. suburb of Birmingham. It stands on an elevated plain and consists of five or six principal streets, wide, well laid out and kept in good condition, with several others of subordinate description well supplied with water lighted with gas and rapidly increasing in size and population. Houses of brick, but except in the principal streets, built without any regard to uniformity. It has three Established churches, a number of Dissenting chapels, and day schools. Trade much the same as that of Birmingham. Pop. 26,245 — [Local Correspondent.]

DUDDINGSTONE a vil and par Scotland co Edin burgh. The village about two miles S.E. Edinburgh is pleasantly situated near the foot of Arthur's Seat, having W. a small, but beautiful sheet of water called Duddingstone Loch a favourite skating resort of the citizens of Edinburgh. It has a handsome parish church in the Norman style and an hospital founded by Louis Caprin a French tinsmith in Edinburgh and afterwards a farmer in the parish. Near the village are the manor-house and grounds of the Marquis of Abercromby. The forces of Prince Charles Edward encamped in the vicinity in 1745 both before and after the battle of Prestonpans. Area of par. 1819 ac. Pop. 441

DUDINGTON par Eng Northampton 1490 ac. Pop. 401

DUDDON a river England rising near the junction of counties Cumberland Lancashire and Westmorland, and after a S. course of 30 m. between counties Cumberland and Lancashire falling into the Irish Sea by a broad estuary nearly dry at low water $7\frac{1}{2}$ m. N. Morecambe Bay. This river has been celebrated by writers from a series of beautiful cascades.

DUDLDORF a tn. Prussia, gov. of and 18 m. N. Trarar, near the Kyll. It is the seat of a justice of peace court, contains a R. Catholic parish church has manufactures of woollens, a trade in cattle, a weekly market, and two annual fairs. Pop. 840

DUDLSHEIM a market in Hesse Darmstadt, Ober hessen, dist. of and near Biedingen. It contains a Protestant parish church townhouse, and school and has manufactures of linen, a trade in fruit, and an annual fair. Pop. 1258

DUDENHOVEN par Hesse-Darmstadt, prov. Starkenberg dist. of and near Biedingen. It contains a Protestant parish church and has a trade in cattle, and two annual fairs. Pop. 1181

DUEBSTADT a tn. Hanover Grubenhagen cap. of a small manor, in a fertile valley at the confluence of the Hahle and Bremse, 15 m. E. Göttingen. It consists of the town proper surrounded by a wall and rampart, and of four suburbs, and is divided into four quarters. It contains a Protestant, and a R. Catholic church an ancient town house, superior school, hospital, and Ursuline monastery, and has extensive manufactures, particularly of linen and ribbons. The ramparts furnish a fine promenade, and the court yards are laid out in gardens. Pop. to 4333 hall 9639

DUDINGEN a vil and par Switzerland cant. of and 4 m. N. by E. Fribourg. It is well built, and contains a handsome parish church with a tower a well endowed school, and a remarkable hermitage called Magdalene Kluendeleen built out in a steep rock at a very early period, afterwards enlarged into a number of rooms by a man who laboured 20 years upon it, and still the resort of numerous pilgrims. Pop. 2542

DUDLEY a tn. par. bor. and par England, co. Worcester but locally situated in Staffordshire, being completely surrounded by that county. The town on an acclivity 8 m. N.W. Birmingham, on the S. Staffordshire Railway connected originally of only one long street, to which several others have been added. The principal one is spacious, and all are well paved and lighted with gas houses for the most part, well built of brick, and cheaply furnished. It has five places of worship connected with the Established church, and others belonging to R. Catholics, Free Church of Scotland, Independents, Baptists, Unitarians, Wesleyans, Easters, and several other Dissenting bodies. Among the charities are an infirmary a free grammar school two boys' and two girls' schools liberally endowed; a female school of industry a charity

school for 40 poor girls, and an infant school. There are several bank societies, a subscription library a mechanics institute, and a geological society with a museum containing numerous specimens of interesting fossils and minerals collected in the neighbourhood. The principal trade of Dudley consists in the smelting and working of iron boilers, chain cables, fire-arms, saws, vices, spades, scythes, and nails, being the principal articles made. Flint-glass is also extensively manufactured and beautiful ornamental articles of fossiliferous limestone, with which the vicinity abounds, as it does also with coal and ironstone. The limestone caverns wrought into the limestone rock are very remarkable, and particularly interesting to the geologist. One of these excavations extends nearly 2 m. into the solid rock, and is traversed by a canal, by which the quarried material is conveyed to the mouth of the tunnel. The roofs of the caverns are supported by massive limestone pillars, which impart an exceedingly grand and striking effect to these subterranean regions when seen by torch-light. Hard by is the extensive ruins of the ancient castle situated on an eminence overlooking the ravine, and affording a fine view of the surrounding country. It is of an oblong shape, with a tower at either end, and was held in 1644, by Colonel Beanmont, for three weeks for the King against the parliamentary forces. The original building was erected in the eighth century by Dudo or Dodo, a Saxon prince, from whom the town is named. Dudley sends a member to the House of Commons. Registered electors (1850) 925. Petty sessions are held every Monday by the county magistrates. Market day Saturday. Three fairs annually. Richard Baxter the celebrated nonconformist divine, was for some time master of the grammar school in this parish. Dudley confers the title of earl on the family of Ward. Area of par. 3530 ac. Pop. 892 — [Local Correspondent.]

DUDLEY HILL, a hamlet, England, co. York (W. Riding) $1\frac{1}{2}$ m. S. Bradford with places of worship for Primitive Methodists and Wesleyans and two worship halls. In the neighbourhood are several coal mines. Two fairs annually for cattle, horses, and pigs.

DUEÑAS, a tn. Spain in Leon prov. of, and 10 m. S. Palencia, near r. bank, Pisuerga. It is irregularly built has two squares a Gothic parish church school, townhall, prison, and spacious consistorial hall. It is the seat of E. of the town and affords facility for the transmission of merchandise. The inhabitants are almost exclusively employed in tillage and cattle-rearing. There are, however, a few looms and a manufactory of hats. Pop. 2233

DUEÑA a river Spain Leon which rises in the E. slope of the Sierra del Teleno, flows E.S.E. and, after a course of 40 m., joins r. bank Tago near La Banaña.

DURO river See Domo

DUFFEL, a tn. and com. Belgium, prov. Antwerp, 8 m. N. Malines with some manufactures of linen and flax spinning trade in country produce and an annual fair lasting eight days, for horses, cloth business, &c. Pop. 4178

DUFFIELD a vil and par England, co. Derby. The village, 4 m. N. Derby a station on the Midland Railway is situated partly on a plain and partly on an acclivity and consists of four principal streets houses chiefly of stone from the Duffield quarries; well supplied with water. It has a parish church chapel belonging to Wesleyans and Baptists, and six schools the most important of which are the free national, and infant schools. The principal trade of the place is the making of silk gloves for the manufacture of Belier and Derby and at Milford, about 1 m. distant, are extensive bleach and dye works, a cotton factory, and a small foundry which give employment to a great number of hands. Many are also employed in the stone quarries in the neighbourhood. Area of par., which, besides the village of Duffield, contains several populous villages and a market tn., 17,890 ac. Pop. 17,749

DUFFS ISLANDS, S. Pacific Ocean N.E. Queen Charlotte's Islands. Lat. $16^{\circ} 23'$ S. Lon. $165^{\circ} 40'$ W. (a). They are about 11 in number extending 14 or 15 m. N.W. to S.E. of unequal size the smaller apparently barren but the largest two, which are about 6 m. in circumference, and situate in the middle of the others, are covered with wood. The natives are stout and well made, with complexions of a copper colour. Their canoes are about 12 or 14 ft. long and about 15 inches

broad, shagreened at the ends, and a little ornamented. They are made of a single tree.

DUFFUS par Mac. Elgin 6 m. by 3 m. Pop. 2993.

DUFFON, par Eng Westmorland, 18,119 ac. P. 498.

DUGNANO a vil. and com. Austrian Italy prov Milan, dist. of, and 6 m. W. Monza, near 2 bank, Serrova. It contains two parish churches. The district produces much corn, wine, and silk. Pop. 1421.

DUIA a magnificent mountain, S. America, Venezuela, near its extremity lat. 8° 36' S. lon. 66° 10' W. about 20 m. N. E. from the point where the natural canal of the Casiquiare leaves the Orinoco. It rises to an elevation of 8500 ft. and being perpendicular S. and W. bare and steep on the summit, and clothed on its less steep declivities with vast forests presents a most imposing spectacle; forming a landmark which guides the voyager on the Orinoco for hundreds of miles. The summit of the mountain is so steep that no person has ever ascended it. At the beginning and end of the rainy season, small flames, which appear to shift, are seen upon it. On this summit it has been called a volcano which, however, it is not. The granite whereof it is composed is full of veins, some of which being pierced upon gaseous and inflammable vapours are supposed to pass through them, and to have given rise to the error. Another mistake has been occasioned by its rock-crystals and chlorite quartzes having been taken for diamonds and emeralds, and thus to have obtained for a miserable village about 10 m. S. from it the gorgeous name of *Zameralda*. Spots of dazzling whiteness are observable along the precipitous declivities of Duia, when the atmosphere is clear and the sea reflects its rays on its walls.

DUIEBURG (anc. *Laetum Drinowa*) a tn Prussia, gov of and 15 m. N. Düsseldorf, between the Ruhr and the Angerbach, and about 2 m. from 7 bank Rhine, a station on the railway from Cologne to Hanover. It is surrounded by walls flanked with towers, in a somewhat dilapidated state, is the seat of several courts and public offices, contains four churches—two Protestant and two R. Catholic, one of them the Sal. vatorkirche, a beautiful structure of the 15th century, a synagogue, a grammar-school for the university which was suppressed in 1802 an orphan, and an ordinary hospital and has important manufactures of woollen cloth, woollen covers, cotton prints, beams, valvet, hosiery cat-gut, paper, porcelain, leather and lacquered ware. There are also chemical starch dyeing vinegar and glue works, oil-mills, and sugar refineries. The trade, greatly facilitated by a canal which communicates with the Rhine, and by the railway is important consisting chiefly in wine and colonial produce. Duisburg is of Roman origin. It rose to be a free town, and became a member of the Hanseatic League. It was early fortified and suffered much by repeated sieges. Pop. 8543. —The centre, area, 278 sq. m. is, in the N. flat and sandy but, in the S. traversed by the Sauerland hills. It is watered by the Rhine, Lippe, and Ruhr and has good pastures, on which numerous cattle are reared. In the higher grounds coal is worked to a considerable extent. Pop. (1848) 108,254.

DUIVELAND an Isl. Holland, prov Zeeland, formed between the mouth of the Maas and the Scheldt, by the junction of various islets from the creeks between having been filled up. It measures about 5 m. by 7 m., and is separated W. from sal. Behouwen, by a canal W. S. and E. it is bounded by arms of the Scheldt and Maas. Its soil is sandy but is tolerably fertile, possessing both good corn and meadow land. It is surrounded by dykes, but still has on several occasions suffered severely from incursions of the sea, more especially in 1861. It was nearly wholly submerged. It has five schools. Agriculture and mussel-gathering are the main employments. Pop. 4900.

DUIVEN a vil. Holland prov Gelderland, 6 m. E. by S. Arnhem, with a R. Catholic church, and a school. Pop. agricultural, 700.

DUKE OF YORK—1 [native, *Outigwa*] An Isl. S. Pacific Ocean lat. 8° 36' S. lon. 173° 25' W. a large island, of coral formation 3 m. in length, E. to W. and 2½ m. broad, N. to S., covered with coco-nut and pandanus trees. Nineteen varieties of trees were found here by the officers of the U. States expedition, some of which were of large growth. Aquatic birds are numerous also rats, and a large black lizard. The natives, a docile and harmless people do not cultivate

the ground, but live entirely on coco-nuts and fish, having neither animals nor fowls of any kind. Neither have they any water on the island, their supply being wholly obtained from excavations made in the body of the coco-nut trees 3 ft. from the ground, and capable of containing five or six gallons of water. This island was discovered by Byron in 1765 who reported it as destitute of inhabitants. It is now believed to contain about 120.—2 An Isl. S. Pacific Ocean, S.W. entrance St. George's Channel between New Ireland and New Britain lat. 4° 8' S.; lon. 155° 24' E. (n.) It is covered inland with lofty woods, and near the water side are the houses of the natives, interspersed among groves of coco-trees.—3, A cluster of mts. lying off the W. coast of Buenos America, Prince of Wales archipelago they extend about 50 m. in length and 25 m. in breadth, or from lat. 68° 50' to 58° 34' N., and from lon. 138° 18' to 184° 15' W. They were first discovered by Vancouver.

DUKELELLA, a maritime dist. Marocco, S.W. of the Morrocco, and between it and the din. of Abda, with Tharagha on the E. between lat. 32° 10' and 33° 15' N. The soil is in general fertile, producing in great abundance, grain, fruit, honey and wax in great quantities. Goats are reared in the country.

DUKES TOWN a tn. W. coast, Upper Guinea, on a branch of the old Calabar river lat. 5° 30' N. lon. 8° 28' E. An extensive trade is carried on here in palm oil, ivory, pepper and red wood the first being by far the most important. A great deal of form and ceremony towards the chiefs has to be observed by the foreign vessels trading in this part of the world. A salute of two guns must be fired at Henshaw's Town a little below Dulé's town and seven at the latter followed by a formal visit to the Duke himself, who holds dominion on every an immense tract of surrounding country.

DUKINFIELD or **DUCKWORTH** a vil. and township, England, co. Chester 6½ m. N.N.E. Stockport a station on the Manchester and Salford-bridge Railway. It has several churches, and chapels belonging to various bodies of Dissenters. Extensive collieries and cotton factories give employment to the greater part of the population which has been rapidly increasing during the last half century amounting to 1801 to 1787 and in 1851 to 28,418.

DUKLA a tn. Austria Galicia circle of and 16 m. S.E. Tule on the Carpathians. It contains a parish church and a Bernardine monastery and has manufactures of woollen cloth, flannel, and linen, and a considerable trade, chiefly in wine. Pop. 2100.

DULANE par Irel Meath 4243 ac. Pop. 809.

DULAS par Eng Hereford 845 ac. Pop. 74.

DULBAHANTA a dist. N.E. Africa, Somali country S. from the War Shegeli Mountains, between lat. 5 and 10° N. and lon. 46 and 49° E. It consists of a level country bounding in grass, water and timber without a stone, and forming extensive pasture ranges. The inhabitants or Dulbahanta, are represented as a fine martial race of men, who fight chiefly on horseback, their horses powerful and courageous, and their arms two spears and a shield. They are courteous and hospitable to strangers have no grain subsisting chiefly on milk; have few guns, but trade extensively in ivory, ostrich feathers, and glass. Wild beasts are numerous, the lion especially. Camels, parrots the koodoo, oryx and black rhinoceros, are also common.

DULCE—1 A lake, Central America, state of and 102 m. N.E. Guatemala, forming the principal water-way of the state to the Atlantic. It is about 25 m. long and 10 m. average breadth has 18 ft. water at 800 or 400 yards from the shore, and in most other places from 80 to 60 ft. communicates with the Gulf of Honduras through a smaller one, called the Golfo, and the small river Dulce the entrance to which from the sea is impeded by a bar which cannot be passed by vessels drawing more than 6 or 7 ft. though, once over there is a general depth of 15 ft. Near its mouth is the port of Santo Tomas, which is well sheltered from the violence of the winds, and has deep water close in shore.—2 A Gulf, Central America, formed by the Pacific, on the coast of Costa Rica. Its entrance is between the point of Burica, lat. 8° N. lon. 83° W. and Gorda, lat. 8° 35' N. lon. 83° 50' W., on the latter of which is a fort.—A river of same name rising in the mountains in the interior of the state, flows S. to S., and falls into the Gulf after a course of about 75 m.—3 A river La Plata, rising in the mountainous dis-

tricts of Tucuman about lat. 28° S. whence it flows S.E. under various names, and finally falls into Lake Salado de los Portugueses, at lat. 30° 15' S. its whole course being thus about 400 m.

DULCIGNO a small seaport in European Turkey Albania, on the Adriatic lat. 41 55 49' N. lon. 19 11 E. (n.) It is built on an isolated hill forming a cape, which is united to the low land by an isthmus. It contains about 1000 houses, and is the seat of a R. Catholic bishop. The inhabitants live mostly upon the produce of their estates, excepting a few families engaged in commerce, or in the fisheries of the river Bogena, 6 or 7 m. S.E. from the town. Pop. 7000 to 8000.

DULEEK a vil. and par. Ireland, co. Meath. The village, 5 m. S.W. Drogheda, on the Nanny has a few respectable houses, built of stone, and slated, but the greater part are thatched mud-cabins. It has a parish church, with a handsome spire, and an elegant white marble statue of Judge Trotter a large R. Catholic chapel, and a continuous, in which petty and quarter sessions are held the ruins of the abbey of St. Kierans, and of St. Patrick's chapel and two antique stone crosses. There are a parish and a national school, and a dispensary. About 50 looms are employed in weaving bed ticking and there is an extensive corn-mill. Four annual fairs. Area of par. 18 554 ac. Pop. 3787 of A. 54.—*Local Correspondent*.

DULLEA Amey par. Ire. Meath 1090 ac. Pop. 101
DULLEA a tn. Prussia, gov. of, and 17 m. N.W. Ulmschert at the source of the Neetz. It is the seat of a law court contains a R. Catholic parish church and has manufactures of linen a linen printfield a worsted mill and four annual fairs. Flax is extensively grown in the neighbourhood. Pop. 2230.

DULL par. Scot. Perth 134,400 ac. Pop. 3342
DULLINGHAM a par. England Cambridge 3240 ac. Pop. 809.

DULMEN a tn. Prussia par. Westphalia gov. of, and 20 m. S.W. Münster on a small stream. It contains a fine castle, the residences of the Duke of Croy Dülmen, and three R. Catholic churches at the seat of a law court, and has manufactures of linen, dyeworks, tileworks a marble quarry some general trade, and several mills. Pop. 281.

DULOCK par. Eng. Cornwall 5444 ac. Pop. 1209
DUMBERTON a market tn. par. England co. Somerset. The town 18½ m. W. by N. Taunton, is well built, mostly of stone obtained from quarries in the neighbourhood. Kept clean water abundant. It has a neat Established church, an independent chapel, two schools, and some minor charities. About 100 families are engaged in the crape manufacture but the inhabitants, generally are employed in agriculture. Weekly market on Saturday two fairs annually. Area of par. 8357 ac. Pop. 1497.—*Local Correspondent*.

DULWICH a vil. England co. Surrey 5 m. S. London in a small vale surrounded by rising grounds, and surrounded with handsome villas. It is, however noticeable chiefly on account of its college, founded in 1619 by Edward Allen or Alley, a distinguished actor in the reigns of Elizabeth and James I., and a contemporary of Shakespeare and Johnson. The members of the college are a master warden, four fellows, six poor brethren, six masters, 12 scholars and 30 outmembers. The original revenues were only £280 but now amount to £14,000. The sons of inhabitants of Dulwich are entitled to gratuitous instruction and certain sums, under the direction of the master and warden, are appropriated as exhibitions to either of the universities. Dulwich college has been always celebrated for its pictures, many of which were bequeathed by the founder but the greater and more valuable portion of them were the bequest of Sir Francis Bourgeois a handsome painter of some eminence, who died in 1810. He bequeathed also £2000 for the purpose of building a gallery for the reception and proper care of the pictures. A free school was founded in Dulwich, in 1741 by James Alley, a master of the college, for 60 boys and 60 girls, of which number 12 of the former and 20 of the latter are clothed by subscription. Pop. 1682.

DUMARAN an isl. Philippines, N.E. Palawan lat. 10° 10' 25' N. lon. 119° 56' E. (n.); length and breadth about 17 m., and possesses shelter for vessels in some seasons of the year. The inhabitants are poor and chiefly occupied in fishing trawling.

DUMBERTON a maritime co. Scotland consisting of two detached portions, the larger and most W. having co. Perth N., Loch Lomond and co. Stirling E. the Clyde separating it from co. Renfrew S. and Loch Long separating it from co. Argyle W. Its utmost length is about 37 m. breadth varying from 5 to 7 m. and in some places, towards its N. extremity diminishing to 1 and ½ m. The smaller portion is about 4 m. E. from the former and comprises the two parishes of Cumbernauld and Kirkintilloch. It is about 14 m. long, and from 1½ to 2½ m. broad having the county of Stirling on the N. and E. and the county of Lanark on the S. and W. These two parishes formerly belonged to the county of Stirling, but were annexed to that of Dumbarton in the reign of Robert I. More than half the area of the county is occupied by lofty and rugged mountains some of them attaining a height of upwards of 8000 ft. above sea level. Though unfit for cultivation and covered with snow for several months in the year they abound in excellent pasture for sheep, and produce many rare alpine plants. The lower lands again are fertile, and in general well cultivated. Next to its mountains, which contribute to the formation of some of the most magnificent scenery in Scotland, are, as regards picturesque beauty its lakes, of which the principal is the far-famed Loch Lomond with its numerous islands (see LOCH LOMOND). The most considerable of the other fresh water lakes, of which there are 9 or 10 in Loch Ely the wavery of the highland clan Macfarlane. Loch Gare, an arm of the former, lying parallel to Loch Lomond, and forming a part of the county into a peninsula, is likewise surrounded by picturesque scenery. The principal river is the Leven, rendered classic by Scott's beautiful Ode. The river the waters of which are singularly pure and lured issues from Loch Lomond and discharges itself into the Clyde a little below the town of Dumbarton. The state of agriculture in this county is as various as its soil and surface. The farms in general are small, except where the heath and mountains are used as sheep pasture. Wheat is now raised to a considerable extent, limiting proportionally the cultivation of barley but oats are the principal grain crops. Turnips, beans and potatoes are also grown in large quantities, and of superior quality. The prevailing breed of sheep, of which great numbers are reared in the hilly districts, are the 8 of Scotland blackfaced sort and the cattle of the Highland breed, but on the low lands of the shore the milch cows are mostly of the Ayrshire breed. The climate is in general mild and healthy, but extremely moist, and is thus more favourable to pasturage and the growth of wood than to agriculture. The latter at one time abounded but the larger kinds of natural timber are now nearly extinct. There are still, however, extensive natural soap woods, which add much to the beauty of the scenery and large plantations of wood have been made during the last half century. The chief minerals are coal limestone, ironstone and slate, all of which are wrought, more or less—the first two to a great extent at Old Kilpatrick Kirkintilloch, and Cumbernauld.

On the banks of the Leven, and at Milton, are several extensive cotton-printing and bleaching establishments. Sundry manufactures are also carried on in this town of Dumbarton (which see). The Dumbartonshire Railway gives communication between this Clyde at Bowling and the S. and W. of Loch Lomond the detached part of the county is traversed by the Campus branch of the Edinburgh and Glasgow Railway and by the Clyde and Forth Canal, which likewise has its W. termination within the county on the Clyde, at Bowling. Besides Dumbarton the chief town, the county contains the towns of Halesburgh Kirkintilloch, Cumbernauld and the manufacturing villages of Alexandria, Renton and Bonhill and it is divided into 12 parishes. The county returns a member to the House of Commons. Registration elections (1857) 1288. Pop. (1841) 44,995. (1851) 45,293.

DUMBERTON or **DUMBAROTON** a royal and par. burgh and seaport Scotland chief tn. of above co., 1 bank Leven within a short distance of its junction with the Clyde 18 m. N.W. Glasgow on the Dumbartonshire Railway. It consists of one principal street, curved like a horse's snout, from which numerous lanes and alleys diverge. The former is well paved, tolerably well kept, and is lighted with gas as is the town generally. The houses on the line of the main street are, in general, well built, but in some of the subordinate streets and lanes there are houses antiquated and mean looking and

apparently greatly wanting in comfort accommodation, and cleanliness. The supply of water is indifferent, and is obtained altogether from wells, public and private. On the bank of the river in the suburb of West Bridgend, united with the town by a good stone bridge of five arches. The place of worship consist of the parish church, a neat structure, one Free church, two U. Wesleyan, one Baptist, one Episcopalian, and one E. Catholic. The only public building, exclusive of the churches, is the courthouse. The schools consist of the parish academy a Free church, and two female schools. There are a mechanics institute, and a public reading-room. Glass was formerly extensively manufactured here, but that branch of industry is now altogether abandoned. Shipbuilding both in wood and iron is now (1861) the staple business of the town and is carried on to a very great extent, there being two spacious yards for shipbuilding in each of these materials, or four yards in all employing 1000 men and a marine engine manufactory has lately been created, employing more than 100 men. Besides these, there are a distillery and brewery a foundry and a small machine manufactory. The river Leven is navigable to Dumfries and at high water for vessels of considerable size but at very low tides only small vessels can come so far up, in consequence of the obstruction presented by a bar and sandbanks near the mouth of the stream for the removal of which money has been subscribed. The shipping belonging to the port is inconsiderable. A little to the S. of the town is the famous rock or castle of Dumfries situated on a flat point of land at the confluence of the Leven with the Clyde now as desirable at all times by land, although formerly surrounded by water. The rock terminates at the summit in two points, and being precipitous and entirely isolated, has a very striking appearance. It is 300 ft. in height and about 1 in circumference at the base. On the side facing the river looking S. stands the house once occupied by the governor and between the two summits are the various buildings of the fort, consisting of the barracks armory &c. the latter containing about 1600 stands of arms the former capable of accommodating 140 men. In the armory is kept the double-handed sword of the Scottish patriot Wallace. A long flight of steps leads to the barracks, &c. which are as accessible by no other route. At what period a castle was first erected on this singular rock does not appear but it seems to have been a stronghold from the earliest times, and is known to have been so for at least 1000 years. It is a place of considerable historical interest. It was at different times in possession of Edward I. having been held at one period four years for that monarch by Sir John Montgomerie the infamous betrayer of Wallace, who was at that time sheriff of the county and governor of the castle. It came subsequently and successively into the possession of Balcol Bruce Queen Mary Charles I. and Cromwell. It was from this castle that the unfortunate Queen just named was conveyed to France while yet a child; and it was to this fortress her friends intended conducting her after her escape from Lochleven had they not been intercepted and defeated by the Regent Murray at Langside. In 1568 at a more happy period of her troubled career she visited this fortress, and a numerous retinue on a progress to Angleshire. Dumfries Castle was the scene also of a singularly daring adventure. In May 1671 it was taken by sea-boards, on a dark and stormy night, by Captain Thomas Crawford and a few soldiers, under circumstances demanding an extraordinary degree of intrepidity. The last memorable occurrence connected with this ancient fortress was the visit of her present Majesty Queen Victoria, on August 17 1847 on her way to the Highlands. This fortress is one of the four stipulated to be kept in repair by the act of the Union. Dumfries was known in ancient times, by the name of Alclud, which in the British language signifies the rock high on the Clyde. It united with Port-Glasgow, Renfrew Rutherglen and Kilmarcok in sending a member to the House of Commons. Pop. 1841 3783 (1851) 5445.

DUMBLANE. See DUMFRIES.

DUMBLETON par. of Gloucester 2100 ac. P. 487
DUMBRATON, a t. in Montgomeryshire, Wales, one of about 40 m. from Arad. It contains a Greek non-natal parish church. The inhabitants are about all Welshmen. Pop. 1146.

DUMDU, a military vii and extensive cantonment, Malacca, prov. Bengal 6 m. E.N.E. Calcutta. It is the

head quarters of the Bengal artillery, and may be considered the Woolwich of India. All the young officers arriving from Europe, as well as the recruits, are practically trained here before being sent to their respective regiments. The officers' rooms are handsomely fitted up, and, besides the mess-rooms, comprise a billiard-room, a select library a model room, and a collection of remarkable arms. Close by is a large plain appropriated to artillery practices. There are here a church and free school.

DUMFRIES, a maritime co. Scotland, on the Solway Firth, having N. and E. co. Lennox Peebles Selkirk and Roxburgh W. Ayr and Kirkcubright S. the Solway Firth, and part of Cumberland length, N.W. to S.E. 53 m. breadth between 52 m. and 83 m. area 808,930 ac. of which between one-fourth and one-fifth are supposed to be arable. The surface is irregular but for the most part mountainous, especially in the N. and N.W. districts, where the hills attain a considerable elevation some of them exceeding 2000 ft. lofty mountains occur also at intervals throughout the whole length of the N. limit of the county including Harthol, the highest in the S. of Scotland 2790 ft. in height and Ettrick Pen. about 8 m. S.E. the former 2290 ft. These parts of the county abound in the most romantic scenery. In the lower or S. portions, there are some extensive moorlands, one of which called Locher Moss, is from 10 to 13 m. long and from 2 to 8 m. broad. In these swampy large trunks of trees marine shells, ancient weapons, and iron anchors, have been found at great depths in the moss. Arable husbandry has greatly improved here during the last half century as have also farm buildings of all descriptions. They are now mostly commodious and well arranged built of stone and lime, and covered with slate. Oats, potatoes and turnips are the most common and most extensive products. The cultivation of the last has increased greatly of late years they are generally consumed on the ground by sheep. The cattle are mostly of the Galloway breed and are much in request for the English market. The sheep on the hill pastures are mostly Cheviots on the lower and arable lands, the Leicester prevails. Immense numbers of pigs are reared in the country hams and bacon both of excellent quality being cured in large quantities, for the Liverpool London and New castle markets. The estates in this county are generally large, and mostly unimproved. The farms in the lower districts vary from 100 to 400 ac. and in the higher from 600 to 5000 ac. This county has profited in a remarkable manner by the facilities afforded by steam navigation in conveying its produce, including sheep and cattle, to distant markets, particularly Liverpool. The principal streams are the Nith the Annan, and the Foh all falling into the Solway Firth, which in fact receives the whole of the drainage of the county. There are likewise a number of small lakes. The minerals most abundant are coal, lead from antimony and gypsum. Coal is worked at Canobie, and at Sengubar and lead mines at Wanlockhead and Leadhills from which 48 000 tons are annually extracted. The Wanlockhead contains a considerable proportion of silver. Leadmines and Quenies abound in various parts of the county. Gold also has been found amongst the mountains and in the time of James V. considerable quantities were obtained. There are no manufactures worth mentioning. The county contains 48 parishes returns one member to the House of Commons. Registered electors (1854) 2195. Principal towns—Dumfries, Annan, Sengubar and Lochmaben which unite with Kirkcubright in sending a member to Parliament. Pop. 1841 72,880 (1851) 78,126.

DUMFRIES a river port, and part bar Scotland, cap. above co. beautifully situated 1 bank, Vich, about 5 m. from its junction with the Solway Firth, 64 m. S.W. Edinburgh a station on the Scottish S. western Railway. It is one of the handiwork towns in Scotland. The streets are wide, well-paved, well lighted with gas and kept remarkably clean. Excellent water also is abundant. The houses are chiefly built of red sandstone, and are generally remarkable for their elegance. On the opposite side of the river is an extensive suburb called Macmillan, which communicates with the town by an old and a handsome modern bridge. The public buildings comprise the trades hall, county jail, a large new building the court house, the assembly room, theatre, academy the Christian royal mastification or lunatic asylum the

Dumfries and Galloway royal infirmary and the Dumfries savings-bank, in front of which is a statue of the late Rev Dr Dunlop, minister of the neighbouring parish of Rathwell, the originator of savings banks. Near the centre of the town stands what is called the Mid-Scotie, built by Imgo Juma, and in which the meetings of the town council are held. And in the centre of Queen'sbury Square there is a stately Doric column, erected to the memory of Charles, Duke of Queensbury. The ecclesiastical edifices, some of which are neat and tasteful buildings, are three Established churches, a Free church (three U. Presbyterians, a Reformed Presbyterian, a Wesleyan Methodist, a United Christian, an Independent, an Episcopal chapel, a R. Catholic chapel and some minor places of worship. There are, besides, a number of religious and benevolent societies. The means of education are also abundant, there being no fewer than four endowed, and 90 endowed schools, many of them of high character. Its literary and scientific institutions include an astronomical association, a horticultural society, a mechanics institution, four public reading rooms, four public, and three circulating libraries. The only articles manufactured in Dumfries to any extent are hats, stockings, principally of lambs wool alone, strong shoes with thick wooden soles and ordinary shoes, of which considerable quantities are exported. There are also several large tanneries and breweries, a very extensive basket establishment, and a woollen spinning and weaving mill. The weekly cattle markets of Dumfries have long been celebrated; they are held upon the Sands, an open space by the river side set apart for the purpose. Pork is sometimes sold at these markets to the extent of £4000 to £7000 in one day. The river with is navigable to the town for vessels of above 50 tons. The principal foreign trade is with America, and a little with the Baltic for timber. The chief imports are coal, lime, iron, tallow, slate, hemp, bones, wine, and colonial produce. The exports are principally grain, fat cattle, sheep, pork, wool, hosiery, wood, grain, seeds, freestone, &c. There are three stations lower down the bank for vessels drawing too much water to come up to the town. Foreign traders generally stop at that nearest the mouth of the river. Of this description, there are 13 or 14 belonging to the town. The whole number of vessels, of all sizes, belonging to the port, is between 80 and 90. Dumfries is governed by a provost, magistrates, and town council. It is of great antiquity and has been the scene of some remarkable historical events one of which was the slaughter of John Comyn by Robert Bruce, which occurred in the chapel of the Franciscan or Greyfriars convent, that stood in the street called the Friars Yessel on February 10 1306. In the burying ground of St. Michael's or the old church are deposited the remains of the Scottish poet Burns, who died in Dumfries, and whose resting-place is marked by a handsome monument erected by subscription as a tribute to his genius. Burns resided in Dumfries for some years preceding his death and the street in which he lived, a very humble one, is now distinguished by his name. Dumfries unites with Annan, Bangour, Lochmaben, and Kirkcubright in sending a member to the House of Commons. Registered electors (1853) 521. There are a number of handsome villas around the town, and the general tone of society is much above that usually met with in provincial towns of similar magnitude. Pop. bur (1841) 10 089 (1851) 11 107 of par 12,298.—(Local Correspondent)

DUMPER, par Eng Hants 8180 ac. Pop. 409

DUMPO or Doonoo, a trib. Tibet, near a little river at some distance from the l. bank of the Sutlej lat. 31° 5' N lon. 80° 12' E. Locusts, of different species, breed in the vicinity and on a neighbouring mountain are found the ruins of several ancient monuments.

DUNANY par Ire Louth 1692 ac. Pop. 618

DUNAMUNDE, a fort, Russia, par Livonia at the mouth of the Dvina, near Riga. It was originally a Cistercian convent, and is of little military importance. It is occupied by a small garrison and contains a church for their use, and a prison, in which state prisoners have occasionally been confined.

DUNBAR, a royal and parli bur and seaport, E coast Scotland, co. Haddington, 27 m. E. by N Edinburgh at a station on the North British Railway lat. (elurwh) 56° 5' 54" N lon 2° 31' W (n.) It stands on a slight eminence, and consists chiefly of one spacious street, running E. and W. with some smaller streets, and a number of lanes. The houses are mostly modern, the shops good, and the streets are lighted with gas, and the outskirts are adorned with a number of tasteful villas. The parish church, built of red sandstone, is an elegant Gothic building, standing on a height, 65 ft. above the level of the sea, with a magnificent tower 107½ ft. high, which forms a well-known landmark to seamen. In this church is preserved a splendid marble monument 26 ft. high and 12 broad erected to the memory of George Home of Marston, created Earl of Dunbar in 1606. The other buildings of any note are the town hall, the new high schools, the assembly rooms, and Dunbar House. Besides the parish church, there are a Free church, at the village of Belhaven, within the burgh, two U. Presbyterian churches and a Wesleyan Methodist chapel, two R. high schools, a grammar and mathematical and several other schools, and a mechanics institution, with a respectable library attached. There are several charitable and benevolent institutions. The harbour is rendered of difficult access by rocks at the entrance, once gained, however, it is safe and commodious. It has 9 ft. water at low and 14 at spring tides. Timber, coal, and foreign grain, are the principal articles of import. There are in the town and vicinity a soap-work, an iron-foundry, a steam-engine manufactory and several breweries, some shipbuilding and manufactures of carriage and saddlery, and sail-clothing employ a considerable number of hands. Lobsters, also, are caught in great numbers, and are preserved for the London market, in pits cut out of the rock within sea mark, and called Indias. The principal object of interest at Dunbar is its castle the ruins of which are situated on the summit of a lofty rugged, sea-batter rock. The date of the buildings is unknown. After the battle of Bannockburn Edward II. took refuge here, and afterwards continued his flight by sea to Berwick. It was subsequently in the possession, alternately of the Scotch and the English, being often perseveringly besieged and as often bravely defended. The most remarkable defence was in 1347 against the Earl of Salisbury by Black Agnes, countess of Dunbar who, in the absence of her husband, successfully held out the castle for 19 weeks. An Act of Parliament, passed in 1498, directed the immediate demolition of the castle of Dunbar as a place dangerous to the peace of the realm, but it was not till 1567 when another Act of the same import was passed, that the sentence of destruction was carried into effect. Dunbar was erected a royal burgh by David II. It is governed by a provost, magistrates, a town council and unites with Haddington, North Berwick, Jedburgh, and Leander in returning a member to the House of Commons. Pop. (1841) burgh, including Belhaven vi (1860) 8018 (1851) 2905 of par 4415.

DUNBIN par Ire Louth 2109 ac. Pop. 1856

DUNBLANE, or DUNALMAG, a market to. and old Episcopal city Scotland, co. Perth, 6 m. N.E. Strirling pleasantly situated on the Allan, and a station on the Scottish Central Railway. It consists of one principal, and several smaller streets, all narrow and ill kept houses generally mean, and mostly covered with thatch. The most remarkable object is an ancient cathedral, partly in ruins, with a tower situated on an eminence overlooking the town. The date of its erection is uncertain, but is supposed to have been in the 12th century. The nave is 120 ft. by 55 ft. and the choir

now the parish church, is 80 ft. by 80 ft. Bishop Leighton, who held the see of Dunblane from 1662 to 1670, bequeathed his library to the clergy of the diocese, his executors providing at their own expense a suitable building for its reception and endowing the establishment with funds to defray the librarian's salary, uphold the fabric and aid the books. The public, as well as the clergy of the presbytery have access to the library, which has received large accessions from various quarters. There are other two libraries in the town. Besides the parish church, there are here places of worship in connection with the Free, the United Presbyterian, Congregationalist, and Scottish Episcopal churches. Both the sheriff-court and commissary court are held every Wednesday during session and there is here a large district prison. Market-day Thursday, several fairs, chiefly for cattle, are held annually. At Farnham about 2 m. distant, is a mineral spring of some celebrity. Dunblane gives the title of Viscount, in the peerage of Scotland, to the Duke of Leeds (Catharine). Pop. 1816 of par. 8213.

Dublin, contains an ancient church, and a dispensary and has a well frequented annual fair on July 9 chiefly for horses and cattle. Area of par. 12,886 ac. Pop. 3245.

DUNBRODY and St. James, par. Irel. Wexford 6489 ac. Pop. 8385.

DUNBULLOGH, par. Irel. Cork 16,783 ac. Pop. 2701. DUNCANNON a vil. Irel. co. of and 22 m. S. W. Wexford on the shore of Waterford harbour consisting of one principal street, and containing a R. Catholic chapel and several schools and is set on a rock projecting from the E. side of Waterford harbour whence, after the battle of the Boyne James II. embarked for France. Duncannon gives the title of Viscount to the Ponsonby family. Pop. 460.

DUNCANSBY HEAD a vil. known and picturesque promontory N. E. coast Scotland co. Caithness, at the E. entrance into the Pentland Firth lat. 58° 29' N. lon. 8° 1' W. (n.) It consists of a circular rocky eminence of about 2 m. in circumference and is indented by several large ravines, and remarkable fissures. Close by the promontory are two singular insulated rocks, of fantastic form and great height, called the Stacks of Duncansby which in spring and summer are covered with sea-fowl. About 1½ m. S. of the promontory stood the celebrated John O'Grat's House, of which no trace now remains.

DUNCHIDEOCK par. Eng. Devon 250 ac. Pop. 178. DUNCHURCH a vil. and par. Eng. co. Warwick. The village 13 m. E. N. E. Warwick has a church and a free grammar-school founded. 1707. Area of par. 4846 ac. Pop. 1422.

DUNCORMICK par. and tn. Irel. Wexford 5 11 ac. Pop. 1859.

DUNDEON par. Eng. Sussex. 1924 ac. Pop. 273. DUNDALK a maritime tn. and par. Irel. co. Louth 45 m. N. by W. Dublin; lat. 54° 0' 30" N. lon. 6° 34' W. (n.) on a plain, r. bank, Castletown River where the town suddenly expands to an estuary half a mile wide and about 2 m. from its embouchure at Dundalk Bay. It has two principal streets, each 1 m. in length one straight, the other somewhat crooked but both are tolerably well kept, and intersect each other in the market-place. The older houses, of which there are many, are of stone, the more modern of brick. The town is abundantly supplied with pump-water much impregnated with saline particles held in solution, and is lighted with gas. The principal public buildings, exclusive of the churches, are the courthouse, in the Doric style, with a portico after the model of the temple of Theseus at Athens the county infirmary, later English national school, guildhall new jail, cavalry barracks, barrack hospital and riding house. Some of the first class private houses are also very handsome edifices. The places of worship are an Episcopal church, a R. Catholic cathedral, a very beautiful structure of Fenny chapel, a Presbyterian, and two Methodist chapels. A nursery also, has been recently established. The educational establishments comprise an endowed grammar school a free school, a national a free daily and infant schools, besides a number of private schools. The

literary and benevolent institutions are a mechanics institute, with lending library attached, and two societies an infirmary a dispensary and a ladies work-society.

The principal manufactures are flax spinning, pin and starch making one establishment for each. There are also a very extensive distillery two breweries two rectifying distilleries, a foundry in which machinery and agricultural implements are made several rope manufactories and three saw-mills.

The chief trade of Dundalk is in agricultural produce of which, it is computed 33,400 tons annually besides horses, cows, sheep and pigs are shipped for various British ports. The principal foreign imports consist of timber tallow wine, and bark. In this department of the trade of the town, an extraordinary improvement has been in progress during the last 17 years. In 1854, the gross produce of the customs was only 24480; while, in 1858, it amounted to 244,893. The number and tonnage of sailing vessels belonging to the port, in 1848, was 27 aggregate ton. 2307 steamer three, of 1023 tons. Comparing the five years ending January 5 1850 with the preceding five years, the foreign trade had more than doubled itself the increase being 65 vessels, ton 12,480 upwards; and 40 vessels ton, 8639 outward. The bar and harbour have been recently deepened so that vessels drawing 16 ft. water may now come up. The channel when completed will be 160 ft. wide at the quay. The rise of tide at the bar where there is now a lighthouse on the new principle is 16 ft. King Edward River, brother to Robert Bruce of Scotland, was killed in battle near Dundalk, and part of his body is buried at a place called Faughart, close to the town. Dundalk returns a member to Parliament. Registered electors (1860) 400. There is a root railway communication between Dundalk, Drogheda and Dublin. Pop. 9841. (Local Correspondent).

DUNDALK BAY an inlet, Irish Sea, E. coast Ireland, co. Louth, between County Point on the N., and Dunany Point on the S. It is about 8 m. wide, and as many bays. It is shallow and the Doe and other rivers which flow into it are small. It contains extensive oyster beds.

DUNDAS—1 A manufacturing vil. Upper Canada, W. end of Lake Ontario. It has six churches and a mechanics institution. It is connected with Burlington Bay at the W. extremity of Lake Ontario by a canal 5 m. long. Pop. (1852) 3617.—2 A chain of small lakes stretching along the E. coast of Africa, close to the land, from lat. 8° E. nearly to the equator. They amount to about 500 many measure up from 2½ m. to 4½ m. in length but the majority are of uncommon size, rising abruptly from and overflowing a narrow line of reefs. Throughout the whole space occupied by these islands, 154 m. in all are so but secure retreat for vessels at all times. It is at the entrance of a river and is called Port Dundas lat. 1° 13' 12" S. lon. 41° 54' 15" E. (n.)—3 A river E. Africa which falls into Delagoa Bay its sources being as believed about 30 or 40 m. inland it is the only one of several streams that fall into it as none but that has fresh water in the dry season. It flows with hippopotami.—4 A strait, N. Coast, Australia, between Melville Island and Victoria Peninsula, one of the two passages leading into Van Diemen's Gulf.

DUNDEE a royal bur. and seaport, Scotland co. Fife. finely situated 1 bank, Firth of Tay about 8 m. from a open sea lat. 56° 27' 58" N. lon. 3° 57' 46" W. (n.) 87 m. N. by E. Edinburgh. It stretches along the Tay or E. to W. for about 1½ m. its greatest length is across the island, with a gradual ascent, to a distance of about half a mile its extreme breadth. Its appearance from the sea, and opposite shore, from which it is distant about 1½ to 2 m. is at once striking and pleasing an effect much enhanced by the beautiful green hills which form the back ground of the picture one of which the nearest, called the Law is 525 ft. high. In the centre of the town is a large open space surrounded with good substantial free stone buildings of four stories in height called the Cross or Market-place, 860 ft. long, by 100 broad from which a number of the principal streets diverge. The more recently formed streets are, in general spacious and handsome; but most of those of more ancient date are narrow irregular and ill built. The town is lighted with gas and is amply supplied with water. The most conspicuous object in Dundee is its old tower 156 ft. high, built in the 12th century the only remaining

portion of an edifice burnt down some years ago; and to which three modern parochial churches have been built in form of a cathedral, the nave, choir and transept respectively forming a separate church and the whole constituting one of the most striking architectural features of the town. Many of the other churches are also elegant buildings. In all there are five Established churches and two chapels, eleven Free, six United Presbyterian, and three Congregationalist churches, three Episcopalian chapels, three Roman Catholic ones, and several other places of worship. The other public buildings of note are—the townhall, trades-hall, the academy, the new exchange containing besides other accommodations, a handsome reading-room, Watt institution, the theatre, infirmary and the royal lunatic asylum. To these may be added the jail and bridewell under one governor erected within these few years at an expense of £26,000 and an imposing Norman triumphal arch erected in front of the mid quay to commemorate the landing at Dundee of Her Majesty Queen Victoria, in Sept. 1844. There are two handsome cemeteries, one on the N. and the other on the W. side of the town, both tastefully laid out and above the former is the new bleaching-green, bordered by trees and shrubs, and intersected by gravel walks with rustic seats placed at intervals.

Besides the academy the principal seminary of the town the grammar school now united with the firm and the women's school there are a large number of private and Sabbath schools, including several connected with the sporting establishments of the town the teachers of which are paid by the proprietors of these works. There are a number of libraries in the town the principal of which are the Dundee public library now consisting of 20,000 volumes the Watt library and the Law library and the Dundee Literary Institute has a handsome reading room and library in its centre, part of the town. Extensive (if the infirmary and dispensary already alluded to, there are a number of charitable and benevolent institutions and societies, and various religious associations.

Dundee has long been celebrated for its manufactures particularly those of the coarse descriptions of linen duck and canvas. It is a linen manufacturing emporium altogether 10,157 individuals, of whom 4541 are females, and their entire value is estimated at from £1,500,000 to £1,600,000 annually. The linen yarns are made in the town and partly in the neighbouring towns and villages, and a portion of them is exported to France and other foreign countries. The staple articles of import are flax and hemp from foreign countries, and coals and lime for use in export, houses and linen yarns to which may be added since the opening of steam communication with London large exports of black cattle, sheep, and agricultural produce. More than half the linen shipped at Dundee are exported to foreign countries being generally sent in the first place in Glasgow, Liverpool and London, where they are re-shipped for their destinations. The whole of the mills are driven by steam power. Another manufacture of some importance is the Dundee kiln glass, famed for their strength and durability. Splendidly furnished steamers are also carried on to a considerable extent. The harbour accommodation, and docks of Dundee, are of the best description, and include two wet docks, one of 64 ac. and another of 42 ac. with a tidal harbour of 42 ac. connected with them the breadth of the lock of the former to which is attached a splendid graving dock is 40 ft. and that of the latter which is fitted to admit steamers, 55 ft. A wet dock of 144 acres is now being constructed, the lock of which will be 80 ft. and there are others embraced by the harbour plan, which when executed, will greatly extend the spaces of accommodation. The quays are fitted affording berths for about 65 vessels, and there are spacious magazines and ship-building yards, with a slip capable of drawing up a vessel of 800 tons. A large amount of 20 tons power is erected on the N.E. corner of Earl Grey's Dock, for the purpose of raising the heavy machinery and boilers of steam-vessels, there being now a considerable trade carried on in constructing and fitting the machinery of steamers at the port. The registered shipping of the port, in 1861 numbered 582 vessels aggregating tons, 72,361.

Dundee was long considered one of the most unhealthy towns in the United Kingdom, but some later inquiries have

led to a contradiction of this opinion, and, without claiming any remarkable salubrity for the place, would show that the value of life stands higher there than in either Liverpool or Glasgow.—(*Four London Star* Dec. vol. vii p. 824.) The communication between Dundee and the opposite shore, a distance of from 1½ to 2 m. is maintained by a large and handsome steamer of 2000 tons and admirably adapted for its purposes, which are the conveyance of cattle, carriages, &c. as well as passengers. About 100,000 persons are conveyed across annually besides carriages, horses, cattle, &c. The trip is performed in 30 minutes. There are four railways connected with the town—One to Newtyle, from which are branches to Gmpar Angus and Glamis, on the Scottish Midland Junction (this being the first railway line in Scotland); one to Arbroath with branch to Montrose, and continuation to Aberdeen; another (the Edinburgh Perth, and Dundee) to Edinburgh, crossing the Firths of Tay and Forth by powerful steamers and a fourth to Perth, and thence to the South by the Scottish Central line.

Dundee was at an early period a place of considerable note, and like most old towns, was originally walled. It was erected a royal burgh by William the Lion, was twice in the possession of the English under Edward I. was as often taken by Wallace and Bruce and in the reigns subsequent to that of the latter was ranked the third town in Scotland after Edinburgh. At the Reformation it was distinguished by the name of The Second Geneva, for its zeal in behalf of the new faith. In 1615 it was besieged, taken, and sacked by the Duke of Montrose, and six years afterwards nearly in 1651 it was stormed by Monk when a great number of its inhabitants were put to death, not fewer it is said, than a sixth part, or about 1800 persons. During the reigns of the Scottish kings, Dundee was one of their places of residence. It is the birthplace of Hector Boece, the historian and of Admiral Duncan the hero of Camperdown. The town returns one member to the House of Commons. Registered electors (1851) 3250. Pop. (1841) 50,852 (1851) 78,541.

DUNDEE, a village in the parish of Madley, Middlesex, 10 m. N. of London, with a chapel. Pop. 810.

DUNDEE, a town in Ireland, Cork 6495 ac. Pop. 1454.

DUNDEE, a town in Scotland, 10 m. N. of Dundee, 4 m. S. W. Kilmarnock, is beautifully situated near the remains of an ancient castle, and has a castle at W. May. This place gives the title of earl to the noble family of Fife. Pop. 7294.—A vill. and par. Ireland co. Down. The village, 5 m. E. Belfast, contains a small church and a Presbyterian meeting house. In the immediate vicinity is an extensive flooding ground. Area of par. 4635 ac. Pop. 1297.

DUNDEE, a town in Ireland, 10 m. E. of 24 m. N. Dublin, pleasantly situated on a sheltered declivity and containing a Catholic chapel school and dispensary. Pop. 1454.—A town 7 m. S. W. Downpatrick on the river part of Dundrum Bar much resorted to for sea-bathing. Near it are the ruins of Dundrum castle. Pop. 180.

DUNDEE, a town in Ireland, 10 m. E. of 24 m. N. Dublin, pleasantly situated on a sheltered declivity and containing a Catholic chapel school and dispensary. Pop. 1454.—A town 7 m. S. W. Downpatrick on the river part of Dundrum Bar much resorted to for sea-bathing. Near it are the ruins of Dundrum castle. Pop. 180.

Downpatrick on the river part of Dundrum Bar much resorted to for sea-bathing. Near it are the ruins of Dundrum castle. Pop. 180.

DUNFERMLINE, a royal and par. bur. Scotland, co. Fife, W. dist. about 5 m. N. of the Forth, and 18 m. W. of Edinburgh. It is agreeably situated on the side and summit

of an activity along the S. end, and, when approached from this direction, has a very imposing appearance. It consists chiefly of three parallel streets stretching W to E and three other streets intersecting them nearly at right angles, and of several extensive suburbs extending off in all directions, but chiefly W. Owing to the nature of the ground, the streets, in the direction of the activity are steep and have few residences to regularity but the High Street, which is nearly 1 m. in length, is spacious, contains many houses of three stories, of a respectable and substantial appearance and is continued W by a handsome street, built partly across a deep ravine and occupied, for the most part by elegant shops. The space occupied by the town and suburbs is larger than the population might seem to require, many of the houses having gardens attached to them but it is somewhat remarkable that though Dunfermline, a few years ago possessed in the town Green, one of the finest public walks of which any provincial town in Scotland could boast it has not now a single public square to which the inhabitants can resort either for business or recreation. But if in this respect the town has been retrograde, in many others it has made rapid progress and in 1850 obtained the removal of one of the greatest disadvantages under which it laboured by the introduction of an abundant supply of excellent spring water. The principal modern edifices are the parish or abbey church so called from occupying the site of the old church of the abbey destroyed at the Reformation a spacious and handsome Gothic structure, with a square tower rising from the intersection of the nave with the transept, to the height of 100 ft. and containing beneath its pulpit, the remains of King Robert the Bruce which were discovered in digging its foundations the guild hall with a spire 132 ft. high and containing the public offices connected with the county the townhouse, the new jail and poorhouse both situated in the town Green already mentioned Queen Ann Street church in connection with the U. Presbyterians a huge unequalled edifice, forming from its elevated site, the most conspicuous object in the town, from whatever direction it is approached, with an open space in front in which has recently been erected a colossal statue of Ralph Erskine, one of the chief founders of the first great session from the Establishment Oldparish church so called in honor of Mr Gillespie, who on his expulsion from the parish church of Carnock, removed to Dunfermline, and founded the Relief Society the Episcopalian Independent, and various other churches, most of them modern and several of them hand some, including in all, three Established, three Free four U. Presbyterian, two Baptist an Episcopalian a Congregationalist, and a R. Catholic. The principal educational establishments are the grammar and the commercial schools. There are a number of other schools, several of them in connection with the different religious denominations. Of these, the most important are Maclean school, belonging to the Establishment, and the Free abbey church school. The staple manufacture is table linen, in regard to which the town early took the lead, and is still unrivalled by any other town in the kingdom. This manufacture together with that of coloured worsted and cotton yarns which has been added to it, and sheet quilts in extent occupies about one half of the population. There are also numerous spinning-mills extensive malting iron works a large power-loom factory and, in the vicinity several important collieries Dunfermline connects E. with branch of the Edinburgh and Northern, and W. with the Alloa and Dunfermline railways both of which have a common station immediately N of the town. Among the antiquities of the town, the most important are the monastery of which the most perfect portion now remaining forms a magnificent entrance to the abbey church, and is terminated at its W. end by a fine old spire, with a belfry from which at least 14 counties are said to be visible. The Prior's hall immediately adjoining with a pyramidal tower which bears the name of Malcolm Canmore and a much admired Gothic window and the remains of the royal palace, consisting chiefly of a large square tower built over an arch, beneath which the public road passes, and a lofty buttressed wall overhanging a shady wooded and romantic glen, and containing among its windows one which is still shown as that of the room in which Charles I. was born. Dunfermline unites with Stirling Inverkeithing Culross, and S. Queensferry in sending a member to the House of Commons. Area of par

35 040 ac. Pop. 21 967 of bor (1841) 13,398 (1861) 18 636.

DUNFIERTH par Irel. Kilmore 5648 ac. Pop. 744 DUNGANVON an island in, and part bor Ireland co Tyrone and 85 m W by R Belfast, on the southward near a branch of the Blackwater. It consists of an old and a new in, comprising a square, and several streets contains many good houses and is lighted with gas. It has a coast-guard, and is well attached a handsome modern structure, a parish church R Catholic chapel, meeting houses for Presbyterians and Methodists a fever hospital and an endowed classroom and several other schools. Linens are manufactured here to a considerable extent; also coarse earthenware, fire-bricks, and tiles. There are besides a large distillery a brewery and a corn-mill. Fairs monthly grain market weekly on Monday. It has quarter sessions and petty sessions, and returns a member to the House of Commons. Legislature's (1850), 271. Dunganvon was the chief seat of the O'Neills kings of Ulster from the earliest period of Irish history till 1607 when the last of these powerful chieftains fled to the Continent, and his possessions were granted by James I. to Sir Arthur Chichester. Pop. 3385

During the parliamentary war it became the depot of the Scottish troops, and was sent to Cromwell's troops after a six months siege, the garrison having previously been secretly conveyed away. Pop. 1949

DUNOIS an anc. territory France, prov. Orléans its new forming parts of the depts. Eure-et-Loir, Loiret-et-Lier and Loiret. Its capital was Châteauneuf

DUNOON a maritime vil. and par. Scotland co. Argyre. The vil. has lately situated on the W. shore of Firth of Clyde 20 m. W. by N. Glasgow has risen into importance within the last quarter of a century, having become a favorite summer resort for the summer of Glasgow. Range of neat and elegant modern villas stretch along the shore to the distance of about 1 1/2 m. N. and S. of the old village. On a green rocky knoll overlooking the Firth are to be seen the foundation walls of the ancient castle of Dunoon a rare relic of the noble family of Argyll in the early part of the 17th century. The existing remains do not indicate a higher antiquity than the 14th or 15th century though it is known that a castle existed here at a much earlier date. There are here an elegant parish church, a Free A. U. Presbyterian and English Episcopal churches and a neat Scotch Episcopal church, never sold and a circulating library. No manufactures are carried on but the population of the village is increasing. Area of united par. of Dunoon and Kilmar 180 sq. m. Pop. 4518. — (Local Correspondent)

DUNSE a bor. of barony market in par. and Scotland co. Berwick. The town 35 m. S.E. Edinburgh on a branch of the N. British Railway beautifully situated at the foot of a hill 680 ft. high called Dunse Law at well built, and contains some spacious streets is well known as a bathing place and a place of resort for the summer. The only remarkable public building is the town hall, founded in 1876 and surmounted by a beautiful Gothic spire. It has a plain parish church built in 1790 a Free and A. U. Presbyterian churches, several schools and libraries, and a reading room. Weekly market on Wednesday; three annual fairs. On the summit of Dunse Law are vestiges of the embanked camp occupied by General Leslie and 20 000 Covenanters, May 1693, to oppose a threatened invasion of Scotland by Charles II. who had advanced from beyond Berwick with a large force, to subdue the Scottish Covenanters. John Dunse Scot. Boston author of the *Fourfold State*, Dr. M. Craik, the historian of Knox and Sir Joseph Paxton architect of the Crystal Palace, were all born in the town or parish of Dunse. Area of par. 16 sq. m. Pop. 8467. — (Local Correspondent)

DUNSHAUGHLIN a par. and par. Ireland co. Meath. The former situated in a hollow 15 m. N.W. Dublin, is a dirty dilapidated place, and has a parish church, a R. Catholic chapel, two schools, and a dispensary. The

people, in a miserable condition, are either day labourers or mendicants. Poverty seasons fortnightly. Area of par., 3354 ac. Pop. 1839. (Local Correspondent)

DUNSHILT or **DAMSHILT** a vil Scotland co Fife, 1 m. S.E. Anstruther on the Eden. Inhabitants mostly cotton weavers. Pop. 645.

DUNSTON a vil co. of the S. of the H. H. Scotland co. of 7 m. S.E. of Forth, and about 15 m. S.E. of Perth. Height, 1114 ft. An extensive view is obtained from the top, on which the circumvallations of what is said to be Macbeth's castle, may still be traced.

DUNSTON a pleasant vil Ireland, co. of and 4 m. W. N. Dublin. On a hill in the vicinity 310 ft. high, is the observatory of Trinity college.

DUNSTABLE, a tn and par England co. Bedford. The town 23 m. N. W. London on a branch of the London and North-western Railway in the centre of the Dunstable chalk downs consists of four principal streets, houses, mostly of brick, in general well built, but many of an antiquated appearance. It has a parish church a Wesleyan, and two Baptist chapels, a free school, and several almshouses. Straw plait and bonnet manufacture is the chief trade of the town, employing a great many females. Whiting also is manufactured to a great extent, and there are several considerable mangle establishments. Immense numbers of larks are taken in the vicinity and sent to the London market. Dunstable was an important Roman station. Henry I. built a royal mansion in the neighbourhood and also founded a priory here, of which no part remains but the portion appropriated to the parish church, and two arches in the adjoining wall. Market Wed. needer f or fairs annually. Area of par. 230 ac. P. 3589.

high school, and hospital and has manufactures of woollen cloth. Pop. 1400.

DURANCE (Latin, *Durentia*), a river France, which rises on the W. slope of the Cevennes Alps, in Mount Gravelle, in the N.E. of dep. Hantes Alpes, flows easterly in a S.E. direction through that dep. thence about due S. through the W. part of dep. Basses-Alpes, on reaching the S. frontier of which it turns W. forming the boundary between dep. Vaucluse and Bouches-du-Rhône, and joins E. bank Rhone, 4 m. below Arignon. It passes the towns of Branc, Embrun, Sisteron, and Orgon, and has for its principal affluents on the right, the Grasse, Gironde, Bouch, and Calaven, and on the left the Gull, Ubaye, Saane, Blacon, Aase, and Vordon. The Durance though a large stream, is so rapid in its current and carries so much debris along with it, that it is nowhere navigable. It is, however much used for boatage, and by feeding the canal of Carpiagne which connects it with the Rhone in the lower part of its course, furnishes an important water communication. It is subject to inundations, which often commit great ravages. Its whole course is about 180 m.

DURANGO—1 A mixed state, or dep. Mexico co. federation between lat. 23 37' and 27 49' N. lon. 102 30' and 107 17' W. surrounded by Chihuahua, Coahuila, Zacatecas, Jalisco, Sonora, and Chihuahua. Length, N. to S., about 230 m. breadth 150 m. area, about 54 000 sq. m. It is mostly rocky and mountainous, and is traversed by the Sierra Madre which forms the connecting link between the plains of America and the Rocky Mountains. It is watered by only a few streams, the most important of which is the Rio-de las Naves, which flows itself in the lake of Cayman in the Bolson-de-Mapimi. The greater part of this state is a barren and unproductive waste but there are some fine meadows, well adapted for grazing and along the banks of the streams the soil is rich and fertile producing in abundance corn maize rice, and other cereals. Agriculture, cattle rearing and working the gold silver and iron in the mountains are the chief employments. Durango is greatly infested by several Indian tribes, especially by the Comanches, who, at various seasons, overrun the N. and W. portions of Mexico, do much cattle, and massacre without mercy all who come in their way. Pop. (1841) 165 000.—2 A tn and co. above state 7295 ft. above sea level lat. 24 25' N. lon. 103 34 8' W. (L.) It is picturesque but dirty, and has two large churches, a college, an hospital several convents, a mint, and numerous woollen and cotton manufactures and a good trade in cattle and leather. It was founded about the middle of the 16th century. Pop. (1841) 25 000 of whom a majority are negroes and beggars.—3 A tn in Spain prov. Huesca 14 m. S.E. Dillen E. bank of a small river here crossed by three bridges. It is well built, and has straight streets, and paved streets three churches, two convents a Latin, and two primary schools, a townhall hospital prison and cemetery. Weaving, tanning and the manufacture of hardware are carried on. Pop. 2236.

DURAS, or **URAS**, a valley Ladakh about lat. 34 22' N. lon. 75 30' E. at a short distance N. from the frontier of Cashmere, in which are a collection of villages, through which passes a river of the same name the latter rising in the British or Kantai Pass, flows N. to the Indus, which it joins in lat. 34 44' N. lon. 76 9' E. Duras is 3000 ft. above the sea.

DURAGON a river Spain which rises in the W. of the Sierra Nevada, near the W. frontiers of New Castile, flows N. W. traversing Old Castile enters Leon and shortly after passing Paderel, joins E. bank, Duero. Its whole course is about 60 m. and is partly navigable in spring. It is well supplied with fish.

DURAZZO (anc. *Dyrrachium*, or *Epidamnus*) a seaport, European Turkey prov. Albania, on the Adriatic, 50 m. S. by W. Scutari lat. 41 18 12' N. lon. 19° 26' 40' E. (L.) It is strongly fortified, has a safe and commodious harbour, exports tobacco to Italy and receives Manchester and Birmingham manufactures from Trieste. The ancient Epidamnus, which was a colony of Corcyraeans, was the most powerful maritime town of Illyria. The expulsion of its aristocracy B.C. 495, was the origin of the Peloponnesian war. No traces of the ancient city now exist, excepting pieces of columns and marbles scattered over the burial grounds, or built in the walls. Pop. 5000.

DUREN a market tn. Rhine, gov. Coarland on the R.E. shore of a small lake of same name, 16 m. E.N.E. Lebat. It contains a church and an old castle. Pop. 1500.

DURCAL, a vil. Spain, Andalusia, prov. of, about 16 m. S. Granada, in a beautiful plain, at the foot of Mount Zahor, a continuation of the Sierra Nevada, near its base. The houses are old and sit back, and the streets, though level, are winding, and, for the most part, without pavement. It contains a parish church of modern construction, a town-house, which is small and of no architectural merit, and an endowed primary school. Some of the inhabitants are export articles but the chief employment is agriculture. Pop. 1891.

DUREN [anc. Marcondringum] a tn. Prussia gov. of and 16 m. E. by N. Aix-la-Chapelle on the R. bank of the Roer here crossed by a stone bridge, and on the railway from Aix-la-Chapelle to Cologne. It is the seat of several courts and public offices, contains two Protestant, and five R. Catholic churches, one of the former new and very handsome, and one of the latter surmounted by a fine Gothic tower, a synagogue, gymnasium and three nurseries and has important manufactures of woollen cloth and woaden covers paper leather sheet-iron cast iron and wire, numerous brassy distilleries, an important trade in corn cattle and the above manufactures; and two annual fairs. Duren is of Roman origin, and is mentioned by Tacitus under its name of Marcondringum. It was destroyed by Charles V. in 1543 with an army of 60,000 men and after an obstinate resistance taken and destroyed. Pop. 7759. — The circle, area, 164 geo. sq. m. is partly dry and partly hilly is watered by the Roer and several small streams, is well wooded produces a good deal of wine and fruit, rears great numbers of cattle, and possesses a number of valuable minerals particularly iron slag, lead, lignite and coal. Pop. 16,461.

DURGHAM a fishing vil. Holland, prov. N. Holland, on the IJ opposite Amsterdam, which it supplies with fish. It has a church and school. Pop. 450.

DURHAM a N. maritime co. England consisting chiefly of a long contiguous tract forming the co. properly so called and of three detached portions. Of these the largest is in the N. of Northumberland where it forms an irregular triangle, with its base on the German Ocean, and has annexed to it at a short distance from the coast, Holy Island, and the small group of the Farne Islands the second is on the S. F. part of the coast of the same county the third, forming the parish of Crutche, is wholly enclosed by Yorkshire, and is situated about 10 m. N. of the town of York. The county proper is in the form of an irregular triangle the vertex of which, somewhat flattened is on the W. where it is contiguous both with Cumberland and Westmorland. The coast line on the E. forms its base. The N. side is bounded by Northumberland from which it is partly separated by the Tyne. The S. side by Yorkshire, from which it is separated throughout by the Tees; greatest length W. to E. 35 m.; greatest breadth 35 m. area, 1097 sq. m. or 702,080 ac. The surface is greatly diversified. In the W. it becomes mountainous being covered by portions of what has been called the Pennine range one of whose summits, that of Killip Law here attains the height of 2196 ft. To the E. of this range a black elevated tract extends, and is contained by a series of branches, some of which stretch as far as the sea and form a number of rocky headlands. The finest part of the county lies in the valleys which separate these branches and form the channels of numerous streams, of which the most important, in addition to the Tyne and Tees, already mentioned is the Wear which traverses the county centrally first in an E. and then in a N.E. direction. All these rivers are navigable to a considerable distance from their mouths. The geological formations of the county are well defined. The strata lowest in the series but most elevated in position belong to the mountain limestone, of which both the mountains in the W. and the elevated plateau to the E. of it are composed. Immediately above this, continuing E. appear first the millstone grit then a part of the valuable coal field to which Newcastle has given its name, then the magnesian limestone, and finally the new red sandstone. The continuity of the strata is frequently broken by veins of basalt or greenstone. The W. part of the county both from its elevated position and the black moors which cover its surface is altogether unfitted for agriculture, and

scarcely admitting of improvement, is allowed to remain in a state of nature. A number of small hardy sheep, much esteemed for the delicacy of their flesh, are reared, and in some parts, and in some parts, especially where limestone forms the immediate substratum some tracts of good, second pasture are employed in the rearing of young stock, but the average annual value of the whole mountains is supposed not to exceed 1s. per acre. To the E. of the moorlands though much of the soil continues to be of a thin clayey and infertile nature a very decided improvement is taken place, and good crops of all the ordinary cereals are raised. Fertile loams admirably adapted for root crops, especially turnips, are not unfrequently found along the N. bank of the Tees particularly near its estuary are considerable tracts of rich alluvial soil, partly under the plough but more frequently kept in permanent pasture, on which many of the finest cattle of the kingdom are grazed. Indeed in this branch

of agricultural industry the farmers of Durham are not surpassed, and their famous short horns or Teeswater breed of cattle are universally admitted to combine the most valuable properties of the race in their highest perfection. The best wooded part of the county is the vale of Derwent, where much fine hardwood timber particularly oak, is grown. It is not, however, from the soil that Durham derives the principal source of its wealth. The richest treasure its deeply barren soil in its bowels. References has already been made to its coal field, one of the most valuable which England possesses and in the W. where the surface is almost without value, the limestone beneath it abounds in rich veins of lead which are worked to a great extent and yield a profit only inferior to that of the coal. The value of the minerals is much increased by the facilities of transport. Besides three navigable rivers each with an important town and tolerably good harbour at its mouth, where at least in spring tides, large vessels can load the York, Newcastle and Berwick Railway, forming one of the main trunks by which the communication between the metropolis and Scotland is maintained traverses the county in a N. direction for about 45 m. and is joined by numerous branches passing through the heart of the mineral fields, and conveying their produce either to the trunk or to the coast where in addition to the harbour already mentioned that of Hartlepool furnishes an important outlet. For administrative purposes Durham is divided into the four wards of Chester Darlington Easington and Stockton. Ecclesiastically it is in the diocese of its own name and the province of York and contains 80 parishes. Many of the livings are the most valuable of the kingdom and much of the land belongs properly to the church. It consists politically of two divisions—a N. and a S.—each of which sends two members to parliament. Durham city is the capital where the assizes and the quarter sessions are held. Pop. (1841) 224,284 (1851) 300,997.

DURHAM [originally *Dunelm*] an ancient and celebrated city and port for England, one of the most important in N. England. It stands on seven summits, along the summits of which the streets generally run. Of these there are nine that may be considered principal streets besides several smaller and a number of lanes, courts, &c. The first are tolerably straight, and well kept. The houses are built, some of brick, and some of stone many of them are very old and extremely irregular in form and dimensions, those of modern erection are more uniform. The city is partially paved and dugged, well supplied with water and heated with gas. The principal public buildings, exclusive of the ancient castle, the cathedral, and other churches are the town hall a handsome edifice, in the Tudor baronial style the new hall a spacious room, 70 ft. long 55 ft. broad and 51 ft. high; the county prison, lately much enlarged and a new grammar school. There are in all six churches in the city besides the cathedral together with chapels for Wesleyans, New Connection Methodists, Primitive Methodists Independents R. Catholics, and a meeting-house for the society of Friends. The educational institutions comprise the university grammar-school, a dissenting training school, three cost, national, and infant schools, a R. Catholic free and charity school. The university was founded in 1833 chiefly for students in theology. A new college, called Hatfield Hall has been attached to the former in which students can be educated on much cheaper terms than in the university. An additional college on similar terms to Hatfield Hall, was opened in October

1361 There are in the city a mechanics institute, an asylum, an infirmary and a number of minor charities. The only manufactures of any importance carried on are those of exporting and mustard, for the last of which articles Durham has been for a long time much celebrated. The vicinity abounds in beautiful public walks, commanding a great extent and variety of picturesque scenery. But the great attractions of Durham are its famous cathedral and ancient castle. The former occupies the summit of a peninsula overlooking the Wear on the E. and W. and having rapid descents to the river which are covered with hanging

DURHAM, seen near the French and English bridges.—From Albany's View to Charleston, Charlotte, N.C.

woods and gardens, having a regularly pleasing effect. The aspect of this venerable structure is peculiarly grand and impressive. The general character of the larger portion is Norman, of a very bold style with insertions in all the English styles. Three magnificent, and elaborately ornamented towers spring up from the body of the building one from the centre 312 ft. high, and two, together from the W. end, 143 ft. high each. The entire length of the edifice is 420 ft. It was founded by bishop William de Carlisle, consecrated by Malcolm King of Scotland on August 11 1093. The castle formerly the residence of the bishops of Durham stands N. from the cathedral on the summit of an artificial mound. The original building is Norman, but many of the additions are of much later dates. It is believed to have been founded by William the Conqueror in 1073 but it is considered doubtful whether any part of the original keep, with exception of the foundation, now remains. The greater portion of the existing building is supposed to have been erected in 1250. Durham returns two members to the House of Commons. Registered electors (1851) 1115. Pop. (1841, 14,151 (1851) 13,195.—(Local Correspondent.)

DURIAN or **DUTUN** (**DURAT** and **LITTLE**, and **HERAT**) The former are two islands at the E. E. entrance to the Strait of Malacca, lat. 0° 50' N. lon. 103° 55' E. They are high, and separated from each other by a narrow creek. The conical peak of Great Durian forms a conspicuous object in coming from the E. there is a park also on Little Durian but of much less elevation. The Strait of Durian lies between the E. coast of Sumatra, and the island of Linga, extending from Palo Varela to the Coromandel, off the E. E. extremity of the Malay peninsula. It is about 120 m. in length, and is bounded W. by the coast of Sumatra, False Durian, Babon and the cordugones islands; on the E. side by the islands off the S. and W. sides of Linga, Great and Little Durian, and the adjacent islands.

DURRENHEIM, a town in Bavaria, Palatinate, at the entrance of the valley of Dürkheim through which the Moselle flows, 14 m. W. W. Mannheim. It is well built, is the seat of several courts and public offices, contains a E. Catholic and two Protestant parish churches, a Latin and an industrial

school and has glass-works, a paper-mill, a trade in wine and wool and an annual fair. In the neighborhood are the salt springs of Philippsbad. Dürkheim was early surrounded with walls, and otherwise fortified as so to be a place of considerable strength. It suffered much during the Thirty Years War and still more from the French, by whom it was pillaged in 1874. Pop. 4559.

DURLACH a town Baden circle, Middle Rhine, on a hill of same name, at the foot of the Thurnburg r. bank Rhine, on the railway from Baden to Frankfurt, 4 m. S. E. E. Castle on the hill was a Protestant, and a E. Catholic church, an old townhouse, courthouses, hospital superior burgher school house of refuge, and savings bank; and has manufactures of linen, tobacco, distillery and vinegar and an important market for fruit, which is extensively grown in the district. Durlach was an ancient place, and was long the residence of the Margraves of Baden-Durlach now the ranging line since the extinction of that of Baden Baden in 1771. An old ruined castle, on a height near the town, was the cradle of the family Pop. 4355.

DURNFORD, a river of E. Africa, coast of Tanganyika, flows into the Indian Ocean on lat. 1° 4' S.

DÜRNHOLZ, a town Austria, Moravia circle, and 29 m. S. by W. Brunn a bank Thaya. It has an old castle a church, hospital, mill, two fields, five annual fairs, and a weekly market. Pop. 2407.

DÜRNTEN (**MYRTLE**, **OSAR**, and **LYRRE**) (middle upper and lower) a par and scattered val., Switzerland cant. of, and 10 m. S. E. Zürich Besides agriculture and cattle-rearing the inhabitants are engaged in spinning, and was ing silk and cotton. Pop. 1503.

DÜRRESEE, a small lake, Switzerland, cant. of, and 27 m. S. Bern, on the road from the vil. of Lunnen to the Gellien glacier and nearly 4000 ft. above sea level.

DURKA, **ZABRAN** or **ZERRAR** a large brackish lake, Afghanistan prov. Helistan lat. 33° 4' lon. 63° E.; about 160 m. in circumference, and containing an island on which is a stronghold called the fort of Buzand or Buzan in which the chiefs of Belistan used to take refuge when their country was invaded. The shores are overgrown to a considerable distance with rushes and reeds, interspersed with pools of standing water and these marshes or thickets are occupied by herds of oxen, belonging to a race of people different from the other inhabitants of Belistan, being tall stout, black men, who live in reed huts, and their flocks, and fish or fowl on rafts across the rushes of the lake.

DÜRANGIDRA a town Hindostan, Goojerat, 85 m. N. W. Cambay; lat. 22° 54' N. lon. 71° 25' E.

DURRENBERG a vil. Prussia Saxony 6 m. S. E. E. Merseburg, remarkable only for its salt springs, which have been employed in making salt for above a century and yield yearly about 12 000 tons. Pop. 320.

DURRENBOTH a vil. and par Switzerland, cant. of, and 23 m. N. E. Bern, in an elevated and picturesque locality surrounded by green slopes and wooded hills. It has a church, some neat houses, and a grain-mill. The inhabitants are chiefly employed in cattle-rearing, and linen weaving. Pop. 1642.

DURRENSTEIN a small town Lower Austria, pleasantly situated on a bank Danube, 41 m. W. by N. Vienna. It belongs to the province of Starobrunn, who have here a castle containing a good library. There are also here fine ruins of

an Augustinian monastery. But Dürrstein is more especially noted for the ruins of the old fortress, which lie on a lofty bare, rugged rock above the village, behind which again the Wunderberg rises still higher covered with dark fir-wood. In this fortress, Richard Coeur de Lion treacherously seized when returning from Palestine, A.D. 1191 was detained prisoner.

THE TOWER AND CASTLE OF DÜRRSTEIN
From Düsseldorf, this view from the N. W.

seized by Duke Leopold of Austria. He razed it in consequence 16 months. This old stronghold was taken and subsequently fortified by the Swedes, and ultimately destroyed by them in 1640. In 1741 a small body of the villagers repulsed a large force of French and Russians by means of a number of water-pipes pointed to look like cannon, which they planted on the walls, aimed in their operations by a drum, which was vigorously beaten, to make the enemy imagine the place was strongly garrisoned. In November 1805 the French here defeated the Austrians and Russians. Pop. 500.

DÜRRHEIM a vil. Baden Lake circle, bail of, and 4 m. R.E. Villingen between the acres of the Neckar and Danube on the W. slope of the Black Forest. It contains a parish church, and has a strong salt spring. Pop. 1049.

DÜRRINGTON two pars. Eng.—1 Sussex 891 a. Pop. 177—2, Wilt. 2622 a. Pop. 47.

DÜRRIS, par. Seat. Knechtsteden 7 1/2 by 8 1/2 m. P. 952.

DÜRRMENZ, a vil. Württemberg circle. Neckar on both sides of the Enz here crossed by a handsome bridge. It contains a parish church and has manufactures of tobacco. Pop. 1490.

DURROW—1. A market in and par. Ireland gov. Kilkenny and Queen's county. The town on the River 15 m. N.W. Kilkenny consists generally of old and chiefly stone houses, is plentifully supplied with good water and well kept, has a well-built courthouse, an Episcopal church, R. Catholic chapel, parochial school and a dispensary. Weekly market, Friday. Eight fairs anually. A flax-spinning mill has been recently erected. People chiefly agricultural labourers. Area of par. 6598 a. Pop. 2256 of in 1085—(Local Correspondence)—2. Par. Ireland, King's co. and Westmeath, 8778 a. Pop. 1936.

DURROW, par. Lond. Cork 11 188 a. Pop. 2392.

DURSEY an isl. Ireland, co. Cork 11 m. W. by 8. Castle town, near the entrance to Bantry Bay 8 1/2 m. in length, by 1 m. in breadth. It contains the remains of an old church and castle. Pop. 200.

DURSLEY a market tn. and par. England, co. Gloucester. The town 14 m. S. by W. Gloucester in a picturesque district. It well built, lighted with gas, and well supplied with water; it has a handsome church with a tower at the W. end, a chapel of ease, and chapels for Independents and Wesleyans, and several charities and schools. There are here some cloth-mills, but this branch of business has much fallen off of late years. Area of par. 1059 a. Pop. 2752.

DURSTON par. Eng. Somerset; 1032 a. Pop. 258.

DURTAL, an anc. tn. France, dep. Maine-et-Loire, 31 m. N.E. Angers, on the Loire here crossed by a stone bridge. Vol. I.

It is agreeably situated, has the remains of an old castle, potteries and brickfields, and a trade in grain. Pop. 1566.

DURWAZ, a territory Independent Turkistan between Badkshan and the Fannor Bolor mountains intersected by lat 38° N. and lon 71 E. It is exceedingly mountainous, and its dirty paths can only be traversed by footmen. Cotton is grown on what little soil there is. Made into cloth, it forms an article of export in return for which grain and gunpowder are obtained. The villages are situated on the banks of the Oxus by the earlier stream of which it is traversed. The natives are Tajiks, and most of them Suni Mahomedans. Their language is Persian.

DURWELSTON par. Eng. Dorset 1763 a. Pop. 408.

DUSEFORD par. Eng. Cambridge 8132 a. Pop. 844.

DUSHEE a small tn. and fort, Russian Georgia, 25 m. N. Tiflis. It is an insignificant place, having a number of low small shops, in which different articles are exposed for sale, and where all kinds of tradesmen are seen at work. Here also are to be seen weavers of coarse linen sitting upon the ground with their feet in holes in the earth. The fort is a place of no great strength, now falling to decay and used as a barrack for a battalion of soldiers. The town is surrounded in open and well cultivated. P. (1848) 1364.

DUSKY BAY New Zealand S.W. extremity of Middle Island lat 45° 45' S. lon 166° 37' E. (N.) It is large, and affords good anchorage near the shore which is steep and rugged. Fish are plentiful and in great variety. Discovered in 1769 by Cook.

DUSNOK a vil. Hungary. Either Danube so of and 60 m. from Pesth with a R. Catholic church. Pop. 2289.

DUSSEAL N. a river Hindostan which has its source in the Vindhya mountains, lat 23° 10' N. lon 78° 30' E. about 70 m. E. by N. the city of Bhopal. It flows nearly due N. till it joins the Betwah lat 25° 45' S. lon 78° 30' E. its course about 180 m. It is too rocky to be navigable but abounds with fish.

DUSSELDORF a gov. Rhineland Prussia bounded N. and W. by Holland. S. Aix-la-Chapelle and Cologne, R. Arnsberg and N.E. Münster area, 1078 geo. sq. m. The surface wholly belongs to the basin of the Rhine, which traverses it obliquely in a N. direction and divides it into two nearly equal parts—that on the E. being hilly but well wooded, and that on the W. generally flat and fertile. The principal tributaries of the Rhine within the government are, on the left, the Erft, Moers or Mörs, and Quebach; on the right, the Wipper, Düffel, Rahr, Kambelster and Luppe. The principal crops are wheat, rye, barley and oats, but the produce is sold to full short of the home consumption. Potatoes, flax, and oil seed also are extensively grown, and, in some districts, tobacco thrives well. The minerals include iron, coal, and good potter's clay. For administrative purposes the government is divided into 13 circles—Cleve, Rees, Duisburg, Geldern, Kempen, Krefeld, Düsseldorf, Elberfeld, Lennep, Solingen, Neuss, Grevenbroich and Gladbach. Pop. 887 614.

DUSSELDORF a tn. in Prussia, cap. Rhineland province, beautifully situated among villas and gardens on bank Rhine, here crossed by a bridge of boats, at the confluence of the Dussel, and on the railway from Elberfeld 31 m. N. N. W. Cologne. It is built of brick, mostly in the form of parallel oblongs, with its greatest length from N. to S. and with its principal streets, which are regular spacious and planted with trees in the same direction, and nearly parallel to the river. Its ramparts have been thrown down, and converted into promenades, and so many improvements have been made upon it within the present century that it now ranks as one of the handsomest towns in the valley of the Rhine. It consists of three parts—the Altstadt, the Carlstadt, and Neustadt. Of these, the Altstadt is the best preserving and the Neustadt the most elegant. Among the streets the Mittel Strasse combining a number of fine shops, the Allee Strasse, and the Carlsstrasse Allee; and among the squares, the Exercier Platz, Carl Platz and Friedrich Platz, are most deserving of notice. The principal edifices are St. Lambert's church, in the centre of an irregular open space in the N. W. part of the town, near the Rhine, adorned with a beautiful monument of Duke John

William IV and his consort, in white marble, and with several fine paintings. St. Andrew's or the Hof church, almost overgrown with decorations, and rich in carvings, frescoes, and paintings the Franciscan or Maximilian church, with a fine bronze altar table, and a large picture by Dürer; the old palace of the Churfürst, once a huge pile, but now destroyed with the exception of a wing, partly occupied by the drawing academy and partly as a royal manse; the townhouse, an ancient and venerable structure the old Maximilian, now used for the meetings of the Estates, and other Government buildings the gymnasium, picture gallery theatre, court-house, prison, and large new barracks. Among the public institutions, particular notice is due to the Academy of Art, founded 1777 by the Elector Theodore, renewed, in 1881 by King Frederick William and afterwards directed by Cornelius and Behndorf. It has the honour of having founded a school of painting, which takes the name of Düsseldorf and has a great number of young painters in training many of them of high promise. The manufactures include woolen and cotton goods, calicoes, hats, soap, white-lead, leather tobacco sugar and, particularly liquor, of which there are 10 factories. The trade, both general and transit, and consisting chiefly of agricultural and colonial produce, is very important, and in recent years, has made large and rapid progress. In 1885, the imports were 865,535 cwt. and the exports 118,144 cwt. In 1890, the former had risen to 1,535,928 cwt. and the latter to 208,870 cwt. Much of this increase is owing to the completion of the railway from Elberfeld, and more is expected from the completion of others now in progress. The residence of Prince William of Prussia, as governor of the Rhenish province, and commander in chief attracts many of the nobility and gentry as the town somewhat the appearance of a capital. Pop. (1846) 26,301.—The creek area, 116 sq. m. is finely diversified by hills, and well wooded, but not remarkable for its fertility. Pop. 79,318.

DURGEEA a fortified town, Hindoostan, prov. Goojerat lat. 23° 18' N lon. 71° 51' E contains about 18,000 houses. The country around is well cultivated.

DUSSELINGEN a vil. Württemberg, circle, Schwarzwald hall of 4 and 4 m. S. W. Tübingen. It contains a parish church, and has manufactures of linen. Much hemp flax and fruit, are grown in the vicinity. Pop. 2287.

DUSTEE, or DOST a river Belochistan sources unknown. It traverses prov. Makran and falls into the Indian Ocean, in Gwelter Bay lat. 25° 8' N lon. 61° 50' E. It is supposed to have a course, under different names, of 1000 m.

DUSTON par. Eng. Northampton 1760 ac. Pop. 714.

DUTHILL, par. Scot. Elgin 14 m. by 18 m. P. 1788.

DUTTON two townships England.—1 co. Chester 44 sq. m. E. Frodsham, near where the valley of the Weaver is crossed by a viaduct of the London and North-western Railway built of red stone consisting of 29 stupendous arches

about 70 ft. high and 60 ft. in span. Pop. 241—2 co. Lancaster, 64 m. N. N. W. Blackburn. Pop. (1841) 563.

DUTTWEILER, a vil. Prussia, 40 m. S. E. E. Treves, on the Moselle. It has a court of justice, parish church, and extensive alum and vitric works. A seam of coal in the neighbourhood has long been burning below ground. Pop. 1287.

DVINA, DVINA or DUNA, two rivers, Russia.—1, Western Dvina (Dnieper), rises in gov. Tver near vil. Kalina, dist. Ostashevo about 15 m. W. of the source of the Volga, flows first easterly S. E. W. through that gov. and along the frontiers of gov. Fokov, Smolensk, and Vitsebsk, till it reaches the town of Vitsebsk, when it turns gradually round, assumes a W. N. W. direction, separating Vitsebsk and Livonia, on its right, from Minsk and Courland on its left, and finally falls into the gulf, about 10 m. below the town of Riga, after a course of about 500 m. In spring it is navigable nearly to its source, but, at other times, not beyond Wilna. It continues frozen from the end of November to the beginning of April, and has several rapids, which become dangerous when the water is low. Its principal affluents are, on the right, the Turupa, Obol, Dvina Zvez, and Oghe; and, on the left, the Meje, Kaspija, Onia, and Diana. It is subject to inundations, particularly at the melting of the ice, and frequently commits great ravages. It abounds with fish.—2 Northern Dvina (anc. Caranabou) is formed in gov. Vologda, by the junction of the Sushona and Vitebsk, about 16 m. E. Bobovichsk. Flows, N. N. W. into gov. Archangel, there receives on its left, the Vaga and Ennea, and on its right, the Piyegha and Pinyagha and, after a short course of 270 m. and an indirect of above 400 m., falls into the White Sea about 20 m. below Archangel, after forming a number of islands, and branching off into a number of mouths. For a representation of these and a description of the traffic on this river see ARCHANGEL. By a canal connecting the Sushona with Lake Bule and, through it, with the Neva, and another connecting the Vitebsk with the Kama, a great system of water communication has been formed, furnishing the means of uninterrupted transit from the White Sea and the Baltic to the Black Sea and the Caspian.

DWALAGIRI one of the culminating points of the Himalaya Mountains in the kingdom of Nepal, lat. 29° 8' N lon. 82° 55' E. Its height used to be stated at 28,000 feet, but is now ascertained to be only 26,825 feet, being upwards of 2000 feet below that of Mount Everest which is 29,002.

DWALDER, an is. Java Sea near the S. entrance to the Macassar Strait lat. 4° 12' S lon. 116° 21' E. It is small, low covered with wood, and saddle-shaped.

DWARAKA or JONUTRA, a small maritime town, Hindoostan, prov. Goojerat, at its most W. point, on the Indian Ocean lat. 23° 15' N lon. 69° 5' E, on a beautiful, sandy shore, and surrounded with a wall, washed by the tide. It is considered the most sacred spot in this part of India, and

TOWNS AND TEMPLES OF DWARAKA.—From Gleanings of Europe, India.

is resorted to annually by about 15,000 pilgrims. Its principal pagoda or temple is a magnificent structure of high antiquity. The entrance towards the sea is by a long and noble flight of stone steps. The great pyramid is 140 ft. high, rising

and elaborately ornamented. There are a great number of smaller temples and pagodas. The devotees, having performed the necessary ablutions, visited the temple, deposited his offerings, and paid all fees, which are pretty heavy amounting

altogether to about 11 silver rupees (22s.) besides presents, proceeds to a place called Arunra, 15 m N E Dwarka, for the purpose of being stamped by the hand of Brahmin which means being impressed, usually on the arm, with a hot iron instrument, engraved with the shell ring and the lotus flower, the insignia of the gods. Drunks submitted to the British forces in 1816, but in the following year was transferred to the Baroda government.

Fife N coast Firth of Forth, 18 m. N by E Edinburgh a station on the Edinburgh, Perth, and Dundee Railway lat. 55° 7' N; lon 3° 8' W. It consists of three narrow streets, with several lanes and alleys and an open space in the centre.

In the middle of the town stands the townhouse a plain old structure, with a tower and spire. Though, now a dull and comparatively deserted town, with little or no trade, in the 15th century extensive salt works were in operation here, and the produce exported in great quantities to Holland besides supplying the larger towns of Scotland and coal was brought here 860 years ago. Malting and brewing were also carried on to a great extent, and immense quantities of foreign merchandise were imported and exposed to sale under the piazzas, now all built up of the principal street, and in the marketplace. It has now neither foreign nor home trade, and owns only a few small coasting vessels; and its extensive manufactures of malle and linen cloth are now nearly extinct. Cheeks and ticks however are still manufactured. The harbour is excellent, and is provided with a wet dock having fully 18 ft. water. Towards the S. or lower part of the town are the remains of a small chapel and close by stands the old church of Dybar. A little W of the town on a steep crag fronting the sea, stand the ruins of the ancient castle of Ravenscraig allied to under the name of Ravenscraig in Scott. *Leg of the Last Minstrel*. Dybar unites with Kirkaldy Burntland and Kinghorn in returning a member to the House of Commons. Extent of par 4 m. by 5 m. Pop of burgh and par 8739

EATON (Cirence) a par and vil England co. Stafford 4204 ac. The village 5½ m S.W. by W Stafford, is well built, and has a church and a free grammar-school. Pop. 654. **EAUX BONNES** or **AAS**, a celebrated watering-place, France dep. Basses-Pyrénées 20 m. S.E.E. Clermont. It stands at the bottom of a narrow gorge, down which the Gave de Gabas makes a rapid descent, and consists of rather more than 20 large and lofty hotels and lodging houses, forming one side

of a street, and completely overhung and hemmed in by precipitous rocks. The springs, five in number, are strongly impregnated with sulphur and have a temperature not exceeding 91°. They are used only in baths, with the exception of one cold spring which is drunk and used to be very efficacious in affections of the lungs and chest, and particularly in the early stages of consumption. During the season from June to October the plain is crowded with patients and visitors.

EAUX CHAUDES (Low) or **ANJUM-CHAUDS**, a vil and bathing establishment France, dep. Hautes Pyrénées, situated in a wild and rocky gorge of the valley of Ossau, on the Gave de Pau. It consists of a few inns and lodging-houses, wedged in the trough of the valley and overhung by lofty precipitous. The springs which, with the exception of one cold spring have a temperature varying from 93° to 95° and are of a sulphurous nature burst forth at the junction of the granite and limestone rock. They have the same properties as the *Reuz Bonnes* above described; but the place as yet does not possess many attractions.

EAUX VIVES, a vil and par Switzerland, can. of and forming a suburb of Geneva. It is very situated on the lake contains a number of well built houses and is surrounded by handsome villas, and has manufactures of silk and woollen shawls, and several other printfields. Pop. 1482

EBBERSTON par Eng N York 6850 ac Pop. 1

EBBESHOEN-WAAR, par Eng. Wilts 2762 ac. P. 219

EBBELEVEN a tn Germany principality Schwarzburg-Sonderhausen on the Halbe, 6 m S.W. Sonderhausen. It contains a pleasure palace, with gardens and has the-works of a fishery several mills, a cattle market, and two annual fairs Pop. 681

EBELBERG a tn Austria See EBERBERG

EBELTOFT a maritime tn Denmark, Jutland bail. of and 30 m S.E. Randers E. shore bay of same name. It has a large inconveniently placed church, a winter haven and carries on some trade and fishing. Pop. 1100

EBERFURT a tn Lower Austria, 22 m S. Vienna 1 bank, Leitha. It is surrounded by walls and ditches, in a very dilapidated state contains an ancient church and a modern castle, with fine garden and has manufactures of cloth and a paper cotton, and other mills. Pop. 2000

EBERBACH a tn Baden circle Lower Rhine, esp bail of same name r bank, Neckar 23 m E. Mannheim. It contains a Protestant and a R. Catholic church, town house, hospital and Latin school and has several terraces as iron, gypsum, polishing saw and other mills, some shipping and a trade in timber. The scales of a white fish *Cyprinus alburnus* are collected here to make fish pearls. Eberbach was once a free Imperial town. Pop. 8650 of bail 7271

EBERHARTING or **ONZANGHARTING** a vil Lower Austria, on the Pielche, 15 m. S.S.E. Vienna, with a church and a castle with a chapel; and manufactures of cotton prints, a cotton mill, and machinery for boring the cannon cast at Vienna. Pop. 890.

EBERMANNSTADT a tn Bavaria, Upper Franconia esp bail of same name, 1 bank, Wiesent, 70 m S.W. Dinkelsbühl. It is the seat of a civil court, contains a castle, parish church and school and has an oil and other mills, and several annual fairs. Much hemp and mustard are grown in the vicinity Pop. 651 Area of bail, 66 sq. m. P. 11,851

EBERN a tn Bavaria Lower Franconia, 1 bank, Bau nach, 14 m N.W. Bamberg. It contains a parish church chapel, and hospital and has manufactures of woollen and linen cloth, leather and earthenware, dye-works, several mills, and seven annual fairs. Hops are extensively grown in the vicinity Pop. 1163

EBERBURG a vil Bavaria Palatinate, at the junction of the Rhine with the Nahe, 20 m S.W. Mainz. In the valley below is a handsome modern castle, built on a lofty and almost inaccessible height above stand the ruins of a much more interesting castle long occupied by the celebrated knight Truss von Hohenhausen who gave an asylum within its walls to many of the earliest and most distinguished of the reformers among others, Bucer Melancthon, and Georgiom-pedius Ulrich von Hutten not only composed several of his celebrated writings, but had a printing press here, at which some of them were printed. Pop. 458

EBERBRACH, several small places, Germany particularly 1.—A vil Württemberg, circle Danube, r bank, Pils, and on the railway from Stuttgart to Ulm 6 m W. Goppingen. It contains a Protestant parish church, and has an important cattle market. Pop. 1407.—2 [Ober Mittel] a vil Saxony circle Dresden, near Moritzburg. It contains a parish church and has manufactures of wooden pipe bowls. Pop. 650.

EBERBERG a market in Upper Bavaria, on the Elz, 19 m S.E. Munich. It contains a parish church and a castle, once a Jesuit college and has an important sheep and corn market. Pop. 1004.

EBERBILDIG or **EBERBERG**, a market in Upper Austria, r bank, Traun here crossed by a long wooden bridge 15 m N.W. Steyer. It consists almost entirely of a market place and two small streets, and contains a castle and a very ancient church. In 1809 the passage of the bridge was fiercely contested between the French and Austrians, and a battle fought, in which 13 000 men fell.

EBERSDORF AM-DE-DOUAI or **KAMEN LIEBENOW** a vil Lower Austria, near the confluence of the Behrewhut with the Danube 6 m S.E. Vienna. It contains a parish church, to which numerous pilgrimages are made, and large artillery barracks, and has manufactures of calico and iron ware. Pop. 1116.

EBERDORF several places, Germany particularly.—1 A market in principality Rhenish-Lobenstein, in a bleak district, on the Treese. It is the seat of several courts and public office, contains a handsome palace in which the prince resides an educational and several charitable establishments; and has manufactures of cotton cloth embroidery soap, tins and tobacco. Pop. 1818.—2 A vil Saxony circle Zwickau, on the Elz, 4 m W. Chemnitz. It contains a handsome parish church, with beautiful stained glass and fine wood and alabaster carvings and has manufactures of damask, a coal mine, and some fine quarries. Pop. 817.—3 Eberdorf or Eberdorf a vil Prussia, gov. of 210 m S.W. Breslau. It contains a parish church and has two oil and several other mills. Pop. 1005

EBERSTADT a vil Hesse-Darmstadt prov Starkenburg about 8 m N.E. Weisbach. It contains a Protestant parish church with a monument with figures of Frankenstein a townhouse, and two schools and has manufactures of woollen cloth a worsted and numerous other mills. Pop. 1792

EBERSALVA, **EBERSHARTS**, or **EBERSHARTSTADT** a tn Austria, Transylvania, in a beautiful valley on the Kotal 86 m N.E. Hermannstadt. It contains a Protestant Armenian R. Catholic, and Greek church, the ruins of an old castle, in which the princes of Apafi resided, and a monastery of St. Anthony surrounded by two lofty towers, and containing a small Armenian library and some paintings and has a considerable trade carried on chiefly by Armenians, in wool and wine. Pop. 2900

EBERHAUSEN or **MÜLLERHAUSEN** a vil Württemberg, circle Schwarzwald about 4 m N.W. Nagold with considerable manufactures of woollen cloth. Pop. 1688.

EBINGEN a tn Württemberg circle, Danube r bank, Schmeiss, 10 m S.E. E. Ralingen. With an ancient church, a Latin and a superior bourgeois school and manufactures of woollen cloth, hosiery hats, leather and lace dye-works, and a considerable trade in cattle. Pop. 4384

EBLEEN a vil Austria, Styria, circle of and 35 m W.N.W. Judenburg, r bank, Enns. It possesses a copper mine, the ore of which contains some gold, and a considerable percentage of silver for the extraction of which works are erected. Pop. 600

EBOLA, a tn W. Africa. See ABOL.

EBOLI, or **EVOLA** (anc. *Epura*) a tn and com. Naples, prov Principato Citra, at the foot of a hill, 16 m S.E. Salerno. It contains several churches, convents and two hospitals and has an annual fair which lasts 13 days. Pop. 4989

EBONY par Eng Kent 2309 ac. Pop. 174

EBREICHSDORF or **EBERSDORF AM MOOS**, a vil Lower Austria, 6 m N.N.E. Eberhart. It contains an old castle, surrounded with ramparts and ditches and has a cotton printfield, and cotton mill and iron mill. Pop. 765

EBREUIL (anc. *Evroulens*) a tn France, dep. Alier 85 m S.S.W. Moulins, in a fertile district, r bank, Ronce

which here propels several large flour mills. It has a trade in gum; and in the vicinity are several blackslates. Pop. 1834.

EBERNGEN a vil. Baden circle Upper Rhine, bail of, and 4 m. S.W. Freiburg. It contains a parish church. Pop. 1058.

EBERNGEN par. Eng Gloucester 1960 ac. Pop. 594. **EBRO** (Latis *Herz*, French *Évre*) one of the principal rivers of Spain. It rises in prov. Santander in the valley of, and about 19 m. W. by N. Reymon; lat. 43° N.; lon. 4° W. and pursuing a S.E. course, separates Biscay and Navarre from Old Castile, intersects Aragon, and the S.E. extremity of Catalonia, and falls into the Mediterranean by two branches, in lat. 40° 40' N. lon. 0° 50' E. after a total direct course of nearly 300 m. or including windings, of upwards of 480 m. It is navigable for boats up to Tudela, about 180 m. from its embouchure but is much impeded by shoals and rapids, to avoid which, a canal has been constructed, 8 of, and parallel with the river from near Tudela to Saragosa, 40 m. S.E. Saragosa. Its principal affluents are the Oza, Noguera, Jiloca, and Gualandona on the r. and the Aragón, Gallaga, and Segre, on the l. bank. Previous to the second Punic war the Ebro formed the line of demarcation between the dominions of Carthage and those of Rome. It afterwards formed the boundary between the dominions of Charlemagne and his successors, and those of the Moors.

EBUR, or Bos, one of the Phil ppena isls. off N.W. coast of Manilla, with which it forms a good harbour. It is about 14 m. in extent.

ECCLES, two par. Eng. —1 Lancaster 20,240 ac. Pop. 41,497 —2 Norfolk 1835 ac. Pop. 185.

ECCLES, par. Scot. Berwick 68 m. by 2½ m. P. 1892. **ECCLESBACHIAN** a vil. Scotland co. of 16 m. E. Dumfries a station on the Caledonian railway. It is the seat of an important cattle market and a port market but the inhabitants generally are employed in the manufacture of glass. Pop. 1841, 729.

ECCLESFIELD par. Eng. York (W. Riding) 48,440 ac. Pop. 16,870.

ECCLESFALL, a market in and par. England co. Stafford. The parishes is divided into numerous townships, area, 21,460 ac. Pop. 4695. —The town "a. N.W. Stafford, contains some good houses, and a spacious old church in which Queen Margaret obtained sanctuary after the defeat of Lord Audley at Barnet. Market on Friday four annual fairs for horses, cattle, and sheep. Pop. 1847.

ECHALLENS, a vil. and par. Switzerland, can. Val de la Tale, 8 m. N. by W. Lausanne. It contains a parish church, used in common by Protestants and R. Catholics, and an old castle, and has important annual fairs. Pop. 744.

ECHALLAS (Lan) a vil. France dep. Savoy, r. bank. Giron 12 m. S.W. Chambéry. The village beyond the village, is closed up by a limestone cliff 800 ft. high, through which the public road passes, by a tunnel 25 ft. m. wide, at such a height, and nearly 1000 ft. long. Originally travellers, in order to get out of the valley were obliged to climb the precipice by ladders, from which circumstance the village is said to have derived its name. A road was subsequently cut in 1670. The tunnel was commenced by Napoleon, and finished by the King of Sardina in 1817.

ECHMIADZIN par. Armenia.

ECHT par. Scot. Aberdeen 41 sq. m. Pop. 1266.

ECHT or Eort a vil. Holland, prov. Limburg, 9 m. S.W. Roermond, r. bank, Maas; formerly a fortified town, but now a village, consisting of a single paved street. It has a R. Catholic church, a good townhouse and a school and near it once stood the strong castle of the Huis-ter-Echt. Pop. 1500.

ECHTERDINGEN a vil. Württemberg, circle Neckar bail of, and 5 m. S. Stuttgart. It contains a parish church, and has several annual fairs. Pop. 1626.

ECHTERNACH a vil. Holland, duchy Luxemburg, r. bank, Moselle here crossed by a bridge, 20 m. N.E. Luxemburg. It is surrounded by walls with five gates, contains a church, three chapels a townhouse, prison, playground, and hospital, and has manufactures of silkware, woollen cloth,

leather, and wooden tobacco-pipe bowls, sumac-mills, two weekly markets, and six annual fairs. Pop. 3546.

ECHZELL, a vil. Hesse Darmstadt, Oberhessen, r. bank, Horloff, 5 m. S.E. Giessen. It has a church, school-house, a sulphurous spring, and two annual fairs. Pop. 1618.

ECUJA (anc. *Asipha*) a city Spain, Andalusia, prov. of, and 43 m. E.N.E. Sevilla, l. bank, Guadalquivir, crossed here by a handsome stone bridge. It is partly surrounded by a decayed wall and is entered by two gates. The streets in general are narrow crooked, and irregular but have been much improved and repaired since 1843. Most of the houses are of brick, and have shady gardens and verandahs. There are two principal and 13 smaller squares, among which the Plaza Mayor is large, lined with handsome buildings ornamented with porticoes among others the magnificent palace of the Marquis of Palfleur and of Benicenti and the municipal offices, whose lower story contains the prisons. In the centre of this square are delightful public walks, decorated with trees, and a fine stone fountain. A splendid saloon was erected here in 1843, with seats and other conveniences, and forms a favorite resort on summer evenings. The Plaza-de-Armas or market square, built on the site of the Jesuits convent, also in 1843, has gates facing the cardinal points, and a central fountain. Ecuja has six churches built chiefly of brick and profusely ornamented within; several convents, and a great number of establishments for education. In remaining public edifice comprises civil, military and fencing schools, an orphan asylum, barracks, military drill regiment and some public granaries. In the environs are a variety of shady and agreeable public walks and gardens, one in particular along the bank of the river adorned with trees, flowers, statues and fountains; much needed resorts in place of which, from the excessive heat of its climate, is commonly called the Orto de Andalusia. Manufacturers—woolens and linen fabrics hats soap, cardenware, leather wares, and oil. Trade—cattle, grain wool hemp, fruit, and various productions. A well attended annual fair is held in September. Ecuja is of unknown origin. It is the ancient *Asipha* and was called Colonia Julia Firma by the Romans. It is supposed to have been visited by the apostle Paul, and became an Episcopal see very early in the history of Christianity. Many inscriptions and Roman antiquities still exist here, among the latter a temple of the sun, in which is a colossal figure intended to represent that luminary. Pop. 37,723.

ECK (Lanc) a lake, Scotland co. Argyll, 7 m. long, and rather more than half a mile broad, which discharges itself into the Holy Loch an arm of the Firth of Clyde. The scenery on its banks is very picturesque.

ECKARDSBERGA, a co. Prussian Saxony gov. of, and 24 m. S.W. Merseburg, cap. circle of same name at the foot of the Flinsberg. It contains a Protestant church, and the remains of an old castle, and has manufactures of linen and two annual fairs. Pop. 1828. —The circle, area, 166 sq. m., partly mountainous, and partly flat and fertile, is watered by the Unstrut, Wipper and other streams, and produces much corn, hemp, flax, fruit, and wine. Pop. 86,653.

ECKENFÖRDE, a market, Denmark, prov. Schleswig, E. coast, in a fiord of same name 17 m. N.W. Kiel lat. 54° 28' N. lon. 9° 52' E. It has an hospital for old soldiers and their widows, and with it is connected a school for soldiers children. The inhabitants are engaged to some extent in commerce and have a few small vessels but their main occupation is fishing. Pop. 5540.

ECKERSDORF three places, Prussia—1 A vil., gov. Breslau, circle, Glatz. It contains a R. Catholic parish church, and two castles, one old and ruinous the other modern, with a fine park and orchard, and has manufactures of beet-root sugar and several mills. Coal is worked in the vicinity. Pop. 955. —2 A vil., gov. Liegnitz, circle, Sagan. It consists of two distinct portions, contains a R. Catholic parish church, and has tileworks. Pop. 1042. —3 A vil., gov. Breslau, circle Namslau, with a castle and a R. Catholic parish church, tileworks, and several mills. Pop. 1188.

ECKFÖRD par. Scot. Roxburgh 6 m. by 4½ m. P. 1078.

ECKHUNG CHOO a river Tibet supposed to be the main head stream of the Indus. It rises in the Cailas mountains lat. 31° 25' N. lon. 81° 40' E., whence it flows N.E. and assumes the name of the Indus about lon. 79° E. At lon. 80° E. it is joined by the Singhey Chu.

hills sink to an elevation of 2000 or 3000 ft. Among the mountains encountered above Chacabamba (which are) holds the first place. Cotacachi though not the highest, is the most celebrated and conspicuous peak in the most remarkable region of the Andes. It attracts the eye at once, being a perfectly symmetrical truncated cone, presenting a uniform unbroken field of snow of resplendent brightness. It is not to its beauty however that it owes its celebrity but to its terrific eruptions, which, recurring frequently in the course of the last and the beginning of the present century totally changed the face of the E. part of the valley of Hamabato, overturned the towns or buried them under scum and ashes. Riobamba was destroyed, in 1797 by an eruption of Tungurahua, when the river, dammed up by masses of rock falling from the mountain, swept away every vestige of the town. Great numbers of the inhabitants perished on that occasion. Pichincha, which, previous to the Spanish conquest, was an active volcano, rose immediately above the plain of Quito. Its crater is 8 m. in circumference, and may be viewed by a spectator lying flat on the precipitous rocks which form its rim. Thus seen, it appears to be nearly on a level with the plain of Quito, or about 5000 ft. or 14 m. deep, and is quite black within, while its upper edges are covered with snow.

Valleys.—The cultivated land and population of Ecuador lies chiefly in the valley which extends along between the summits of the Cordilleras, and which may be considered as divided by transverse ridges or dykes into the valleys of Quito, Hamabato, and Cuzco. The average height of this tract is about 9000 ft. above the sea, though at its E. extremity at and beyond Loja, it sinks about 2000 ft. Deep cliffs or crevasses sometimes occur, which bring the tropical vegetation into immediate contact with that of the elevated plains. Thus the luxuriant vale or glen of Chota, penetrates the plain of Ibarra, at a depth of nearly 5000 ft. The inhabited districts on the sea-coast at Babacoas, Esmeraldas, and Guayaquil are of small extent, and the slopes of the Andes on both sides are still covered with wild forests, on which the encroachments of human industry are rarely perceptible. These forests, with the snowy heights and the dreary paramos on the borders of the snow occupy nineteen-twentieths of the area of the state.

Rivers.—The rivers are, for the most part, rapid torrents, quite unsuitable for purposes of internal communication. Some of the streams on the coast may perhaps be pined for a few miles by the raucos of the Indians, but commerce derives so aid from their navigation. The Marañon or river of Amazonas indeed becomes navigable for light boats at Chacabamba, on the E. frontier of Ecuador and about 5 m. below Jaen de Bracamoros, but this remote and difficult navigation is never attempted but by adventurous travellers, with whom the hope of mortally outweighs the considerations of safety and convenience. The communication by post with the settlements (chiefly missionary) of the interior on the banks of the Amazonas, is carried on by means of Indians who, with the packets of letters tied in a handkerchief round the head, swim for 300 or 400 m. down the great river aided only by a balon or float of light wood, which supports them in the descent of the rapids. On the E. of the Cordillera, beginning at the W. limit of the state we find at the boundary itself, the river Cayapas or Japara which joins the Amazonas some 1000 m. lower down. The Patateague or Ica, a few miles further S., hastens to unite with the preceding. Then follow the Almaraz, Cota, and Napo which last, receiving the other two and also the Curaray further S. enters the plains as a great river. The Tigra, Pastaza, Macas, Puta, and Zamora, all hurry in hither courses to the Marañon. On the W. or maritime side of the mountains, the chief rivers are the Puta, noted only for the extreme insalubrity of its valley; the Mira, the Esmeraldas, so called from the ancient emerald mines now deserted on its banks and the river of Guayaquil formed by the junction of two small streams, the Cayapas and Duma. The country the mouth of this river being protected towards the sea by the large island of Puna, forms a secure and capacious harbour sometimes called the Gulf of Puna. This island is remarkable as being the landing-place of Pizarro, when in 1530, he led his adventurous band to the conquest of Peru.

Geology.—The Andes of Ecuador may be entitled, collectively a volcanic group, but as yet little has been done towards

the minute examination of their structure. Chincabamba is known to be a mass of trachyte, the ridge of Arapica displays the same formation; lavas, pumice, and shales cover extensive tracts in the neighbourhood of Cotacachi and Babacoas. Yet at the syenitic rocks and porphyries, elsewhere so characteristic of the Andes, occur here also and on the heights of Cuzco the canyons and ruined temples of the Incas are constructed of freestone. It is said that gold was formerly collected in several river beds in the valley of Hamabato and S. towards Zamora, and silver ore are believed to exist in various parts of the Cordillera sulphuret of mercury is found in Cuzco, and platina in Babacoas; but no attention is now given to the mines, excepting those of iron and copper, not perhaps so much owing to their diminished productiveness, as to the greater appreciation now made of that kind of industry. Esmeraldas, however are still gathered, chiefly by Indians, the mines being for the most part, in impenetrable forests, on the side of the river Esmeraldas.

Climate.—From its geographical position, and double range of snow-capped mountains Ecuador may be readily inferred to possess variety of climate so far at least as temperature is concerned. But the practical effects of this variety are less striking and important than might be expected. The inhabitants of the coast of European origin are few in number and the Indian population has selected for its abode, not merely a temperate, but even an almost invariable climate. On the plain of Quito, 8000 ft. above the sea, there reigns a perpetual spring with a temperature so constant that even the snow line on the surrounding mountains seems hardly to vary throughout the year. The absolute height of the line of perpetual congelation is here about 15,700 ft. which is considerably lower than in Bolivia, where owing to the dryness of the climate the fall of snow is scanty. At Quito the rain is abundant falling generally for a few hours in the afternoon and rarely so constant or so heavy as to war seriously the enjoyment derived from the usually bright sky and delicious atmosphere. It is popularly believed that since the earthquake of 1797 the temperature of Quito and the adjoining valley has been lower than before but it does not appear that any change has taken place in the vegetable productions of the country since that event. At Loja, S. in Leya and E. in the plain, there is less rain than at Quito, while on the opposite direction, at Babacoas, it rains nearly every day in the year. The country round Guayaquil is inundated in a great extent in the rainy season (July) after which it remains for some months a pestilential marsh from which issue in credible multitudes of mosquitoes, reptiles, and scorpions in sects. The exemption enjoyed by Quito and the elevated valleys from these plagues, is counterbalanced by their liability to violent earthquakes, of which they are constantly reminded by the ground quaking in deep cracks, by tottering buildings, and other monuments of former ruin. The high lands are often visited too, by gusts of wind of indescribable violence, sometimes accompanied with snow.

Zoology.—All that we know of the zoology of Ecuador is derived from popular report, compared with the scientific information gathered in the other tropical regions of America. The yuma, cougar or American lion (*Panthera concolor*) and the still more formidable jaguar or American tiger together with the black bear, frequent the mountains near Quito, and descend even to the sea-shore. The tapir (of two species) is one of the largest of the wild quadrupeds; four numerous, but generally small. The sloth, bear, of which one species (the vampire) is destructive of cattle, exists ignominiously, much prized as delicate food and monkeys of many species, people the intermountain forests. As to the feathered tribes, the reptiles, and insects, they are far too numerous to find a place in this rapid sketch. On the sea-coast, life is rendered unendurable by the incessant stings of flies and insects; snakes lie coiled under every fallen tree, while the banks of every stream are guarded by alligators. Fish of many kinds are successively abundant along the shore, but, owing to the great heat of the climate, they are of little value to the inhabitants; they feed, however, myriads of birds, of various species, and the condor among the rest, is said to visit the beach twice a day from his home on the highest Andes—on an average 100 m. distant—to feast on the shell-fish washed ashore by the tide.

Vegetation.—The botanical productions of this country are many and intrinsically valuable, but not absolutely peculiar

to it, and they are, consequently excluded in some degree from commerce by the competition of countries such as New Granada and Venezuela which are nearer to the European markets, and have greater facilities of mineral communication. The amaranth, chita or quims (Jussiaea burtii) of Loja, is of the best kind and was formerly in general demand, but the price now paid for it barely defrays the expense of carrying to the coast. The coasts of the same locality and of the coast near Guayaquil, is excellent, and finds a ready sale in Mexico. Rice and pepper also are cultivated in the low country while the plain of Quito produces sugar-cane, cotton, maize, and higher up, wheat and barley. Wheat, which here attains the greatest perfection and is extremely prolific, particularly when grown on irrigated lands, may be regarded as the characteristic product of this country. It is exported chiefly to Guatemala. In the equable climate of Quito, wheat can ripen at any time of the year and the season of sowing it depends in the several localities on slight differences of elevation. An indigenous species of tobacco, very mild, and rendered fragrant by the process of drying is cultivated in the neighbourhood of Loja. The vast forests of large timber and the abundance of tropical fruits on the sides, and chiefly at the W. foot of the Andes, add little to the wealth of the state, and serve at present only to shelter and support a few tribes of wild Indians. Agriculture, considered as a science, is in a low condition in this as in the neighboring states being chiefly in the hands of the aboriginal race, who cling obstinately to their old habits.

Industry and Towns.—The Indians are collectively in destitution, though they never manifest the enervacy of the European race. They weave cotton cloth make quills and carpets which last are highly prized on account of their brilliant and unchangeable colours. Their pottery also merits commendation. The Indians are the miners, the agriculturists, the herdsmen, and, to a great extent, the manufacturers also of the state. On the coast they formerly carried on a profitable pearl fishery but of late years this has been abandoned, chiefly owing, it is said, to the dread of a large cuttle fish, the grasp of which is fatal to the divers. That the natives are not deficient in natural skill and boldness is evident from their haloes or rafts made of light wood, on which they often venture in seas, and make voyages of 900 or 500 m. along the coast. The haloes are sometimes 80 ft long and capable of carrying 25 tons of merchandise. The native ingenuity is still further manifested in the taravilas or rope bridges, of various kinds, thrown over torrents, and across profound chasms.

Chief Towns.—The chief towns (proceeding N to S) are Ibarra, at the foot of Cotacachi. Quito the capital with 70,000 inhabitants. Guanoa, near Chimborazo and within a few miles of the site of the old town. Cuenca, which ranks next to Quito in population, having 30,000 inhabitants. Loja, Jaen de Bracamoros, only a large village and Guayaquil the chief port of the state and nearly equal in size, while superior in wealth, to Cuenca.

Population, &c.—Of the population of Ecuador the aboriginal red race or Peruvians as they may be called, speaking the Quichua or some cognate language, form more than half the rest are negro and mestizo mestizos sambos, and whites, the last a small minority. The negroes are comparatively few and chiefly on the coast. Indeed, the little maritime towns of Esmeraldas, Rio Verde and Atacama, are peopled almost wholly by sambos or that breed of mixed negro and Indian blood, which is said to inherit all the vices of both parent stocks. The entire population of the state probably exceeds 800,000. The form of government is republic with a president as the head, who governs with a chamber of 45 members. The revenue of the state in 1849 was \$729,900 (£158,680). Many of all sects and opinions are now politically equal. Religious liberty freedom of the press, and the principle of election to office are now established by law but the whites or Spanish creoles, though numerically weak, still maintain a leading position as an aristocracy by means of their superior education and intellectual vigour. It is said, however that they are excelled in the moral sense, and in purity of life, by the native races and that when these shall have been raised a little by education, the power of the State must necessarily pass into their hands. In dress and domestic manners, these people differ in nothing from the natives of Peru. The Spaniards are much given to indolent enjoyment, swinging in hammocks, and smoking cigars. A very broad

Vol. L

hat, broad jacket and breeches, coarse buckles on bare legs, and spurs with rows of enormous studs, are the dress of the peasant. The natives generally hide their other tunics beneath an ample mantilla or cloak of cloth or velvet. The Indians also sometimes conceal themselves in capotes, but the French style of dress is now generally adopted by the upper classes. The means of education are said to be very defective, and Spanish being the common language, is of course accompanied by a stagnant literature but, as to the progress of science in Ecuador there is little known in Europe, our chief sources of information respecting that country being anterior in date to the epoch of its independence.

Antiquities.—In the time of the Incas, the mountain region from Quito S. ranked next to the plains round Tlucana, as the seat of Peruvian civilization and the remains of royal roads or causeways, and of Tambos or palaces still attest, at Cayambe and on Assay more than 15,000 ft. above the sea, the perseverance grandeur of design, and careful workmanship of the natives.

History.—Quito formed part of the viceroyalty of Peru till 1564, when it was erected into a separate presidency. In 1577 it was annexed to New Granada, but at the end of five years, returned to its former separate condition, and so continued till the revolution, which broke out in 1809. The first attempts were twice suppressed, and it was not till 1823 that the royalists were finally vanquished in Quito, which then united with New Granada and Venezuela to form the republic of Colombia. Continual troubles and revolts harassed the new republic, till at last in 1831 the three ill settled States agreed in separate and to form as many independent confederated republics, it being equally between them the Colombian debt. On this occasion Quito with its associated provinces, took the name of Ecuador.—(Humboldt's Personal Narrative of Travels to the Equinoctial Regions of the New Continent. Mollin's Travels in the Republics of Colombia. Colombia, being a Geographical, Statistical, Agricultural, Commercial, and Political Account of that country. Don Pellicani Montenegro Colon's Geographical General, &c.)

EDAM, an isl. in coast of Peru, in N. E. Asia, about 2 m. in extent, and very woody. There are here some store-houses for salt but the island is chiefly used as a place of banishment.

EDAM [Latin Edamum] a town in Holland prov. N. Holland 12 m. N. N. E. Amsterdam about a mile from W. shore of the Zuider Zee, with which it is connected by a canal formerly a more important place than at present. It is intersected by a canal and has a haven which however is little frequented, partly from its shallowness. Edam is walled, and was formerly fortified and had seven gates the fortifications are now planted with trees. It has two Calvinistic churches, one of which esteemed the finest in the province, has some good painted glass a Lutheran a Baptist, and a Catholic church a synagogue, and several benevolent institutions a good townhouse, exchange and fish market. It was formerly the principal cheese market in N. Holland and from it the round red cheeses, called in England Dutchman's heads, were carried to other parts. Though for centuries now by Alkmaar and Haarlem, still carries a million lbs. of cheese sold annually in the Edam market. It likewise still possesses three boat-building yards three rope-works and a saw-mill. Pop. within the walls, 2500 with environs, 4000.

EDAY an isl. Scotland Orkney between Stronay and Westray and separated from the former by the fifth called Eday Sound, about 4 m. broad. It is about 7 m. long and 8 broad, and is chiefly covered with heath. It has two excellent harbours, that of Farness on the W. and Calb Sound on the N.

Pop. 147.

EDBURTON par Eng Sussex 2551 ac. Pop. 289. **EDD** a maritime vil. Abyssinia, lat. 13 59' N. lon. 41 40' E. on a sandy plain, and consisting principally of oblong huts, with arched tops, and an outer covering of coarse grass mats it is of no great extent has a few small boats and considerable trade with Mecca, in sassa, saffron, gins and goshierins. Good cattle may be had here, but no water excepting at some distance, and that is brackish.

EDERSHIM a market in Bavaria, Palatinat, on the Queich here crossed by a stone bridge, 6 m. N. Lauter. It

contains two castles, and has an important annual fair. Much wine is produced in the vicinity. Pop. 2600.

EDFEN par Wales, Carnarvon 1860 ac. Pop. 644.
EDFOO or **EDFOR** (anc. *Apollinopolis Magna* Coptic, *Phibos* or *Phibos*) a small town, Upper Egypt, 1 bank Nile, 54 m. S. S. E. Thebes lat. 26° N. lon. 32° 51' E. It is a poor place, composed chiefly of mud huts. Its manufactures are coarse cottons and indifferent pottery. It is only remarkable as being the site of an ancient city and for its remains, especially those of the greater and the smaller temples, the latter apparently as adjacent to the former. The greater temple is the largest in Egypt of those of Karnak and Luxor but can with difficulty be inspected from the mass of rubbish collected in and around it, and from the modern houses built in every part of it, even on the roof of the inner temple. It would seem to have been founded by Ptolemy Philometor and Ather the Egyptian

DOOR OF THE GREAT TEMPLE AT EDFOO.—From Harmer. *Excavations of Egypt*

Aphrodite the God-wat, and their son Hor-ne-ne-to, appear to have been the founders. The two pylons or gate-towers, in appearance like truncated pyramids are 90 ft. high each consisting of 10 stones made and carved outside with magnificent reliefs, chiefly of a religious nature. Between them is the doorway 20 ft. wide also covered with reliefs. Through this doorway the temple-court is gained enclosed by a splendid colonnade of 32 pillars after this follows a hall with 18 pillars, and beyond it, through a beautiful portal the temple-proper is reached but mostly filled up with rubbish. Each pillar differs from the other but all form a complete harmony and give an impression of perfect beauty. The length of the temple is 400 ft. its breadth 150 ft. In form it is exceedingly regular and the effect of the whole is grand and imposing in the extreme. The small temple consists of two chambers, with a peristyle of pillars. Pop. 2000 — (Sir G. Wilkinson's *Modern Egypt* Runniger's *Reise in Egypten*).

EDGAR (Port) on S. E. coast, W. Falkland Island lat. 53° 0' 42" S.; lon. 60° 13' 10" W. (n.) It is a very secure harbour. The entrance is between two bluff heads, about a cable's length apart, and about a cable broad. When once within the heads, the harbour opens out suddenly. The rocks on both sides of the entrance are bold there are from 15 to 17 fathoms in mid-channel.

EDGWARE, a par and small town, England, in Middlesex, which contains the capital. The chief towns are Edinborough capital of Scotland; Leith, Dalkeith, Musselburgh and Portobello. The county is divided into 45 parishes, and returns one member to the House of Commons. Registered electors (1850) 3017 Pop. 259 488.

EDINBURGH (DUNEDIN) [DUNEDIN] or MIDLOTHIAN a maritime co. Scotland bounded N by the Firth of Forth, along which it extends from 11 to 12 m. N.W. by co. Linlithgow N.E. Haddington, E. Berwick, and S.W. by co. Perth of Lanark, Peebles, Selkirk and Roxburgh its S. outline is extremely irregular being deeply indented by the co. Peebles. Its extreme length on this side, E. to W., is 35 m. diminishing gradually to the shores of the Forth to 11 or 12 m. as already stated. Its breadth varies from 13 m. in the centre to about 16 m. at either side. Area, 856 sq. m. or 259 120 ac. of which it is calculated, that 140 000 are under cultivation. The S.E. and S.W. parts of the county are diversified with hills of which the two principal ranges are the Pentlands and Moorfoot, the former stretching S.W. to N.E. into the centre of the county from Peebles, to within 4 m. of Edinburgh the latter occupying an area of nearly 50 sq. m. on its S.E. corner. The highest summit of the Pentlands is between 1500 and 1800 ft. the highest of the Moorfoot hills between 1800 and 1900 ft. The former have generally a more bleak and barren aspect than the latter which are interspersed with fertile dales and tracts of arable land, while a large part of their acclivities also is under cultivation producing excellent crops. The views from some of the higher elevations of the Pentlands looking towards the N. and N.W. are of the most magnificent description. There are, besides these systems of high lands, several isolated hills in different parts of the county some of them covered with wood, and extremely beautiful. The county is watered by several rivers but none of any extent. The principal are the N. and S. E. Esk and the Water of Leith. The banks of the two former are remarkable for their picturesque beauty. Edinborough rises on a series of strata, connected with the coal formation. In the hills S.E. districts the rocks are of greywacke, and clay-slate, quartz, spar and steatite being found only in small quantities. The Moorfoot hills are of greywacke, the rock of the Pentlands chiefly porphyry. Whin stone is sometimes met with and granite syenite, and other primitive rocks are occasionally found. Coal, limestone, and sandstone are extremely wrought throughout the whole district. In the hilly parts, particularly in the S.E. the climate is cold, but healthy in all other places it is the same with that of the adjoining coast, subject to dry and cold E. winds for three months in the year namely March April and May and to much rain in August and September during which W. and S.W. winds prevail. The soil is generally varied but consists chiefly of a clayey loam, alternated with sand and gravel. It is not generally remarkable for natural fertility but the richest portions are the low lands towards the Forth, where the most luxuriant crops are obtained and the valley watered by the N. and S. E. Esk, where vegetation is rapid, early and abundant. The chief crops are wheat barley oats, beans, pease, potatoes and turnips. The agricultural farms are of considerable size, varying from 100 to 400 ac. the farm buildings substantial and well arranged, generally of stone the implements of husbandry of the best and most approved description and the lands well drained and enclosed. A large portion of the county however is under pasturage, chiefly the S. and hilly parts. The sheep and cattle are of the best breeds the former mostly Cheviots, the latter Highland and the horses for husbandry chiefly of the Lanarkshire, with a few of the Clydesdale breed the milk-cows are usually of the Ayrshire and Friesian breeds. Considerable attention is paid to the management of the dairy farms of which the principal produce is milk and butter for the supply of Edinburgh and other towns. The manufactures of the county are comparatively limited, but include ale, long celebrated whisky to a considerable extent gunpowder and paper especially along the banks of the N. Esk which may be considered the principal seat in Scotland for the paper manufacture. There are also bleachers,

and corn and other mills, on the Esk and the Water of Leith and manufactures of various kinds are carried on in Edinborough and Leith. The county communicates by the Union Canal with the Forth and Clyde Canal; is intersected by numerous excellent roads and by several railways, all of which centre at the capital. The chief towns are Edinborough capital of Scotland; Leith, Dalkeith, Musselburgh and Portobello. The county is divided into 45 parishes, and returns one member to the House of Commons. Registered electors (1850) 3017 Pop. 259 488.

EDINBURGH (Latin *Edinburgum*, or *Edna* Celtic, *Dunedin* French, *Edinburgh* Italian *Edinburgo*) the metropolis of Scotland a royal and peer. bur. cap. above on about 1½ m. from S. shore Firth of Forth 43 m. E. by Glasgow 53 m. N.W. London lat. (observatory) 55° 57' 24" N. lon. 8° 11' W. (a). A city not more remarkable for the extent and beauty of the views it commands at numerous different points, than for its picturesque air, the striking and romantic appearance of the city itself and the general excellence and elegance of its buildings. It stands on three elevated ridges, lying E. to W. parallel to each other. The central ridge is terminated at its W. end by the lofty castle rock while an imposing appearance is imparted to the E. end of the city by the Laithe Hill, Salisbury Crags, and Arthur's Seat.

General Description.—Edinburgh is divided into the Old and the New Towns. The former occupies the central and highest ridge the loftiness of the houses here, rising in huge dark, irregular masses, along the edges, and on the steep slopes of its acclivities, adding greatly to the picturesque appearance of the city but, like most old towns, exceedingly irregular in the arrangement of its streets. The New Town occupies a ridge of much broader crest, and less abrupt ascent, to the N. of the Old Town from which it is separated by a deep hollow formerly filled with water and called the N. Loch crossed by two stone bridges and an earthen mound. The houses here, all built of a beautiful white freestone obtained from quarries in the vicinity are comparatively modern and remarkably handsome while many of the squares, crescents, &c. are magnificent. The streets, with a few exceptions, are spacious and regular and the high and excellent order prevailing in this, a striking contrast to the former condition of the streets of the Old Town. Extensive and well laid out pleasure-grounds, with the command of beautiful views from various points complete the attractions of this elegant quarter of the city. On the S. side of the Old Town and separated from it also by a hollow occupied by an ancient street called the Cowgate, and crossed by two bridges, stands the remaining portion of the city. With exception of a few unimportant streets, this is also comparatively a new town but without any of the pretensions or magnificence of the other. It contains many good houses and one or two good old fashioned squares but possesses no other remarkable feature of any kind and has no distinctive appellation. About one-quarter of a mile further E. is a handsome suburb called Newington. The entire city is about 14 m. in length and the same in breadth with a circumference of about 54 m. The principal street in the Old Town is that which occupies the crest of the ridge on which the latter is built, and which bears at different points the names of Canongate, Wetherbow High Street, Lawn Market, and Castle Hill. This ancient and very remarkable street—for notwithstanding its various names, it is but one street—being continuous and uninterrupted from one end to the other—is upwards of 1 m. in length, rising gradually with a regular and steep incline from a small plain at the E. end of the town, on which stands the palace of Holyrood and terminating in the huge rock on which the castle is built, 443 ft. above sea level. The appearance of this street, the scene of many interesting historical incidents, is rendered exceedingly imposing by the loftiness and unique aspect of the houses with which it is lined, many of them ranging from five to seven stories in front, and several more behind. The streets in the New Town most worthy of notice are Princess Street, George Street and Queen Street, all lying parallel to each other E. and W. Princess Street runs along the edge of the hollow which separates the New Town from the Old. Being built only on the N. side, a magnificent view of the Old Town, towering high and sharply on its rocky ridge, of the lofty castle, and the intervening valley is ob-

tailed, rendering it one of the most delightful promenades of which any city can boast. At the E. extremity of this street is the Calton Hall, one of the most striking features of this singular city being a rocky eminence, studded with monuments, with a broad verdant summit, commanding a view of the Firth of Forth with its shipping and surrounding

shores, of surpassing beauty. The principal street on the N. side of the town is Nicolson Street, which with its extensions, B. Bridge Street, and Clerk Street, intersects this part of the city N. to S. On this side, also, are the Meadows, a large level park, surrounded with trees and walks for the recreation of the inhabitants, upwards of 1½ m. in circum-

ference adjoining the Meadows, are Bruntsfield Links an extensive common of uneven surface, much frequented by the golf players of Edinburgh. From the higher parts of the Links, which overlook the beautifully situated village of Morningside a view is obtained of the Pentlands Hills, distant N.W. between 4 and 5 m. and of the intervening valley or strath, with the romantic hills of Braid, rendered classical by Sir Walter Scott. Beyond the E. extremity of the town a huge belt of precipitous rock, called Salisbury Crags, rises to the height of many hundred feet from the deep valley below. Immediately behind, a conical hill, with a narrow rocky summit, called Arthur's Seat, towers above the Crags, attaining an elevation of 790 ft. A broad pathway winds along the side of the Crags, and a carriage drive leads round the entire hill from many points of both of which, prospects of unrivalled beauty and splendour are opened up.

Public Buildings, Monuments, Statues, &c.—In the Old Town, the most remarkable, and next to Holyrood, the most interesting public building is the castle, the position of which has been already described. It is composed chiefly of a cluster of irregular buildings, built with unvarnished walls, excepting in the E. side, where a lofty antique looking edifice rises above them from the face of the rock, which is embellished in grandeur and sublimity of aspect, overlooking the Grass Market. (See Woodcut.) The castle contains accommodation for 1000

soldiers, and the armory space for 30 000 stand of arms. On a small flagged area, occupying the highest summit of the castle, and called the bomb battery stands conspicuously a huge pile of ancient ordnance called *Mons Meg* built of malleable iron, square, cast-fashion and believed to have been forged at Moss in Fife about A.D. 1488. In an apartment in the castle is kept the ancient regalia of Scotland, found in the year 1818 in an old oak chest, where they had lain undiscovered for upwards of a century. They consist of a crown, sceptre, and sword of state. At the E. end of the lofty range of ancient buildings on the S.E. side of the castle, a small room is pointed out in which Queen Mary gave birth to James VI., on June 19 1566. This castle was anciently called *Castrum Pictarum*, the Camp of the Picts, on account, as tradition has it, of its having been the place of residence of the daughters of the Pictish Kings prior to their marriage. The date of its first erection however is unknown. On the esplanade in front of the castle, stands a bronze statue of the late Duke of York, and a little lower down, on the face of the sandstone the house in which Ramsay the poet died.

The Palace of Holyrood or Holyrood House, as it is more generally called, stands, as already mentioned, at the lower or E. extremity of the street leading to the castle. It is of a quadrangular form, with a central court 24 ft. square. The

front is flanked by two castellated circular towers at either end; and between them, in the centre, is the entrance gate. No part of the present palace is older than the time of James

VI. It is used also as a place of worship. Adjoining St. Giles church is an open area called the Parliament Square, the centre of which is an ancient statue of Charles II., erected in 1635. At the S.W. corner of the square is the entrance to the Parliament House, the various higher courts of law and the Advocates Library.

The Parliament House, now known by the name of the Outer House, is the place in which the Scottish Parliament met before the Union. It is a magnificent hall, 122 ft. long by 49 ft. broad, with a lofty open timber roof and contains marble statues of Henry Dundas first Lord Melville and Lord President Blair. The higher law courts enter from this hall which, in session time, presents a very animated appearance, being thronged with members of the bar in their gowns and wigs. Adjoining the Parliament House, with which it has a communication is the Advocates Library containing the largest and most valuable collection of books in Scotland the printed works amounting to 160,000 volumes and the MSS. to 1700. In an adjoining building is the Signet Library, belonging to the writers to Her Majesty's Signet, containing about 50,000 volumes. The only other buildings of any note in the Old Town are the Tron Church, a very ordinary looking structure, founded in 1657 the County Hall a heavy mass of building, containing the sheriff courts and various offices for the management of county business the Royal Exchange, founded in 1763 the New Corn Exchange in the Grass Market; the Bank of Scotland and the New or Free Church College at the head of the Edinburgh Mound, an elegant structure in the Tudor style. It is a Theological Seminary having professors in the theological moral and natural sciences and attached to it an excellent library and a museum.

The principal public buildings on the S. side of the town are the University situated in Nicholson Street, a large and somewhat heavy looking quadrangular edifice, with a spacious court in the centre, founded in 1583 the University itself having been founded in 1582. The E. front is adorned with a portico, supported by Doric columns, 36 ft. in height. There are 23 professors in four faculties—divinity law medicine and the arts. The students are not resident within the college, wear no peculiar dress, and are under no general system of discipline.

EDINBURGH CASTLE from the Green-archway.
Drawn from Murray and on Wood, by W. L. Litch.

V (1528) while the greater portion of it dates only from the time of Charles II. In the N.W. angle of the building are the apartments which were occupied by Queen Mary nearly in the same state in which they were left by that unfortunate princess. The palace was twice partially destroyed by fire, first by the English during the minority of Queen Mary and afterwards by the soldiers of Cromwell. On the area in front stands a statue of Queen Victoria, in freestone, by R. Watson.

Adjoining the palace on the N. side are the ruins of the chapel belonging to the abbey of Holyrood, founded in 1128 by David I. the only portion of that establishment now remaining. In this chapel Queen Mary was married to Lord Darnley July 29 1565 and in its S.E. corner are deposited the remains of David II., James II., James V., and Magdalen his Queen, Henry Lord Darnley and other illustrious and noble personages. It is still used as a place of sepulchre by families of distinction. A privilege of sanctuary for insolvent debtors is attached to this abbey which extends over Arthur's Seat, Salisbury Crags and for a considerable distance E., including altogether a space of about 15 m. circumference.

The Cathedral of St. Giles, the tutelary saint of the city situated in the High Street, is a large ancient edifice in later gothic style, of no great beauty but having on the whole rather an imposing appearance. It was in this church that the Solemn League and Covenant was subscribed in 1646 by the committee of estates of Parliament, the commissioners of the church, and the English commissioners. It contains three separate places of worship; and the monument of the Regent Marry assassinated at Lethingow in 1669 whose remains, along with those of the Marquis of Montrose, are interred within the church. The entire building is 306 ft. in length by 110 in breadth. On a commanding situation at the top of the High Street, stands Victoria or Assembly Hall a magnificent new structure in the decorated Gothic style. Its elegant spire rises to the height of 241 ft. and is seen from all points, a conspicuous and beautiful object. Here the General Assembly of the Established church meet annually.

THE VICTORIA HALL, AND PART OF HIGH STREET EDINBURGH
Drawn from Murray and on Wood, by W. L. Litch.

edipina their average annual number is about 1200. The library which occupies the S. side of the building is a magni-

scout room, measuring 198 ft. in length by 60 in breadth, with an arched roof from 50 to 63 ft. high. It contains about 100,000 volumes. The museum contains a large collection of specimens in the various departments of natural history (the ornithological and anatomical departments being very rich and very complete). Near the college stands the infirmary, a large and commodious edifice, built in 1734, containing 400 beds; a surgical hospital, fever hospital, and lock hospital occupying separate buildings adjacent with it. A little S. of the University is the Royal College of Surgeons, an elegant modern building of the Ionic order with a beautifully proportioned portico, and pediment supported by six fluted Ionic columns resting on a screen. It contains a valuable museum. Heriot and other hospitals on this side of the town are noticed under the head *Hospitals and Charitable Institutions*.

In the New Town at the foot of the Earthen Mound and fronting Princess Street, stands the Royal Institution, one of the finest buildings in the metropolis, though much of its effect is lost from its low situation. It is a Grecian edifice, with an exterior surmount of Doric columns, and a flat octastyle portico in front, three columns in depth supporting a pediment. The building is surrounded by a colonnade of Queen Victoria in stone. The Institution was erected for the accommodation of the Royal Society of Edinburgh, and for the board of trustees, instituted in 172 for encouraging trade and manufactures in Scotland, and for the Royal Institution for encouraging the fine arts. The Dean bridge, a noble structure thrown across a deep ravine, at the bottom of which flows the Water of Leith, connects the ridge on which the New Town stands with the country to the N. of it. The height of the bridge to the top of the parapet is 109 ft. above the bed of the river. There are four arches each 96 ft. span. The Physicians hall in Queen Street, lately erected, is a handsome edifice, embellished by colossal figures in front. The Assembly rooms and Music hall the Edinburgh and Glasgow and the Commercial banks the British Loan Company's bank the Royal bank and other buildings are all elegant, and some of them ornate structures. The Assembly rooms, or General Assembly house of Scotland, at the E. end of Princess Street, erected for the preservation of the public records of Scotland, and as a general repository for copies of title deeds and other legal documents affecting property forms a square of 200 ft. surmounted by a dome 50 ft. diameter and contains upwards of 100 apart ments for the transaction of public business. On the elevated platform in front is erected a bronze equestrian statue of the Duke of Wellington by John Steele. The theatre-royal general post-office, and stamp-office, are substantial edifices. The jail and brewhouse, a cluster of unattractive buildings, surrounded by a high wall on a rocky ledge of the Calton Hill was founded in 1815 and speeded for the reception of prisoners in 1817 when the old jail, poetically called the Heart of Mid-Lothian was taken down, and its inmates removed to the new prison now the only one in Edinburgh. A little E. of the prison stands the high school, a splendid doric edifice extending about 270 ft. in length and on the Calton Hill, above it, stand the royal astronomical observatory the monuments to Admiral Nelson, James Stewart, the metaphysician and *Physicist*, the mathematician and the national monument, intended to be a literal reproduction of the Parthenon in commemoration those who fell at Waterloo, and in the different engagements by sea and land during the last war with France, but want of funds arrested its progress when only 15 columns for the W. end of the edifice had been erected so that it now appears like a ruined temple, and imparts to the Calton Hill an aspect somewhat resembling the Acropolis of Athens. There are a number of other handsome edifices in the New Town which do not come under the designation of public buildings, such as the new club in Princess Street, lately situated opposite the Castle, &c.

The most remarkable, and by far the most elegant of the public monuments of Edinburgh, is that to Sir Walter Scott, on the S. side of Princess Street. Its form is that of an elaborate Gothic cross 200 ft. high, being a composition from Melrose Abbey designed by George M. Kemp, a self-taught genius. A marble sitting figure, by Steele, of the novelist and poet, occupies the pinnacle of the monument, and over it the poetical inscription in the canopy. The other noteworthy monuments in the city are those to the poet Burns; Hume, the historian; and Lord Melville with bronze statues of the Earl of

Hopetoun, George IV., and William Pitt, the last two by Chantrey.

Hospitals and other Benevolent and Charitable Institutions.—Few cities of equal extent are possessed of more numerous and more magnificent hospitals and charitable institutions; indeed so multiplied have they become that it is matter of doubt whether they are really to be looked upon as an advantage to the community. Many of the edifices built by these institutions are among the finest in the city and resemble rather ducal palaces than receptacles for orphans or the children of indigent parents. Among these, Heriot's hospital on the N. side of the city founded by George Heriot, goldsmith and jeweller to James VI., is a fine old Elizabethan structure, designed by Inglo Jones, and one of his finest works. The object of the institution is the maintenance and education of poor boys, the sons of freemen of the town of Edinburgh; and the surplus funds are employed in establishing and maintaining free schools in various parts of the city. Another large and exceedingly elegant structure, of quite recent erection, is Donaldson's hospital in the W. part of the city. It is a Tudor building, and intended to maintain 200 poor boys and girls. Of the numerous other hospitals and benevolent institutions, many of which have handsome and extensive buildings, the following may be specified.—George Watson's hospital John Watson's hospital (St. George's) hospital the Orphan hospital &c. Besides these more important institutions there are the lying-in hospital, the asylum for the blind the deaf and dumb institution, the city workhouse, the Glasgow charity workhouse and the West Kirk workhouse at the W. end of the city the houses of refuge, the houses of industry and the night asylum for the houseless. There are also many public dispensaries, where medicine and medical attendance are gratuitously afforded to the poor.

Churches and Places of Worship, &c.—Besides St. Giles the Tron and Victoria Halls already adverted to, Edinburgh possesses 23 churches in connection with the Established church, of which St. George's, St. Stephen's, St. Mary's, and St. Andrew's may be specified as elegant buildings. There are 25 Free churches, the finest, in an architectural point of view being Free St. George's, and the Free High church, the latter forming part of the New College buildings, but none of them are very fine, though some are neat. There are 15 U. Presbyterian and eight Episcopalian of the latter St. John's, in Prince Street, and St. George's, in York Place, are very elegant Gothic structures. The other places of worship include six Baptist, three Methodist three Congregationalist, two Original Senders one Reformed Presbyterian two R. Catholics, with places of meeting for Quakers, Friends, Jews, &c. The Greyfriars churchyard, attached to the old and now Greyfriars church, burned down in 1845 is noteworthy from the numerous remarkable personages interred in it among whom are George Buchanan, the historian; Alexander Henderson moderator of the Glasgow Assembly of 1688 Sir George M. Keene well known as Baily M. Keene, a celebrated lawyer in the time of Charles II. Dr. Fitchie Maclellan, the mathematician Allan Ramsay the poet; Robert son, the historian, &c. In this churchyard are also interred many who suffered martyrdom during the times of the reformation and here, on the top of the grave stones, the National Covenant was signed in 1638.

Courts of Law, &c.—Edinburgh is the seat of the supreme courts of Scotland. The principal of these is the Court of Session, composed of 18 judges, each of whom is distinguished by the title of Lord. It consists of an Inner and an Outer House. The former sits in two divisions, each composed of four judges—a first, in which the Lord Justice General, who is head of the whole court, presides and a second, in which the Lord Justice Clerk presides. The Outer House is composed of the remaining five judges, who are called Lords Ordinary and are called to the Inner House, when vacancies occur according to the seniority of their appointment. Each lord ordinary has a separate court; and any party complaining of the judgment of any inferior court, or originating an action in the Court of Session, must in the first instance bring it before one or other of the lords ordinary. He has the privilege, however of not only naming his judge, but also the particular division of the Inner House before which the cause is to be carried in the event of review. The judgment of either division is final in Scotland but may be appealed to

the House of Lords. When the judges of either division are equally divided in opinion, the other division is called in to decide by a majority of his division; and sometimes, in very important questions, what is called a hearing in presence, takes place before the whole judges, including ordinaries. They also consider the said court. The court has two terms in the year—the winter session, commencing on 12th November and terminating on 11th March, the summer session, beginning on 30th May and ending on 19th July. The court of justiciary or supreme criminal court instituted in 1673 is composed of the Lord Justice General, the Lord Justice Clerk, and five Lords commissioners. The inferior courts are the sheriff, the justice of peace, and small debt courts. The college of Justice, established by James V in 1563 consists of all members connected with the supreme courts, including the judges, advocates, writers to the signet, advocates' first clerks, clerks to the judges, extractors, &c. The members enjoy several privileges, and are exempt from some of the city taxes. The twenty of advocates, presided over by a dean is an association of barristers, who have the privilege of pleading cases before the Court of Session, or any other court of record. The writers to the signet, an incorporated body conduct cases before the supreme courts, and have the exclusive privilege of subscribing the writs that pass the royal signet in Scotland. Solicitors also practise before the supreme courts, but with inferior privileges to those of the writers to the signet.

Education, Literature, Science, &c.—The more prominent educational institutions of Edinburgh exclusive of the colleges and high school, which have been elsewhere spoken of, are the Edinburgh academy and the Scottish naval and military academy, established for the purpose of affording education to pupils destined to serve in the army or navy or East India Company's service, and the Royal Scottish academy of painting, sculpture and architecture. There are also several public seminaries, and a number of schools for the education of the poorer classes, two normal schools, Heriot's schools, seven in number elsewhere spoken of, the school of arts established in 1821 for the instruction of mechanics and tradesmen in the elements of scientific knowledge. The societies and institutions for the promotion of science and other branches of knowledge, are exceedingly numerous. The principal are the royal college of physicians incorporated in 1661, the royal college of surgeons, the royal society the Highland society instituted in 1785, for the promotion of agricultural improvements in Scotland, the astronomical society the society of antiquaries, established by royal charter in 1780, the medico-chirurgical society, the royal medical society the Veterinary, the botanical, and the speculative society. There are five public libraries in the city besides the advocates, writers to the signet, and college libraries and three public gardens connected with scientific objects—the zoological gardens, the Caltonian horticultural society's garden, and the royal botanic garden, all situated in the N.E. environs of the city.

Manufactures and Trade.—The manufactures of Edinburgh are neither extensive nor important. Ale brewing, for which it has been famous for upwards of 900 years, is the principal. There were lately 38 breweries in the city, whose annual consumption of malt amounted altogether to 890,000 bushels. Glass-making, coach-building, type and iron founding, soap and candle making, are carried on to a considerable extent and also the making of various kinds of machinery generally of the smaller class. Glass-painting and staining are also prosecuted to some extent, and with much success. Edinburgh is the head-quarters of the book-trade in Scotland, and as a literary mart it is the second town in the United Kingdom, being in this respect excelled only by London. The manufacture of linen was at one time an important branch of industry here, but is now nearly extinct.

Municipal Government, &c.—The affairs of the city are conducted by a local provost, magistrates, and council, elected by the citizens, according to the burgh reform Act. The council consists of 85 members 81 of whom are returned by the five wards into which the city is divided the dean of guild, elected by the guildry and the trades convenor elected by the incorporated trades. The lord provost is high sheriff and lord lieutenant within the city and liberties. The streets are lighted with gas. The supply of water which is frequently found inadequate especially in dry seasons, is obtained

from a large reservoir formed in a gorge of the Pentlands hills, at the distance of between 6 and 7 m. A further supply is about to be brought from the Bewshaw springs, about 8 m. S.W. from the city.

Edinburgh may be called an aristocratic city its inhabitants being occupied, to a great extent, of persons of independent property amounts, &c. including a larger proportion of the more liberally educated classes than any other town in the United Kingdom. This fact, taken in connection with the advantages it presents, as respects education, the beautiful environs of the city and abundance and cheapness of provisions of all kinds renders Edinburgh a most desirable place of residence. It has now also become the centre point of several railways—the Edinburgh and Glasgow North British and Granton lines have their termini in the low ground between the Old and New Town W. of the North Bridge, the Caledonian has its terminus in the W. and the Dalkeith mineral line in the E. part of the city and the Union Canal furnishes an additional means of transit for goods to the W. of Scotland. Leith (which see) is the port of Edinburgh and may almost be said to form a suburb of it.

History and Name.—The name Edinburgh [Edin'a castle or fort] is supposed to be derived from Edwin, King of Northumbria, a Saxon prince who, in the seventh century possessed the S. part of Scotland, and who is present said to have built a stronghold on the site of the present castle. The Gaelic name *Dun Eidein* or *Dunedin*, is merely a translation of the Saxon name while its poetical name, *Edina* was introduced by George Buchanan. Whatever antiquity may be claimed for the city the period when it first attained the dignity of a capital does not appear to be very remote, not more remote, according to Chalmers, than the time of James V. The principal town of Scotland previous to that period having been Scone, where the Scottish kings were crowned. It was, however a place of considerable importance long prior to this, having been recognized as a burgh by David I. in 1128. In 1215 Alexander II. held here his first parliament and 20 years later a provincial synod was held in the city by the Pope's legate. It suffered from the incursions of the English during the wars of independence, and was all burned down, excepting the castle, by Edward II. in 1385. The town was rebuilt under shelter of the castle and for a long period was confined to the neutral ridge. In the 15th and 16th centuries, the city was walled and the S. loch or morass being drained became the seat of the Cowgate and Grass Market, in which the weather class of the community took up their residence, and for many years they continued to be the most fashionable localities in the city. In 1513 Edinburgh was visited by the plague and in 1539 the college of Justice was established. It was taken and burnt in 1554 by an English army under the earl of Hertford, but soon recovered from the consequences of that disaster. On Dec. 3, 1657 the first Covenant was signed in the city and during the remainder of the 16th century it was the scene of numerous interesting events including many in the history of Queen Mary and in the earlier history of the Reformation more especially in connection with John Knox, whose house (from a window of which he frequently preached) is still standing, near the top of the Cowgate. On Feb. 28, 1835, the National Covenant was signed in the Greyfriars church yard. After the overthrow of Charles I., the Scots having taken up arms in favour of his son, Cromwell invaded their country and took Edinburgh castle, and it remained in the possession of the English till the Restoration, which was followed by the infamous religious persecution in Scotland carried on for a long period under the auspices of the king's brother during which the Grass Market, the common place of assembly, where so many of the Presbyterian Protestants suffered martyrdom, became the most notable place in the city. During the civil war in 1715, an unsuccessful attempt was made by the Jacobites to surprise the castle. In 1786 took place the famous Porteous Mob when John Porteous, captain of the city guards, was forcibly taken out of prison by the populace, carried to the Grass Market, and there was hanged upon a dyer's pole. He had been tried and condemned to death for firing and ordering the guard to fire upon the multitude assembled to witness the execution of a smuggler when six people were killed and eleven severely wounded, but Queen Caroline (then regent) granted him a reprieve, which, as soon

as it became publicly known, produced the result above narrated. In 1745 the city was taken possession of by the rebels under Prince Charles Edward Stuart. The only other event in the history of Edinburgh sufficiently momentous to be noted here took place May 18, 1848 when the Assembly of the Established church of Scotland, then holding its annual meeting in St. Andrew's church, was severed in two by the secession of 203 of its members, who, retiring to Tunbridge hall, Camogie, formed themselves, with the addition of other seceding ministers and elders, into the first General Assembly of the Free Church of Scotland. Edinburgh returns two members to Parliament. Registered electors (1850) 5,600. Pop. (1851) exclusive of the parishes of N and S. Leith 136,004 of part for (1841), 136,182 (1851) 160,502. (Annot's History of Edinburgh: Hetherington's History of the Church of Scotland Buchanan's Ten Years' Conflict Black's Edinburgh Guide: Private information &c.)

EE, a vil, and free town, Hindostan, lat. 25 45' N lon. 85 45' E. Hindostan, 18 m. N.E. Laccarawan, with a Calcutta class school, and a corn-mill. Pop. (agricultural), 960 — 2, Two streams, prov Grooming — 3, Two streams, prov Friedland, the smaller of which falls into the Zinder Zee and the larger, forming several canals, more especially that between Laccarawan and Doekum & wa N.E. and falls into the Laccarawan under the name of Doekumar-Be.

EECHAU, a to, Hindostan, prov Behar dwt. Ram pter 103 m. S.E. Patna lat 24 10' N lon. 85 46' E. It is the residence of the rajah of Eechau.

EECKEREN, a town, and vil Belgium prov. of and 4 m. N Antwerp. It is the seat of some lace-weaving and other manufactures, including chamois bear and spirits but the people are chiefly agricultural. Pop 4540.

EEKLOO, a to, Belgium, prov E. Flanders, 11 m. N.W. Ghent, near the Lieve a canalized stream. It is a clean place, well built, and the seat of manufactures of woollens, cottons, hats, tobacco, chocolate, soap, starch, &c. and has breweries, distilleries, vinegar works with refineries dyeworks, and oil mills and a busy trade in grain, linen, cattle, and timber. Pop. 5029.

EEEDILABAD, a Hindostan, a small well built in Hindostan, prov Canindah, 1 bank, Poorna lat. 21 4' N lon 75 8' E; contains two see fatulated street only

EEFLA, or Etsa. See 1st

EELDE, a vil Holland, prov Drenthe 10 m. N Assen and connected with Groningen by a canal along which it sends grain, fruit, &c. to the weekly market of that town. It is a pleasant village, is surrounded by a number of country seats, and has a Calvinistic church, and a school. Pop. 706

EEL LA, a name applied to the wandering tribes of Persia. The men have well-made, powerful frames wearing black ryes, noses generally inclined to aquiline, frequently overhanging thick moustaches, which united with black bushy beards almost entirely conceal their dark brown skins. Their appearance is altogether strongly characteristic of health, hardihood, and independence. Their dress consists of a coarse blue shirt and trousers, with heavy cloaks of felt, thrown over the shoulders, the sleeves being left unoccupied a central cap of white or gray felt with flaps for the ears, covers their heads they usually carry one, and sometimes two guns, slung at the back, and a large knife or dagger at the girdle, a sword or a clubbed stick completes their equipment. The women, when young are often handsome, their complexion is of a delicate nut brown hue, eyes dark and expressive nose well formed the mouth small, and adorned with beautiful teeth expression of the countenance full of good humour and the contour of their forms indicative of a beautiful and slender shape. All these attributes, how ever, soon disappear as they advance in life their skins become parched and withered, and their complexion changes to a coarse sunburnt red. When aged they become the most ill favoured and repulsive looking hags it is possible to imagine. — (Fraser's Khoreasm.)

EPM, a river Holland. It originates in numerous streamlets which rise in prov Gelderland flow W by N into prov Utrecht and make near Amersfoort, whence the stream flows N.W. to its outlet in the Zuider Zee. It is navigable to Amersfoort.

EEENET, two adjoining vils Holland, prov. of, and about 18 m. N. by E. Utrecht. They are called, respectively Zonnen-Binnendijk and Zonnen-Buitendijk. They have two Calvinistic churches and a R. Catholic church, and two schools. Pop. (agricultural) 1400

EEERSEL, or Eenset, a vil. Holland, prov N. Brabant, 8 m. S.W. Eindhoven, an old and formerly a well-built, beautiful, and much larger place than now but reduced by repeated earthquakes. It has a church, townhouse, and a school and eight annual cattle fairs. Pop. 270

EEBAUGHUR, a strong fort, Hindostan prov Malwa, 39 m. N.W. Chandore lat. 24 50' N lon. 77 55' E. It

has a large patch or suburb that extends round the N and W sides of the fort.

ESSAH SOMALI a numerous and powerful tribe, E. Africa, who inhabit a territory on the coast of the sea of Bah-Mandab, between lat. 11 and 11 30' N. They had a wandering life, moving from place to place, wherever they can find pasturage for their flocks and herds. Few of them wear any clothing excepting a loathsome apron. They are armed with spear, shield, bow, and arrows and are said to be very expert in the use of the latter. The arrows are poisoned and with them they kill the ostrich, zebra, and all kinds of animals. They are very partial to red hair dyeing it of that colour and are very particular in dressing it. Those who are not favoured by nature with good heads of hair make wigs of sheep-skin, dyeing them their favourite colour. They are held in great dread by their neighbours, the Danakils, who describe them as treacherous thieves, and murderers. Lieutenant Barker formed a different opinion of them, saying that, as far as his experience went, he found them a timid and inoffensive race.

EFFE, an Isl. Indian Archipelago, near E. coast Mysols lat. 2° 12' S. lon. 100° E. about 5 or 6 m. in length. Herds of paradise migrants gather during certain seasons, and are caught by the natives, who dry them in the sun and send them to Europe. There are two small villages on the island.

EFFENCHTYD per Wales, Denbigh 1917 ac. P. 278. **EFFAT**, a pro Abyssinia. See **SA**.

EFFERING a tn. Upper Austria, east bank Danube 107 m. W Vienna. It is surrounded by walls with four gates and is on the whole, well-built. It contains a hand some square, a castle, two churches - a Protestant and a E. Catholic, the latter a Gothic parish church with a number of fine monuments a townhouse, ad hospital. The Danube, which about a century ago, lashed the walls is now at some distance from them. Pop. 1800.

EFFIN par Irel Limerick 5288 ac. Pop. 1458. **EFFINGHAM** a tn. par. and vil England, on Surrey 8148 ac. the latter is 10 m. N.W London. Pop. 618.

EGBELLA, a market in Hungary, either Danube, co. of and 53 m. N.W. bank, Buda-Pest, not far above the junction with the March. It contains a parish church, and carries on a considerable trade in hemp which it sends chiefly to Moravia and Austria. In the neighbourhood there is a sulphurous spring. Pop. 2880.

EGDRAN, par Eng. Sussex 710 ac. Pop. 105.

EGEDREMINDE a Danish missionary station and colony Greenland, N. inspectorate, about 45 m. E. Dano island. It was founded in 1769 and is chiefly useful to the Danes, for sealing, elder-down gathering &c. It faces the archipelago of islands called Egedreminde which as well as the colony is named after Hans Egede, a Danish missionary to these parts in 1741.

EGELN a tn. Prussia, gov. of and 17 m. S.W. Magdeburg. It consists of the town proper surrounded by old walls, and of a suburb is poorly built as the seat of a law court and several publichouses contains three parish churches and four schools, and has manufactures of fur, several distilleries, numerous mills, and three annual fairs. Pop. 2888.

EGELEHOLM or **EGEOMORSEN** a vil. and par. Switzerland, com. Thurgau in a beautiful district surrounded by vineyards, 3 m. W. Constantine. It is well-built, and contains a parish church and two schools. Pop. 1386.

EGENBURG or **EGENBURG**, a tn. in Lower Austria, in a valley at the W. foot of the Mannhartberg 88 m. N.W. Vienna. It is surrounded by old walls, contains a handsome parish church, of ancient date, and an hospital, and has manufactures of woollen and linen cloth. Fine sanctuaries are often found in the vicinity and the whole district is rich in monuments of the Middle Ages. Pop. 1963.

EGENHAUSEN a vil. Württemberg, circle Schwarzwald, half of and 5 m. W. Nagold. It has manufactures of roots and turpentine. Pop. 1059.

EGER, or **GMA** (Latin, *Agria*) a tn. Bohemia, circle, Eibisgum, on a rocky eminence, above a black stream of same name, 91 m. W. Prague. It was once an important border fortress, but only parts of its walls now remain in a very dilapidated state and its towers are almost filled with rubbish. It contains several churches, one of them an old

donatory church very handsome; an old burg or steeple on an overhanging height, once the frequent residence of kings and emperors, now dismantled, but still interesting in its ruins an ancient town-house, containing a library and a building at the death of Wallenstein, who was executed in the house of the burgomaster which still stands at the E. end of the market-place a gymnasium high school, military school, barracks, two hospitals, and several charitable endowments. The manufactures consist of linen and woollen cloth, shiraz, and salico and there is a bleachfield a powder a polishing and several other mills. An avenue 3 m. long, conducts from Eger to Franzensbrunn, a celebrated watering-place. Pop. 10 600.

EGER (Latin, *Agria* and *Agria* Bohemian, Chod) a river Germany. It rises in the Fichtelberg in the N.E. of Bavaria, about 16 m. W.E. Baireuth, flows E. into Bohemia, and passing the towns of Eger Eibisgum Saaz and Leun, falls into the Elbe, at Thiersteinstadt, after a course of 124 m. It has high banks a stony bed, and a rapid descent.

EGERDIR a small tn. or vil. and lake, Asiatic Turkey, near Anatolia. The town is picturesquely situated on the margin of the lake on the W. side of its E. extremity in lat. 3. 42' N. lon. 31. 18' E. It consists of 500 or 600 houses, all Turkish, streets narrow and extremely filthy. The LAKE is about 20 m. long and 5 m. broad. It is a beautiful sheet of water surrounded on all sides by lofty mountains, wooded in places to the water's edge. In others, rich and luxurious vineyards and orchards cover the sloping plains which extend between the mountains and the lake. There are two beautiful islands in the lake, nearly opposite the village, covered with woods and inhabited chiefly by Greeks the most red roofs of whose houses are seen peering out from amongst the luxuriant foliage of the trees.

EGERI or **AGRI**, a lake, Switzerland, in the E.E. of can Aug 4 m. long S.W. to S.E. and near its centre about 2 m. broad. It is surrounded by mountains particularly on the W. by the Romsberg and Kalkersattel and on the N. by the Gabel and though romantically situated has a very lonely appearance. It is about 140 ft. deep, and is well supplied with fish. On its S.E. shore stands the village of Morgarten famous in the history of the Swiss struggle for independence.

EGERÖE, an Isl. S.W. coast, Norway, half of and 40 m. S.E. Stavanger. It is of very irregular form somewhat resembling a horse shoe and is separated from the coast by a narrow channel. Its greatest length is about 6 m. and its breadth scarcely averages 1 m. lat. 58° 38' N. lon. 6° 56' E.

EGERSUND a seaport and fishing tn. Norway, half S.W. on the Eger Sound, a strait, between the isle of Egroa and the mainland lat. 58° 20' 10" N. lon. 6° 57' E. (v.) It has a good harbour and some trade, especially in herring. In 1641 44 vessels ton 2940 entered and 68 ton 3977 cleared of which 13, in both cases, were British ships. Pop. 1282.

EGEREZEG ZALA, a market in Hungary Thutur Darabcs, on Eledr bank, Zala, 54 m. W. S.W. Veszprim with a parish church and a house in which the county meetings are held. Pop. 3116.

EGERTON par Eng. Kent 2780 ac. Pop. 830.

EGGO a vil. and par. Switzerland, can. of and 8 m. S.E. Zürich in a fertile grain and fruit district, 2880 ft. above sea-level. Some cotton manufactures are carried on. Pop. 2763.

EGG two harbours on an Isl. U. States New Jersey Great Egg harbour is in lat. 39° 22' N. lon. 74° 30' W. and receives a river of the same name, which is navigable for large vessels 20 m. - Little Egg harbour is 17 m. N.E. from the former - Egg island in Delaware Bay has on it a fixed light, 42 ft. high lat. 39° 19' 24" N. lon. 75° 9' W. (v.)

EGG-BUCKLAND par Eng. Devon 3304 ac. Pop. 1468.

EGGA, a large tn. of W. Africa, Guinea Yarrba country, r bank, Niger a little below the junction of the Coocondia lat. 6° 43' N. lon. 6° 10' E. It is about 4 m. in length and 2 m. in breadth the houses are of a conical form, and so closely packed together that in some places there is not room for two persons to walk abreast in the streets. The walls of the huts are of clay some of them beautifully smooth, and stained with indigo they are without windows, and have rarely more than one door. Large quantities of a narrow cloth, not exceeding three inches in breadth, are manufactured

here there have been no fewer than 300 looms in operation in the town when visited by Captain Allen in 1841. This cloth is generally dyed blue. The people are speculative, enterprising, and keen traders, members of them employ all their time in trading up and down the river and live entirely on their canoes, which are generally protected by a shield. The market days at Egga present a singularly lively and animated scene. All are anxious to sell their wares, and are constantly making the most eager, earnest, and often noisy efforts to accomplish this desirable end. Women are the chief if not the only traders here, most of them are of graceful and prepossessing exterior and all profess similar antipathies in their dealings with those put in regulation with the market-women of civilized countries. The articles exposed to sale consist chiefly of beautifully-wrought and carved calabashes, silk and native from Borneo, country cloth, network, Guinea corn, yams, Indian corn, sweet potatoes, dried fish, a few European articles, beads, and gunpowder. The people dress neatly and one-half are Mahomedans, the other Pagans.—(Allen's Excursion to the Upper Land's Records.)

EGGARAH W Africa See **IGORAH**
EGGEREN a tw. W Africa, Eng-Zag 80 m. S by W Kano lat. 10° 58' N lon. 9° 6' E. delightfully situated in the midst of a beautiful and highly-cultivated plain. It is neat and scrupulously clean and its inhabitants have at least the appearance of prosperity and happiness. It is surrounded by a wall in the form of a square, measuring 1 m. each side Pop. about 14,000.—(Lander's Records.)

EGGERBERG **EGGERBERG** or **EGGERBERG** a vil. and lordship, Austria, Styria, circle of and about 9 m. from Gröden. It has a castle, a simple but majestic structure, which contains a good collection of paintings, and is surrounded by fine gardens, much resorted to on holidays by the citizens of Gröden, with which it is connected by a long avenue. Pop. of lordship, 8516.

EGGERFELDEN a market in Upper Bavaria, 1. bank Rott, 34 m. W & W Passau. It is the seat of a court of law, contains four churches, a chapel, Franciscan hospital and hospital, and has manufacture of cloth, and a trade in cattle Pop. 1444.

EGGERSTEIN a vil Baden, circle Middle Rhine, bail of, and near Karlsruhe. It contains a parish church, and has an extensive manufactory of printers ink Pop. 1179.

EGGESFORD par Eng Devon 2500 ac. Pop. 138.

EGGINGTON par Eng Derby 1389 ac. Pop. 874

EGGHAM a par and vil England co Surrey The village, 20 m. W by S London near r bank Thames, is large and thriving and is connected with the market town of Staines, on the opposite bank of the river by an iron bridge. It has almshouses, a charity school, and other charities, and a national and infant schools Runnymede, famous in English history as the scene of the conference, in 1215 between King John and his barons, which led to the signing of *Magna Charta*, lies between the village and the Thames. Races are annually run on this ground Area of par 1435 ac. Pop. 4482 of which about half reside in the village.

EGINA, an isl Greece. See **ZELOS**.

EGLETON par Eng Rutland 1450 ac. Pop. 136

EGLINGHAM par Eng Northumb. 23361 ac. P 3000

EGLSAU a tw and par Switzerland, can of, and 14 m. N Ebdol, r bank Rhine, here crossed by a handsome wooden bridge. It stands in a narrow valley along which the river winds between steep and finely-wooded banks, is well built, contains a parish church, with some interesting monuments and a large and ancient town-hall and has some shipping, a considerable transit trade, particularly in corn. At the extremity of the bridge, on the l. bank, stands the ruins of the old castle of Eggen, with a lofty and massive square tower Pop. 1106

EGLSH two par. Ireland —1 King's co., 14,800 ac.

EGMOND, three vis. Holland, prov. N. Holland —1 (see *De*), on the sea-coast, 5 m. W Alkmaar with a town-house, two churches, a school and a light. Pop. chiefly fishermen, 1870.—2 (Bossum), 5 m. S.W. Alkmaar, with church and school, and inhabitants mostly engaged in agriculture, cattle-rearing, and fishing 354 m. S.E. of, (see *De*) 4 m. W Alkmaar with church and school. Inhabitants, agriculturists and fishers. Pop. 520

EGMONT or **SIX ISLANDS**, Indian Ocean, Chagos Archipelago. The largest is in lat. 6° 40' S. lon. 71° 50' E. From this, five other islands lie on the circular edge of a coral reef extending to the N.W. by W., 5 m.; the N. islands have conspicuous trees on them. The whole group produces 6000 gallons of coco-nut oil yearly, pigs and poultry in abundance also pigeons, and the red and land crabs, which are numerous. Fresh water is also easily preserved.

EGMONT an isl. S Florida, Low Archipelago lat. (N.W. point) 19° 24' S. lon. 159° 14' W. (n.) It is of coral formation steep, and well-wooded with cocoa-nut and pandanus trees. The natives go armed but are friendly, and disposed to barter particularly for iron

EGNACH a vil. and par Switzerland, can Thurgau in a district almost covered with orchards, 12 m. S.E. Constance It is a large straggling place, contains a new parish church and parsonage, and has a trade in fruit. Pop. 5175.

EGREMONT a par and market in England co. Cumberland area, 2708 ac. The tower 354 m. S.E. by S. Carlisle, within 3 m. of the Irish Sea, has an ancient parish church and a Wesleyan chapel. Tanning is carried on to some extent, and checks, satinet, linen, and paper are manufactured Weekly market, Saturday several fairs annually Pop. 3049

EGREMONT par Wales Carmarthen 54 m. by 3 m Area, 1006 ac. Pop. 151

EGRES, or **Kona**, a vil. Hungary Banat on Torontal on the Maros, about 15 m. from Kosolcs. It contains a Greek see-rail parish church Pop. 2549

EGTON, 1 in England York (N. Riding) Pop. 1129

EGUTSHEIM EXER or EXERIM a tw. France, dep. Haut-Rhin, near l. bank Leuch 4 m. S.W. Colmar. It owes its origin to a strong castle, supposed to have been erected in the eighth century of which a massive hexagonal tower about 130 ft high, still exists Good white wine is grown in the vicinity Pop. 2149

EGYK a vil. Hungary Thaur Thome to Szabolcs, on the Thoma, about 15 m. from Nádudvar. It contains a Protestant and a R. Catholic church Most of the inhabitants are Protestants. Pop. 3570

EGYPT (Greek *Agyptos* Latin, *Ægyptus* French *Égypte* German, *Ägypten* Italian *Egitto* Arabic, *Misr* Turkish, *Memlûk*) a country remarkable alike for its physical peculiarities, and for its place in history and which still retains, in its wonderful monuments, the earliest records of civilization, extends along the Nile at the N.E. angle of Africa, and embraces properly the lowest and most N. division of the valley of that river, from the last cataract to the sea. In lat. 24° S. 45° N. the Nile, issuing from the rocky gion of Lower Nubia, sweeps in a smooth but rapid stream round the little island which was called by the Greeks *Phila* by the Arabs *Bilak* (both names being corruptions of the Coptic *p-tah*, that is, the limit) and then immediately turns down the cataracts, or rather rapids, of Aswan (*Syene*) and by the island of Elephantine, about 3 m. below Phila. Here the cataracts to the northward of the Nile are at an end and the river extends in a general course, N. by W., to lat. 31° 35' N. where, in the neighbourhood of Dendera, the principal branch falls into the Mediterranean Sea. The length of Egypt, measured on the meridian, is but 450 sq. m. but along the winding valley of the river which is truly the habitable country it has an extent of above 800 m. of course, or about 720 statute miles. The average width of the valley of the Nile may be assumed to be 5 m. the greatest width of the delta, from Alexandria to the W., to the ruins of Pelus, is on the E. is about 160 m. The whole area, compressed in the valley and delta, may be taken at 11,000 sq. m.

Kame—Egypt is now called by the natives, and throughout the East generally *Misr* or *Masr* a name evidently connected with the *Misraim* of Scripture and this name being in the

dead number seems to refer to the division of the country into Upper and Lower Egypt, which were always considered, under the native dynasties, as distinct kingdoms, symbolized by different crowns. The ancient Egyptian name of the country *Kham* (whence *Cham* or *Ham*) signified black and was probably suggested by the dark colour of the sedimentary soil. As to the origin of the name *Egypt* (*Aegyptus*) no one has yet been able to offer a plausible explanation of it. The attempts to derive the word from Greek roots are merely guesses, and Breaux's suggestion, that *g-ypt* signifies in Ethiopic the land of canals, requires confirmation. Besides, the Ethiopic (or Ge'ez) language is apparently too modern a source to allow us to hope that it could furnish any elucidation of Egyptian etymology.

Description.—The island of Phih in the S. extremity of Egypt, has been compared by Arab writers to an emerald set in gold, and this allusion to the luxuriant vegetation of the island compared to the glowing naked surface of the surrounding desert, is equally applicable to the valley lower down. The Nile in the valley of Egypt is everywhere an agreeable object; not so much owing to the majesty of the stream, or the variety of its scenery as to the strong contrast between the freshness, verdure, and animation of the river's banks, and the desolation which reigns beyond them. The country of the river is, in the S. part of Upper Egypt wild and romantic; but as we descend it grows continually more tame and monotonous, till at length every lively and picturesque feature is lost in the uniform level of the delta.

Divisions.—As Egypt embraces two widely different regions, namely the broad plains of the delta, and the comparatively narrow valley of the river higher up, so it naturally falls into two parts or divisions, namely Upper and Lower Egypt. These were anciently regarded as separate kingdoms, denoted in hieroglyphics by different crowns or royal diadems. Whenever they were united under the same rule, the Pharaoh bore the title of The Lord of the two worlds. But the lower part of the valley which includes the Fayoum, and the plains watered by the Bahr Yusuf differs widely again from the narrower portion higher up, hence the division into Upper Middle, and Lower Egypt, or to use the Arab names *Bah* or *Mah* (in Coptic, the South), *Wesant*, and *Er-Rif*. The whole country appears to have been subdivided from the earliest ages into districts under the Greek name of *Nomes*, to the number of 36, to which may be added, however, eight more of later date probably comprising the territory adjacent to the Delta, but beyond its proper limits. Upper Egypt, or the *Bah*, was often named by classic writers the Thebais and Middle Egypt, divided into seven *Nomes*, the Heliopolites. These ancient territorial divisions, being founded on nature, have never fallen wholly into disuse, though disguised under new names. Yet the late Viceroy Mohammed Ali, effected a great change by grouping and subdivision. He divided the whole country into seven *Mudariyas* or provinces, superintended by a *Mudir*; each *Mudariya* being subdivided into departments, and these again into counties, each having its proper and responsible chief.

Mountains.—The valley of the Nile, throughout its whole extent, from Phih to the vicinity of Cairo, is hampered in on both sides by continuous chains of hills, those on the E. side approach more closely to the river, while the Libyan hills on the W. rise with gradual ascent, and sometimes reach to a distance of 10 or 15 m. Hence they appear less elevated than the E. hills, which vary in height from 400 to 600 ft. Towards the delta these chains of hills diverge, that on the E. side turning E. by Jebel Mokattam (that is, the haven so called probably from its quarries) near Cairo, and sinking gradually till it disappears in the *litham* of Baa; while the Libyan chain extends to the N. W. the plains of the Natron lakes. The desert between the Nile and the Red Sea is intersected by several chains of mountains, which increase in elevation towards the E., so that the ridges nearest to the Red Sea attain a height perhaps exceeding 6000 ft.; W. of the Nile on the other hand, the land evidently sinks, so that the Libyan chain approaches the river from a wide valley, which is supposed to be not above the level of the sea, and may probably have received the waters of the Nile, and conducted them to the sea in early times, while the rocky channel through lower Nubia was as yet but imperfectly opened. The appearance and physical character of this region is well described by the

name 'Bahr bala na, or river without water, now bestowed on a portion of it.

Valleys and Roads.—The openings or lateral valleys of the hills bounding the valley of the Nile are comparatively few, or being little frequented, remains unknown. Those on the E. side, with which we are best acquainted, are the Valley of the Wanderers (or the children of Ismael) leading from the neighbourhood of Cairo to the head of the Gulf of Suez, and that through which passes the road from Egypt to Kossair on the Red Sea. In early ages, when the commerce of the Red Sea was far more important than it is at present, the roads from the Nile through the E. desert were numerous and frequented, and there still remains indubitable evidence chiefly in the ruins of guard-houses and of solidly-constructed wells, of the industry which once animated these inhospitable wastes. W. of the Nile, in lat. 29° 20' N. a deep timony in the Libyan chain of hills forms the fertile valley of Fayoum (in Coptic, *Pa-lom*, the sea or lake) in the N. W. and lowest part of which is the lake named Birket-el-Keren the level of which is perhaps not above that of the river. The E. part of the Fayoum was anciently the site of the celebrated lake Moeris, the embankments enclosing which were first recognized and traced, in 1849 by M. Linant de Bellefonds. From this valley a road leads W., through the hills, to the oasis of the Bahkiliya. The roads from Jirfeh or Gilgah and Bahd to the great oases are much frequented; and several other openings of less note offer communications with the fertile spots which characterize the depressed region W. of the river.

Oases.—The oases above alluded to extend, in a narrow line, along the hollow region of the Libyan desert, parallel to the general direction of the valley of the Nile and above 80 m. W. of it. The Great Oasis, called from its chief town El Wah el Kharijeh lies immediately W. of the Thebais and has a length of 100 m. from lat. 24° 15' to 25° 45' N. About 80 m. W. of the N. extremity of this oasis, lies the Wah el Dakhilah 94 m. long and 10 m. broad. In the parallel of Jirfeh, and W. by B. from the Fayoum, the date groves of the Little Oasis (*Oasis parva*) or Wah-el-Bahariya, display their unusual verdure. In this fertile spot arid wells are numerous, and some of ancient construction have been recently discovered which have a depth exceeding 400 ft. On the road between this oasis and that of El Dakhilah, including to the W. occurs half-way the Wah-el-Fayoum, a small extent. W. of Fayoum and about 200 m. from the Nile, lies the oasis of Siwah, where the foundations of the once-celebrated temple of Jupiter Ammon may still be traced. The inhabitants of this secluded spot, though tributary to Egypt, are in language and manners wholly Libyan. The region of the oases terminates towards the N. in the desert of the Natron lakes, which the Copts called *Soots*, and where, in the midst of the dreary wilderness, priory-like monasteries offered a congenial home to gloomy and ascetic monks. The desert on the W. bank of the Nile generally presents to view uniform plains of gravel or of fine drifting sand; on the E. the scene is varied by rocks and mountains, but the aridity is extreme, and the heat, verberated from surrounding cliffs, is often insupportable.

Rivers.—The only river of Egypt is the Nile which receives no accession from tributary streams (occasional torrents from extraordinary rains excepted) in the last 1500 m. of its course. At Phih it enters Egypt with a breadth of 3000 ft. and though often contracted lower down to 2000 ft., its average width throughout may be taken as half a mile, and therefore, with the canals depending on it, it bears a considerable proportion to the whole area of the habitable valley. Of the canals alluded to, one of the most remarkable is that commonly called the Bahr Yusuf, or Joseph's river or canal which, leaving the Nile at Dairut (lat. 26° 15' N.) runs along the foot of the Libyan hills, which it enters at the opening of el-Lahm and, having watered the valley of Fayoum it again leaves from the Libyan chain and joins the Nile. The Bahr Yusuf has a length of 140 m. and the level plain, often 10 or 12 m. wide, included between it and the Nile, forms, with the valley of Fayoum, the most fertile part of Egypt. Popular belief ascribes the construction of this water-course to Joseph, but competent observers pronounce it to be an ancient branch of the river flowing between banks for the most part of natural origin. It has a general breadth of 800 ft., and winds like the Nile. The spot of the Delta was, in the time of Herodotus, at Casserosa 10 m. below Memphis. It is now about

6 m. still lower down at Ham-el Bahari. The river at the early period referred to, separated at once into three branches, the Canopic, going N.W. the Pelusiac, N.E. and the Sebaste branch proceeding directly N. to the sea. But the latter threw off also two other branches, namely the Ballia, W. and the Mendesian, E. Near the former of these flows the Bolhaisic sea, at some distance to the E., the Ballia branches both artificial. These were the seven mouths of the Nile as described by Herodotus (from whom later writers differ in many particulars) and it is remarkable that, at the present day, only two of these continue to flow in uninterrupted navigable channels to the sea, and these are the Bolhaisic and Rosetta (the artificial) arms, now named respectively from the towns at their mouths the Rosetta (Rashid) and Damietta (Dumyeh) branches. The artificial branches probably owed their superior permanence to the circumstance of their being cut in a straight line, so that their banks were not liable to be leapt on by the current. The other ancient arms of the river may still be traced, more or less satisfactorily among the numerous canals which intersect the Delta, and terminate, for the most part, in the lakes bordering the sea-coast. Among the ancient canals of Lower Egypt, there was one which carried an especial notoriety, that which starting from the Nile a little below the modern Cairo, ran N.E. and E. into the desert, and then turning S. through the marshy district of the Bitter lakes, terminated at Arminia, at the head of the Gulf of Suez, thus uniting the Nile and the Red Sea. Pharaoh Necho was the first who ventured on this great undertaking; he failed, however, and Darius, of the Persian dynasty had no better success. At length Ptolemy Philadelphus overcame the numerous hindrances opposed by nature to the completion of the work; yet, in a few years, this canal apparently so advantageous, became choked up and useless, and was restored by Trajan, to fall again to ruin. Some traces of it remain at the present day but for the most part it is wholly obliterated. One of the greatest works carried on in Egypt in modern times, is that projected by Mohammed Ali, for the damming up or barrage of the Nile below Cairo, and for the establishment of canals above the barrage which should carry the water of the summer over the surface of Lower Egypt. The barrage is established at the point of the Delta where the Nile bifurcates into two great branches, which flow one to Rosetta, the other to Damietta. It is 118 m. from Alexandria, and 99 m. from Rosetta 12 m. below Cairo, in view of the great pyramids of Ghizah. The works comprehend—1. A sluice bridge on each of the two branches of the river with a levelling quay to fix the point of the Delta. 2. Three great canals, one on the right bank of the Damietta branch in the direction of Mansourah, another running along the left branch of the Rosetta branch in the direction of Alexandria, the third placed in the axis of the Delta. The canal directed towards Alexandria is to be 197 ft. wide—the two others, 398 ft. each. The barrage has a length of 1765 ft. between the extreme abutments on the Damietta branch, and of 1585 ft. on the Rosetta branch making a length altogether of 3350 ft. The quay wall constructed at the point of the Delta is 5791 ft. in length. The barrage is expected to be finished in the course of 1862.

Lakes.—The first place among the lakes of Egypt has been hitherto usually assigned to the Birket el Kerdin, lying N.W. of el-Fayoum, owing probably to the celebrity which attached to it from the supposition that it was a remnant of the ancient lake Moeris. It has a length of about 24 m., and a general breadth of 6 m., its direction being from W. by N. to E. by S. On its shores stands a castle, the projecting spouts of which have procured for it the appellation of Kasr-el-Kerdin, (Horn Castle) whence the lake takes its name. It abounds with fish, and like Lake Moeris of old, is famed out to Lebanon, to the great profit of the Government. There can be no doubt that this lake is of natural origin, but it probably owes a great measure of its extension to the manner in which, led to the disappearance of Lake Moeris. So long as the great reservoir on the higher level of the valley was maintained in good condition its embankments must have cut off supplies from the natural lake below. At present the Nile, in cases of high flood, makes its way to the Birket-el-Kerdin, which then rises 4 or 5 ft.

About 60 m. W. of the Birket-el-Kerdin, where the Libyan chain of hills, W. of the Nile, begins to sink in the desert, a

low coast, extending N.E. to N.W. exhibits in the spring a chain of pools, known as the Matruh Lakes, some of which, in the dry season, the water evaporates, leaving the ground thickly covered with natron (sulfate of soda) better known in commerce under the name of *aroma*. The fertile land of the Delta is, for the most part, separated from the sea by a series of lakes, or rather vast lagoons, which are themselves formed from the sea by very narrow necks of land. On the W. side of the Delta, and proceeding W. to E., these maritime lakes are, Marouta, Matruh, of Abdiak and Elkhed or Elkh. They all communicate with the sea by shallow openings. Between the Rosetta and Damietta arms of the Nile, Lake Burros occupies half of the coast, or above 80 m., while E. of the latter arm, Lake Mansarah covers an extent of 500 sq. m. while Lake Bardawal (Bir-bou) stretches 70 m. still further E. Altogether the frontier covered by these lagoons has an extent little short of 300 m. They all abound in fish but more particularly Lake Mansarah, the shores of which are rendered hateful to strangers by the smell of fish and mud, by filth and pestilence. From the S.E. angle of Lake Mansarah, a low tract, usually covered into a swamp during the inundation, winds S. by E. across the desert thence to Suez. In the S. part of this tract are the Bitter Lakes, which are very like the Natron Lakes on the W.

Geology &c.—The general rocks of Egypt are limestone, sandstone overlying the former and granite, which breaks through and overtops both. The granite region lies at the S. extremity of Egypt. In Lower Bahia, the summits of the granite rocks rise 1000 ft. above the level of the river. This rule and wild scenery continues down to Aswan, where the canyons are formed by the cliffs and broken masses of granite which lie in the bed of the river. Granite of many varieties may be found here but the rock at Aswan or Syene is not the granite of modern geologists. Blackened by the sun's rays, and often highly polished these rocks have been frequently mistaken for basalt and indeed it is not certain that truly volcanic rocks may not be found mingled with the granite. The cliffs near Aswan have supplied the materials for all the colossal and monolithic monuments of Egypt. From Aswan to Eand (lat. 25° 19' N.) extends the sandstone formation, which is very durable, and easily worked. The quarries at Jebel Sileila (also mountain) and a few other points in this region furnished the materials for the superb structures of Thebes, and, indeed, for most of the temples of ancient Egypt. Below Eand the limestone predominates, though sandstone hills still occasionally interrupt the calcareous range. The limestone region at more times and monotonous in outline than those of the sandstone and granite, and more frequently assumes the form of table lands. Thus the pyramids of Ghizah, built altogether of limestone, stand on an elevated plain of the same material. The Egyptian limestone is generally grey containing shells, shells, and corals but in the E. desert specimens have been found of hardstone marble and in the parallel of Minya, lat. 25° 4' N. and about 100 m. E. of the Nile, were discovered, a few years ago, the splendid ruins of the ancient Alabastropolis, which once derived wealth from its quarries of alabaster. Farther S. in the desert, towards the limits of the granite, we come upon the ancient mines or quarries of Jasper porphyry and verd antique. The emerald mines of Zabarah lay near the Red Sea, in the parallel of Suez. To complete this brief geological sketch, it may be mentioned that in the calcareous region, diluvial heaps of oyster and other shells frequently occur at considerable elevations, and that a few miles E. of Cairo in the Jebel Mokattam an extensive tract is strewn over with the muffled trunks of trees. This phenomenon of a petrified forest presents itself again in the desert of the Natron Lakes, W. of the Nile, and also far to the S. in Nubia.

Alluvium.—The alluvial soil of Egypt is a no less interesting object of study than the rocky foundation on which it rests. The Nile during the flood deposits in the valley of Egypt the earthy particles with which it becomes loaded in the rocky and superfluous part of its course, and it is easy to recognize, in the dark brown mud of Egypt, the distinguished trachyte of Abyssinia. Wherever the velocity of the stream is checked, the earthy sediment is deposited, and a thin, silty film spreads over the ground. The accumulation of this fine sediment becomes very perceptible in the course of ages, the inundated land of Egypt, with the bed of the river, being gradually

raised by means of it. The increase of the soil is said to proceed, in Upper Egypt, at the rate of 6 or 8 inches in the century; in the Delta it goes on more slowly. The banks of the Nile, as they first abate the current, receive the largest share of the deposited soil and hence they are higher than the adjacent fields, which also generally decline a little from the river. The lower part of the nilometer at Elephantine or standard for measuring the rise of the waters, described by Strabo, still remains entire but the highest groyne here as it is now covered to a height of 8 ft. by the flood. From the depth of the sedimentary soil covering caneways or heaped round monuments at Thebes, which doubtless stood originally above the reach of the inundation, it has been calculated that the age of that city must reach back at least to the year 1900 B.C. a conclusion which can be reconciled with the chronology of Scripture only by adopting the Septuagint or Samaritan text in preference to the Hebrew. Thus it appears that the Greeks were in some measure, justified in saying that Egypt is the gift of the Nile but they added more particularly to the Delta, and yet it is evident that the Delta has advanced but partially between the two main branches, only a distance of 8 or 4 m. within the period of history. Its coast on the W side, including Alexandria, and as far E as Almhik is formed by a ledge of limestone, and cannot be supposed to have undergone any change. On the E Tinch, one of the most ancient of Egyptian cities, still occupies the site of Pelusium (the Sin of Ezekiel xxx. 15) and still on the sea-shore, it fully merits its ancient name which all had but one meaning—sand. It is, however, remarkable that before the industry of man interfered on controlling and regulating by means of dykes and canals the effects of the inundation of the Nile, the deposition of alluvium at its mouth gained rapidly on the sea.

Climate.—The climate of Egypt is remarkable for its dryness and general uniformity. In no other country is one day so like another. Winter on the banks of the Nile has no rigour and the heat of summer is rarely oppressive. As the extension of the country however is chiefly from N to S there is a considerable difference between the mean temperatures of Upper and Lower Egypt, but peculiar circumstances such as the velocity of the winds and the freshness of the N wind modify at the N and S extremes of the country respectively the cold of winter and the burning heat of summer. In the Delta, the mean temperature of winter is about 54 F. that of summer 82 at Assuan, the thermometer often rises, in the latter season, to 95°. It is, however, characteristic of Egypt and the neighbouring deserts, that a great fall of temperature, from 14° to 30° takes place at night, owing, as it is usually explained to the setting in of the N wind at sunset or rather perhaps attributable to the general dryness and perfect transparency of the atmosphere, which favour rapid evaporation, and the radiation of heat. This nocturnal cooling sometimes, though very rarely sinks just before sunrise to congelation and ice has been found on the Nile even at Syene. The hot S and E winds from Khamsin (that is, 50 days wind) sets in at the vernal equinox and lasts, as the name implies, nearly two months the thermometer sometimes rising during its continuance to 100° F. winds prevail after the autumnal equinox during the remainder, or about eight months of the year the wind blows from the N and neighbouring points. In the maritime parts of the Delta, smart falls of rain occur 25 or 30 times between October and March, only half of this quantity falls at Cairo, and above the 36th parallel rain is hardly known. It is very rare, and still more so snow which fell, nevertheless, in 1833, in the Delta, to the great surprise of the people. There seems to be little reason for supposing that the climate of Egypt is im-

balanced; although the habit of sleeping on the terraced roofs in the open air regardless of the violent and sudden changes of nocturnal temperature, breeds much febrile disease; while the extraordinary but unheeded, effluence of the Egyptian sky acting on eyes irritated by the fine sand which, as the native adage says, one makes its way through an egg shell, gives rise to ophthalmia. As to the plague, it is doubtful whether it be generated in Egypt, but its rapid diffusion, as well as the prevalence of elephantiasis and other apparently endemic diseases may be naturally ascribed to the filthy habits and wretched condition of the people.

Seasons.—In Egypt, where there is in fact no winter the distinction of seasons depends immediately on the Nile, and with the state of the river the aspect of the country undergoes the greatest changes. The seasons are there reduced to three—the inundation, spring, and harvest. At the beginning of June, the hot winds being over and most of the crops out, the country begins to resemble the adjacent desert and the parched ground cracks and opens in all directions, when, in the third week of the month, the river is observed to rise. The increase of the water becomes in a short time regular till it reaches its maximum, about the second week of December. Its progress is watched with much anxiety for should the flood fall short of the expected measure, famine must ensue; but should it on the other hand exceed the ordinary limits, it may break down the embankments, sweep away villages, and carry desolation to its source. The Nile may rise at the present day 28 ft. without occasioning any damage. As the canals become filled the water is allowed to run over the fields and gardens, the low dams which protect them being successively broken down. This mode of proceeding is alluded to in that passage of Scripture (Deut. xi. 10) which describes Egypt as the country where thou sowest thy seed and watered with thy foot. During this season, Egypt resembles a great sea, in which the towns, villages and groves of trees, figure as so many islands. By the middle of November the river has returned to its old bed and, as the waters retire the fields emerge from the inundation in a moist and slightly green, covered with blackish mud, but the state of things does not last long the seed is quickly sown the refreshed earth teems with life and in a barely short time, the face of the country lately so desolate, is clothed with the richest verdure. Thus spring time lasts till the Khamsin or hot winds after which comes the harvest, and occupies the period that intervenes till the return of the inundation, or from April till June. And here it may be observed that even when the Nile is low the work of irrigation may be carried on to some extent by means of the saqiya, which is a rarely constructed wheel placed vertically and turned by oxen, buckets being fixed to its circumference, the lower part of which passes through the water or whose cir-

SAKIYA FOR RAISING WATER.—From Description de l'Egypte.

cumference is divided by pectinets into separate water compartments, with outlets at the side, as seen in the accompanying figure. It is said that there are 60,000 saqiya in Egypt, notwithstanding the tax injudiciously levied on them.

Agriculture.—As soon as the waters have retired, the Egyptians sow their wheat and barley which are quite ripe in May in the Delta, where the produce of the field arrives at maturity generally a month later than in Upper Egypt. Durrah (*Sorghum vulgare*) the grain on which the natives chiefly subsist, and millet, are sown later and gathered earlier. Of maize, two crops are often raised in the year. Rice, the sale of which is a monopoly of the Government, is a novelty to the Egyptian husbandman, and is grown chiefly in the low grounds near Rosetta and Damietta. Beans, lupins, lentils, and various kinds of pulse, with onions, hennip (*Eghysson aculeatus*) and mallow are cultivated, and consumed in great quantities. The system of husbandry is probably the same now as it was 3000 years ago, wherever the Government has not interfered with it, by introducing new objects of culture. The Egyptian peasant is extremely tenacious of ancient usage. His plough at the present day exactly resembles that figured in the hieroglyphics, for a harrow he uses a roller made of a piece of the trunk of a palm tree and he allows no rest to the inundated land, but relieves it only by change of crops. The efforts of the Government, however, to increase the commercial resources of the country have disturbed the traditional routine. The cultivation of cotton, begun in 1831 has now extended widely. Indigo succeeds in the Fayoum and Upper Egypt. The growth of the sugar-cane is confined to the latter country. The manufacture of the sugar being carried on at Maryut. For the sake of the silk manufacture, three millions of mulberry trees have been planted in Egypt, but the hot winds often prove fatal to the silk worms. The cultivation of the olive, also, is now encouraged and attempts have been made even to naturalize the coffee plant, clove, and cinnamon.

Botany.—The wild plants of a country such as Egypt, are necessarily few and these being natives of the desert, have no very interesting character. These desert plants are generally mesocephalous annuals, characterized by a hairy or thorny exterior, long roots and of pale green colour and dry texture. The most common wild shrub is the *Azadirachta* acyral, which is almost leafless, and armed with long thorns; its crooked stem usually collects round at a heap of fine sand. The palm tree is rarely seen in a perfectly wild state, yet forests of the date palm, of great antiquity exist on the E. borders of the Delta, and on the site of Memphis. This tree attains a height of 60 or 80 ft., and is prolific only when attended to. The dates of inferior quality serve for distillations. The doum palm (*Ocoteva palmata*) singular in its inflorescence, arrives at perfection in Upper Egypt, and yields a fruit of the size of an orange, but much less esteemed than the date. The sycamore is the largest and most unobtrusive of Egyptian trees, often attaining a circumference of 20 or 30 ft., but with moderate height. It bears a kind of fig on its trunk and larger branches. The oranges, figs, and tamarinds of Egypt are excellent; the European fruits, however, there are of inferior quality. The chief timber trees are the acacia lebeck, the cyprus, and the Aleppo pine. The acacia and acacia melanocarpa, valuable for its hard wood, and producing gum arabic, increases in size as we ascend the Nile. The late Ismael Pasha Mohammed Ali, is said to have planted, chiefly in Lower Egypt, above 16,000,000 of trees of various kinds, and his son, Ibrahim Pasha, planted more than 6,000,000.

Zoology.—The list of the wild animals of Egypt is even still more scanty than that of its flora. The wolf, hyena, and jackal, habitual inhabitants of the desert, occasionally visit the valley of the Nile. There the jackalman or mangonot, which lives chiefly on eggs, and preys on those of the crocodile among others, is still numerous. The ferret, or mangro-like rat, burrows in the sands, and frequents, in great numbers, the plains of Gizeh, round the pyramids. The crocodile very rarely descends the Nile below Jizah, and the hippopotamus has long since retired to Upper Nubia, and never visits the waters of Egypt, except when scarcity drives down by the flood, as happened in 1886, when one of these animals was

seen view before Damietta. A remarkable peculiarity of Egypt, handed down from ancient times, is the practice of hatching eggs by the artificial heat of ovens. The poultry reared in this way are wholly without the instincts which relate to the care of offspring: the artificial method of hatching, therefore, when once resorted to, soon becomes necessary and the natural system of incubation is totally superseded. It is said that 24 millions of eggs are hatched annually in the vivifying ovens in Egypt, of which number one-third fall. Wild swine are still numerous in the marshes and thickets bordering the Delta, but they are little molested by a Mahommedan population.

Industry.—The branch of industry for which Egypt is peculiarly adapted by nature, is agriculture. Yet in that country where three successive crops may be gathered in the year agriculture is still in a very low state. The necessary consequences of the wretched condition and extreme poverty of those engaged in it. The Egyptian husbandman is ill supplied with the implements of agriculture. He has little stock; he knows nothing of the rotation of crops, or of the use of manure, and, being habitually oppressed he cherishes no hope of personal advantage to be derived from the improvement of his art. The Egyptians still adhere to their ancient custom of uniting the followers of such business or profession into a guild or corporation governed by their chief or sheikh, who acts if need be, as their representative. These guilds are exceedingly numerous, as might be expected, among a people whose social organization reaches to a remote antiquity. Of all these trades, however, very few can claim especial mention on the score of importance or singularity. Among these few we must place the business of the manual-labourer or egg-hatching establishments, above alluded to. A very steady heat (about 104°) is required for the success of this process, yet the keeper of the ovens never uses a thermometer but is guided wholly by experience and practical sensation. The business of tanning also, is one in which the Egyptians succeed perfectly by a process peculiar to themselves. They make excellent Morocco leather which is goathorn dressed and dyed in a particular manner. The pottery of Egypt, also, deserves a word of praise, chiefly for the merit of the harden or ware jars. The best harden are those made at Kenah which, besides being impregnated with a fine and lasting perfume, are, in various degrees and forms, permeable to water so that while some serve as filters, others exude the purified fluid, and keep it cool by evaporation, which effect, in such a climate as Egypt, is a matter of great importance. These jars are transmitted to Cairo in a

PUTTER FLOAT ON THE NILE.—From Hay's Sketches of Egypt.

singular manner. They are tied together in large numbers, with their mouths downwards, and thus forming long rafts, are floated down the Nile. But what may be called the singular industry of Egypt, though it could supply a long list of trades and occupations, is too rude and primitive to figure in commerce, or even to supply the wants of the country. The manufacture of shagreen, which is carried on with skill and capital, and the aid of machinery all owe their establishment to the late Mohammed Ali and are, in fact, the property of

the Government. That energetic ruler had incalculably embraced the doctrine, that it is always more advantageous to produce than to purchase, and, consequently he sought to supply all the wants of the country from within, imagining that every branch of industry which flourished elsewhere would prove profitable in Egypt also. He established above 20 cotton mills, on a large scale, horses or corn being employed as the moving power. His linen manufactories delivered annually 8,000,000 pieces, and compete in Italy with those of Germany and England. The manufacture of silk, as well as the rearing of the silk-worm, received from him a powerful impulse. Then woollen cloth, hampers, cordage, sugar, indigo, oil, gunpowder and various chemical products, all engaged his attention, and in every case he established manufactories, to be conducted on the public account. He even went so far as to establish an iron-foundry at Boulak, a suburb of Cairo on the Nile. This experiment, made on a handsome scale, in a country not affording either iron ore or fuel, and where machinery is soon destroyed by the fine sand and the corrosion of the atmosphere (owing perhaps to the presence of carbonic acid) must necessarily have proved a serious loss. His establishments for the manufacture of fire-arms, and of military accoutrements in general merit commendation on grounds of policy. If those of economy be insufficient. For exports and imports see ALEXANDRIA, the principal port.

Race.—Of the inhabitants of Egypt, the great majority—those of the peasant class or Fellahs, as they are called—are undoubtedly indigenous, and may be regarded as descendants of the ancient Egyptians. These having embraced Mahomedanism are now generally denominated Arabs though easily distinguished from the true Arab who invariably regards the Fellah with contempt. The Copts are the Egyptians who still cling to the Christian faith, though comparatively few; they contrive to hold a respectable position in society by means of their education and useful talents. They are thus widely separated by their faith and social lot from the Fellahs, though of kindred race with them. The Fellahs are generally peasants and labourers; the Copts fill the posts of clerks and

the Greeks are all merchants and traders. The Berbers, from Lower Nubia, below the second cataract, do all porters work while the Negroes are preferred as domestic servants. The whole population of Egypt has been estimated by the Govern-

FELLAH DRESSED IN THE HAREM, AND FEMALE WEARING FACE VEIL, EGYPT.—From *Victor's Oriental Album*.

ment, from apparently simple data, at 24 or nearly 4 millions. But the Europeans who have examined this question on the spot, come in reducing the estimate to 24 millions; the Fellahs being nearly 2,000,000; the Copts 1,450,000 and the ruling caste of Turks and Mamelukes that is, slaves chiefly from Caucasians, taken young and reared at Turke) not above 20,000.

Government.—The Government of Egypt being in the hands of Turks, is, as might be expected, an unqualified despotism. Under the first Viceroy and founder of the present dynasty Mohammed Ali it became in practice more or less enlightened, liberal and humane but its simple fundamental principles remain unchanged. He commenced his great reforms in 1806, by abolishing the right of private individuals to hold estates in land. Thus he became the proprietor of the whole kingdom (houses and gardens excepted) and found himself in a position to carry out his schemes of improvement. He then divided and subdivided the whole country the officers of every grade, down to the Sheikh of Beld or village chief, being not merely magistrates, but overseers of work and tax-gatherers. The Fellahs received wages, sowed their fields as they were ordered by the Government, carried their produce to the Government stores, and were paid for it at the Government prices. Thus Mohammed Ali took into his own hands all the agriculture, as well as all the manufactures of the kingdom. He aimed at developing the resources of Egypt, but he never dreamt of turning to account the mismanagement of national prosperity namely the untiring energy with which every man labours to promote his own welfare. To foster this spirit, is to make a nation rich. But the prosperity which Mohammed Ali had in view was that of his own treasury and not that of his people. He aimed at being the sole farmer, manufacturer and merchant in his dominions; and to his subjects, who were reduced to abject slavery and heavily taxed, he left but a wretched subsistence. All the reforms effected by Mohammed Ali, his schools, manufactures, canal plantations, well appointed army and increasing navy all tended towards the organization of a system on which he reckoned for the increase of his financial means and political power but as to the instruction or well-being of his people in general nothing could be further from his thoughts. The people were reduced by him to the deepest distress, while he seriously amassed no treasures.

Revenues and Expenses.—The revenues of Egypt are derived

FELLAHS ENGAGED IN AGRICULTURE, EGYPT.—From *Victor's Oriental Album*.

accountants. With these aboriginal Egyptians are mingled, in various proportions, Turks Arabs (chiefly Bedouins) Armenians, Greeks, Berbers, Negroes, Jews, and Franks. The Turk form a privileged class or kind of aristocracy and hold the principal offices under Government. The Arab tribes considered as belonging to Egypt, and to whom lands have been assigned, are the Bedouins, who supply the country with camels, sheep, and, to some extent, with horses. Their herds are on the borders of El-Fayoum; their numbers about 250,000. The Armenians are generally bankers or jewellers

from various sources, the chief being the gift or land tax, for which the districts are answerable however individuals may fail, so that the Government is sure to be paid. This yields nearly half of the whole revenue. Next in importance are the proceeds of monopolies, namely of cotton, indigo, sugar, rice, oil, etc. Then come the excise, the customs, taxes on grain brought to market, on cattle slaughtered on date trees, etc. etc. in all producing about \$2,500,000. The Egyptian army is composed of 150,000 regular troops, 12,000 of whom are cavalry and of about 40,000 national guards. To these may be added about 40,000 irregular cavalry (Bedouins, chiefly in Arabia). The fleet consists of 10 or 11 ships of the line six frigates, and a dozen smaller vessels connected with it and with the armaments, is a force of 40,000 men. Thus the fleet maintained by a prince whose revenues hardly exceed two millions and a half, cannot altogether fall much short of 2,000 men. The officers, those of high rank especially experience liberal treatment while the men, who have been, for the most part, forced into service by conscription are miserably paid.

Historical Monuments.—As the Arabic language has been for 12 centuries the language of Egypt, the literature of this country necessarily merges in the wide sea of Arabian literature. There, as in other Mahomedan countries, the Koran is the only book systematically studied. In the schools, indeed, established by Mahomed Ali for specific purposes, a place under the direction of French suitable texts of various kinds were indispensable, and these have been generally supplied by translations from the French. The modern Egyptians have as yet acquired, and but partially acquired, the first of mental sciences. It is not improbable that from the time of the Macedonian conquest nine centuries and a half before the Arab invasion, the Egyptian language began to give way to the Greek being its literary cultivation though it remained in vulgar use. The introduction of Christianity naturally favored the inroads of the Greek language and it is not surprising that the Coptic language, the specimens remaining to us should exhibit a large admixture of foreign words. After the Arabs were settled in Egypt, the Copts continued to be cherished only by a small and despised sect, and it ceased to be a living language; it is supposed, in the 12th century Coptic literature belongs to the Christian period and is almost wholly theological. If therefore we would look for the true indigenous literature of Egypt—that literary cultivation which belonged to the country when its historical importance was at its height—we must seek it in the greater monuments of that period. But as the description of those wonderful monuments belongs properly to topography we shall here confine ourselves to such a brief and general review of them as will serve to indicate the chief epochs of the history which they record and the cultivation of the people.

Passing over the 25,000 years during which Egypt was ruled by gods and demigods, we come to the mortal Menes the founder of the first of 30 dynasties recorded more or less perfectly by Manetho the high priest of Heliopolis, who lived about 3000 B.C. But so arbitrarily has the high priest's information been dealt with by the writers who have handed it down to us, and who have sought to adapt it to their own theories, that we cannot decide whether he places Menes 5400 or 3900 years before the Christian era. However it is worthy of remark that the son and successor of Menes is said to have written a book on anatomy and to have had a temple at Memphis. This city was already under the second dynasty the capital of the kingdom and mention is made, at the same early age of Bubastis or Pa-Puhti (Pi-heseth Exod. xxx. 15) dedicated to the goddess Pasht, the remains of which may still be traced at Tel Basta, on the E. side of the Delta. With the fourth dynasty begins the period of undoubted contemporary monuments. Sifted (Chimot) built the great pyramid in which his name is written but which must necessarily be the second and his nephew Menkare, the third. A portion of the coffin of Menkare, with his name, is secured as it is now in the British Museum, being probably the oldest specimen of writing extant beyond the 17th century and the tomb of Clapham and Sakhara. These earliest known specimens of hieroglyphic writing exhibit the art in complete maturity and compared with the pyramids prove that Egypt under the fourth dynasty was already far ad-

vanced beyond the infancy of civilization. The 11th dynasty was the first of the Theban or Theban kings, whose celebrity however commenced with the 12th, to which belonged Sesostris one of those kings whose achievements have been based on the half fabulous Sesostris and of whom there remains an inscribed pillar recording his conquests in Nubia, and his son Amenemhat III. who embanked Lake Moeris and built the labyrinth. This edifice, the foundations of which may be still traced, appeared to the Greeks, even when Karnak stood in all its glory to be the greatest and most wonderful in the world. The monuments of this distinguished dynasty are written or graven on the walls in the grooves of Beni Hassan. The 15th and two succeeding dynasties were those of the Hyksos or shepherds, whose tyrannical rule continued for some centuries. These shepherds, that is, pastoral and comparatively rude tribes, appear to have been the Canaanites who on their expulsion from Egypt, founded Jerusalem. With the 18th dynasty begins the most brilliant period of Egyptian history and the greatness of Thothmes, Achnosis (Amosis) the first king of the 18th dynasty is supposed by some to have been the Pharaoh (Pharaoh, king) under whom the Exodus took place though others suppose the Exodus to have taken place in the reign of Rameses (Sesostris) the last king, or last but one of this dynasty. Subsequently comes a series of great princes—Amenoph, Thothmes, Horem, Rameses, and Menephtah, to whom are due the great monuments of Karnak, Luxor (at Akhmin), Medinet Abu Amud, Karnak, etc. The inscriptions of these victorious kings are found at the present day from Syria (at the Nah-el-Kelb) to Jebel Barkal above Dongola in Nubia. Their conquests are recounted on obelisks, temples, tombs and represented by paintings, with hieroglyphic explanations, as elaborate and frequent, as to furnish the material of a voluminous, though still obscure literature. The tombs of the 12th dynasty are, many of them in the valley named Mian-el-Mutk (Gates of the Kings) extending in subterranean chambers, with painted or inscribed walls, to a distance, in some instances 500 ft. Some papyri written in the reign of Menephtah III. the last of this dynasty (and son of Rameses III.), the Sesostris of most writers 1840 B.C.) have been partially interpreted and throw a certain light on the manners of the age. One of them contains instructions written by a minister of state for the secret preparation of a certain feast whence it appears that the Ethiopian feast, entitled Table of the Sun (in old Egyptian phrase, the King) as described by Herodotus 800 years later had its origin in Thebes. I enter the 20th dynasty began the decline of Egypt and of Egyptian art while Assyria on the other hand, now rose. A Pharaoh, probably the last, of the 21st dynasty (Tanites, by Isaiah called the princes of Zion) gave his daughter in marriage to King Solomon (1 Kings ii. 10) The 22d began with Sennosheh, the Sitahak of Scripture (the first Pharaoh mentioned by name in the Sacred Volume) to whom Jacobson fled, and who afterwards sacked Jerusalem. In the paintings at Karnak, which recent his conquests, this event is shown in detail and the written title, King of the Jews, points out the principal capt. c. The next dynasty was founded by Sesostris (So, the ally of Horem, 3 Kings xvi. 4) originally from Upper Nubia. His name, as well as that of 14 followers Thothmes, or Zerah the Ethiopian, is found on the monuments. The 26th dynasty is distinguished chiefly by Psammetichus, in whose reign the Greeks began to grow numerous in Egypt. This was followed by the Persian Cambyzes and his successors for 121 years after which period we have again three dynasties of native princes, the last king of Egyptian race being Nectanebus of whom there remains a temple and inscription at Philae. He was driven from the throne in 341 B.C. by a usurper who was soon after displaced by Ptolemy Soter and he in turn was obliged, in 335 B.C. to make way for Alexander.

Zakrateh.—The monuments here briefly indicated furnish in truth a very simple literary store. The inscriptions when long, are rarely so read completely for though the Coptic affords a key to the structure of this ancient language, it supplies but an imperfect vocabulary. These difficulties may however be overcome by persevering study and the monuments of Egypt will probably hereafter enable us to restore with certainty the earliest dates of civilization. Hieroglyphic writing continued in use down at least to the third century of

hospital and poorhouse, and has manufactures of a fine black earthenware as a trade in fruit and vegetables, particularly asparagus in the vicinity as a fine bed of clay mounds of which is sent to other towns. Pop. 3000.

EIBENSTOCK is a factory village Zwicken, cap. hall of same name near bank. Blüde 60 m. W. Dröden. It is tolerably well built contains an old church, townhouse, and several and has extensive manufactures of tinware and lace chemical products and tobacco a considerable trade in cattle numerous mills, and three annual fairs. Medical plants are cultivated on a large scale and iron and tin have been worked here from a very early period. Pop. 52. — The *Wittmucke* on the Bohemian frontier, is the highest and kindest district of the country and belongs to what is sometimes called *Naxa* or *Siberia*. Pop. 2,281.

EIBENSTOCK is a village Holland prov. Friesland 21 m. E. Zutphen. It bank Borkel or Borkel here crossed by an excellent bridge near the Prussian frontier. It has a Calvinistic and a R. Catholic church and a school. In its vicinity are some blackberry tree works, breweries, and brickfields and weaving is likewise carried on. Pop. 1840 or with adjoining hamlets 2500.

EIBENSTOCK is a village in Austria, Styria, circle of and 22 m. W. W. Markburg in a valley on the Saganbach. It contains a church of a parish church and has blast furnaces and other iron works which derive their materials from coal and iron mines in the neighborhood.

EIBENSTOCK (GROSS AND KLEIN) two villages Bavaria Lower Franconia near Kaulbachhausen. The castle here crossed by a bridge. The church is an old castle and a manor, and has several mills (three are named and were formerly by grown in the castle). Pop. Gross Eibstadt 579, Klein Eibstadt 619.

EIBENSTOCK is a village and par. H. island prov. and forming almost a suburb of Lauenburg. It is a thriving place and has iron furnaces porcelain works and paper and other mills. Pop. 4900.

EIBENSTOCK is a village Hesse Darmstadt Rheinhessen near bank Rhine 9 m. N. W. It contains a Protestant and a R. Catholic parish church two parsonages a town house, and school. Pop. 1349.

EIBENSTOCK is a village Bavaria Lower Franconia in district of and near Miltenberg at the confluence of the Elz approach and Elz each of which is here crossed by a stone bridge. It has a parish church and two other mills. Pop. 985.

EIBENSTOCK is a market in Austria, Moravia, circle of and 18 m. W. W. Brum cap. lordship. It same name, near bank Schwanau, remarkable only for its old castle on a height between steep precipices, and surrounded by venerable oaks, founded in 1049 by Duke Conrad of Moravia and afterwards occupied by the Templars. Iron and argentiferous lead are extensively worked in the locality.

EIBENSTOCK is a village Bavaria Middle Franconia, cap. dist. of same name in a deep valley on the Altmühl here crossed by four stone bridges 67 m. N. W. Mauth. It consists of the town proper and four suburbs. It is the seat of a bishop, the best of an appeal court with extensive jurisdiction and of several other courts and public offices and is tolerably well built, having some good squares one of them adorned with a fountain and brouse statue of St. Willibald. The principal buildings are the cathedral founded in 1,650 a Gothic edifice, surmounted by two towers and possession of fine painted glass curious monuments in bronze and marble and several fine paintings; the castle a modern structure, the residence formerly of the prince bishops, and now of the Duke of Leuchtenberg containing a good museum and some interesting portraits; the townhouse, built in 1440 and surrounded by a square tower seven churches several of them hand some an ecclesiastical seminary a normal school a Capuchin monastery a Benedictine monastery and on a height on the opposite side of the river the old castle of Willibald, formerly a ruin but now repaired and used as barracks. The number of inhabitants consists of 20,000 and 100,000, comprising as it stands are and there are several breweries and numerous mills. Eibstadt is of Roman origin, and was surrounded by walls in 906. After passing through various hands it came into the possession of the Bavarians in 1805. In 1816 it became the capital of a principality of the same name, and was bestowed on Eugene Beauharnais, in whose family it still remains. Pop. in 1869 11,402.

EICHSTETTEN is a market in Baden circle Upper Rhine on the Treisgau, 10 m. N. W. Freiburg. It contains a parish church and has a trade in cattle and wine. Pop. 2051.

EICHFELDE is a village Baden circle Lower Rhine, hall of and near Wusthof, with a Protestant parish church and in its vicinity the castle of the lords of Benningen. Pop. 915.

EIDEL (Latin *Adel*) a river Denmark, falling into the N. Sea, N. of the Elbe, at Tønning, and forming, throughout the greater part of its course, the boundary line between the Duchy of Schleswig on the N. and Holstein on the S. Through the latter or Schleswig Holstein canal extending from the river at Rendsburg to Kiel Fjord, water communication is established between the N. Sea and the Baltic. The river rises in Holstein, about 12 m. S. by W. Kiel, flows N. W. to the Schleswig frontier after which its general course is W. though with many windings. Its total length is 92 m. of which 69 m. are navigable.

EIDSVOLD or **EIMVOLD-BARKEN** a small town and river-port, Norway built Agdenes in bank Wormen, near where it leaves Lake Midsen 34 m. N. E. Christiania. It has stone communication along Lake Midsen with the iron works of Lillehammer and is much resorted to during summer for the mineral waters of its neighborhood. It has some iron furnaces and small quantities of gold were formerly found in the vicinity. Eidsvold is chiefly remarkable for the meeting of Norwegian delegates, held here in 1814 when the constitution was formed and sworn to, declaring Norway independent and Christian Frederick prince of Denmark king. Though Norway soon after was compelled to submit to a union with Sweden this constitution comes to be the fundamental law of the country.

EIDEL a range of schistose hills, Prussia prov. Lower Rhine connected with the E. Ardennes and trending E. by S. towards the Rhine, chiefly between the rivers Ahr and Moselle. They are solid wooded, the valleys sometimes bold often picturesque and they present numerous crater-like lakes. They are sometimes divided into Hohen-Eifel (high Eifel) and Nieder-Eifel (lower Eifel) and Schmelz (snowy Eifel). Culminating peak about 2300 ft high. Numerous extinct craters and other traces of volcanic action are met with and they are still the haunt of the wolf and the boar.

EIG an old W. coast headland on Inverness about 10 m. from the main land in 56 S. N. 11° W. 5 m. long by about 3 broad. It is a bold and striking appearance when approached proceeding partly from the ruggedness of its base but principally from an irregular carved ridge of rock at its southern extremity called the *Beul* of Eig, which terminates in a peak of sumner pichetous porphyry rising 1339 ft above sea level generally speaking flat on the top, and perpendicular at the sides more especially on its E. side where it is perfectly perpendicular. Dr. McCulloch asserts that to him who may have been satisfied with the regularity of cliffs or the magnificence of Etna, this island offers both variety and novelty. There are numerous caves round the coast, in one of which, whose entrance is so small that a person must creep on hands and knees into it, the M. Donalds, inhabitants of the island took refuge from the pursuit of their enemies, the M. Lords of Etna. The latter discovering their retreat, kindled fires at the mouth of the cave and suffocated the M. Donalds whose whitened bones in the cave still attest the truth of the tragedy. The general surface of the island is uneven and consists mostly of heathy or mossy pasture but some of the low grounds are tolerably productive. Cattle rearing is the principal occupation. Pop. 461.

EIGELSTOFF is a village Baden, Lake circle hall of and near Stuckach. It has a parish church, three breweries of new and flour mills and a limestone quarry. Pop. 793.

EIGHT BROTHERS or **SOAWANA** a group of small islands in the coast, Abyssinia, at the mouth of the Strait of Bab el Mandeb, about 15 m. N. E. Ras Bar. The largest is lat. 12° 28' N. lon. 43° 38' 50' E. They are of a brownish colour and apparently volcanic of considerable height; and the greater number may be seen from off 70 to 80 m. in clear weather. The highest forms a conspicuous peak, rising about 8,000 ft. above the sea, with a small bay on its N. side, abundantly supplied with turtle and fish of various kinds.

EIJERLAND or **ZEJERLAND** (egg land) a former island, Holland, prov. N. Holland now forming the N. part, and about two-fifths of the island of Texel. It was formerly a sandbank, but by accumulations from the sea, it is now good

pasture land. It received its name from the numbers of sea-fowl's eggs formerly and still found upon it. Rabbits, also, are plentiful.

EIL (Loch) a salt water lake Scotland, forming the upper part of Loch Linze, on the borders of cos Argyll and Inverness.

EILAU or **ETNAU** (DUTCH) a tn Prussia, prov W Prussia, gov of, and 27 m S S E Marienwerder at the S. extremity of Lake Gersick. It has manufactures of woollen and flann cloth, hats, and leather and slight annual fairs. Pop. 1710.

EILAU or **ETNAU** (PRUSSIAN) a tn Prussia, gov of and 24 m S S E Königsberg, cap circle of same name on the little river Passer surrounded by small lakes. It is the seat of a court of law and several public offices, contains a church and an old castle, and has manufactures of woollen and linen cloth hats, and leather several mills a trade in horses and cattle and four annual fairs. In 1807 on two successive days, bloody but not very decisive battles were fought here between the French and the allied Russians and Prussians. Pop. 2220. — The **OLDEN** area, 850 sq. m. is well wooded and well watered, but does not contain much good arable land. Pop. 40,448.

FILDOV HILLS, three promontories conical and apud hills Scotland co Roxburgh S. of Melrose. Two of them attain to an elevation of about 1400 ft. above sea level, and on the third are the traces of a regularly formed Roman encampment.

FILFNUIG RG a tn Russian Saxony gov of and 26 m N W E Moreburg on an island of the Mulde here crossed by two bridges. It consists of the town proper surrounded by walls and ditches, and of four suburbs. It is the seat of a court of law and several public offices. contains a castle two churches, a chapel hospital and infirmary and has manu factories of calico, tobacco and refined wax a tilework, several mills, a trade in cattle and four annual fairs. Pop. 8080.

FILFNUIG a tn Rhineland Prussia gov of and 3 m. E. Ailsa-Chapelle. It contains a R. Catholic parish church and has a copper mill. Mines of calcine and lead are worked in the neighbourhood. Pop. 759.

FILFNUIG a tn Lippe Schaumburg land. Beckburg. It is about 2 m N W Althausen. It stands at the foot of the Harburg and has chalybeate and sulphureous waters, and mud-baths—this last the oldest in Germany.

FILFNUIG a tn Hanover gov Hildesheim cap bail of same name, at the N. near its junction with the Leine 40 m S Hanover. It is in the form of an irregular oval surrounded by old dilapidated walls with five gates and is poorly built, consisting of unquarried houses and narrow winding and ill paved streets with exception of one part, which having been burned down in 1826 has been rebuilt in a much improved form. It contains three churches, a gymnasium, orphan asylum, and two hospitals and has manu factories of woollen and linen cloth carriages, and chemical products several brandy distilleries, breweries, tanneries, and tobacco factories and an active trade in corn wool and flax. Eisenach was a place of considerable importance in the 16th century and early embraced the Reformation. In recent times it has greatly decayed. Pop. of its 1867 of April 13,019.

FILFNUIG one of the Society Islands S. Pacific Ocean lat. 17° 30' S lon. 149° 47' W (p) about 10 m long by 5 broad. The surface is hilly and rocky here and there shooting up into isolated picturesque peaks, while on the shores the mountains rise precipitously from the waters to the height of 2500 ft. There are several harbours, but that of Talon on the N. coast, is the best. It is a beautiful reef about 3 m in length, situated in a glen enclosed by precipitous sides, rising in places to the height of 2000 ft. at its head. It is an extensive flat of rich alluvial soil, now employed in the culture of sugar and studded with trees, shrubs, and other interesting objects. The sea here is of superior quality and the climate well adapted to its production. About 100 tons are made annually. Coffee, cotton and all other tropical plants succeed well on this island. A considerable quantity of tape is manufactured. A factory for spinning cotton, and weaving cloth and carpets was attempted here under missionary auspices but was unsuccessful. Pop. 1800.

FILFNUIG a tn Holland prov S. Brabant 18 m S by E. Hertogenbosch near the junction of the Rinde with the Demmel. It was formerly fortified, and surrounded with

a ditch, and formed a long parallelogram. But it now consists chiefly of a very long closely built street and has a neat townhouse, with a tower a prison, courthouse, R. Catholic and small Calvinistic church, a synagogue, and a Latin and several other schools. It is a busy manufacturing town though much fallen off from its former importance. Its hats are much sought after and it does a good trade in tobacco and snuff the latter having a considerable reputation. It likewise has cotton and woollen factories driven by steam and water power two breweries and a vinegar work. Formerly linen weaving tanning and shoemaking were largely carried on but those branches of manufacture are now extinct. It has a large market place where weekly and numerous annual markets are held. Pop. 8000.

FILFNUIG a tn Switzerland, cant. of and 9 m N by E. Schwyz, 5000 ft. above the sea, on the Alp here crossed by a covered wooden bridge. It owes its celebrity wholly to the neighbouring Benedictine Abbey which is visited annually by about 150,000 pilgrims, attracted by a black image of the Virgin to which faithful R. Catholics ascribe marvellous powers. The present building erected one of the finest in Switzerland was built at the beginning of last century and is the fifth since the foundation of the abbey in the 10th century. The village is chiefly inhabited by shopkeepers artisans and unskilled labourers supported by the pilgrimages. There are 55 inns and 20 alehouses in the village. During the dedication festival in September the great pilgrimage season there are two semi-circular rows of tents in front of the abbey where all kinds of religious wares may be purchased and in the centre is a well with 14 spouts whose water is highly esteemed by the faithful. In 1517 Ulrich Fugger the Swabian reformer then parish priest in Eisenach preached at the dedication festival with much fervour against indulgence, pilgrimages, and monastic vows that the monks led aside their cows, and the abbey was for a time deserted.

FILFNUIG a tn of S. Hindostan, prov. Cuttara lat. 18° 5' N lon. 25° 18' E. It contains eight temples belonging to the Jains and one or two to the Brahmans. In its vicinity is a colonial station of their favourite idol Paraswanath formed of a mass of calcine at granite. The country around is extremely unproductive and the inhabitants very poor.

FILFNUIG or **ELNAH** a river Austria a Tyrol, which rises on the S. slope of Mount Brenn and pursued a very circuitous course of about 50 m first S. E. to Nixen then S. S. W. past Klausen and finally descends W. to Botzen about 2 m below which it joins the bank Adige. Its torrent is very impetuous and often, particularly at the melting of the snow, overflows its banks. It is nowhere navigable.

EISENACH a tn Sax. Weimar cap principality of same name, beautifully situated amidst wooded hills belonging to the Thuringian forest at the foot of the Wartburg, and on the railway from Leipzig to Cassel 45 m W Weimar. It is surrounded by walls and has well built houses an elegant market-place and wide streets paved for the most part with basalt. It is the seat of a civil consistorial and criminal court and of several public offices and contains a palace built for res. dence by Duke Ernest Augustus, built 1600 and as a residence. Four churches, one of them the Nicholas kirche, a fine old Gothic structure a library a gymnasium normal industrial, and burgher schools a school of midwifery and school of design a savings bank a library society a house of correction, and four hospitals. The manufactures consist of woollen cloth fustian drills, linen thread worsted, bluing, peach brandy pottery especially pipe-heads, and sealing wax and there are several dyeworks numerous breweries a powder three oil and spinning and other in its. The trade is in seeds wine, and the above articles of manufactures. Besides two weekly markets, there are five annual fairs. Sebastian Bach was born here. On a lofty height in the neighbourhood surrounded by dark forests stands the castle of Wartburg the ancient residence of the Lanlgaves of Thuringia, and memorable as the place to which Luther was carried by a friendly stratagem of the Elector of Saxony after his appearance at the Diet of Worms. Here notwithstanding the papal excommunication he remained in safety for 10 months, in what he called his Fatima, and associated a considerable part of his translation of the Scriptures into his mother tongue. Pop. of in 1849. Area of the principality 820 sq. m. Pop. 78,845.

AKSENBURG a tn. Germany Baza-Altenburg cap. hall of same name, on a height near the Saale, 25 m. E. Weimar. It is partly surrounded with walls contains three churches, a castle with gardens, a courthouse, townhouse, lyceum, two schools, and a postoffice; and has manufactures of woollen goods, porcelain, and stoneware tile-works. Trade in corn and wood and five annual fairs. Pop. of in 1744. Area of land 49 sq. m. Pop. 16,750

AKSENBURG or **VAN VARENBURG** a tn. Hungary Thither Danube bounded, N by Oedenburg, N.E. Raab, E. Veszprem, S.W. and S. Zalaud W. Styria, and N.W. Archduchy of Austria area, 1536 sq. m. The surface is mountainous, particularly in the W. where several ramifications of the Styrian Alps terminate but the valleys and plains are so extensive, that nearly one-half of the whole is arable. The principal river is the Raab, which receives within the co. the Pinka, Ruck, Harpago, and Gyngyia. Though situated on the frontiers of Styria, it possesses few of the advantages for which that duchy is so celebrated, but has a full compensation in the fertility of its soil, which yields abundant crops of corn and fruit and is also well adapted for the cultivation of the vine, to which much attention is paid. The woods also are extensive, and furnish excellent timber. For administrative purposes it is divided into six districts. Steam-navigator to the capital. Pop. 185,000.

AKSENBURG or **VAN VARENBURG** a market tn. Hungary co. Eisenberg, near S. bank Harpago 27 m. S.E. Güns. It contains a R. Catholic church, and a Dominican monastery. Much good wine is grown in the vicinity. Pop. 60.

AKSENBURG a vil. Bohemia, circle Klattau 38 m. W. by S. Pilsen, in the Bohemian mountains, on the frontiers of Bavaria. It contains a parish church and a small castle, and has a saw and two other mills. Pop. 743.

AKSENBURG, or **AKSENBURG** a market tn. and lordship, Austria, Styria, circle of and 19 m. W. W. Bruck, at the foot of the Erzberg or Iron Mountain. It contains a Gothic church of the 13th century situated on a lofty height and is celebrated for its iron which has been worked on the mountain for 1000 years. Instead of lying merely in seams, the whole mass of the mountain seems to consist of iron ore which, though once worked by mines, is now rather quarried than mined in large open excavations. The blast furnaces, there in number about 14 m. distant and communicating with the workings by railway. The iron produced is of the best quality and makes excellent steel. P. p. 2,75.

AKSENBURG a tn. Hungary Thither Danube, co. of, and 11 m. N. W. Oedenburg is a pleasing district on the slope of the Leitha hills. It is surrounded by walls, with two gates contains an ancient parish church, a townhouse, a Franciscan monastery in which is the Ketschery burying vault, an hospital high school, and barracks. In the neighbourhood is a magnificent palace, belonging to Prince Esterhazy. Pop. 6700.

AKSENBURG a tn. Germany Baza-Altenburg, cap. hall of same name, on the Werra, 23 m. E.N.E. Meiningen. It stands in an extensive valley more than 1400 ft. above the sea, is divided by the river into the old and new town the former surrounded by a wall is the seat of a court of law contains an old castle, two churches, a townhouse, and superior school and has manufactures of woollen, linen, and cotton goods, dimity and leather numerous mills, tile-works a tobacco factory a weekly market, and seven annual fairs. Pop. in 1778. Area of land 64 sq. m. Pop. 12,335.

AKSENBURG (Moravia, Lodomer) a market tn. Austria, Moravia, circle, Brilon about 8 m. from Nikolsburg. It contains a parish church and a castle belonging to Prince Liechtenstein, which is regarded as one of the most magnificent in Moravia. It has manufactures of potash, leather bricks, and tiles and four annual fairs. Pop. 1851.

AKSENBURG par. Eng. Wills 1840 no. Pop. 167.

AKSENBURG, a maritime, tn. Russia, at the head of a land-locked bay of same name, E. above, Bay of Azov, territory of the Governor of the Black Sea, 50 m. W.S.W. Azov. The place for its erection was issued on March 6 1848 and as it is intended to form the entrepot for the agricultural products of the surrounding country considerable privileges are granted to its inhabitants, with a view to their increase.

AKSENBURG a tn. Prussian Saxony gov. of, and 35 m. N.W. Merseburg. It consists of the town proper and of five

suburbs. The former consists of the New Town, which is open; and the Old Town, which is surrounded with walls. It contains four churches, a castle, and gymnasium is the seat of several courts and public offices, and has copper furnaces, salt-petre, and potash works, manufactures of linen and cotton, a trade in corn, and three mills. In Eisenberg was born Martin Luther November 10 1483 and in it he died February 28 1546. The house of his birth though partly destroyed by fire, still stands, and with good taste has been converted into a school house, which bears his name, and in which poor children are gratuitously taught. His portrait is placed over the entrance, and within, his cap, cloak, and other relics are shown. The church of St. Andrew's contains the pulpit in which he used to preach. Copper is extensively worked in the neighbourhood. Pop. 8008.

AKSENBURG (Gnesse) a vil. Württemberg, circle, Danube, hall of and 2 m. E. Göppingen on the Fils. Pop. 1238.

AKSENBURG or **AKSENBURG** a vil. Austria, Styria, circle of, and 24 m. W.N.W. Laybach. It contains a parish church, several mills, and blast furnaces, employed in smelting the iron which is extensively worked in the neighbourhood.

AKSENFELD a market tn. W. Germany Hesse Cassel, par. Fulda, hall of same name, 7 m. S.E. Harfeld, on the road to Fulda. It contains a handsome parish church. Pop. in 1852. hall 9518.

AKSENBURG a tn. and par. Portugal prov. Douro, near S. bank, Vonga, 23 m. N.N.W. Coimbra. Important sales of copper were once worked here. Pop. 3390.

AKSENBURG or **AKSENBURG** a tn. Spain, Aragon prov. of and 80 m. N.W. by W. Barcelona at the confluence of the rivers Llobregat and Arga de Bui. It has wide level, and clean streets two parish churches, some convents a town-house, prison hospital and public storerooms. There are some remains of its ancient walls and gates, and along the banks of the river are beautiful alameda. Manufactures—linen and hempen fabrics, wine and oil. Pop. 5378.

AKSENBURG or **AKSENBURG** or **AKSENBURG** a tn. Austria, circle of, and 170 m. S.E. Perna lat. 56 50' 14" N. lon. 16° 34' 44" E. on both banks of the Loath or Loat at an elevation of about 560 ft. above sea level. The general external appearance of Eisenberg very much resembles that of one of the many flourishing towns of Europe. The streets are long and straight but unpaved, having, however, planks or logs laid on each side for foot-passengers. The principal street runs parallel with the river and is crossed by numerous smaller streets, leading directly to the bank of the lake. A number of the houses are of wood, but there are also a great many of stone, built in a handsome and substantial style, and possessing as much internal comfort as exterior elegance. On the S.E. bank of the river the buildings are spread over an extensive plain which is connected with the city by a handsome bridge these buildings include the Government magazine, mills, factories, &c., and enclose an extensive square or market-place. The principal part of the town however is on the opposite side. Here the streets are spacious and elegant, and the stone edifices, the habitations of merchants and some proprietors, exceedingly handsome. In this quarter there are a public granary a public sale room, a convent and several churches. The cutting, polishing, and engraving of precious stones, forms a principal branch of industry in Eisenberg, and the art is here brought to the greatest perfection. Men, women, and children, are met with at every step offering bargains of these tempting valuables, consisting chiefly of topaz, amethysts, crystals, Jasper &c. The greatest gemstone, says Mr. Kewenau, is observable in the dwellings of those who work in these gems, who even when in possession of considerable wealth, retain their native simplicity of dress and manners.

The fashionable dress of the women of Eisenberg is the ancient sarafan, and a covering for the head, called a kakhok tik, having a broad securing border and sometimes covered with jewels. This head dress is worn by married women only; long plated tresses forming the decoration of the unmarried, who do not cover the head. The young men delight in flowing locks. Parties of ladies frequently pass through the town, amounting in number yearly it is stated to 5000. The women are generally in waggons the men following in couples, on foot. Pop. (1851) 15,852.

EKATERINODAR, or **IKATERINODAR**, a *tu. Russia*, cap. country of the Black Sea Cossacks or Tcherkasskoi Cossacks, 1 bank Kaba about 100 m above its mouth and 185 m. S. Azof. It has broad, regular and straight, but excessively dirty streets, being in fact a complete mire. The houses mostly of earth, with a few of wood are of one story generally thickened, and all stand in direct lines, having usually garden attached. There is here a cathedral with six lofty wooden towers and a lyceum or higher school for frontier defenses against the Cossacks. Ekaterinodar is the seat of the Cossack hetman and other authorities for the district. On every side is swamp and morass, forming a mud defence to the town, in which carriage, horse, and traveller often sink fast for many hours. Pop. (1853) 10 000

EKATERINOGRAD or **IKATERINOGRAD** a *tu. and fortress Russia* gov. Caucasus, 30 m W Mosdok 1 bank, Turk. lat. 43° 40' N lon 45° 55' E. It is an ordinary Cossack town houses regular but poorly built. *Phosphorus* are caught here in abundance, and form a chief article of food. This is the most important military post of the Cossacks of the line, and was founded in 1777 by Prince Potemkin, to whose memory a stone triumphal arch was here erected by the Empress Catherine II. On the opposite bank of the Turk are seen the lofty summits of the Caucasus mountains, rising in the rear of the steppe and although at a distance of several days' journey they appear as if in the immediate vicinity. Pop. (1849) 2751. — (Wagner's *Russisches*)

EKATERINOSLAV or **IKATERINOSLAV** a *gov. of S. Russia* lat. 47° to 49° 30' N and lon. 33° 30' to 35° 40' E bounded, N by govs. Pultova, Kharkov and Voronez E by the Don Cossacks, S by Izmail and W by Kherson, with a separate portion in Don Cossacks, at the mouth of the Don area, 19,249 geo. sq. m. The government is divided into two sections by the Dnieper which intersects it in a semi-circular course N to S. about three-fourths lying E., and one-fourth W. of that river. The E. portion belongs to the steppe country of S. Russia being flat, monotonous, without trees often without water and with a lean saline soil. The W. portion is more undulating and more fruitful. The Dnieper forms part of the N. W. boundary and there are sandy smaller streams, chiefly affluents of the Dnieper and lakes and morasses are numerous. The minerals are granite, lime, chalk, salt, and garnet. The climate is moderate and healthy the winter short, and the rivers are not very firmly frozen the summer is very warm and often without rain. Wheat, spelt barley and oats are raised in quantity sufficient for local consumption and hemp, flax, poppies, peas, vegetables, and fruits are also cultivated. Grapes and mulberries frequently suffer from frost but melons, cherries, &c. succeed well. But the chief wealth of the government consists in its innumerable herds of horses, oxen, sheep many of them merino goats, and swine. Bees yield a large return and the silk culture is carried on by the Greeks at Mariupol, and the Armenians at Akchikhan. In the steppe, wolves, foxes, hares, wild cats, badgers, polecats, partridges, quails, ducks, and snipes are found and in the rivers fish are very plentiful. Wood is wholly wanting in the E. and quite insufficient in quantity in the W. fuel consequently is scarce, and the poorer classes are fain to burn dung litter and heather. The houses are of clay thickened with rushes. Of manufacturing industry there is little still some cloth leather candle, and beer are made, and some tallow smelting carried on, and there are no less than 235 distilleries. The exports are chiefly fish, tallow and other animal products. Education is in a very low condition. The government is divided into seven districts. Capital Ekaterinoslav Pop. (1850) 867,500

EKATERINOSLAV or **IKATERINOSLAV** a city S. Russia, cap. above prov., 1 bank Dnieper 250 m. N. E. Odessa lat. (Trinity church) 48° 27' 00" N lon. 36° 5' 52" E. (L.) The streets are long broad, badly filled up with houses, and very dirty. It is the seat of an archbishop whose jurisdiction extends over the neighbouring governments of Taurida and Kherson and has three churches, a theological seminary a gymnasium, 10 public schools, government offices law courts, barracks, several barracks, a police park, and botanical garden. In the vicinity is a large palace, in a ruinous condition, with extensive pleasure grounds attached. Once the residence of Prince Potemkin who here entertained Catherine II. in 1784, at which date the city was founded.

It has some cloth manufactures, and an important annual wool fair. In its district are one R. Cabbell, and 16 Monette colonies the latter came in the end of last century from the vicinity of Danzig and Elbing. Pop. (1851) 12 117

EKEVAS a small seaport, Russia, Finland prov. Nyland on a tongue of land near the N. E. entrance of the Gulf of Finland, 50 m. S. E. Åbo. It contains a church and has manufactures of woollen linen, and sailcloth. At its harbour which is shallow and small, some provisions and wood are exported. Pop. (1843) 1516

EKEBOE a small *tu. Russia* Archipelago of Åland entrance of the Gulf of Bothnia and on the W. of Åland, from which it is separated by a narrow channel. It is about 15 m. long, by 5 m. broad, and contains a small village of its own name, at which there are a chapel and a telegraph.

EKEHE or **EKA** a river Mongolia, issues from the S. end of Lake Kossagail in about lat. 50° 28' N lon. 100° E; from which it flows S. E. and joins the Selenge at lat. 48° 30' N lon. 104° E. It receives several considerable affluents. Entire course about 170 m.

EKKHIM, a *tu. Upper Egypt*. See **AKHIM**
EKIM KILAN a *tu. Asiatic Turkey* part. of, and 140 m. E. Sivas near the junction of the Kamak or Aza with the Euphrates. It has well-built brick houses, and a good caravanserai and a mosque. Pop. 1000 to 1500

EKSIO a *tu. Sweden* Ålän Beland, on an elevated plain 160 m. S. W. Stockholm. It is an old place, but possesses no object of interest. The inhabitants live chiefly by agriculture and rearing cattle. There is a mineral spring in the vicinity. Pop. 1100.

EL, or **AL**, the only Arabic article and a qualifying *The*. For names compounded with **EL** not found here seek under the second word, as *El Kafir* See **KAFIR** (L.)

EL-AHBA **EL-HAGA** **LACRIS** **LAMBA** and **LAKHBA** a fertile dist. of E. Arab. about 90 m. S. W. Kadif or El-Kadif, about lat. 25° 25' N lon. 49° 45' E. In former times it was also called Hagar. The word **AHBA**, which frequently occurs in Arabian geography is said to signify a place where water sinking through the surface of the ground is retained beneath. **EL** **AHBA** is separated from Kadif by a sandy desert but at the village of Jumah within 20 m. of the former place, the scene improves, water abounds and date plantations delight the eye. The date gardens of **EL** **AHBA** are very extensive and productive being well watered from wells and lakes but the inhabitants deny the salubrity of any constant river running through the district and connecting the lakes. The lands adjoining the date gardens produce wheat, barley, millet, and rice. The tamarisk here attains a large size and serves for roofing timber. The domestic industry of **EL** **AHBA** consists wholly in weaving camels, and making shawls or overcoats but the inhabitants derive large sums annually from the sale of camels and of dates and all the trade between the coast of the Persian Gulf and the Redoubt of Keld, passes through this oasis. The Turks, at the conclusion of their war with the Wahab (1818) occupied **EL** **AHBA**, but soon after restored it to its original possessors, the Beni Khalid, who consented to pay a small tribute to the Porte. The whole oasis is supposed to contain a population of 50 000. — (Capt. Haller in *Trans of Lat. Soc. Bombay*)

EL-ARABICH — 1 A *tu. Morocco* See **ARABICH** — 2 (or **ARABICH** or **ARAB**) a vil. Lower Egypt, on the Medi terranean, at the mouth of the Tarent of Egypt or Wady-Arabich, on the route from Egypt to Syria. It is simply a fort surrounded by a few houses and is supposed to have the site of the ancient Rhinodora. It was taken by the French Feb. 15 1799

EL BALAD an anc. city Arabia, of which the ruins only now remain, on the S. E. coast within 100 yards of the sea lat. 17° 1' N lon. 54° 12' 30" E. The ruins are spread over a space 2 m. long and 600 yards broad and consist of extensive mounds of loose brown stones, worn and blackened by long exposure to the weather. Groups of columns surmount small mounds with capitals, shafts, pedestals and fragments of ornamental sculpture scattered around them, and occasionally brought up for baths all of which have been skillfully worked out of solid blocks of freestone. It is not certainly known when, or by whom, this ancient city was built; but there is a tradition that it was founded about the middle of the 13th century

EL-BARRAN, or **AL-BARRAN**, a to European Turkey prov. Athens, 64 m. S.E. Saronic Sea, on a tributary of the Bosporus lat. 41° 11' N lon 19° 56' E. It has in a fertile plain, is capital of a sanjak, and seat of a Greek bishop, and has some trade in iron and copper wares. Pop. 3000.

EL-BOTHER, a small low sandy island Red Sea, Arabian coast lat. 15° 25' N lon 41° 30' E 3 m. N.W. Kamaran Island, about 3 m. long N. to W., surrounded by a reef, which extends off the S side 14 m.

EL FLURTI, or **EL CALADCO**, a to. Chili, lat. Chile, near 10° E. extremely on a steep slope. It contains a large wooden church. A sunset of the town there is a good anchorage, in from 30 to 32 fathoms, muddy bottom.

EL-KASAR a in Upper Egypt, esp. of the Wah-el-Dahel or W. Oases, in the Libyan Desert, lat. 26° 40' N lon. 28° E. It is the residence of a shahik. Pop. 1500 to 1500.

EL-KHARGEH or **GREAT WADY EL-KHARGEH**, an oasis in the desert of Upper Egypt; lat. 24° 35' to 26° N and lon. 30° to 31° E. The productions are figs, rice, barley, wheat, millet, clover with cotton, and some fruits, the desert palm, mesquit, and a few other plants. The caravans from Darfur to Egypt pass through this oasis on their way to Suva. Slaves are also brought this way by Takroros who are blacks from the interior of Africa and Moabites. At the distance of about 13 m. from the hills that bound this oasis on the E. stands the town of the same name, in the vicinity of which are the ruins of the great temple of El Khargeh about 142 ft. long, by 63 broad, and about 30 ft. in height. There are many other interesting ruins around. Pop. of the oasis estimated at 4290 of which 3000 are in the town of El Khargeh.

EL-KOS, a beautiful river Morocco near the N.W. extremity of the empire, rises in a mountain range in the interior from which it flows W., and enters the Atlantic at El or Al Anzuch lat. 35° 12' N lon 6° 5' W. It flows through a fine valley its banks are fertile, and adorned with many gardens whole length, about 40 m.

EL-ORLEID cap. Kordofan, Sen Osm.

EL-ORU an al Asiatic Turkey. See RUCE.

EL-TTEH (Dessau) of Arabia, comprising the extensive tract lying between the upper or S. parts of the gulf of Naam and Akaba, or between lat. 32° 35' and 33° E. It is traversed by the Egyptian caravan route to Mekka.

ELBA the *Ile* of the Romans, the *Æolia* of the Greeks French *Elbe* an *Isl* Mediterranean Sea belonging to the Grand Duchy of Tuscany from the coast of which it is separated by the strait of Pionchio about 6 m. wide. It lies 80 m. W. the N. end of Corsica lat. (N. extremity Cape Vita) 44° 52' 30" N lon. 10° 25' E. (a) and is 17 m. E. to W. by 12 m. N. to S. at its E. end, and 6 m. at its W. end. It is traversed in its whole length by mountains, attaining a height of 5335 ft. and its coasts are bold and very sinuous, forming some good harbours the best of which is that of Porto Ferro on the E. coast. The climate is healthful and mild the soil rich and fertile in the valleys, still agriculture is much neglected. Though seven eighths of the island might be under cultivation and three-fourths in grain and vines yet three-eighths are covered with wood, and only three-eighths are under tillage. The grain produced does not suffice for more than three months' use is superabundant and good. In fact, vice culture fishing—chiefly tinsley, scurvy, and anchovies—and iron-mining, constitute the chief wealth of the inhabitants. Among the numerous kinds of fruit and other trees which flourish here, may be named the date-palm, also, almond fig orange, citron, chestnut, olive, &c. Iron abounds, but there is only one mine in operation traversing limestone for building and for burning, bolls and potter's clay are wrought, and to a limited extent, fine granite and marble. Marine salt and medicinal salts are made there are about 50 limkilins and some little vanner brandy straw-hats, common pottery leather and cottons, are manufactured. Public instruction is much neglected, but, in 1842 there were 15 schools. It is divided in to four communes—Porto-Ferraio, Mariani, Porto-Lungone and Rio.

Elba has often changed masters Etruscans Carthaginians, and Romans, having become paramount in turn in its earlier days. During the Middle Ages it belonged to the Pisans to these succeeded the chiefs of Milan and Florence. In 1648 the Emperor Charles V. ceded the territory of Porto-Ferraio

to the Grand Duke of Tuscany. In 1806, Philip III. of Spain took and fortified Porto-Lungone. Till near the close of the 18th century the island was shared between the Neapolitans (who had succeeded to the Spanish in 1759) and its feudal sovereigns, the lords of Piombino. From July 1794, till April, 1797 it was in possession of the British Crown. It was ceded to France, by the treaty of Amiens, in 1803, but reunited to Tuscany in 1807. The treaty of Paris, in 1814, erected Elba into a sovereignty for Napoleon who resided in it from May 8, 1814, to February 26, 1815 and after his second abdication, it reverted to Tuscany. F. (1856) 11 163.

ELBE (Taz) [see *Alba* Bohemian Lake Dutch *Elv*], a river of Germany one of the largest in Europe. It rises on the S.W. slopes of the Schneekoppe or Schneap, one of the highest mountains of the Riesent-Gebirge, which separates in part, Bohemia from Silesia, at a height of 4440 ft. above sea level lat. 50° 47' N lon 10° 40' E. From this point it flows nearly due S. into Bohemia, through a narrow and wild valley passing Kunitzgrätz, to lat. 50° 5' N about 50 m. when it turns to the W. and having held on that course to lat. 16° E about 40 m., takes a general N.W. direction till it falls into the North Sea, in lat. 53° 55' N, lon. 10° 55' E. intersecting Saxony a considerable portion of Prussia, part of Hanover and in the latter part of its course separating the duchy of Holstein from Hanover the former being on the r. the latter on the l. The whole length of the river including windings, is upwards of 780 m. direct distance, about 295 m. The tract of country through which the river passes has been divided into two different and well defined basins, namely the basins of the Upper and Lower Elbe the former being a plateau surrounded by mountains and the latter a country entirely of plains, and of twice the extent of the former. The basin of the Upper Elbe, which comprehends nearly the whole of the kingdom of Bohemia, is a hollow space excavated out by the waters of the Elbe, and the Moldau a species of across the interior of which is covered by the low ramifications from the mountains that surround it, and which decrease in elevation as they approach the centre the two S. sides of the space are formed by the Forest of Bohemia (Böhmerwald) and by the mountains of Moravia the two N. sides by the Elbe-Gebirge and the Erzgebirge. This basin which is, for the most part, ill cultivated and thinly peopled, at the same time possesses vast forests very extensive iron mines and a celebrated breed of war horses its roads are few and bad and their collective length does not exceed 80 m. The basin of the Lower Elbe is composed almost entirely of plains and of meads covered with forests, morasses, and small lakes but slightly fertile yet well cultivated well peopled and having the advantage of extensive communication. The principal affluents of the Elbe are, on the right, the *Isar* *Saale* *Elster* and *Havel* on the left, the *Alder* *Moldau*, *Eger* *Mulde*, and *Weser*. In the lower part of its course, namely between Harburg on its left bank, and Hamburg and Altona on its right, the river is divided into several arms by five large and seven small islands these arms, however unite again in a single channel at Blankenese, about 5 m. below Hamburg. Between the two latter places the land rises in gentle slopes, covered with wood, and studded with handsome villas and gardens. A similar scene presents itself on the r. bank above Dresden where picturesque hills ascend from the edge of the river topped with luxuriant woods, while their lower slopes, turned to the southern side, are covered with vineyards, and from a continuation of the Saxon wine district. The mean depth of the Elbe is 10 ft. and its average breadth 900 ft. but it widens at some points to upwards of 1000 ft. and at its mouth to 5 or 6 m. It is navigable for about 470 m. but its navigation is much impeded by the lowness of its bed the greater part of its course being only from 150 to 200 ft. above sea level. Its estuary at Cuxhaven is also much encumbered with sandbanks. It is well stocked with fish, particularly salmon, eels, and sturgeon.—(Lavallee's *Middle* *Topography* Johnston's *Physical Atlas* Murray's *Hand-book*, &c.)

ELBERFELD [Dutch *Elberweld*] a to Prussia, gov. of and 15 m. E. Düsseldorf esp. circle of same name, in the beautiful valley and on both sides of the Wupper enclosed by lofty hills. The older part of the town contains a number of good houses but, on the whole is poorly as well as irregularly built the newer part is handsome and lighted with

gus. Taken in connection with Barren which is properly a continuation of it, it stretches along the valley forming an almost continuous street of 6 m. It owes its prosperity to the cotton manufacture, of which it is the central locality in Rhemish-Franca, and has acquired the greater part of its importance during the present century. It thus has no building which excites interest by their antiquity and few of any kind much deserving of notice. The most conspicuous are the townhouses, the great hall of which is adorned by numerous frescoes of allegorical character by modern artists; three parish churches, one of them a handsome structure, in the Byzantine style, a museum, a gymnasium, with a library and mathematical and physical cabinet, an exchange, a theatre, an industrial and several burgher schools, a sawi gubank, and infirmary. The hill of Harde, in the neighbourhood, surmounted by a balustrade, from which a fine view of the valley is obtained, and surrounded with richly laid out gardens furnishes an excellent promenade. In addition to the cotton manufacture, which under a variety of forms, is the great staple of the town, linen, woollen silk and mixed silk goods, ribbons and velvets are extensively made and largely exported. There are also numerous mills for spinning cotton twist, linen yarn, and worsted, and dye-works, celebrated for the richness of their colours. The environs are almost covered with bleaching-grounds. Elberfeld is the seat of a mercantile and other courts, and possesses a chamber of commerce a harmonie and several other societies. Pop. (1846) 88 840.—The climate, area 88 geo. sq. m. is a plain, much broken by hills, and well covered with wood, but, in general, ill-adapted for agriculture. The far greater number of the inhabitants are engaged in manufactures. Pop. 124,786

• ELBERTON pop Eng Gloucester 1878 ac Pop 204.

• ELBERTON or ELBERTON in France dep. Seine-Inférieure. 11 m. S.W. Rouen, and about 4 m. from the Paris and Rouen railway. It is beautifully situated in a picturesque valley. I. bank, Seine. Its river streets are wide and hand some, some of them spanning with a spacious area, bordered with chestnut trees, called the *champs de foires*; and it has eight artesian wells, with six well-supplied public fountains and is lighted with gas. There are two parish churches—St. Stephen and St. John's—the former a fine Gothic edifice, with some rich old stained glass the latter of similar character and larger but less ancient. It is the seat of a tribu nary of commerce a consultative board of manufactures and a central of prod'houses. Elbert is chiefly noted for its spinners numerous factories, dyeworks &c for the manufacture and finish of woollen cloths—being the third town in France for this species of manufacture. A rivulet, which traverses the place, in several windings, called the Puchet, is usually employed in these operations and in fulling washing, &c. Generally speaking, the highest priced French cloths are not made here but lighter woollens, such as saphys, habit cloths chequered stuffs, fine coloured dannel fabrics, mostly for China, billiard table covers and all sorts of fancy goods, made to a great extent. Elbert is also an entrepot for the better class of Lowland and Scotch jacks and for the wool of Shetland, from Germany and England. Bone, chemical stuffs, oils, and all sorts of machinery for the woollen manufacture, are likewise made. It has also some trade in grain and timber and daily traffic by steamer with Paris, Rouen and Le Havre. Elbert is an old town and as early as the 16th century had 80 cloth manufactures but its importance as a great exporting cloth mart, dates from about A.D. 1780 Pop. (1881) 10258 (1846) 10100

• ELBING [i. e. Elbing, Elbing] in Prussia, gov. of Posen 28 m. E.S.E. Danzig cap. sits on the Elbe, a navigable stream, which falls a little below into the Frische Haff, and communicates by a canal with the Nogat an arm of the Vistula. It is surrounded by lofty surmounted walls, with five land, and two water-gates, is defended by two forts, and consists of the Old and New Towns three mms and 11 outer suburbs. In the Old Town the streets are narrow and hemmed in and darkened by lofty houses. In the new town, the streets are generally spacious, and the houses well and uniformly built. The public buildings and establishments include one H. Catholic, and eight Protestant churches, a synagogue, gymnasium, and numerous parish schools, five hospitals, a convent for poor ladies, a poorhouse, house of industry and several other benevolent institutions. The manu

factures consist chiefly of soap tobacco, refined sugar chicory and virtual. There are also building yards, at which a considerable number of vessels are built or repaired. The trade has recently increased and threatens to come into formidable competition with that of Danzig. Elbing is the seat of a law court and several public offices. It is always garnished by a body of hussars. Steamboats sail daily for Königsberg. Pop. (1846) 22 246.—The climate, area 207 geo. sq. m., is flat, fertile, and tolerably well wooded. Pop. 58 657

• ELBINGERODE, a m. Haverov gov. Hildesheim, cap. built of stone mms, on the Rohrbach which here falls into the Hude, 18 m. W. Quedlinburg. It occupies a bleak and naked site, about 1600 ft. above the sea, consists of one long street, is the seat of several public offices, contains a church, and an old castle; and has extensive iron mines and blast furnaces in its vicinity. Pop. 3051

• ELBOGEN KALOEN or ELBOEN [elbow] a m. Bohemia, cap. sits on a name situated on a steep rocky promontory round which the Elbe here crossed by a chain bridge, makes an elbow like bend, to which the town owes its name, 74 m. W. by N. Prag. It is surrounded by old walls, and defended by two forts and is, in general, well built and contains eight churches one of them a handsome Gothic structure an old castle finely situated, but now ruins and used only as a prison a townhouse, in which a large mass of meteoric iron is preserved and a courthouse, in which the meetings of the curia are held. The only manufacture of importance is porcelain, of which there is an exten sive factory in the suburbs. Pop. 2000.—The climate, area, 538 geo. sq. m. is fertile, and well-adapted for agriculture; it is also rich in minerals and contains seams of coal. Pop. 149,800.

• ELBURG a maritime in Holland prov. Gelderland, on the Zuider Zee 88 m. N. by W. Arnham lat. 52° 26' 56" N lon 6° 50' E. It forms a walled parallelogram with towers at the four corners and is surrounded by a ditch, now used for stepping hides, &c. while the wall is chiefly a defence against the sea. It is a walled city, a Oosthoek, over which are five stone bridges, some of which are markets and is so regularly built, that, as the centre of the town the four gates, one on each side, as be seen. It has an old and a new townhouse, a Reformed church, and a synagogue some benevolent institutions and several schools. Besides agriculture and cattle-rearing the chief occupations are fishing especially of herrings tanning and ropemaking &c. F. 2100.

• ELBURZ, or ELBURZ—A range of mountains Central Asia occupying a middle position between the Ait-Taurus and the Kuen-lun, and forming the connecting range by which these two systems are united. The Elburz pursues a course nearly E. and W., skirting the S. shores of the Caspian and stretching E. to the highlands of Mervan, in the N.W. part of Afghanistan. This mountain tract, irregular in shape, and spreading out in some parts to a breadth of full 200 m. is divided longitudinally into ridges, separating valleys which communicate with each other by passes or defiles, and form an extensive aggregate of districts many of which are well inhabited and cultivated. One of the loftiest peaks is Dena vad (which see) —9 The culminating peak of the Caucasus mountains (which see)

• ELCHO, (anc. Elcho) a populous in Spain Valencia, prov. of, and 14 m. W.S.W. Alcaniz, I. bank, Vinalopé or Elcho, crossed here by a substantial stone bridge. It was formerly surrounded by walls, flanked by towers and a fosse, some vestiges of which yet remain. It contains the seats are wide, clean, well kept and lined with wall-bells houses and handsome public buildings and there are many squares, of which the Plaza Mayor containing the spacious townhouse, erected about the middle of the 16th century is the largest and some of the others are surrounded with fine buildings, and have agreeable public walks. Elcho has three parish churches. That of Santa Maria is a noble structure, in the composite order having a majestic dome, five gates, a famous organ, and a great variety of statues, pictures, monuments, &c. of considerable merit. Those of San Salvador and San Juan Bautista are large, and have tastefully decorated interiors. There are, besides numerous chapels and three convents, one of which is now converted into a hospital, a college 11 schools two prisons, an excellent market-house and fish market, several sugar houses, cavalry barracks, cenae-

tury an extensive feudal palace of the Duke of Arcos, a second of the Counts of Almorá, a third Episcopal and in the courtyard, near the cavalry barracks, an old square fortress, called La Torre, belonging to the Marquis of Corrales. Manufactures—linen, woolen and cotton fabrics, soap, brandy, wine, oil, metal hardware, and implements of husbandry. Considerable trade in grain, fruits, barley, soap, soda, cattle, rice, and wool. Elche contains numerous Roman remains. It suffered considerably in the Peninsular war and was occupied by the Carlist general Forcadell in 1837. Pop. 18,060.

ELCHE DE LA SIERRA, a tn. Spain. New Castle, prov. of, and 35 m. S. W. Alicante. It has a church, handsome townhall, plaza, and two schools. Manufactures of linen, woolen, and hempen fabrics, shoes, and oil and trade in hemp, saffron, silk, grain, and cattle. Pop. 8039.

ELCHINCE (Ossa), a vil. Bavaria, Swabia, r. bank, Danube, 9 m. K. E. Ulm. The Austrians were here defeated by the French under Marshal Ney who was rewarded by Napoleon with the title of Duke of Elchingen. On a neighbouring height stand the handsome build ings of an old Benedictine abbey.

ELLDA (Latin, *Adellum*), a tn. Spain, Valencia, prov. of, and 23 m. N. W. Alicante, on a gentle eminence, above a bank. 1 mi. S. of Elche. The houses, generally of two or three stories, are substantially built and two squares, and a few modern streets, are regular and spacious but the old streets forming the greater number are narrow and winding. All the streets are clean. The principal buildings are the parish church, town house, Franciscan monastery, prison, hospital, and a large old castle, in a very dilapidated state. The manufactures consist of paper and articles of copper, in both of which there is a considerable trade. Weekly market, and a large annual fair. Pop. 3546.

ELDA (Latin, *Adellum*), a tn. Hannover, gov. Culmburg, near r. bank, Haller 15 m. S. S. W. Hannover. It consists of the town proper and two suburbs is entered by two gates, contains a church and a townhouse and has manufactures of starch, blowpipes, and two mills. There is a sulphurous spring in the vicinity. Pop. 3210.

ELDE, a river Mecklenburg-Schwerin, which rises in lake Müritze, forms lake Eldgyn, Flämen, Malchow and Flämen Bows W. by S. receives the waters of lake Schwerin on the right, and falls into the Elbe at Danitz, about 62 m. S. E. Hamburg. Total course, 94 m.

ELDEN a vil. Holland. See *ELZER*.

ELDERBRIJD par. Eng. Worcester 23 1/2 m. S. E. 1794. **ELDERBRIJD**, or *ELDERBRIJD*, a vil. Scotland, co. Renfrew 2 1/2 m. N. E. Paisley. Inhabitants principally employed in weaving and cotton spinning. See *WILSON WALLACE*, the Scottish poet, was a native of this place. Pop. 1085.

ELLEK two places, Hungary.—1. A vil. Thither Thales, co. Arad, about 15 m. from Rimand. It contains a R. Catholic parish church and is inhabited almost entirely by Germans. Pop. 2314.—2. (*Stett-Ellek*, or *Stettendek*) a vil. Thither Danube, co. Kleinburg, on the borders of Byra, 23 m. S. W. Güns. It stands among low hills, and contains a parish church. Pop. 125.

ELKNER, a vil. Hungary, Banat, co. Torontal 9 m. S. W. Nagy Bekacsk. It contains a handsome Greek un- canonized church. Pop. 2775.

ELKE HANT [name name, German] a small isl. in the North Sea, in the Bay of Roskilde, 7 m. E. from the coast, and 6 m. from the mainland; lat. 55° 57' N. lon. 7° E. It is about 5 m. in circumference, and consists of low hills, with a narrow valley intervening. It is much overgrown with wood but has several springs of good water. The inhabitants cultivate rice, but are principally employed

in rearing sheep and poultry for the Roskilde market. This island has obtained great celebrity from its remarkable over- temple, and its innumerable mythological figures, some of them of gigantic proportions. The area is 180 ft. long, 123 ft. broad, and 18 ft. high supported by pillars cut out of the rock, many of which were broken down by the Portuguese, while the island was in their possession, leaving capitals attached to the roof without their supporting pillars, and columns split and without capitals, &c. It rests on twenty-six pillars and sixteen pilasters; but neither the roof nor the floor being a plain the height varies from 17 ft. to 15 ft. There are eight pillars and pilasters in a line, from the N. to the S., and from the E. to the W. entrance. In the centre is a

TEMPLE FIGURE IN THE TEMPLE OF ELEPHANTA—From *Quincy's Travels*.

gigante triform or three-formed god—Brahma the creator in the middle Vishnu the preserver on the one side and Shiva the destroyer on the other. There are several other compartments, containing various representations of the Hindoo deities. Nothing is known, either of the age when these memorials were constructed though it is supposed not to be very far back, nor of the race by which they were executed. It is not now used as a temple, but is generally supposed to have been dedicated to Shiva. The island is named Elephanta, from a large olivary elephant cut out of an local black rock that at one time stood near the landing place.

ELEPHANTINE [Arabic, *Thoset-el-Bog*] an island, Upper Egypt, in the Nile at the extremity of the Cataracts, opposite Assuan lat. 30° 5' N. lon. 32° 55' E. about 1 m. long by 1/2 m. broad. It is formed of granite, covered by fertile alluvium; is inhabited by Nubians, and rich in ancient ruins. The most interesting ruin is that of the obelisk mentioned by Strabo; the upper part of which however was destroyed in 1822 at which time, also, sandy other remains were dilapidated and the stones taken to build a palace to the pasha, at Assuan. There are also a granite gateway and numerous ruins of houses, besides quays and fragments of pottery with Greek inscriptions are plentiful.—(Sir G. Wilkinson's *Modern Egypt*).

ELI HANT'S RIVER, Cape Colony. See *OSBURN'S RIVER*.

ELSED or *ELZER*, a market in Hungary Thither Thales, co. Bihar on the Koros, 60 m. S. E. Debrecen. It contains a Protestant, and a R. Catholic parish church, and has a trade in salt. The old castle of Solvayk is in the vicinity. Pop. 1870.

ELSTZ, a tn. Russia. See *LEZAR*.

ELEUTHIS, an ion. city, Greece, near Lepina, 12 m. N. W. Athens. The site is covered with ruins. Amongst these the most remarkable are the six arches of an aqueduct the remains of a theatre, of several temples, and paved ways. The ancient port of Eleuthis was artificially enclosed by a semicircular pier.

ELEUTHERA, one of the largest of the Bosphorus isls.; lat. (N. point) 34° 56' N. lon. 75° 5' W. (N.) It is of very

irregular shape, and, like most of the other islands of this group, long and narrow. Its length is about 70 m. breadth from 5 to 4 m. extending at one particular point to 10 m. Pop. 1232

ELIUTTEROPOLIS, a great and ancient city Palestine, supposed to have stood on the site of the modern village Beit-Gatir, or Beit-Jilam, in the S.W. plain of Judea, 14 m. N.W. Hebron, and 20 m. S.W. Jerusalem. In and around this village are extensive and massive ruins of different ages. They consist principally of the remains of a fortress of immense strength, encompassed by a very ancient and strong wall, built of large square stones, unincorporated an irregular ancient walls, numerous massive vaults, with fine round arches. Remains of ancient walls and dwellings, and of a church, exhibiting strong and beautiful masonry.

ELFDAL, a vil. Sweden, dist. of and 70 m. N.W. Falun, amid well-wooded and picturesque scenery. L. bank, Dal., which here forms numerous falls and cascades. The chief objects of interest are the porphyry quarries in the vicinity and the royal manufactory at which a great variety of articles in porphyry including vases, basins, and boxes, of great beauty and exquisite finish are made and largely exported. There is a mineral spring here.

ELFORD, par Eng Stafford 2070 sq. Co. 468.

ELFSBORG or **WEXMANSÖ** a lin or co. of S.W. Sweden, bounded, N. by Carlstad län E. Lake Wener and Skaraborg län, S. E. Östergötland and W. Göteborg län, and between lat. 57° 10' and 58° 30' N. and lon. 11° 50' and 12° 45' E. area, 2352 sq. m. In the N. districts it is hilly rocky rich in iron copper and slate, and well wooded. In the S. parts it is more undulating a zone of comparatively level and fertile lands stretching W. to E. from Göteborg to Skaraborg län. Many parts also are marshy and full of small lakes, frequented by numerous waterfowl. Streams are abundant and the general drainage is to the Kattegat. Besides the minerals already named, all of which are wrought, building stone, lime, and clay are found in the S. parts. Good crops of rye, oats, potatoes, turnips, peaches, &c., are produced cattle-rearing is successfully pursued and manufactures of various kinds, including cloths and cutlery flourish. Pop. (1840) 209,572.

ELGG a vil and par Switzerland, can. of, and 18 m. N.E. Zürich. It stands in a pleasant and fertile district was once surrounded by walls, of which only some traces now remain. It is tolerably well built, and contains a large parish church several schools, and a very ancient castle, situated on a height. There are glass works and coal is worked to some extent in the vicinity. Pop. 1089.

ELGIN or **ELGINBURGH**, formerly **MORAYTOWN**, a N. maritime co. Scotland bounded N. by the Moray Firth W. by Morayshire E. and S.E. by Banffshire; and S. by Inverness-shire; about 40 m. in length, N. to S. and 8 to 25 m. in breadth; area, 840 sq. m. or 535,600 ac. of which 120,000 are under cultivation. Along the sea coast, the surface is low, but inland it rises into hills of moderate elevation, intersected by fine narrow fertile valleys. In the east, which extends upwards of 30 m. presents, in the middle range, bold prominent rocks of sandstone, with a few detached masses, while the two extremities are for several miles formed of vast mounds and raised beaches of sand and gravel. The chief rivers are the Spey, Lossie, and Findhorn all remarkable for their romantic and picturesque scenery particularly the Findhorn, in which, and the Spey there is also good salmon fishing. There are several lochs in the county having fine scenery and abundance of excellent trout. The rocks in the S. consist of granite, limestone, rock-crystal, mica, slate, sandstone, and gravel. The banks of the Spey towards its mouth, exhibit secondary rocks of red sandstone, which extend E. throughout the N. plain of the county. Many large and inextinguishable quarries of freestone are worked, especially near the coast. There are also some slate quarries, but neither coal, nor any metallic ores occur while lime, even for agricultural purposes, has to be imported.

The climate is noted for its general mildness, dryness, and salubrity. The soil on the low level tract of land which stretches along the main coast with a breadth varying from 5 to 15 m. is, with exception of some sterile lands close by the sea, very fertile, and is occupied by cultivated fields, of which wheat is now the staple production although of only Vol. I.

comparatively recent introduction. In other parts of the county oats are the chief crop. Barley, beans, pease, clover, grasses, potatoes, and turnips are also grown, but, excepting the last two, to no great extent. Turf, however, has only been lately adopted, but has been attended with great success. The great majority of farms is small ranging from 50 to 100 ac. although they sometimes reach 800 ac. Lossie almost universally nineteen years. In the hilly districts there are extensive pastures where considerable numbers of black-faced sheep are bred, the Cheviots and Leicester forming the stock on the less elevated lands. The breed of native cattle has been improved by importations from Galloway, Aberdeen and Argyll, and those of horses and swine have also been greatly benefited of late years. But a great portion of the surface of the S. and high lands is still covered with native forests or with unfenced commons of heath and brown. The exports from the county are corn, timber, whisky, and salmon. The county unites with Nairn in returning one member to the House of Commons. Principal towns and villages—Elgin, the county town, Moray, Forchard, and Banff. Pop. (1861) 26,959. Municipal district 1841 8947.

ELGIN a royal bur. and market to Scotland, co. Nairn, or Moray on the Lossie, about 5 m. from its influx into the Moray Firth, 116 m. N. Edinburgh. It is pleasantly situated in a fertile valley, consists chiefly of one spacious well paved municipal street, lighted with gas nearly a mile long and a number of narrow lanes. The principal public buildings are the parish church in the centre of the main street, a beautiful green edifice, with a richly ornamented organ, and a large portico. Grey's Hospital the Elgin burlington the academy assembly rooms, the Trinity Episcopal chapel, the R. Catholic chapel, several other chapels and churches including one Established one Free, two U. Presbyterian, one Episcopal an Independent, and a Baptist the Jail and courthouse. The most interesting architectural object in the town however is the cathedral now in ruins, but once the most magnificent in Scotland. Of this venerable building The Laurens of the North, as it was called, there remains some architectural fragments only. Its entire length was 282 ft. by 86 ft. broad, the transept was 11½ ft. in length and the tower which rose from its centre, 198 ft. high. Its foundation stone was laid by Bishop Andrew Murray July 19 1224. It was plundered and burned in 1590 by the Wolf of Dalmeoch Alexander Stewart, son of Robert II. again in 1509 by Alexander third son of the Lord of the Isles and again, in 1598, when its leader roof was stepped off by order of the Regent Murray and his council since which period it has gradually fallen into its present state of decay. There are 10 schools in the town, including the Elgin academy already alluded to an extensive circulating library a literary association a reading room, dispensary pauper lunatic asylum, and some minor charities.

The only manufactures in the town are a woollen cloth manufactory a tannery and some breweries, but it is a considerable trade in grain, butter and other farm produce 10 cattle fairs annually. It unites with Culter, Banff, Peterhead, Kintore and Inverurie in sending a member to the House of Commons. Pop. 5383. Area of par 15 sq. m. Pop. 737.

ELGOIBAR a in Spain prov Guipuzcoa, 32 m. E. by S Bilbao r. bank, Bays. It has a parish church some chapels, two schools, a townhall, prison, hospital cemetery iron works, an extensive nelson foundry and manufactory of swords and cutlery. Trade in wool sheep and horned cattle. Pop. 2000.

ELGOIBAR, a small vil. in the Red Sea near the coast of Arabia lat. 16° 8' N.

ELGUETA, a in Spain, prov Guipuzcoa, on an elevated plateau, 30 m. S.W. St Sebastian. It has a parish church townhouse, with prison attached two schools and some manufactures of linen, and twine. Pop. 1517.

ELHAM a par and in England, co. Kent area, 3570 sq. The town 84 m. E. Canterbury is a general weekly b. of trade, has a spacious parish church, place of worship St. Wendreda, an R. Synagogue an endowed school, and several annual cattle markets. Pop. 1307.

ELHENITZ, or **LENNITZ**, a market in Bohemia, circle, Frachin, on a height among mountains and forests, 21 m. S. Pisek. It has a parish church a chapel, and two mills. P. 1218.

ELIANCOODY a large vil. & Hindoostan, Carnatic, 22 m. S. by W. Tanjore. It is nearly built, and populous.

ELIAS (Mount St.)—1 A lofty mountain, N. America, N. W. coast on the line of demarcation between the British and Russian territories. lat. 50° 15' N. lon. 140° 25' W. (2) It forms the N. termination of the coast range of the Ale. Alps, and is the culminating point of the whole N. American system. height, 17,800 ft. above sea level. Its appearance is magnificent, towering majestically above a crowd of snow-capped peaks of lesser but still of great elevation.—2 The highest peak of the isl. of Santoin Grecian Archipelago at the S.E. extremity of the isl. lat. 36° 22' N. lon. 25° 30' 45' E. (3) It is of limestone or marble formation, and is 1887 ft. high.—3 [anc. Taygetos] A peak, Morea, 10 m. S. W. Elis. 7822 ft.—4 [anc. Oda] A peak, Isl. Euboea, Grecian Archipelago, near the S.E. extremity of the island, 4607 ft. high.—5 A peak, S. part of Isl. Egeira, 1,550 ft. high.

ELIK, a seaport, vil. and par Scotland on Fife. The village, at the head of a small bay 1 bank, Firth of Forth, 9 m. S. by W. St. Andrews, has two straight and tolerably well-kept streets a parish, and a Free church a Congregational chapel two schools a well situated, but greatly neglected harbour and some coasting trade in coals and agricultural produce. It is much resorted to during summer for sea-bathing and is the birth place of James Hargest the hydrographer. Area of par. sq. m. 1 p. 844.—*Local (correspondent)*

ELING a l. and par F. gland Hants. The village, at the head of the Southampton water 1½ m. S. W. W. in chester has an ancient church of stone and flint with a square tower and is the seat of a brick trade in corn coal and timber. The parish contains a considerable portion of the New Forest. Area 12,455 ac. 1 p. 582.

ELLIS—1 A dist. in Grecian N. W. coast Morea, forming, with the sea dist. of Achaia, a modern part of that kingdom (see Achaia).—2 The suc. name of the former cap. of the district of Elis, now called Palaeopolis (see also).—3 The name of a small river in the same district an affluent of the Ilissos River.

ELIZABETHTOWN or **ELIZABETHTOWN**, a tn. Russia, gov. of and 180 m. N. by W. Khe lon cap. circle of same name, in a plain on the Il gul. It consists of the fortress surrounded by six bastions, of the town proper which is built with the greatest regularity and has spacious streets several of them lined with trees and of four suburbs. It contains five churches and a large hospital carries on a considerable general trade and has an annual fair which is one of the most important in the government. Elizabethtown is the head-quarters of the military colonies on this side the Bug. Pop. 12,000.—The circle has, in the N. an undulating surface, and almost throughout a rich fertile soil is watered by the Ingul and several other streams, and is well wooded, having forests, in which the bear is not uncommon.

ELIZABETH numerous places, U. States, including—1 A vil. & Carolina, 144 m. E. by N. Raleigh on the Pamlico, about 20 m. from its mouth. It has a courthouse, and exports shingles, waves and pitch-pine lumber to the W. Indies. Pop. about 2000.—2 A to New Jersey 44 m. N. E. Trenton. It has a courthouse, jail and five churches. Pop. about 2500.

ELIZABETH ISLAND—1 An uninhabited isl. Straits of Magellan lat. (N. E. point) 52° 50' S. lon. 70° 30' W. It is long and narrow with the adjacent land, low not being more than 200 to 300 ft. high. It is composed of narrow ranges of hills, extending in ridges in the direction of its length, over which are strewed boulders of various rocks two kinds—greenstone and hornblende—being the most common. The valleys which divide the hilly ridges are well clothed with grass. Geese and wild ducks are numerous.—2 An isl. S. Pacific Ocean, 120 m. N. E. Pitcairn's Island lat. 24° 0' 3' S. lon. 124° 45' W. It is 5 m. long 1 m. broad, and thickly covered with shrubs and small trees. The island is composed of dark coral more or less porous, elevated in a flat surface to the height of 80 ft.—3 One of the Admiralty Islands S. Pacific Ocean lat. 7° 55' S. lon. 146° 49' E. (4) One of the Marshall Islands, S. Pacific Ocean lat. (S. point) 5° 48' N. lon. 159° 26' E. (5) One of the Society group lat. (E. point) 17° 58' S. lon. 145° 45' W. (6) A group of 16 small isls. U. States, Massachusetts,

S. E. side Buzzard's Bay between lat. 41° 24' and 41° 37' N. and lon. 70° 55' and 70° 56' W. Two of them only are inhabited.

ELIZABETH (Carr.)—1 U. States, Maine; lat. 48° 28' 30' N. lon. 70° 11' 30' W. (2) Sweden Amoy, 18 of the entrances to Cook's Inlet; lat. 59° 9' N. lon. 151° 18' W. (3) A Chinese empire, N. E. extremity of Beringia Island, Sea of Okhotsk lat. 54° 24' N. lon. 143° 47' E. (4)

ELIZABETH (Port) See PORT ELIZABETH.
ELIZABETHPOL, or **GANJA** a tn. Georgia, dist. of same name, 90 m. S. E. Tiflis lat. 40° 45' N. lon. 46° 10' E. It consists of three parts, one of which is fortified by a bastioned wall, built by the Turks. It contains four Armenian churches, and one belonging to the Georgian Greeks, 11 mosques, several caravanserais, about 2000 houses, and 1900 fruit gardens, or vineyards. The chief occupations of the inhabitants of the town and of the district in which it is situated are horticulture the care of silkworms, bees, and cattle, besides farming and mulling. Pop. 6208 of which 4830 are Tartars, and 4028 Armenians.—The district contains nearly 1500 sq. m., consisting in part of the mountainous tract near Gagra this is followed by hilly slopes, and these terminate in plains. The soil varies, being in places sandy or stony, but it is more generally of black earth. The climate varies between the extreme cold of the mountainous districts, and the powerful heat of the plains. The mountains contain alum, iron, and some gold also forests, in which a particular sort of poplar grows to an immense size. Domestic animals are numerous. Madder tobacco, cotton linen grain, &c. are cultivated, and garbs and asparagus grow wild.

ELJAN a tn. Spain, Matremadura, prov. of and 56 m. N. N. W. Caesara, in a mountainous district, near the borders of Leon. It has steep narrow and uneven streets a parish church chapel townhall, prison and school, a clock tower, cemetery and four copious fountains. The inhabitants are chiefly engaged in weaving linen, cultivating grapes, olives, chestnuts, flax and vegetables and in rearing cattle and mules. Trade in oil sugar linen soap, and other necessities. P. 2739.

ELK—1 A name given to the Allegheny river during the latter part of its course (see Allegheny).—2 A navigable river U. States, Tennessee. It flows S. W. and falls into the Tennessee river in Alabama.—3 A navigable river U. States, Pennsylvania.—4 A small stream U. States Maryland which falls into the Chesapeake lat. 39° 30' N. lon. 76° 8' W.—5 A river U. States, Virginia, which falls into the Kanawha lat. 38° 9' N. lon. 81° 46' W.—6 Two small rivers, U. States, Minnesota territory the one falling into the St. Peter's, near its junction with the Mississippi, in lat. 44° 50' the other joining a bank Mississippi in lat. 45° 50' N.—7 One of the small lakes connecting the Lakes of the Woods with Lake Superior.

ELKINGTON three parts, Eng.—1 Northampton 1720 ac. Pop. 47.—2 (North) Lincoln 591 ac. Pop. 104.—3 South Lincoln 8048 ac. Pop. 231.

ELKOSH a tn. Asiatic Turkey pash. Daghest, 30 m. W. Moulou, on the side of a low rocky hill and surrounded by a strong stone wall. The houses are substantially built of the same material all are arched at the lower story and being built on a declivity they rise above each other which together with their being loop-holed makes the town a place of great strength. The men here dress like Kurds of the poorer class the women wear blue trousers, and over them a large blue shirt they wear no veils, the hair hanging down behind in two plaits or tails round the head a garland of silver coins is placed, generally old European coins. The inhabitants are all E. Catholics, and speak nothing but Arabic. Pop. between 3000 and 3000.

ELKLEY par Eng. Motts 2500 ac. Pop. 404.

 ELLESMERE, a market tn. and par England co. Salop The town 15 m. N N W Shrewsbury has five principal, and several subordinate streets, generally straight, and pretty well kept is well supplied with water, and lighted with gas. It has a spacious church, recently rebuilt and several Dissenting chapels, boarding and other schools a charity school and a mechanics institution in the vicinity are several lakes or meres, well stocked with fish. Making is the principal, and almost the only trade of the place. The Elhamers canal passes a little S. the town weekly market on Tuesday well supplied with corn. Five fairs annually for horses, cattle, and sheep. The town gives the title of Earl to the Egerton family. Area of par 36 633 ac. Pop 6940.

—(Local Correspondent)
 ELLESMERE (Port) a vil and port England Cheshire, 1 bank Mersey 34 m. S. by E Liverpool. It has a work-house, a church, Wesleyan chapel, Primitive Methodist meeting-house, and a school. It owes its name to the formation of a canal between Chester and the Mersey and within the last few years has become a place of great traffic. A new soap manufactory has lately been completed, and is now in active operation but the place is chiefly important as a transshipping port. The iron ore for the large iron manufacturers of Staffordshire, is brought here in coasting vessels from Whitehaven, Ulverston and other places, and is forwarded by canals to its destination, and goods arriving by the canals from London, Birmingham, Wolverhampton, Stafford shire, and W. Wales are here transhipped into barges and towed by steamers to Liverpool. The docks, wharfs, piers, and warehouses, are spacious and mostly of recent construction and the place exhibits all the bustle and importance of a thriving port. Pop. about 2087. —(Local Correspondent)

ELLESMERE, a com. and vil Belgium prov Hainaut, 17 m. N. E. Tournai. Agriculture and linen weaving are the principal branches of industry and there are several flour-mills, small iron breweries, and a salt refinery. Pop 6392

ELLICE an isl group S. Pacific Ocean, consisting of two isls, of considerable size, and a number of islets, about lat. 8° 31' S. lon 179° 21' W (N.). The islets are well covered with cocoa nut and other trees, which give them a sufficient elevation to be seen at 10 or 12 m. distance. One of the larger islands is 5 m. in length by two in width the other is 18 m. long, N by E. and S. by W. and upwards of 7 m. broad. The natives are of middle size, and have a deep brown complexion, hair, thick bushy and long. They are tattooed in a peculiar manner small curved figures or zigzag lines forming the most prominent feature. Their canoes are more rudely constructed than those of many of the other S. Sea Islands.

ELLICHOPE a decayed city Hindoostan, Deccan prov. Berar between the Barman and Beasim rivers which form a junction in the vicinity and afterwards fall into the Poorna, 550 m. N E Bombay lat. 21 14 N lon 77 38 E. It contains no public edifices of any note but the houses and houses near the seat of government are of brick and in the environs are the tombs of several Mussulman sultans.

ELLINGEN *in Bavaria. Middle Franconia, cap. of the same name, on the Benat, here crossed by a bridge, 26 m. S. E. Augsburg. It has a palace of the princes of Würtemberg a huge structure of little architectural merit three churches, two chapels, a townhouse and Latin school manufactory of musical instruments and calumet work, a brewery, and three mills. Pop. 1829. Area of hall 64 geo. sq m. Pop 8021*

Presbyterian churches, an Episcopal chapel, a Congregational meeting-house, parochial school and a savings-bank considerable traffic, well attended fortnightly market for cattle and grain and two annual fairs.

Pop. 3524
 ELLORA, ELORA or ELOROUR a ruinous vil Hindoostan, Deccan Nizam dominions prov. of 13 m. N W Aurangabad. Its ruins cover a considerable extent of ground and are surrounded by a stone wall but the interest they would naturally create is greatly lessened by the surpassing attractions of the neighbouring cave temples, the most stupendous and magnificent works of the kind in existence. They are excavated in the slope of a hill of red granite, shaped like a horse shoe and extend about a mile in length. Some are cut down through the rock, and left open above like an isolated building and both externally and internally richly ornamented with the most elaborate sculptures. Others are excavated under the hill in the manner of caves properly so called the interior being supported by massive pillars variously but harmoniously carved. The interior walls likewise are often finely carved with mythological designs among which human figures are the most numerous in a great variety of grotesque and distorted forms. The cave temples have been divided into three classes, namely the N. which are Buddhist or probably Jain, the central which are Brahminical and the S. which are evidently Buddhist. The most magnificent of the whole is the Hindoo temple of Kailas or Kalika, apparently like the other Brahminical temples dedicated to Shiva. The central portion is 100 ft. high and forms an isolated excavated mass or immense block, 500 ft. in circumference. It is surrounded by galleries or colonnades at the distance of 150 ft. in which the whole Hindoo pantheon is cut in the perpendicular rock. Every part outside and inside of this magnificent temple is elaborately carved in a most finished manner. Another temple, much smaller though still likewise very fine, but not under the hill is the Buddhist cave of Bhima Karna or Vishva Karna. It is remarkable as being the only one excavated

INTERIOR OF THE BHIMA KARN ELLORA. —From Robert's Views of India.

with a curved roof and its design is characterized both by its stupendous proportions and its massive simplicity. The extreme depth of this excavation from the outer gate is 166 ft. the main nave is 80 ft. long by 40 ft. broad and 354 ft. high with 38 octagonal pillars, in two rows, besides two pillars supporting a gallery above the doorway. Above the pillars is a narrow archway, and above this is a broad

ness; both are most elaborately carved and in niches formed in the latter are sitting figures of Buddha, of whom also there is a colossal figure at the entrance of the cave. There are six other principal excavations, some in the N., others in the E. quarter of the mountain, filled with sculptures. When these caves were first seen it was not certainly known; but being in the vicinity of Dughr a new Dowlatabad which prior to the Malabar conquest A. D. 1793, was the capital of a powerful Hindu principality they probably originated as the superstitious fancies of the reigning families of that metropolis.

ELLORRE a town and dist. of E. Hindoostan N. Circars. The town about 80 m. from the coast; lat. 15° 43' N. lon. 81° 15' E. Is of considerable size, and has a pretty extensive bazaar and is noted for carpets, and for leather manufactures. The district is one of the five original N. Circars, but is now mostly comprehended in the modern district and collectorate of Masulipatam.

EL LORIO a town Spain prov. Biscay on a small brook in a valley surrounded by mountains, 12 m. S.E. Bilbao. It is an open straggling place; contains two churches, a court-house and school and in some trade in cattle wool, and cheese, and numerous mills. Pop. 1470.

ELMINA an English East India Co. station, the cap. of the Dutch settlements on the Gold Coast, W. Africa. Lat. 4° 10' N. lon. 3° 30' W. Kingdom of Ashantee, 5 or 6 m. W. Cape Coast (castle). There is here a large and extensively irregular and dirty native town, the inhabitants of which consist of traders, fishermen, and persons employed as servants to traders some among them are wealthy. There are likewise some mulattoes in respectable circumstances, who support a number of slaves performing the duties of carpenters, masons, and blacksmiths indeed one-third of the people are supposed to be artificers. Elmina is defended by a castle, which stands slightly on a low rocky peninsula, along the E. side of the small river Dyak which runs within 80 yards of one of its sides. There are sundry other defensive works, including the fortress of St. Jago, on De Voer's Redoubt, &c. Elmina is not so surrounded by a line of rocks which extend S. and E. about two cable lengths, and on which the sea breaks with great violence. From this point the shore recedes to the N. about a third of a mile, forming a small bay and the surrounding country is undulating and thickly wooded. There

are nevertheless, some country residences and cultivated farms which belong to the governor and merchants, and which afford very agreeable retreats from the business, the crowd, and the heat of the town. The castle of St. George del Mina was the first European establishment on the coast of Guinea, having been erected by the Portuguese in 1482. It was captured by the Dutch in 1637 and was finally ceded to that nation by the Crown of Portugal in 1842 together with some other smaller and dependent settlements of the Portuguese.

ELNE (anc. *Albana* and *Edesae*) a town France dep. Pyrénées-Orientales, beautifully situated within 4 m. of the Gulf of Lyons 8 m. S.E. E. Perpignan 1 bank, Tech. It has remains of strong fortifications and the view from its ramparts over the plain of Remoulon is superb. The ruined church here (consecrated in 1084) mentioned on that of the Holy Sepulchre at Jerusalem, was once a cathedral, but the seat of the bishop was removed to Perpignan in 1602. Elne has some trade in cattle, cordage, drapery and agricultural implements. It was founded at a very remote period Humal was said to have encamped under its walls a. c. 214. The Emperor Constantine much improved the place, and built a castle for its defence. Here his descendant Constantine was murdered and his body interred his monument long held a shrine in the church cloisters. In 1474, Elne was treacherously taken by Louis XI. and it was often besieged afterwards. Pop. 2305.

ELPHIN a market in the east of a burgh, and par. Ireland, co. of and 15 m. N. Honecom. It consists of thatched stone houses, and has an Episcopal church, a Roman Catholic chapel, and several excellent schools the most important of which is the Diocesan school, at which Oliver Goldsmith received the early part of his education. Weekly market, Wednesday and four fairs annually. Petty sessions are held every Wednesday. Area of par. 12,546 ac. Pop. (1891) 4737. of which in the town 1225. (Lond. It is well built, has a church with a bell tower and a navigation school building yards, at which only a few vessels are built several breweries and tile-works and a considerable trade in wood. Only vessels which draw less than 12 ft. can approach the quay. Pop. in 2550 built 2008.

ELSHAM par. Eng. Lincoln 2610 ac. Pop. 600.

ELLSINEUR, or *ELLSINEUR* (Danish, *Ellsineur*), a seaport in Denmark 1st Zealand, at the narrowest part of the Sound here only 34 m. broad, 24 m. N. by E. Copenhagen lat. (Kronborg light) 56° 3' 15" N.; lon. 12° 57' 20" E. (n.). It has two churches a classical school, and a common-houses; its inhabitants are chiefly engaged in commerce and seafaring and considerable traffic is carried on with Helsingborg on the

opposite coast this being the chief point of transit between Denmark and Sweden. Elsinore is defended by the castle of Kronborg, which stands on a projecting spit of land and commands the Sound. It is a Gothic-Byzantine edifice, with walls and ditches. It is entered by two drawbridges and was built 1574-1584. On it is a flag light, 118 ft. high. In the vicinity of Kronborg is the royal country palace of Marselislet. Elsinore is however chiefly noted as being the place where the Sound dues are levied on vessels entering or clearing the Baltic. All vessels passing with some exceptions require to salute the castle of Kronborg and clear at Elsinore. The dues, originally instituted for keeping up lights and landmarks on the Kattegat and neighbouring coasts, now consist of dues on the ship, barge light or beacon money and dues on the cargo a toll paid to the Danish government. The total number of vessels passing the Sound was, in 1847 21,026 1848 18,667 1849 18,959; of which in 1847 4323 were British, 2533 Prussian, 2534 Norwegian, 1888 Swedish, 1807 Danish, 1447 Dutch. Of other countries the numbers were under 1000 and in some cases, as America, Naples, and Hamburg under 100. The principal maritime countries leave consuls at Elsinore. Pop. 8000.

ELBING par Eng Norfolk 1011 ac. Pop. 400
ELBY or **ELBOW**, two vis. Holland.—1 prov Gelderland 14 m. S. Arnhem, with a Reformed and a R. Catholic church, three schools, and two annual cattle and horse fairs. In the vicinity tobacco, cherries, and vegetables are grown. The last for the Arnhem market. Pop. 1130.—2 prov Utrecht, 14 m. S. W. Amersfoort. Pop. 700.

• **ELSWORTH** par Eng. Cambridge 3700 ac. P. 822
ELTEN a vis. Prussia, gov. Düsseldorf not far from the Rhine, 6 m. N. N. E. Cleve. It contains two R. Catholic churches and has three annual fairs. Pop. 1440.

ELTERLEIN a vis. Saxony circle Zwickau in a mountainous district, 53 m. S. W. Dresden. It contains a church, and has manufactures of metal tile works, an iron and other mills, and two annual fairs. Pop. 1910.

ELTHAM a vil and par England co. Kent. The village, 8 m. S. E. London, contains a church, an independent chapel a free school and several almshouses. Here, also are the remains of a royal palace, which was a favorite residence of several monarchs of the Plantagenet and Tudor families. Area of par 4350 ac. Pop. 2568.

ELTHLEY par Eng Cambridge 1823 ac. Pop. 448
ELTMANN a vis. Bavaria, Lower Franconia, cap. dist. of same name, 1 bank Main here crossed by a bridge, 40 m. E. N. E. Würzburg. It contains a chapel a posthouse, and the ruins of a feudal castle; and has manufactures of leather points, and earthenware and has several mills, and a trade

in wood. Much fruit and wine are grown in the vicinity. Pop. of vis. 1898. Area of dist. 80 sq. ac. Pop. 14,903.

ELTON a salt lake, Russia, gov. of, and 165 m. S. by E. Saratov said vast steppe. It is 11 m. long and 5½ m. broad but nowhere more than about 15 inches deep. In the hottest season it appears as if covered with ice and snow so great is the illusion produced by the crystallized salt along the banks, and over the whole surface. The Mongol name of this remarkable saline lake is Elton-Nor the Golden Elton. Great quantities of hydro-carbonate of magnesia are extracted from its waters; and salt to the amount of 5,000,000 ewts yearly in collecting which about 10,000 persons are employed.

ELTON four pars Eng.—1 Durham 1419 ac. Pop. 84.—2 Hereford 1470 ac. Pop. 101.—3 Huntingdon 2250 ac. Pop. 878.—4 North 980 ac. Pop. 78.

ELTSCH *OLIVA* or *JURUCKOVA* a vis. Hungary co. of, and 8 m. N. W. W. Gödör. It stands in a deep valley on a stream of same name, here crossed by a marble bridge contains a Protestant church, a large chateau, and a high school and has numerous tanneries, and an active trade in produce of its own manufacture. Much excellent fruit is grown in the district. Pop. 4500.

ELTVILLE or **ELSTEN** a vis. Nassau cap. hall of same name, r. bank, Rhine 6 m. W. Mentz. It is beautifully situated among vineyards, and is conspicuous from a distance by its Gothic towers, some parts of a castle built in the 14th century and long the residence of the Archbishops of Mentz, who had here a mint. The on the ruins of the town are covered with fine villas and country seats. A printing press was established in Eltville as early as 1465. The town is well built, contains a R. Catholic parish church, is the seat of a court of law and has a trade in wine. Pop. of vis. 2234. Area of hall 80 sq. ac. m. Pop. 1216.

ELUCE, or **EL-OUK**, an isl. and in Asiatic Turkey in the Ephraïm 36 m. N. H. and 130 m. N. W. Bagdad. The island, on which the town is situated, is about 1 m. long. The latter consists of 500 houses and has several mosques.

ELVA [Latin *Elvis*] a vil and now kingdom of Italy Piedmont, prov. of and 18 m. W. W. Cuni. It lies in a small basin, among the mountains which separate the valleys of Mauris and Varaita, near a small stream of its own name. It contains a parish church and townhouse, and has a considerable trade in butter. Pop. 1165.

ELVAS [Latin *Elvis* Spanish, *Habes* or *Yabes*] a fortified city Portugal prov. Alentejo 19 m. W. by N. Huelva 118 m. E. by N. Lisbon, within 5 m. of the Spanish frontier on a hill in the midst of a plain, between the two castles of Fort Santa Lucia and Fort La Léppe, both also on eminences. It is considered with its defences one of the strongest places in Portugal and indeed all but impregnable. The streets are in general narrow crooked, and dirty but the Moorish houses of which a great part of the city is composed have a picturesque and interesting appearance. Their arched fronts, latticed windows, verandahs, and flat roofs profusely adorned with flowers and shrubs, arranged in fanciful plots, having a singularly agreeable effect. Many of the houses have piazzas in front which increase their accommodation but does not improve their appearance. The Moorish houses are in general much better arranged, and of more cheerful aspect, than those of the Portuguese though the better description of the latter display in many instances, great taste not only in their architecture, but in their ornamental grounds. Elvas has three gates all strongly fortified and by one of which only strangers are allowed to enter and contains a cathedral, of mixed Arabesque and Gothic style parish churches several convents and hospitals, and a bomb-proof barracks for 6000 or 7000 men. One of the most remarkable objects at Elvas is its aqueduct, constructed by the Moors, which conveys water from a distance of 15 m. to the city. That part of this stupendous work which crosses the valley of the Campo de Feira, near the town and which is 1½ m. wide, consists of four stories or tiers of arches, the lower ones being nearly 100 ft. and the upper ones about 40 ft. high, giving a total elevation, allowing for the thickness of the arch, of about 250 ft. The country around is productive in corn, wine, and oil. Pop. 11,848.

ELY (Latin, *Ely* or *Elia*) an episcopal city England, co. of and 16 m. N. E. Cambridge, on an eminence, 1 bank. It consists of one principal street, and several smaller branching off on either side, is lighted with gas, partially paved, and has a spacious market-place in the centre. Some of the houses particularly those in the vicinity of the cathedral, are very old, as their external appearance indicates. The municipal buildings consist of a commonhouse townhall a house of correction, and a corn exchange. The first contains also a chapel and infirmary. The ecclesiastical structures comprise the cathedral, the churches of St. Mary and the Holy Trinity the latter belonging to the town of Ely and St. Andrew's one of the most perfect buildings of that age. Places of worship for Baptists, Independents, Wesleyans, and the Countess of Huntingdon's connection. The cathedral is one of the most remarkable edifices of the kind in this country. Its entire length, E. to W. is 617 ft. and its W. tower which is of the most beautiful workmanship, 370 ft. high. The whole structure comprises an almost unbroken series of the various styles of architecture which prevailed in England from the Conquest to the Reformation and so judiciously blended, and generally so perfect in their kind as to produce no disagreeable effect by their adjacency. The nave is Norman and is one of the finest specimens of that style in England. This magnificent edifice is at present (1851) and has been for some years past, undergoing extensive alterations, additions, and restorations, including amongst numerous other improvements, a new arrangement of the choir the introduction of new and richly ornamented subtile and the restoration and re-polishing of the beautiful piers of Parbeck marble fine old gateway of simple design, built in the reign of Richard II. forming the principal entrance to the precincts of the cathedral. There are a grammar school and a charity school in the city a mechanics institute and a savings-bank. There are no manufactures worth noting most of the inhabitants being engaged in agricultural labour. There are extensive gardens in the vicinity the greater part of the produce of which is sent to London and Cambridge. Pop. [1851] 61 ft.

ELY (Lat. Or) a dist. England on Cambridge, separated E. by the Ouse from the neighbouring portion of the county. It is about 36 m. long by 25 m. broad, area, 225,150 ac. Pop. [1841] 61 ft. The name is now universally restricted to a smaller tract about 7 m. long by 4 m. broad. It is surrounded by marsh, formerly covered by water. The soil is fertile but requires a great deal of artificial draining. It produces aquatic plants in great variety and is much resorted to by aquatic birds. See Bedford Level.

ELZE a. Hanoover gov. Bielefeld at the confluence of the Beale with the Lame, 18 m. S. Hanoover. It is an old place, contains a church and a townhouse, and has some trade in iron. Pop. 3038.

EMADOU a. W. Africa, Imboden Tarifa, about 18 m. W. Jema. Lat. 7° 10' N. Lon. 3° 10' E. on the route from Badagry to Boats.

EMATHIA, par Irel. Monaghan 12 296 ac. Pop. 4769.
EMBA or *Jema*, a river of W. Asia. It has its rise in the Urubak or Camel Mountains, in the steppes of the Little Khydis about lat. 49° 5' N. lon. 56° 50' E. from which it flows S.W. and falls into Emba Bay at the N.E. end of the Caspian Sea. The principal branch of the stream expands, before it reaches the sea, into a great many shallow lacuna, like lakes. The N. branch of it being nearly choked up with sand. Its principal streams are the Uzun Tuzur and the Tem ren, both flowing from the right. The entire length of the Emba is about 230 m.

EMBACH or *Amorosa* a river or rather two rivers, Russia, gov. Livonia. It rises in the S.E. of dist. Porras,

and under the name of Little Embach, flows N.E. to Valk then turns N. and after a course of about 80 m., enters E. extremity of Lake Viemsa. The stream which issues from the N. extremity of same lake, takes the name of Great Embach, flows E. past Dorpat, where it becomes navigable, and enters the B.W. extremity of Lake Peipus. Total course, 40 m.

EMBERTON par Eng. Bucks 1860 ac. Pop. 618.

EMBOTETTU or *MOXON*, a river Brazil, prov. Mato-Grosso, which rises in the N.E. of dist. Chapada, flows W.N.W. and after receiving the Verde and Zazare joins a bank, Paraguay about 20 m. below the junction of the Tequari. It is navigable almost to its source.

EMBRUN (Latin *Eboracorum* *Castroverum*) a. t. France dep. Hautes Alpes, 20 m. E. Gap, on an elevated plateau, rising in the middle of a vast plain watered by the Durance, which sweeps past the foot of the rock on which the town stands. It is surrounded by walls and ditches, and has a very picturesque appearance, but, though the houses are good the streets are irregular, crooked, dark and dirty. It has a large fine cathedral with a lofty spire; an extraordinary pale; some manufactures of woollen fabrics and hats, some cotton-spinning and tanneries. It was once the seat of an archbishop, and is still that of a bishop. It was sacked in turn by Vandals, Huns and Saracens pillaged burned and the population exterminated by the Moors, in 964. It was pillaged and burned again in 1578 and devastated once more by the Duke of Savoy in 1692. Pop. 2709.

EMDEN (Latin *Embsa* Dutch, *Embsa* and *Ambsa* or *Ambsa*) a. in Hanoover cap. E. Frisia, a bank, 25 m. north, where it is situated, and itself into the Dollart estuary lat. [Hofst. de Vind] 53° 22' 6" N. lon. 12° 45' E. (N.) It has very much the appearance of a Dutch town, occupying a low flat intersected by numerous canals, across which the communication is maintained by 30 bridges. It was originally surrounded by ramparts and ditches. The part of the former which still remains is used as a promenade. Towards the water a strong wall and dyke have been constructed to prevent inundation but the security which they afford is very imperfect, as, in 1850, the water stood in the streets for three months, up to the first floor of the houses. The town is entered by five gates, and is divided into six quarters, of which two are properly only suburbs. The streets are, for the most part spacious, and well paved and the houses, built generally of brick, have a substantial comfortable look and are remarkable, both with and without, for their extreme cleanliness. The principal buildings are the great church, built in 1455 by Count Ulrich as part of a Franciscan monastery a long and slender edifice, surmounted by a lofty tower the new church in a better style of architecture, the French Reformed church the townhouse built in the model of that of Antwerp, with a lofty tower and a spacious hall the courthouse, weigh-house, custom-house granaries or house of correction, and barracks. The educational establishments include a gymnasium with six teachers, and school for navigation, the benevolent institutions are numerous, and several of them are well endowed. Emden has an excellent roadstead in which vessels of any size can securely anchor. Its harbour is shallow but a canal is at present (1851) in progress to connect the town with the deep water of the Dollart. It has the most extensive trade in coats of any port in Europe and its general trade includes not merely all the export produce of the province, especially grain dairy produce, fish, tallow wool and hides but it also imports hemp, potash, tishier wine and colonial produce. In the building yards a considerable number of vessels are annually built and the manufactures, though far less important than the trade, include hosiery leather brown soap, and tobacco. There are also oil-mills, saw-mills, and numerous brandy distilleries. Pop. about 15,000.
EMERALD or *Macoua* a coral at Red Sea, coast of Nubia lat. 23° 50' N. lon. 38° 52' 30" E. about 1 m. in length and 100 ft. high in the centre.
EMERINA, a dist. in Macassar prov. Aukara, and formerly an independent state. It is the highest, and consequently the healthiest district in the island rocky mountains, and by no means remarkable for fertility neither is the climate favourable to vegetation, a distressing drought pre-

valley from April to September, with excessively cold winds blowing from the E. From October to the end of March, however, the heat increases, and becomes sometimes excessive accompanied by heavy rains during the night. The chief crops raised are rice, maize, and batatas, these being the chief articles of food used by the natives but maize, earth nuts, sugar cane, pine-apples, bread-fruit, and the vine, are also cultivated. A variety of European plants and vegetables, for which the climate seems well adapted, have been recently introduced, and are thriving well. Emmeria is also productive in cattle which are remarkably large and fat. Sheep, hogs, and poultry are likewise successfully reared. Wild ducks are in great profusion. The natives are skilful workmen in gold and silver producing articles in these metals which Europeans would have difficulty in surpassing. The internal commerce of the district consists in rice, cotton silk, cattle, cloth of their own manufacture, and a traffic in slaves. The capital of Emmeria is Tannemara which is also the chief town in the island.

EMPRAS a considerable to Ahyama, on a hill lat. 12° 38' N., lon. 87° 30' E. Chief trade, cloves and civet. EMLAGH par. lrel. Meath 2110 ac. Pop. 277. EMLAGH-AD par. lrel. Shoo 8909 ac. Pop. 3931. EMMEN a vil. two streams, and a valley, Switzerland —

1 A vil. and par. one of 2 m. N. by W. Lusern in a fertile district, 2 bank Reuse, near where it joins the Little Rumen (from Emmer, or Waldenma) a stream which rises in a small mountain lake in the most S. part of the canton flows N. and then N.E. joins the Reuse as above indicated, the united stream falling into the lake at the town of Lusern. 2 A mountain stream cuts here. It rises about 5 m. W. of Lusern, flows N.W. through the extensive valley of the Emmer (Emmerthal) famed for its cattle and horses, forest and flax culture and numerous thriving manufactures, and joins the Aar in can. Solothurn, 2 m. N.E. the town of that name. It is not navigable, but often overflows its banks causing great damage. Total direct course, about 35 m.

EMMENINGEN a tn. Baden circle Upper Rhine cap. hall of same name, in a beautiful dist. r. bank, E. 3 m. N. Freyburg on the railway to Carlsruhe. It is well built, contains a church, ancient townhouse, and superior burgher school and has paper works and other mills, lime-kilns, and tile-works. On the heights above the town stand the extensive and well preserved ruins of the castle of Hohenberg. Pop. of tn. 2000 of bellwied 25505. EMMERICH a tn. Prussia, gov. Düsseldorf in a fertile plain r. bank, Rhine 6 m. N.E. Cleve. It is surrounded with walls and ditches, contains a Monastery, two Protestant, and two Catholic churches, a gymnasium, ecclesiastical seminary and orphan hospital, is the seat of a court of law and several public offices, and has manufactures of woollen and linen cloth, hosiery hats, soap leather and tobacco and possesses a free port, some shipping and a trade carried on particularly with Holland to a very large extent. Pop. (1840) 6685.

EMMINGTON par. Eng. Oxford 26 ac. Pop. 104. EMNETH par. Eng. Norfolk 8449 ac. Pop. 1092. EMPFINGEN a vil. of W. Germany Hohenzollern-Sigmaringen hall. of and near Hildesheim. It contains a parish church and has a market. Pop. 1810. EMPINGHAM par. Eng. Rutland 2780 ac. Pop. 988. EMPORION a tn. al. Santorin, Grecian Archipelago. It is neat and clean and is inhabited by a great many respectable land proprietors. This place derives its name from having at one time been the residence of most of the merchants and vine-growers of the island. Pop. 1890. EMPORIUS par. Eng. Hants 1220 ac. Pop. 160. EMPORIUS a Tuscany cap. dist. of same name, 1 bank, Arno, in the beautiful and fertile valley of that name 16 m. W. A.W. Florence, on the railway to Leghorn. It

consists of the town proper surrounded by walls flanked with towers, and of several suburbs, and though the streets are narrow and the fronts of the houses project considerably over them it is built with considerable regularity and has several good squares, one of them adorned with an elegant fountain. It contains an ancient collegiate church, somewhat defaced by modern attempts at ornament, but adorned with a fine facade and possessed of a number of good paintings. Another church formerly belonging to the Augustinians, with good frescoes and a pulpit, in which the Ghislini held a parliament, and but for the opposition of Fabrizio degli Uberti, celebrated by Dante, would have resolved to raze Florence to the ground, and make Empoli the capital in its stead. It is the seat of a court of justice, and several public offices, and both from its central position and the remarkable fertility of its environs, carries on a considerable trade particularly in agricultural produce, including the straw used in making Tuscan bonnets. The principal manufactures are straw bonnets, beaver hats, and earthen ware. The weekly market is important. Pop. tn. 6141 dist. 15,018.

EMS.—1 A tn. Nassau in a mountainous dist. r. bank, Lahn, 6 m. W. N.W. Nassau. It is beautifully situated on a narrow belt of ground, hemmed in between the river and the cliffs of the Hilsdorf, and consists chiefly of a long row of lodging houses occupied by the numerous visitors to the springs, which have long enjoyed a European celebrity. The bathing establishment (Karlshaus or Karsen) is on a very large

THE KURHAL, EMS.—From Hermann's Pictures on the Lahn.

and somewhat gorgeous scale and the number of visitors annually exceeds 8000. The springs, which are of an alkaline nature vary in temperature from 94 to 116° are agreeable to the taste, and easy of digestion and are used with good effect both internally and externally particularly in rheumatic and nervous affections. To many the chief attraction of the place is the beauty of its environs to others, less wisely disposed it is the gaming table where large sums are usually lost.—2 (Hohen) A market in Austria, Tyrol, Vorarlberg, near r. bank Rhine 10 m. S.W. Bregenz. It contains a parish church and a castle, and a quarry from which fine shales are obtained. A great number of the inhabitants are Jews. Pop. 2123.

EMS, a river of W. Germany. It rises in Lippe-Deilmold in the S.E. extremity of the Teutoburger Wald about 28 m. S. by W. Münden flows first S.W. then W. through the Prussian prov. of Westphalia, crosses S. to N. the W. section of the kingdom of Hanover and falls into the Dollart estuary near the town of Emden. Total course, 254 m. The river is fast for about 18 m. up, and for that distance the river is navigable for vessels of 300 tons, smaller vessels may ascend to Rhema in Prussia, near the Hanoverian frontier. Its chief affluents are on the right—the Hoper, Aa, Hase, and Leda, and on the left the Weser.

EMMETTEN a vil. Prussia, prov. Westphalia gov. Münster circle of, and near Steinfurt-on-the-Ems. 1 con-

town a R. Catholic parish church, and has a trade in cattle, and two annual fairs. Many of the inhabitants are employed in weaving machine. Pop. 1180.

EMSKIRCHEN a market in Bavaria, Middle Franconia, 1 hour, 14 m. W N W Nürnberg. It contains a Protestant church, and an infirmary and has two mills, and four annual fairs. In the vicinity are the ruins of the castle of Kitzingen. Hops are grown extensively in the district. Pop. 867.

EMSWORTH a town in England, Hampshire, 8½ m. E. by N Portsmouth a station on the Hastings branch of the London, Brighton, and South Coast Railway at the head of the Freshwater Channel, navigable for vessels of 200 tons, to the English Channel. It has manufactures of sail-cloth, making fishing-nets, ropes, and twine several coasting vessels and a number of boats in the oyster fishing. Pop. 1105.

EMU!—1 A town in Australia, New S. Wales, on Cook, 55 m. W by N Sydney on a rising ground on the river Nepean — 2 A bay Van Diemen's Land, Bass's Strait, between Blackman's Point and Round Hill Point, lat. 41° 4' S. lon. 148° E. It is about 3 m. in width at the entrance.

EMYVALLE, a small town in Ireland, co. of and 5 m. N. N. E. Monaghan, on the road thence to Angharkey with a dairy and a constabulary barracks. Pop. 518.

ENARA a lake, Russia, in the N. of Finland of a tolerably regular and nearly rectangular form about 50 m. long & W to N. E. and 30 m. broad. It is surrounded by almost innumerable islands, receives several streams of which the Irvi, which joins it on its E. shore is the most important, and discharges itself by the Patsjoki into the Arctic ocean. At its S. W. extremity is a small town of same name, which is inhabited chiefly by fishermen and has an annual fair of some importance.

ENARI a country S. from Abvaxina, between about lat. 7° and 8° N. and lon. 35° and 3° E. inhabited by the Galla. It is principally celebrated for the extensive woods of coffee, the chief locality of which is the valley of the Gibba close beyond Sekke the chief town and great superstore of the kingdom. The inhabitants of Enaria enjoy the reputation of being the most civilized of all the Galla and some factories flourish here in a higher degree than anywhere else in this quarter of Africa. Almost all the coffee, and a large proportion of the ivory and slaves brought to Abyssinia, are from this country.

ENBORNE, or **ENDORRE**, per Eng Berks 1839 ac Pop. 407.

ENCINASOLA a town in Spain, Andalusia, prov. of and 62 m. N by N Huelva, on the frontiers of Portugal. It has a parish church, three chapels, town and court-house, a prison, custom-house, storehouse, three schools, four fountains and a cemetery. Industry.—Woolen and coarse cloth weaving, agriculture, and cattle-rearing. Pop. 3000.

ENCOUNTER HAY S. Australia, to the N. E. of the Gulf of St. Vincent. It is a large shallow mud station.

ENCUEZILHADA a vil and par Brazil prov São Paulo de Rio Grande, to the S. of the Jacaré near the fazenda Santa Barbara, about 50 m. W Rio-Jardim. It contains a new parish church, built of brown stone, and situated close to the mouth of the river. Pop. 2000.

ENDEAVOUR!—1 A strait, N coast, Australia, between Cape York lat. 10° 41' 36" S; lon. 142° 54' E. (s.) and some off lying islands. It forms the S. entrance from the W to Torres Strait at about 30 m. long, and nowhere exceeds 12 broad, and near its N. E. extremity it is encumbered by a number of islands, called Possession islands.—2 A river Australia, N. E. coast, falls into the sea at lat. 16° 27' E. lon. 148° 10' E. it forms a very good port for small vessels.

ENDPILLION (s.) per England Cornwall 8729 ac. Pop. 1212.

ENDERT a town, per Argentina.

ENDIAN

14 m. from the Persian Gulf. It carries on a busy trade with Muscovy. Pop. 4100.

ENDINGEN a town Baden, circle, Upper Rhine, at N foot of the Kaiserstuhl 12 m. N W Freyburg. It is an ancient place, surrounded by walls, and rose to the rank of a free imperial city. It contains two churches, and has a trade in cattle, and three annual fairs. Much wine is grown in the district. Pop. 3000.

ENDRE (Sr) Hungary. See ARMOU (Sr).

ENDREDE several places, Hungary particularly—1 A vil. Thaur Danube, co. Sumegh, in a mountainous district, near Szarvas. It contains a Protestant and a R. Catholic church. Pop. 1139—2, Endre, or Gross Andra, a vil Thaur Danube, co. of and 8 m. from Oedenburg. It contains a parish church. Pop. 733.

ENFIELD 1) a market town, and par England co. Middlesex. The town, 9 m. N by E. London a station on the E. Counties railway contains an ancient church, and five dissenting places of worship, the remains of an ancient royal palace, and a handsome stone cross erected in 1836. The market has been some time discontinued but two annual fairs are held: area of par. 12 400 ac. Pop. 9548.—2 A small town in Ireland, co. Meath 10 m. W Dublin. Pop. 349.

ENFORI per Eng Wilt, 7280 ac. Pop. 911.

ENGADIN (Italian Engadine) a dist Switzerland, can Grisons, forming the upper valley of the Inn, which rises in its S. W. extremity. The valley is about 40 m. long, terminating S. W. in Mount Maloja, and N. W. on the Tyrolean frontier. It is generally 8500 to 6000 ft. high and is divided into Ober and Unter Engadin produces cattle, hides cheese, and butter. It is one of the most picturesque of Swiss valleys and is inhabited by an Italian race.

ENGANO two islands Indian Archipelago.—1 Off W coast Sumatra, lat. (W point) 5° 21' S. lon. 102° 10' E. (s.) about 20 m. by 5 broad. It is high, surrounded by coral reefs, and yields betelnut, rice, sugar-cane, bananas and coconuts.—2 Off N coast Papua, in Great Bay lat. 2° 20' S. lon. 124° 40' E. (s.)

ENGANO (Gara) the most E. point of island Hayti lat. 18° 12' N. lon. 68° 20' W. (s.)

ENGEDI or **ANGEDER** an ancient town in Palestine on W margin of Dead Sea, at a point nearly equidistant from both extremities of the lake, about lat. 31° 50' N. lon. 25° 30' E. The site lies among the mountains which here confine the lake, a considerable way down the descent to its shores. Here is the beautiful fountain of Am-Idy bursting forth at once in a fine stream upon a sort of narrow terrace or shelf of the mountain, about 400 ft. above the level of the Dead Sea. Near this fountain are the remains of several buildings, apparently ancient and in the vicinity are numerous caves which serve as lurking-places for robbers.

ENGELBERG, a vil and par Switzerland can. Unterwalden, div Ob- und Nidwald, in a lofty Alpine valley on the Aa, 9 m. S. S. E. Sarnen. It stands in a deep valley 2290 ft. above the sea, hemmed in on all sides by lofty mountains, and contains a fine old Benedictine abbey founded in 1120 occupied by about 19 monks. A silk mill and cattle-rearing employ the inhabitants. Pop. 1481.

ENGELHARDTSEEL, a market town, Upper Austria, on bank Danube, 29 m. W W. W. It has an old parish church, numerous fine monuments a castle of Prince Wrede, and manufactures of porcelain and crucibles. Many of the inhabitants are fishermen. Pop. 1100.

ENGELHOLM a town and seaport, Sweden, in the Schonen, beautifully situated at the mouth of the Rönne, on the Kullevik 54 m. W N W Christianstad. It consists chiefly of a square and a single street, is clean and well built, has considerable manufactures of gloves, and a trade both in them and in salmon. The harbour is encumbered with shifting sands, and is continually decreasing in depth. Pop. 1068.

ENGELBERG a town Austrian Silesia, circle of, and 26 m. W N W Troppau, with a parish church; manufactures of linen, and a trade in yarn and thread. Pop. 7200.

ENGEN a town Baden, Lake circle, on the Aach, 29 m. N. E. Schaffhausen. It contains an old parish church, in which are the tombs of the lords of Hohen and has several large fairs. The French in 1800 have defeated the Austrians. Pop. 1472.

ENGENHO DO MATO, a vil and par Brazil prov Minas Geraes, about 140 m. N W Rio-de-Janeiro. It contains a parish church, which stands 2415 ft. above sea-level. P. 8600.

ENGER, a tn. Prussia, prov Westphalia, gov of, and 18 m S.W. Minden. It contains an old Protestant church in which is a sarcophagus erected by the Emperor Charles IV to the famous Saxon Wilhelm, who is said to have been buried here; and has manufactures of linen, a trade in yarn and cattle, and three annual fairs. Much flax is grown in the vicinity. Pop. 1693.

ENGERS, EUROPEAN BRUNNEN or ROLL-ENKERS, a vill Prussia, gov of and 5 m N.E. Coblenz, on the Rhine. It has a castle, with a fine botanical garden and park; a R. Catholic church, a sandstone quarry and two annual fairs. Pop. 868.

ENGHIEN a tn Belgium prov Namur, 16 m. N by E. Mons. It has a fine old chateau belonging to the Duke of Arenberg, a college and several benevolent institutions with manufactures of linen, lace, hats, and soap, and some dye-works, breweries, tanneries, &c. Pop. 8680.

ENGHIEN-LES-BAINS, a vill France, dep. Seine-et-Oise N. of Paris, near Montmorency with some copious sulphurous springs, baths, &c. much visited from June till September. Pop. 868.

ENGLA, an island of Greece. See ENKLA.

ENGLAND (Latin, *Anglia*; French *Angleterre*; Italian *Inghilterra*; Spanish and Portuguese, *Inglatera*; German, *England*; Dutch, *Engeland*) forming with Wales, the southwestern larger and more important division of the island of Great Britain between lat. 49° 57' 43" and 55° 46' N and lon. 1° 46' E. and 5° 49' W. The boundary between it and Scotland, the N. division of the island, is not very well defined, but consists of a tract of moor and mountain stretching in a N.E. direction from the Solway Firth to the Tweed. On all other sides it is washed by the sea—on the W. by the Irish Sea or St. George's Channel which separates it from Ireland and has an average width of about 90 m. on the S.W. by the Atlantic Ocean whose vast expanse here best incessantly and uncontrolled upon its shores on the E. by the English Channel separating it from France by distances which commencing at 100 m. on the W. contract till they diminish to 21 m. at the Straits of Dover, and on the E. by the North Sea or German Ocean separating it from Belgium, Holland, and Denmark. Its contour is very irregular, the coast-line presenting an almost uninterrupted succession of curves, bays, estuaries and headlands, the precise form of which can only be learned by minutely tracing the coast, but as it attains its greatest extent on its E. shore, and narrows as it proceeds N. till it finally terminates almost in a point, its general shape may be described as that of a triangle, the base of which has its extremities at the Land's End and S. Foreland while the sides are formed by straight lines, drawn from these two points and converging till they meet at the town of Berwick. The three sides of the triangle thus formed measure, from Land's End to S. Foreland 317 m. from S. Foreland to Berwick 843 m. and from Land's End to Berwick 465 m. and thus, when added together give a perimeter of 1625 m. This however is only a very distant approximation to the truth. When, instead of assuming imaginary lines, the distances between the principal headlands are measured, their aggregate amount gives a perimeter of 1200 m. and when, for the purpose of still greater accuracy the actual curvature of the coast is traced and the opposite sides of its sinuosities are included, the perimeter is found to be not less than 2000 m. The space thus enclosed has a length, measured on a meridian, from Berwick nearly to St. Alban's Head of 865 m. Its breadth measured on a parallel of latitude, attains its maximum between St. David's Head in S. Wales, and the Naze, in Essex, where it amounts to 280 m. Elsewhere it falls far short of this when as frequently happens, the curvature of the W. and E. shores are situated opposite to each other. Hence, to the E. of the parallel already mentioned, the estuary of the Severn is only 116 m. from that of the Thames, and to the N. of it, the salt water of the estuaries of the Mersey and the Humber approaches within 90 m. of each other. The shortest distance between the waters of the opposite shores is in the N., where the outlets of the Eke and Eden in the Solway Firth are only 23 m. from those of the Blyth and Washburn, in the German Ocean. The exact area contained till a comparatively recent period to be rather conjectured than known. According to an early tradition, the area of S. Britain contained 29 000,000 sq. This computation, which appears to have been made in Saxon times, must have included only that part of England which

was actually under Saxon dominion, and leaves so near to the truth as to leave little room for doubt that it must have been obtained either by actual measurement or by means of those minute computations of superficial extent which the customary mode of levying land-revenue rendered necessary. In subsequent times, writers on geography or political arithmetic, apparently aware of the uncertainty of the data on which they proceeded, gave scope to their fancies, and estimated the area, arbitrarily from 28,000,000 to 47 000,000 sq. The first at

tempts to obtain a more accurate estimate was made by the celebrated mathematician Halley who employing the true

scale as to allow the areas of the different counties to be

calculated separately—found by the area given by the former to

be 38 660 000 sq., and that by the latter 39,988 500 sq. The

difference, though exceeding 1 000 000 sq. was considered

not greater than might have been anticipated in the circum-

stances, and the truth was generally supposed to lie some-

where between the two estimates. There cannot be a doubt

that Halley calculated accurately from his maps, but these

unfortunately were defective. In those of the counties nearest

the metropolis, where the greatest accuracy might have been

expected, gross blunders existed and even the distances be-

tween the S. Foreland and the Land's End exceeded the truth

by no less than half a degree. The trigonometrical survey

commenced towards the end of the last century for the

purpose of measuring an arc of the meridian corrected many of

these mistakes and by ascertaining the exact variations in the

length of degrees of latitude and longitude, within the space

over which England and Wales extend, furnished an easy

means of calculating their area. The process is tedious and

was first performed for a collateral purpose by Dr. Hake who

disputed with Mr. Pitt's assumption of an area of nearly

47 000 000 sq. as the basis of his estimate of the produce of

the Income Tax, determined to test its accuracy. He accordingly

subdivided the whole surface into a series of minute

parallelograms formed by the intersection of lines of longitude

and latitude at the distance of a minute or the sixth part

of a degree from each other and by adding all the separate

areas, obtained an aggregate area of 38 498 578 sq. To this

a conjectural addition required to be made for inequalities

of surface, more especially in the more mountainous districts

but, after all Mr. Pitt's assumed was proved to be not

less than 8 000 000 sq. in excess. More recent investigations

have discovered that a deduction of nearly 1,500,000 sq. still

remained to be made. The true area is now understood to be

38 999 680 sq. or 57,812 sq. m. of which 50,887 are in

England and 7425 in Wales but there is still a lurking

error of considerable magnitude, as the general and agree-

able area, instead of amounting show a disagreement of

720 sq. m.

The civil or political divisions of the area have necessarily

undergone repeated changes. At the invasion of the Romans,

it appears to have been partitioned out among a number of half

savage and independent tribes, of which the Dani were

occupied the E.W. the Durogones, Belgae, and Regni, the S.

the Cantii, the R.E. the Trinobantes and Iceni the E. the

Brigantes and Ostodini the N. the Silures, the Iceni, and

Ordovices the W. and the Catvolani, Deboran, Cerni, &c. the

Coelred, the centre. Under the Romans the principal

divisions were Britannia Prima, comprehending the whole of

the S. as far as the estuaries of the Severn and Thames. Bri-

tannia Secunda, nearly equivalent to Wales; Flavia Caesari-

ensis occupying the centre from the Thames to the Humber

Maxima Caesariensis, stretching across the island to the

opposite coasts, from the Humber to the Tyne, on the E. and

the Mersey to the Solway Firth, on the W. and lastly, Val-

encia, occupying the remainder of the N. and extending in-

definitely into Scotland. The next great division was the

Saxon. Hierarchically so called from the seven petty kingdoms

of which it consisted. It is probable that, even during their

subexistence, the modern division into counties had begun to

be established but it does not appear to have assumed a de-

finite form till the time of Alfred the Great, who subdivided

his dominions into 83 counties, with the names, and nearly

the boundaries which they still retain. The existing divi-

sion was first completed in the time of Henry VIII., by Stat.

24 c. 26, which increased the 83 English counties to 117

1601.

to 40 by the addition of the three counties of Northumberland, Cumberland, and Westmorland, of which the Scots long had de jure or de facto possession by the formation of Lancaire and Durham, ut of parts of Yorkshire of Cornwall ut of part of Devon and Rutland out of Northampton and the annexation of Monmouth to England and introduced a variety of other changes, of which the most important was the complete incorporation of Wales with the English monarchy.

WALTON

England and Wales, viewed as part of the United Kingdom has necessarily many bonds in common with Scotland and Ireland. These properly belong to the general article.

MARTIN FAIRFAX, in which the most important of them have already been considered and therefore to avoid repetition the remainder of the present article will be chiefly devoted to those points in which England and Wales may be considered as presenting peculiar features or possessing peculiar institutions.

General View—It would be difficult, if not impossible, to point at a portion of the earth's surface of equal extent, for which nature and art have done so much as for this portion of Great Britain. Situated near the centre of the temperate zone, where heat and cold are seldom in extreme, and are

moreover, greatly modified by the seas which wash its shores. It enjoys a climate under which if ordinary care is used, the most valuable productions of the vegetable kingdom are easily matured and animal life also, not only in its lower grades but in man himself grows vigorously and assumes its finest form. In accordance with the excellence of the climate are the luxuriance and variety of the vegetation. In the tropics, indeed, that some districts are covered with rugged sterile mountains, or elevated tracts of barren rock and that, in other, low monotonous flats occur where much of the rain which falls becomes permanently stagnant or slowly finds its way into sluggish streams, which are scarcely able to force their way to the sea, is owing however to local causes, and, as far as the climate is concerned, is not at all exceptional.

role more conspicuous. After deducting all the land which can be considered absolutely waste, there still remain out of the 67,819 sq. m. no less than 51,000 available for cultivation and containing generally either of rural districts where hill and valley woods and rivers, magnificent domains fields of corn, soil meadows of richest verdure, unite in forming landscapes of unrivalled beauty or of manufacturing districts covered with large and populous towns, in which all the great branches of manufacture and commerce have fixed their chosen seat.

Particular Features.—The loftiest heights of England and Wales are situated at no great distance from its W. shores, and consist not so much of a continuous chain as of a succession of mountains and hills, stretching with some interruptions, from N. to S., and throwing out numerous branches on both sides but particularly to the W. where all the submerging cumula are found. The N. portion of this range has received the name of the Pennine chain. It is properly a continuation of the Cheviot hills, and commencing at the Scottish border proceeds S. for about 370 m. gradually lowering till in the counties of Derby and Stafford it assumes the form of an elevated woodland plateau. Its principal offshoots to the E. are in Northumberland and Durham where they stretch almost without interruption, to the coast, form the mountains of those counties and separate the valleys of the rivers Tyne, Wear and Tees, which all take their rise in the chain. Several minor offshoots proceed into the great plain of Yorkshire and are finally lost in it. The Ouse and numerous other streams by which this plain is so liberally watered have also their sources in the chain. But by far the most important features are those of the W. more especially if we include in them, as we properly may, the lofty mountain masses which from being most largely developed in Cumberland are sometimes classed separately under the name of the Cumbrian range. This range, which links with the Pennine chain, on the E. borders of Westmorland, covers a considerable part of that country stretches across it, and, almost immediately after passing its border attains, in Skiddaw the height of 5168 ft. The heights next to it are Helvellyn 5055 ft. and Skiddaw 5022 ft. but several others nearly equal them, and usually retain their covering of snow from six to eight months. The proximity of these mountains to the W. coast, and the barrier interposed by the principal Pennine chain on the E. make it impossible for them to be either the sources or the feeders of any lengthened streams, and hence perhaps it is that, having no more immediate outlet for the vast quantities of moisture which they necessarily attract from the overcharged clouds of the Atlantic, they have accumulated in a number of magnificent reservoirs, which give a peculiar charm to the romantic scenery of the district. The distance of the Pennine chain from the W. coast, widening considerably as it proceeds southwards, furnishes space for the course of two important streams—the Ribbles, the estuary of which in early times, before encroaching sands had nearly choked its entrance, formed an admirable roadstead and the Mersey at whose mouth an insignificant haven of the last century has rapidly grown up into the second port of the kingdom. The Pennine chain, with its appended Cumbrian range, is succeeded by one which surpasses it both in the loftiness of its mountains and the extent of space covered by them. Viewed as the central portion of the great longitudinal chain it properly begins where the northern portion terminates, in the Derby and Staff. shire moorlands, and proceeds southwards in the line of the Wolds and other hills of Salop, the Malvern hills between Hereford and Worcester and the Cotswold hills in Gloucester. The several hills now mentioned are not remarkable for their elevation, but owing partly to their central position and partly to the extent of surface which they occupy they constitute one of the most important waterbeds of the country and furnish several of its largest rivers with their most important supplies. Still, however, the great nucleus of the range must be sought much further to the W., where it covers the greater part of the principality of Wales, and has been designated, from its ancient name of Cambria, as the Cambrian range. Its principal ridge stretches through Carnarvonshire, from N. N. E. to S. S. W., ascending gradually from each extremity till near its centre, it attains in Snowdon 5571 ft. the culminating point of S. Britain. Plentymoun, in the S. W. of Montgomery, is much inferior in height, being only 3468 ft.

In mass, however, it surpasses Snowdon and every other mountain of the range, and may justly claim pre-eminence of them all as the source of the Severn. The last part of the longitudinal chain has received the name of the Devonian range. It may be considered as commencing in the Mendips hills of Somerset, and then pursuing a S. W. direction through that county and the counties of Devon and Cornwall to the Land's End. Its culminating point Yeator Beacon, near Okehampton in Devonshire, is 2077 ft. and the wild and desolate forest of Dartmoor forest, belonging to the range, and forming one of its most remarkable features, is said to have an elevation of 1700 ft. The average height of the range falls far short of this, and cannot be estimated higher than 1000 ft. In addition to the principal ranges which have now been mentioned there are a number of others which, though of inferior elevation are so distinctly marked and have so much influence as determining the general features of the country that a distinct idea of it cannot be obtained without adverting to them. One of these, which may be considered as a continuation of the Cotswold hills of Gloucester proceeds in a N. W. direction between the counties of Warwick and Leicestershire on the left, and Oxford, Nottingham and Rutland, on the right, forming the principal watershed between the basins of the Wash and the Humber. Most of the other ridges may be considered as having a common point of departure in the county of Wilts. The most southerly commencing near the town of Salisbury proceeds eastward through Hampshire and Sussex, inclining gradually to the S. till it reaches the coast near Beachy Head. Another ridge, to the N. of the former takes a direction nearly parallel to it, across the N. of Hampshire and the centres of Surrey and Kent finally bending round to the S. E. and reaching the coast at Folkestone. The third and longest ridge of all, is very curious. It first, stretching nearly a semicircle in the northern part of Wiltshire, it stretches E. across the centre of Berkshire, then N. E. through Oxford and Bucks, and between Bedford and Hartford, and Cambridge and Essex. On reaching the W. borders of Suffolk, it takes a northerly direction through that county and is W. of Norfolk till it reaches the S. shore of the Wash. Though lost beneath that estuary the hills, which commence almost opposite to it on the N. shore are evidently its continuation. Its direction is now N. N. E. through the E. of Lincoln, to the S. bank of the Humber at Ferrybridge. Reappearing on the opposite side of the river, it proceeds northwards, through Yorkshire, where it takes the name of the Hambleton hills and at last spreads out into a large tract of moorlands. The principal and secondary ridges which have been described, forming what may be called the framework of the country give shape and limits to its valleys and plains and determine the course of its rivers. To these, therefore, it will now be proper to advert.

Valleys, Plains and Rivers.—Beginning in the N. where, from the extent of surface occupied by mountains and moorlands, and the comparative narrowness of the island, the open space left is very limited, the first valleys which we meet with on the E. side are those of the Cogenet and Tyne, the former not large, but very fertile, and the latter though beautiful and romantic in its upper part, more remarkable in its lower for the treasures beneath its surface than for the richness of its soil. To the S. of these is the vale of Stoukton bounded on the N. by the highlands of Durham, and on the S. by the E. moorlands of Yorkshire. Its length, measured by the Tyne, which traverse it is nearly 40 m., and its breadth, where widest about 15 m. On the W. side of the island nearly opposite to it, commences the beautiful valley of the Eden which, at first hemmed in between the Cumbrian range and Pennine chain, gradually widens as it proceeds northwards, and finally spreads out into a wide plain of about 300,000 acres with the town of Carlisle in its centre. One remarkable circumstance connected with it is the course of its river. Wash with the exception of the Trent, is the only one of any importance in England which flows in the main northerly. The great valley or plain which attracts our notice is in some respects the most important of all. It is known by the name of the Vale of York and has an area of nearly 1000 sq. in. In the N. it unites imperceptibly with the Vale of Stoukton, and is skirted by a number of small shallow lakes moorlands proceeding from the Pennine chain down to the W., and the Hambleton hills, already mentioned on the E. in the S. it sinks down into the marsh lands which line the N. bank of the

Humber. Beyond the vale, on the E. is that of Pichering in the form of an imperfect oval, of which the longer axis is 25 m. and the shorter 10 m. and the area about 190 000 acres. To all appearance it is the bed of an ancient lake. To the S. and E. of it is the strict of Humberston, an extensive flat, bounded on the E. by the German Ocean, and on the S. by the Humber and generally composed of a rich alluvial soil. The productive powers of which appear to be all but inexhaustible. Its area exceeds 400 sq. m. This plain is usually considered to sleep here because its continuity is broken by the Humber but properly speaking it is still the same plain which stretches with scarcely a single interruption across the counties of Lincoln, Norfolk and Essex, to the mouth of the Thames, and to a considerable distance inland occupying a large part of several of the counties immediately to the W. Returning again to the opposite side of the island we meet with several flat and fertile tracts in Lancashire, particularly along the course of the Ribbles and in the plain which lies between it and the Mersey. This plain, not confined to the N. bank of the river but continued along its S. bank into Cheshire, includes as it the rich and beautiful vale of Warrington. Passing over Cheshire, in which, notwithstanding the ridges which traverse its W. and the heights which bound its E. side, there is much level land, we are brought to the confines of Wales. The nature of the country here almost precludes the possibility of extensive plains, and gives the valleys generally a narrow rugged form, which however favourable to romantic beauty is not very compatible with great fertility. Still favoured spots do occur. Among others may be mentioned the valley of Clwyd, chiefly in Denbigh but partly also in Flintshire extending along both sides of the river of its name for about 40 m with a varying breadth of 8 or 9 m and so superior in appearance to the general aspect of the surrounding districts, as to have gained the surname of the Eden of Wales. Nor can the S. division of the principality be considered destitute of valleys, while it has that of the Tower in Carmarthenshire, and the rich alluvial vale of flat which lies the shore of Glamorgan in the Bristol Channel and stretches inland for 5 m. to 10 m. Wales, too, by giving rise to the Severn can fairly claim part in its vale or series of almost unrivalled vales along which it pursues its romantic course through the counties of Montgomery, Shrop, Worcester and Gloucester. The chief vales of the W. counties as far as the Bristol Channel and of the E. as far as the mouth of the Thames have now been mentioned. Of those of central England no notice has yet been taken, but though they are numerous they need not detain us long as they are in general more remarkable for their fertility than their extent. As specimens may be noticed the grassy vale of Aylesbury near the centre of Bucks that of Cottesloe, forming a considerable part of Rutland and that of Bedford which follows the course of the Trent, through Nottingham to the borders of Leicester and Lincoln. It is proceeding if we are first attracted by the name of Salisbury Plain, occupying a large portion of W. Wilts. But it is only in name that it can be classed with the other plains and level lands of England, as it has a character peculiarly its own. It is in fact an elevated plateau of an oval shape, extending about 22 m. from E. to W. and 15 m. from S. to N. and covered generally with a thin chalky soil too unsuited to reward the labours of the plough, and applied to its best use when left undisturbed to form a green sward for the pasture of sheep. Among the remarkable features which it presents, must not be forgotten the huge Druidical blocks of Stonehenge. Immediately to the N.E. of it, is an extensive tract of similar but rather more rugged appearance called Marlborough Downs. From both tracts a number of streams descend and pursue different directions—N. E. and W. In the S.W. the only vales deserving of notice are those of Taunton in Somerset, and Exeter in Devon, the former comprising about 100 sq. m. and the latter 200 sq. m. They lie at no great distance from each other being only separated by the Blackdown Hills and possess a beauty and fertility rendered still more striking by contrast with the rugged hills and barren moors of the neighbouring districts. A large portion of the W.E. may be regarded as a continuous plain, consisting of what are called the Wolds of Saluz, Parry and Kent. It is bounded on the N. and N.E. by the secondary ridges of hills above described as terminating near Folkestone and on the S., for the most part, by the S. Downs,

and contains an area of about 1000 sq. m. having a length from W. to E. of 65 m., and a breadth varying from 10 to 15 m. As indicated by the Saxon name of Wold, it was originally a forest or hunting ground, occupied chiefly by herds of deer. The soil is not naturally rich, being principally composed of a stiff heavy clay and occasionally of a sandy and gravelly loam. It is, however, well cultivated and affords a good specimen of the great and beneficial changes which industry and skill are able to accomplish. The primeval forest has disappeared, but magnificent oaks, for which the soil is well adapted, are still numerous, chiefly in hedges or around the enclosures, so as to give the whole district a finely wooded appearance rich corn fields or luxuriant pastures extend on every side as far as the eye can reach, while the numerous towns, villages, country seats, farm houses, and hamlets bear testimony at once to the opulence, comfort, and density of the population. Few scenes can be imagined more delightful than that which the Wolds exhibit, when overlooked from the adjoining hills. The S.E. angle of this district is occupied by the Romney Marsh, an extensive level tract which, taken by itself contains 24,000 ac., but with the addition of several other small marshes, which properly form part of it, is not less than 46,000 ac. The soil is not of equal quality throughout but is composed, for the most part of a rich marine deposit the whole tract having been not so much recovered as conquered from the sea. In summer it is luxuriantly verdant, and presents the appearance of one vast meadow sward with herds of cattle and flocks of sheep, but lying so low that the water which collects upon it can only escape at ebb tide through flood-gates in the lofty subterranean, which secures it from inundation, it is by no means favourable to health. Its inhabitants are few in number and too often, by their shallow looks justify the description which has been given of its air as, in winter bad in summer worse, and at no time good. The situation of Romney marsh reminds us of other extensive tracts of a similar nature comprehended under the general names of marsh lands and fens. There are situated partly in Somersetshire, on the shores of the Bristol Channel and the estuary of the Severn but more especially on the E. coast in Yorkshire and Lincoln, where they are washed by the Humber and in the counties which either border the Wash or like Northampton, Bedford, Huntingdon and Cambridge, send their drainage into it, by the Nen and the Ouse. Many of these lands are actually the richest in the kingdom but their possession is held by a somewhat precarious tenure, and at the expense of an incessant struggle with the sea, which, having once made them part of its domain, threatens to resume them in this strife between man and the elements it long remained very doubtful whether he was ultimately to prove the victor. By means of gigantic cuts, of which that known by the name of the Bedford Level is the most celebrated thousand acres were laid dry and apparently placed beyond the reach of danger but large tracts still remained, on which from excessive moisture, no crops could be raised, or wheat was in some respects still more grievous, after being raised they were frequently destroyed. In these circumstances, the same mighty engine which has achieved so much in the other departments of industry was called into requisition and has accomplished wonders. The idea of lifting up the surface water which could not otherwise escape, and sending it off at a higher level had early occurred, and the embankments of the fens were studded over with wind-mills, which, setting water-wheels and other hydraulic machines to motion, did essential service when the wind blew. But unfortunately the wind did not always blow, and the air was often as stagnant as the water at the time when its aid a serious work most required. The steam engine has no such defect. The moment it was introduced, its superiority was so apparent, that wind-mills have been almost entirely superseded and, in a paper read to the British Association On the application of steam power to the drainage of marshes and fen lands, Mr J. Glynne states, that he alone has applied it in 15 districts, and drained 125 000 ac. The extent of fen land, recklessly drained, is moderately estimated at 1000 sq. m., and the benefit to the country is nearly the same as if a new county equal in extent to Dorset or Durham, and of the greatest fertility had been added to its surface.

Several of the rivers have been incidentally referred to in tracing the valleys and plains which are watered by them, and

as each river of any importance, moreover is separately described at length under its own name, it seems unnecessary to do more here than to give a general idea of the principal basins to which the drainages of the country belong. The opposite sides of the island being necessarily on the same level and its principal watershed consisting of a mountain chain which extends longitudinally from N to S, it is easy to understand how the general course of the rivers must be in the opposite direction of W or E according to the slope of the watershed in which they take their rise. In the same way it is easy to understand how the transverse ridges which branch off from the chain divide the surface into a series of river basins and by fixing the boundaries, determine the area occupied by each. In the N the distance between the two shores is so narrow that there is no room for the formation of an extensive basin, and hence the drainage is effected by a number of comparatively small streams which instead of communicating with each other retain their own independent channels and proceed directly to the sea. The same rule holds in the S, where, by the interposition of transverse ridges, only a very limited tract slopes, so as to send its waters to the English Channel. The extremities of the country being thus excluded, its larger basins are necessarily confined to its more central portion. They are four in number—the Thames, Wash, and Humber belonging to the German Ocean and the Severn belonging to the Atlantic. The basin of the Thames has its greatest length from E. to W. 150 m. and its average breadth about 50 m. It may be considered as commencing W with the river itself in the Cotswold Hills, and includes on its N side, a considerable part of the N.E. of Gloucester the whole of Oxford, the far greater part of Bucks, the whole of Middlesex, almost the whole of Hertford, and the W and S of Essex. Its S. side includes the N of Wilts, the whole of Berks and a narrow belt across the N of Hampshire, with a very small exception the whole of Surrey and the far larger part of Kent. On the S. it is bounded by the narrow tract which forms the N. basin of the English Channel and in which the Avon is the principal stream. On the W by the basin of the Severn, on the N. chiefly by the basin of the Wash but partly also by the small independent basins of the Crouch and Blackwater in the E. of Essex. Its area is 6160 sq m. The basin of the Wash consisting of the subordinate basins of the Great Ouse, Nen, Welland, and Witham which all empty themselves into that estuary is of an irregular shape. Its S. and larger portion including the whole three first-mentioned basins, is irregularly oval; while the N. portion confined to that of the Witham is nearly square. It receives the whole drainage of 8 counties of Huntingdon Rutland and Cambridgeshire, almost the whole of those of Northampton and Bedford, considerable portions of those of Lincoln and Norfolk, and a small part of that of Suffolk. It is bounded S.E. by small independent basins chiefly those of the Stoue and Yare S. by that of the Thames, W by those of the Thames and Severn, and N.W. and N. by that of the Humber. Its area is computed at 5850 sq m. The basin of the Severn consists of two distinct portions lying on its opposite banks. That on the N. bank is of an irregularly oval shape, and has for its principal tributaries the Teme and the Wye. It commences at Plympton, on the E. from the glen of Cardigan, at not more than 15 m. from the W. coast, and includes a large belt on the S. and E. of Montgomery the S. half of Shropshire, the W. parts of Worcester and Gloucester the whole of Radnor Hereford, and Monmouth almost the whole of Brecknock and the larger part of Gloucestershire. The portion of the Severn basin on the S. bank borders in the N. on the basins of the Dee and Mersey, and in the E. on those of the Humber and Thames, and with the exception of its E. part which projects far between the basins of the Ouse and Humber and is drained by the Upper Avon, consists of an irregular tract, stretching first from W to E and then from N to S and so narrow as not to average above 12 m. and sometimes not to exceed, even in the lower part of its course, as to the E. of Gloucester 7 m. On this bank accordingly the present stream has no tributary of the least consequence, with the exception of the Upper Avon already mentioned, and the Lower Avon, which only joins it at its estuary. The counties from which this part of the basin receives its supplies are a large part of Montgomery the N. part of Shropshire, the larger parts both of Worcester and

Worcestershire, a long strip of Gloucestershire lying between the river and the Cotswold hills the N.W. of Wilt and part of the N. of Somersetshire. The area of the whole Severn basin is 6550 sq m. The next basin that of the Humber has the largest area of all. It forms a quadrilateral figure, the longest side of which extends from the W. of Warwickshire, a little S. of the town of Birmingham, to the N. frontiers of York shire, beyond the town of Richmond 145 m. its greatest breadth, measured from the Humber W is about 55 m. In the N.W. opposite to Morecombe Bay it approaches within 22 m. of the W. coast. It consists of the three basins of the Humber proper the Ouse, and the Trent, and receives the drainage of at least three-fourths of Yorkshire the far larger part of Stafford a part of Warwick, nearly the whole of Derby and Leicestershire the whole of Nottingham and the N. part of Lancashire. On the N. it is bounded by the basin of the Tees on the W. by small independent basins, of which the largest are the Ribbles and Mersey on the S.W. and S. by that of the Severn and on the N.E. by that of the Wash. Its whole area is 9550 sq m. being about one-sixth of the whole area of England and Wales. The following Table of which the data are furnished by Petermann's *Hydrographical Map of the British Isles*, exhibits the areas of the larger basins now described as well as those of the most important minor basins in the order of their magnitude.—

	sq m.	sq. m.	S. Area	sq. m.
Humber including	21 5		Yar	7910
Trent	4093	9540	Ida	1160
Ouse	4591		Ida	926
Severn		5850	Ida	813
Thames		5160	Jure	744
Wash, incl. dng			Ribbles	720
Great Ouse	3160		Furze	645
Nen	1137	6840	Ida	545
Welland	498		Thames	523
Witham	1050		Thames	508
Mersey		1748		

Means of Communication.—Of these, the most important in the present time is the railway system, which has a vast network stretching over all parts of England, excepting the central part of Wales, the county of Cornwall and the W. parts of Devon connecting all the principal cities towns and seaports and conveying daily from one to another thousands of passengers, and tens of thousands of tons of goods. The aggregate length of the lines in working operation is about 5000 m. In connection with the principal of them another more subtle and more rapid means of intercourse has been established, intelligence being conveyed from one end of the country to the other and by submarine wires across the Straits of Dover to all parts of the Continent, with lightning speed by the electric telegraph. Of still greater extent, and not less important in their department are the common roads, of which there are 191 531 m. affording easy means of access to the most secluded districts of the country, and forming veins along which the traffic passes to the great arteries of transit—the railways and canals. Besides numerous navigable streams, England possesses 2531 m. of canal. One principal line, proceeding across the island connects the Mersey with the Humber another connects the Severn with the Thames. A third principal line cuts the other two transversely. Beginning in the N. at Kendal, it proceeds E., passing or communicating by branches with all the great towns of central England, and uniting them all to the metropolis and thence continues onwards to Portsmouth.

Coast Lines.—This forms an important part of the geography of every maritime country, and in the case of such a country as England, requires to be particularly attended to, because it not only furnishes an accurate idea of its contour but throws great light on its general structure. Commencing then at Berwick the N. extremity of its E. coast, we are presented with a sweep of sandy shores and an island of a singular description, separated from it by a narrow channel. On reaching Scarborough castle a considerable change takes place. The Firth of Forth, opposite to it, comprises a rocky group, and the coast itself occupies a promontory forming the commencement of a range of low cliffs, which are continued to the Tyne and terminates in the bold ridge of Tyne-mouth castle. Beyond the mouth of the river the coast becomes bleak and dreary. At Sunderland is passed when it rises into rocky cliffs, hollowed out into deep caverns by the action of the waves. A

flat shore accretions, but soon again gives place to rocks of magnesian limestone the loftiest of which form the promontory on which the town of Hartlepool is seated. Here, by means of piers and docks, a tolerable harbour has been formed, at which vast quantities of coal are shipped. With Hartlepool, forming the N. extremity of the mouth of the Tyne, the county of Durham terminates, and with the S. extremity, the coast of Yorkshire begins. It is for the most part bold and, in many places rises into abrupt and naked precipices, 300 ft. in height. Of these, the most conspicuous at Flamborough Head, a round and rocky promontory of chalk projecting far into the sea and crowned by the castle while its side is occupied by the town of Scarborough. Many of the cliffs in the neighbourhood of Flamborough Head are worn into caves and ledges, and being decomposed by the salt spray slowly crumble down and disappear. The Yorkshire coast retains the same character to its termination in the sickle-shaped promontory of Spurn Point, but the cliffs, consisting frequently of an intermixture of beds of clay and gravel, and chalk rubble, decompose still more rapidly than this chalk. The strong current, formed by the great tidal wave of the Atlantic, which rushes through the Pentland Firth and sweeps S. along the whole of the E. coast of Britain is continually preying upon these cliffs and headlands, and greatly aided by the undermining process carried on by land springs, has already consumed such ravages as to give some ground for fear that it will ultimately convert Spurn P. into an island, and diverting it by the new channel into the Humber cause great devastation. There cannot be a doubt that the mouth of the Humber has already been the scene of similar disasters, and that the fen lands of Lincoln which have been recovered by warping and embankments, only form part of more extensive tracts which though once dry land, are now buried by the waves. Indeed, along most part of the Lincoln coast, a sub-marine forest is still distinctly traced. By crossing the wide bay or estuary of the Wash, we reach a coast of a somewhat different character forming a concave line, which curves round the shores of Norfolk and Suffolk. These shores consist of alternate stretches of rocky cliffs and low sands and furnish interesting examples of the very opposite effects produced by the action of the waves. The cliffs are composed, generally of masses of chalk, resting on low arenaceous beds or strata of gravel, clay and sand alternating like those of Yorkshire already described. In these the waste is moment and rapid. Villages, manors, and large portions of parishes have been devoured piecemeal, and the whole site of ancient Cromer now forms part of the German Ocean. On the other hand where low sands prevail the agency of the waves appears to be paralysed. What might be thought the fraillest barrier not only opposes an effectual resistance, but acts on the offensive, and has made large conquests from the sea. Thus Yar mouth is built on sands, which first became firm and habitable in 1006. Since then a line of dunes has been formed and continued to increase in height and breadth so as to fill up the whole of the original estuary and give no ingress to the tides except by the narrow passage which the Yare keeps open in like manner Norwich, now situated near the centre of the E. division of Norfolk, is connected to the 13th and 14th centuries as standing on an arm of the sea. The Suffolk coast terminates at the mouth of the Stour opposite to Essex, where stands the town of Harwich, possessing the first good harbour which we have met with on the E. coast. The possession however is somewhat precarious. The wasting process, already described, is here proceeding unchecked, and large parts of the peninsula on which the town is situated have disappeared within very recent times. The cliffs, composed of horizontal beds of London clay fall in every way to the waves and the removal of the septaria which they contain for the purpose of making Roman cement by depriving the beach of its protecting shingle, hastens the work of destruction. The Ness, a hooked promontory to the S. of Harwich, may be considered as the N. extremity of the estuary of the Thames. Its opposite extremity is the N. Foreland, expressly declared by statute to be the most S. part of the port of London. Between this point and the S. Foreland, the beach must have low and, being marshy and sandy would even at first sight, to fiducies that, like the low shore of Norfolk, it has been gained from the sea. An old tradition asserts the contrary. About 7 m. distant from the shore, a

long range of sands stretches from N. to S. for 10 m. with a varying breadth, which amounts sometimes to 3 m. These banks, the well known Goodwin Sands lie so near the surface as to be extensively laid bare at low water and the tradition is that they originally formed part of the extensive wastes of Ead Godwin, the father of Harold, who died in 1065 and about that time were overwhelmed by a flood. The tradition received some confirmation in 1817 when one of the shoals, on which it was proposed to erect a light-house, was ascertained, by borings, not to be a mere accumulation of sea sand but to consist of 15 ft. of sand resting on blue clay. The Goodwin Sands are the most dangerous on the English coast and numerous shipwrecks annually take place upon them but they have had one good effect. By breaking the force of the waves they have converted the channel between them and the shore, into the celebrated roadstead of the Downs. Towards S. Foreland the coast becomes elevated, and forms lofty precipitous cliffs, among which the beetling cliffs of Dover are conspicuous. On the opposite coast of France, similar cliffs appear and it has often been remarked, that the projections of the one coast have corresponding indentations on the other. The shortness of the distance across the strait, and the fact that the depth of the sea shallows very much on both sides as approaching these seas, in consequence the idea that England was at one time united to the continent and became an island, either by the force of some sudden convulsion which at once burst the barrier and sent the Atlantic, in full flood into the German Ocean or by some wasting process continued, without interruption through almost countless years, till the barrier was quietly consumed. The identity of the chalk on the opposite coasts, leaves no room to doubt that the formation to which it belongs was at one time continuous but it by no means follows, that the dry land of England was ever contiguous to the dry land of France. They may or rather perhaps, must have been contiguous, when the chalk of which they consist was precipitated from water and deposited at the bottom of the sea; but whether the whole formation was heaved into dry land at once or whether the opposite coasts rose at the same or different times, and left the intervening portion of the formation undisturbed in its ancient ocean covered with the deep, as at present, are points which the want of proper data makes it impossible to decide without presumption. The Dover and other cliffs on this shore, are continually diminishing, but the rate of their greater rapidity in consequence of slugging to the shore. A great landslide in 1810 shook the town like an earthquake. This still greater occurred in 1710. In consequence of these falls, Rhyacopara's Cliff has probably ceased to be as fearful and dizzy as it was when he described it. The coast now stretches N.E.W. retaining its elevation beyond Folkestone, till it subsides into the low tract of Romney Marsh which has already been described. Beyond this we reach the coast of Sussex. At its commencement the beach continues low and a considerable tract of ground has been gained, placing the town of Ly, which once stood close upon the sea, about 2 m. inland. An elevated beach near Hastings succeeded by the low and marshy level of Pevensey beyond which a sudden change takes place. A long chalky ridge comes from the W. bends round to the sea, and abruptly terminates in the promontory of Beachy Head, which hangs perpendicularly over the shore, and has a height of 564 ft. The bold rocky coast thus formed stretches for some distance to the W. and is the most dangerous on the English side of the channel. A long sweep of shore, with the South Downs for its back-ground brings us to Boleay Hill the most S. point of Sussex. From this point a low flat leads to the W. extremity of that county. Hitherto the S. coast has proved as barren of harbours as the E. coast but it no longer continues so. The coast of Hampshire is not only deeply indented but guarded by a barrier of islands, especially the Isle of Wight, so placed as to break the force of the winds and waves and afford behind them an ample expanse of smooth water, easy to be reached and deep enough to float the largest vessels. In one of these indentations is the harbour of Portsmouth, the largest naval arsenal of England, and consequently of the world. Proceeding along the Isle of Wight, which belongs to, and appears to have been at some remote period actually united to Hampshire and passing those well-known rocks the Needles, in which the high ridge of chalk, which stretches

across the Isle from E. to W. so remarkably terminates, we are brought to the E. extremity of the coast of Dorset, where the waves have cut deeply into the soft sands and loams of Poole Bay and where, by the action of the frost, great land slips are frequently produced. Immediately to the E. of this is the so-called Isle of Purbeck, celebrated for its quarries chiefly of a limestone which from taking a polish gets the name of Purbeck marble. The most S. point of the Isle is St. Alban's Head and from it the coast, curving slightly stretches almost due W. till near Melcombe Regis when it suddenly turns S. forms the Bay of Weymouth, and terminates in the remarkable insulated headland, known by the name of the Isle of Portland. This consists of an immense mass of freestone admirably adapted for building and extensively quarried. It is surrounded by high and inaccessible cliffs, from which vast masses, undermined by the waves, are often thrown down, but is not truly an island the long narrow projection called Chisell Bank which consists of a singular accumulation of pebbles, and extends about 9 m. N. N. W. along the coast, at a short distance from the mainland, becoming finally united to it. This extraordinary barrier rises from 20 to 30 ft. above ordinary high water mark and is one of the most curious features presented by the S. coast. From it the land sweeps round in a W. direction to the E. extremity of the Dorset, at Lyme Regis, where lofty cliffs of lias are waiting away at an average rate of one yard annually and then in a S. W. direction along the county of Devon, as far as Torbay. Here the geological structure of the coast undergoes a remarkable change. From Dorset, S. to the Straits of Dover and thence W. along the English Channel to our present position various sections of strata have appeared but the prevailing rocks have been chalk and beds lying sometimes immediately below, but more frequently above it. From Torbay W. to the Land's End and thence N. to the Solway Frith the chalk does not again appear its place being supplied by rocks of earlier date and generally of firmer texture. Torbay forms a beautiful semicircular expanse, the N. and S. sides of which are skirted with ramparts of rock belonging to the Devonian system, while its central shore is the level termination of a valley which slopes gently down from the interior to the water's edge. The spacious basin thus enclosed varies in depth from 6 to 8 fathoms and having a bottom of strong grey shingles, is one of the most beautiful coast now continues S. S. W. just Dartmouth, which possesses an excellent harbour to Start Point. From this noted port the coast proceeds W. N. W. presenting a succession of bold headlands and intervening bays, till the W. borders of Devon are reached. Here, between that county and Cornwall at the confluence of the Plym and Tamar the great harbour and docks of Plymouth have been formed. The width and depth of the estuary and its complete shelter on the N. W. and E. together with its important position in the channel, evidently marked it out as a great naval station but it unfortunately lay open to the S. the heavy swell from which often made the anchorage unsafe. A remedy has been provided by one of the most stupendous works in existence—an artificial breakwater of about a mile in length, stretching across the Sound, ascending from the bottom of the sea above the level of its highest tides, and founded so deeply and so firmly as hitherto to have resisted and calmed its utmost fury. In the greatest storms large fleets lie safely under the cover of this mighty barrier. Nearly opposite to it, in the channel at the distance of about 9 m. is the Eddystone lighthouse, another great work, not astonishing by its magnitude, but equal in utility and perhaps superior as a monument of engineering skill. The coast of Cornwall, which curves round in a W. S. W. direction, is generally bold and stormy but presents nothing remarkable till the excellent harbour of Falmouth is reached, where there is good anchorage for the largest ships, and where, from its position just within the curve of the channel, those ships which are outward bound can lie in readiness to avail themselves of the first wind that will carry them out to sea. From Falmouth, across the mainland to Portreath on the W. coast, the distance is only about 13 m.; and the coast which lies between these two points may be considered as forming the contour of two rocky peninsulas and of the large circular expanse of Mevagis Bay, which is between them. Each of these peninsulas terminates in a remarkable headland—the one the most

southerly and the other the most westerly point of England. The former Lizard Head, is composed of steep crags of serpentine and diorite, surmounted by two lights 224 ft. above the sea the latter is less elevated, but more striking in its appearance, and possesses with the peninsulas which it terminates, the peculiarity of being the only part of the English coast composed of cliffs of granite. About 80 m. W. of the Land's End, is the group of the Scilly Isles, open on all sides, and incessantly preyed upon by the billows of the Atlantic. Nothing but the subterranean materials of which they are composed, seems able to save them from destruction. They are thought to have been united to the mainland by a long ridge, which has been completely submerged and there is a tradition that their number has been greatly increased by the channels which the sea has excavated thereby subdividing larger islands into a series of smaller ones. The coast of Cornwall has, in various parts, suffered from similar causes. Within Mounts Bay from a tongue of land near Penzance formed of granite and more than 80 acres have been gradually swept away and even St. Michael's Mount now a bold in situ rock is said to have once stood in a wood several miles from the sea. Indeed a stratum of black vegetable mould, full of hazel nuts, brambles, leaves roots and trunks of trees has been traced seaward to the lowest tides. A bold coast the cliffs of which are chiefly composed of a clay slate, called *killas* and of other slates of the Devonian system, is continued N. along the coasts of Cornwall and Devon to Hartland Point and thence across Bideford Bay and E. into the Bristol Channel as far as Mueland Bay in Somersetshire. Farther E. it becomes low and marshy. The opposite shore of the Bristol Channel is, at first of a similar nature, but as we proceed W., becomes rocky and deeply indented by a number of minor bays, opening into the larger bays of Swansea and Carmarthen. The navigable importance of these bays and of the Bristol Channel generally has been much increased by the opening up of the great coal field of South Wales, and the extensive iron, copper and other works that have, in consequence, been established. The coast of Devon broke, properly outside the channel continues rocky and, by the force of the sea, has been hollowed out into numerous caves and other curious openings. It is also deeply indented by bays and creeks and furnishes in Milford Haven one of the noblest natural harbours in the world. It consists of a spacious basin with several subsidiary inlets is completely landlocked, and has anchorage of the best description. It has the disadvantage, however of being at a considerable distance from the shores, where it is of the utmost importance that our naval resources should be chiefly concentrated and hence, notwithstanding its unrivalled excellence as a roadstead and its erection of a dockyard with it, it holds only a secondary place among our naval stations. Milford Haven is succeeded to the N. by St. Brule's Bay beyond which in the same direction, stands the celebrated promontory of St. David's Head. The remainder of the coast of Pembroke continues lofty throughout, and in many places is bordered by steep or perpendicular cliffs of primary rocks. On reaching the mouth of the Liffy where Limerick terminates and Carrigan begins the coast takes a new, and almost unbroken sweep forming what is called the Bay of Carrigan but in doing so, besides the shores of the county of that name, those of Monmouth and of the S. and E. of Carmarthen. Along the whole of this line, not one harbour of the least importance occurs. The rocks belong to the most ancient of the formations of S. Britain, and the general character of the scenery is wild and mountainous. Between Carrigan Bay and the Irish Sea, the S. part of Carmarthen forms a peninsula, the coast of which is remarkable for its ruggedness and elevation, the lofty mountains which almost cover the county sometimes sending out their arms as if to embrace the shore. On some of these mountains, at the height of 1400 ft. above the sea, are beds of gravel and sand, with marine shells similar to those still found upon the beach, thus disclosing the interesting fact, that at a period not more remote than our most recent geological epoch, these mountains, and the beds which cover them, must have been upheaved from the bottom of the sea. The coast of Carmarthen may be considered either as terminating at the summit of the Mount Stennis or as continued through them. In the former case we must trace our coast line round the rocky island of Anglesey, where though the coast is very romantic

the only object to attract particular notice is the important packet station of Holyhead. In the latter case our course carries us past the spot on which, perhaps more than any other portion of the globe, the wonders of human genius are displayed in the bridges which span the tide. At the N and of the *Head of the Mersey* stands the town of Bangor, beyond will the coast of Carnarvon, partly formed by Pumlumon, the N termination of the Eboracian range stretches magnificently E.N.E. to the mouth of the Conway. Here the coast turns suddenly N and a peninsula is formed, terminating in *Great Orme's Head*, a vast and lofty limestone rock, hollowed out into deep caverns, and connected with the mainland by a low marshy neck, through which the sea appears to have not once flowed. Another stretch of the coast E. along Tinsford, reaches the Point of Air at the mouth of the Dee, and terminates the principality of Wales. The rocks at this point belong to the carboniferous formation which, composed at first of a narrow belt, widens to U.S., and forms a coal field. The coast between the Dee and the Mersey bounds the large rhomboidal peninsula which constitutes the maritime part of Cheshire, and is composed of abrupt and waving cliffs of red clay and marl belonging like that country generally to the new red sandstone. The history of the Mersey next is considered as the terminus of the great oceanic thoroughfare between the western and eastern land spheres, but over its pre-eminence, in this respect, more to its admirable position than to the excellence of its fairway the navigators in which, in consequence of numerous sandbanks, is intricate and difficult. The Lancashire coast is very much indented by the Irish Sea and consists of a succession of curved and flat peninsulas, which appear to have once been more elevated as in one of them a subterranean forest has been traced. In the N. the large expanse of Morecambe Bay penetrates to W. and isolates the tract of Furness which though included in Lancashire, more properly belongs, both locally and geologically to Cumberland the coast of which with Furness included curves round nearly in the form of a semicircle, with its convexity towards the sea, and may be considered as terminating at the mouth of the Eden. From the proximity of the Cumbrian mountains, which send out branches toward the shore, it contains a number of bold headlands, among which that of St. Bees Head surrounded by a lighthouse, is conspicuous. Immediately beyond it a coal field begins and apparently forms a long narrow belt along the shore. In fact, however it is continued into the sea, and has been extensively worked beneath it. The busy ports of Whitehaven, Workington, and Maryport, bear testimony to its importance. Beyond this coal field the coast loses all its ruggedness, and finally subsides into the marshes and sands of the Solway.

Geology.—In tracing the coast its principal geological features were noticed in succession when the different strata were brought into view, and as these strata, instead of merely forming an external border are generally continued far into the interior the only parts of the island which might seem to require further consideration are those attuned to its centre. In some respects the geology of these is the most important of all as including our principal coal fields, and in these, one main source of our national prosperity. But these, as well as our other mineral fields, and the geology of the country generally having been described under the *Bureau d'Enquêtes*, it seems sufficient here while referring to that article, to add the following brief statement.—England and Wales, geologically considered admit of being divided into three districts—a western, middle, and eastern. The western district is the most ancient. It consists partly of crystalline, but to a far larger extent of sedimentary rocks. The crystalline rocks occur chiefly in the N.W. part of N. Wales where they are composed of varieties of trap and in Cornwall and Devon, where they consist of granite, which forms the extremity of the island at Land's End, disengaged, and again as if by a succession of bursts, places the surface, and finally spreads out covering the greater part of Devonshire. The oldest sedimentary rocks belong to the Silurian series, so called from being most largely developed in that part of Wales supposed to have been occupied by the ancient Britons, and composed of various beds of marl, limestone, slate, sandstone, and conglomerate. It is the oldest series in which remains of animal and vegetable life have been discovered.

Immediately above it and not unfrequently grouped along with it, is the Devonian series, which not only appears under its own name in Devon which is almost entirely composed of it, but is supposed to have its equivalent in the old red sandstone which commencing on the borders of the Silurian series in Wales, spreads over almost the whole counties of Radnor and Hereford, and a great part of Shropshire and Monmouth. In calling the western the most ancient district an exception must be made of the Welsh and Cumberland coal fields, which of course belong to the carboniferous system. To this system all the strata of the central district belong. It may be considered as commencing in the mountain limestone, in which our richest veins of lead are found, and terminating in the new red sandstone, sometimes called the millstone series, from the extensive beds of rock-salt, and the great number of brine springs which it contains. Between these extremes, all our workable seams of coal and all our best seams and bands of ironstone, are situated. The central district, thus limited, does not extend farther S. than the Bristol Channel nor as a mineral field, farther E. than the line drawn through the towns of Nottingham and Newcastle and hence leaves both to the E. and S. a space which far exceeds it in extent, and to which we have given the name of the eastern district. The rocks belonging to it are very numerous, and have been classified, in ascending order under the name of the eolitic series, of which the limestones of Portland, Oxford, and Bath, composed of rounded grains not unlike the roe of a fish, are characteristic specimens the wealden series, largely developed in the world of Sussex, and rich in the remains of animals bred on land in fresh water and estuaries and the cretaceous series, comprising numerous secondary ridges of the island and composed in its chalky cliffs. Above these are beds of detrital gravel, sand, and clays in which the remains of existing animals of warmer climates are often found, and a glacial soil though the boundary is not well defined, alluvial tracts, the formation of which by natural or artificial processes, may still be witnessed.

Again referring to the article *BRITISH LITERATURE*, for information on a variety of important matters among others, *Agri-culture*, *Manufactures*, *Trade*, &c. which might otherwise have been here appropriately introduced, we proceed to other heads, the consideration of which must in this article be pretty reserved. The one which first claims attention is the Church.

Church.—In no country are the principles of religious toleration better understood, or more generally practised and hence all religious sects have perfect freedom to hold their peculiar tenets, and labour as zealously as they choose in propagating them, whether by the pulpit or the press. But while this cannot be denied it must also be admitted that there is no country in which the principle of a religious establishment is more distinctly recognized and its incorporation with the State more fully carried out for not only is the sovereign declared to be the only temporal head of the Church but its leading dignitaries sit merely in virtue of their office, or which is nearly the same thing of emoluments inseparably annexed to it, in the House of Lords, and are entitled to take part, both by speech and vote, in all its deliberations. The Church of England is Protestant, and its form of government is Episcopal. It divides the whole kingdom into the two provinces of Canterbury and York, each presided over by an archbishop—the former styled Primate and Metropolitain of all England, crowns the sovereignty, whether king or queen the latter styled Primate and Metropolitain of England, crowns the queen's coronation. Each archbishop, considered as the head of his province has a general superintendence over the dioceses within it and has, moreover a diocese of his own, in which he possesses the privilege and performs the duties of an ordinary bishop. The number of dioceses is twenty-eight, of which twenty-one are in the province of Canterbury and seven in that of York. Each diocese has a dean and chapter in whom in the case of a vacancy the power of election is formally placed, but all archbishops and bishops are nominated, and, as the nomination must take effect, actually appointed by the Crown. Their emoluments are chiefly derived from land, and have been estimated to yield, in the aggregate, a net produce of about £160,000. Till recently the incomes were very unequal but by Stat. 6 and 7 Will. IV. a 77 an extensive modification has taken place. The archbishop of Canterbury has now £15,000 per

antennæ; the archbishop of York, £10,000 the bishop of London, £10,000 the bishop of Durham, £8,000 the bishop of Winchester £7,000 and the bishop of St. Asaph and Bangor £2,000. None of the rest have more than £5,000 nor less than £4,000. The aggregate income of the benefices of the Church is estimated at about three millions sterling. Several of these are above £2,000, and a considerable number beneath £500 but the far greater proportion ranges between £150 and £400 making the average nearly £280. The doctrine of the Church is contained in Thirty-nine Articles, which having been ratified by Parliament, cannot be altered, except by its authority. The public services of the Church are regulated by the Book of Common Prayer. There can hardly be a doubt that the Church of England possesses a strong hold on the affections of the people, and that nothing of a public nature moves them so suddenly and so strongly as an attempted aggression on its rights. Still a large minority are nonconformists, of whom the Methodists, Independents and Baptists are the most numerous. What proportion these bear to the whole is not accurately ascertained; but we shall not be far from the truth in assuming that the adherents of the Establishment include about two-thirds and dissenters one-third of the population. Mr. Baume of Leeds in evidence recently given before a committee of the House of Commons, estimates the number of dissenting chapels at 14,840 and the churches of the Establishment at about the same number but guards against being understood to mean that one half of the population are dissenters.

Education, Crime, &c.—For the lighter and wealthier classes and the clergy of the Established church England possesses in the Universities of Oxford and Cambridge, two of the most celebrated institutions in the world. For the middle classes, notwithstanding the number of endowed schools, much more scanty provision had been made but the deficiency has in a great measure been supplied by the erection within comparatively recent times of a great number of colleges, and similar superior establishments, in which instruction in the various branches, both of general and professional education is furnished at a moderate expense. But the education which in national point of view is the most important of all—that which in the great masses of the population and more especially necessary under a free government, was for a long time greatly neglected. In many quarters the value of universal education was called in question in others, it was thought that the natural affection of parents and guardians would seldom fail to furnish it in sufficient abundance, while not a few satisfied themselves on principles of political economy that education, like all other commodities, might safely be left to adjust itself by the rule of demand and supply. The public mind has now been awakened to the necessity of the case accurate statistics of the educational state of the most important districts of the kingdom have been obtained proving both the lamentable extent to which ignorance prevails, and its decided tendency to foster pauperism immorality and crime and all classes of the community more especially the religious bodies in it, are vying with each other in extending the blessings of education. The two institutions by which the great work is at present most extensively carried on are the national schools in connection with the Established church and the British and Foreign School Society the constitution of which is so framed as to receive the support of all denominations but, in addition to these, there are vast numbers of local associations operating not the less effectually because they are not under the immediate superintendence of some more public body. Nor can the Government be considered as standing aloof, and acting the part of an indifferent spectator. The mere establishment of a public board of education was one great step in advance, and the original grant of £50,000 now raised to £125,000 per annum, proves that great progress continues to be made. It is of importance, however to have a distinct view of the immense task which remains to be accomplished, and it ought therefore to be borne in mind that while a country to be fully educated must like some of the Swiss cantons have at least 1 in 8 of the population actually under instruction, England has barely 1 in 11. This fact discloses one of the most prolific sources of crime. Out of 885,479 persons committed for offences in England and Wales between 1836 and 1843, not fewer than 864,772 in other words, more than 90 per

cent were uneducated. It must be admitted, however that the state of crime depends not merely on moral but partly also on physical causes, and that while its amount rises with a diminished it falls with an increased employment of labour. The rates of increase or diminution, for a series of years in as far as ascertained by the number of convictions, is exhibited in Table p. 930.

History.—The first historical record of the island is furnished by Julius Cæsar who, about half a century before the Christian era, having been brought, in the course of his victorious career to the opposite coast, determined to visit its shores, and add it to the number of his conquests. His landing was opposed by hordes of painted and half-naked barbarians who not only displayed boundless courage, but possessed some acquaintance with the arts of war. As usual however superior discipline prevailed and though Cæsar occupied with more ambitious aims, soon withdrew his successes were followed up by other leaders, and the greater part of the island became a Roman province. It had continued so for nearly 400 years, when Rome attacked in the very heart of the empire, was obliged to withdraw her legions from Britain. The natives were now again independent but they had lost the spirit of freedom, and when the tribes of the N., which had never ceased to battle for their independence, came pouring down upon the S., the pusillanimous Britons found no better alternative, than first to claim the protection of their old masters and when that was refused to call in the aid of warlike tribes from the E. shores of the German Ocean. The N. assailants were thus expelled but the new allies remained, and, continually reinforced by large arrivals of their countrymen spread rapidly over the fairest parts of the island till the Britons were crused up in the wildest and almost inaccessible fastnesses. The Saxons were now masters, not united under one head, but governed by a number of independent chiefs who having ultimately been reduced to seven formed what is called the Saxon Heptarchy. This state of matters could not long exist. Each chief was naturally desirous to extend his dominions, and seldom scrupulous as to the means of accomplishing it. Feuds accordingly arose and war and intestine dissensions raged almost without intermission till 879, in which year, Alfred, in whom military courage and political sagacity were happily combined made himself sovereign of the whole country and gave it his name of England. His most distinguished successor was Alfred who came to the throne in 871. His reign is one of the brightest in English history and his numerous virtues, and admirable institutions, have justly procured him the surname of Great. Long before his time the Danes had gained a footing in the country and even occasionally acquired the ascendancy in it. The vigour of Alfred's government had kept them in check; but when on 11th death, in 901 the succession to the crown was contested by his two sons the Danes saw their advantage, and so diligently improved it during a few feeble and troubled reigns, that in 1014 Sweyn King of Denmark, who had recently arrived at the head of a powerful force obliged Ethelred, the reigning sovereign to take refuge in Normandy with Duke Richard, whose daughter he had married. The Saxon was thus supplanted by a Danish dynasty under which the only great name which appears is that of Canute. His Edicte constituted a composition of cruelty rapacity and intemperance, died of a debauch in 1041. With him the Danish dynasty closed and the Saxon was resumed in the person of Ethelred's son Edward, who was called to the throne by universal acclamation. His reign though marred by the excessive partiality which he showed for the Normans, among whom he had been educated and the affection of a smutty which the monks found nowhere so vividly manifested as in his neglect and maltreatment of a beautiful and accomplished queen, was long and prosperous and would doubtless, have had a happy issue, had he left an heir of his own body to succeed him. The propterterous virtue to which he aspired, and for which, nearly he has been ridiculously surmised the Confessor made this impossible, and cost his subjects dear. On his death in 1066 Harold, maternal grandson of Canute, and brother of Edward's queen assumed the reins of government. He had previously proved himself able to hold them, and the defects of his title might also seem to have been remedied by the voice of the people in his favour. His competitor was William of Normandy whose title by blood, was

as defective as Harold's but was strongly aided by the will of Edward which made him his heir. Harold was not the man to renounce pretensions, nor William the man to forego his claim, and hence, no alternative remained but decision by the sword. William landed at Hastings, in 1066 with a powerful army and in the great battle which was fought, the Normans proved victorious, and Harold was slain. William thus added to his former titles that of conqueror, and though he chose rather to accept the sceptre as a gift, there is no doubt that he wielded it as a conqueror. His abilities were of the highest order, but by his harsh laws, and tyrannical temper he not only increased the animosity of the English, but created dissension among his own barons, and narrowly escaped falling in the field by the hands of his own son. He died in 1087 and was succeeded in England by his son William I. surnamed Rufus, who, in 1100 was accidentally shot, during a hunting excursion by one of his attendants. The crown belonged of right to his brother Robert then absent in the Holy Land, but was usurped by his brother Henry who, aware of the weakness of his pretensions, used the policy of making concessions to his subjects, but soon proved his lenient tyranny by withdrawing them the moment their purposes seemed to be served. Though he was a usurper and had occasionally fought his way both through blood and crime, he long seemed to be the most fortunate prince of Christendom. His competitors disappeared from the field generally when they threatened to become most formidable, a peace which promised to be lasting had been made with his great enemy of France, all was tranquil both in England and on the Continent and the summit of his wishes seemed to be gained. At this moment a domestic blow struck him and proved so deep that it is said he never laughed again. His only son William, a prince of great promise, in his 18th year the undisputed heir of his crown, perished by shipwreck, with about 140 young noblemen of the principal families of Normandy and England. Henry's daughter Matilda, married to Geoffrey of Plantagenet, eldest son of the Count of Anjou had a son named Henry who now that William, son of Duke Robert of Normandy was dead, became lawful male heir to the crown. He was not allowed, however to succeed till after a long struggle during which England was miserably distracted. The succession opened to him by the death of his grandfather Henry I. in 1135 but in consequence of the usurpation of Stephen son of a daughter of William the Conqueror and an interregnum during which his mother was acknowledged as queen, he did not actually possess the throne till 1154. His reign is one of the ablest in English annals. Among its most interesting events are his struggles with the clergy, the murder of Becket, the conquest of Ireland, and the dissensions in his family which made him curse the day of his birth and sent him to the grave with an unrelieved malediction on his undutiful children. He died in 1189 and was succeeded by his eldest son, Richard I., who partially stung by remorse for his conduct to his father and partly actuated by a love of military glory soon set out on a crusade to Palestine. His achievements there gained him the surnames of Lion and the King without a rival. He was slain in the castle of Chalon, near Lamego. His heir was Arthur son of Geoffrey his next brother, but the crown was usurped by a younger brother John, a cruel, unscrupulous, and despicable villain. Obtaining possession of the person of his nephew he put him to death, it is universally believed by his own hand. The great event of his reign though no part of the honour of it belongs to him was the granting of Magna Charta at Runnymede in 1215. He is said the following year and was succeeded by his son, Henry III. an infant prince, whose reign one of the longest and feeblest on record did not terminate till 1272. He was succeeded by his son, Edward I., a man of a very different stamp. His warlike temper led him to pursue schemes of

conquest, in which honour and justice were too often regarded as matters of very secondary moment. His oppression of the Scots, and barbarous attempt to extinguish all evidence of their national independence, by the destruction of their ancient records, are well known. His treatment of the Welsh, though equally cruel, was more successful and Wales became an integral part of his dominions. His domestic government was conducted on better principles, and has a just claim to praise. The existing laws were for the most part impartially accepted, and at the same time so many valuable improvements were introduced by the new laws which he enacted, that he has sometimes been styled the English Justinian. He has moreover the merit of being the only prince who up to his time, ventured to resist, and successfully resisted, the arrogant pretensions of the church of Rome. He was succeeded in 1307 by his son Edward II. whose reign contrasts very unfavourably with that of his father. He attempted subjugation of Scotland met with its just punishment at Bannockburn, his faithless queen wrested the reins of government from his hands, to place them in those of her paramour, and at last, after all ignominious insults had been heaped upon him, he died a horrid death in prison by the hands of assassins. In 1327 when this atrocity was perpetrated, his son and successor Edward III. was 16 years of age, and the government continued to be carried on by a regency which had been previously established. But the young prince soon gave proofs of his fitness for rule, and assuming the sceptre, wielded it with a vigour which never relaxed for a moment till his death in 1377 a year subsequent to that of his celebrated son the Black Prince. The great events of this reign are the battles of Crécy and Poitiers, and a naval engagement, in which an English fleet of 290 and commanded by the king in person defeated a French fleet of 400 with the loss of 290 ships and 30,000 men. Edward III. was succeeded by his grandson Richard II. son of the Black Prince. At first great hopes were entertained of him chiefly in consequence of the intrepidity and prudence of mind which he had displayed in suppressing Wat Tyler's insurrection. He soon won behind the scenes which he had given become a mere puppet in the hands of worthless favourites, was formally deposed by Parliament as unfit to govern, confined in Pontefract Castle, and there murdered in 1400. The chief cause in the rebellions of this reign was the Duke of Lancaster who immediately assumed the sovereignty and laid the foundation of the fierce and bloody contest between the houses of Lancaster and York. He took the title of Henry IV. and had he reached the crown by fair means, would probably have been generally acknowledged not unworthy to wear it. In his time the Lollards and Wicliffites made great progress and it is said that in early life he had himself embraced their opinions, but the favour of the clergy having become necessary to his ambition he scrupled not to gratify their bigotry by lighting the fires of persecution. He was succeeded in 1413 by his son, Henry V. whose youth, spent among low and profligate associates, gave little promise but who afterwards redeemed his character and proved both an able and a virtuous sovereign. The great blot on his reign was the cruel and unprovoked persecution of the Lollards, the event the victory of Agincourt. He was cut off in 1422 in the 34th year of his age, and was succeeded by his son Henry VI. a mere infant. The guardianship of the kingdom was entrusted to the Duke of Bedford, and during his absence in France to his brother the Duke of Gloucester. The king attained majority but proved too imbecile to hold the reins of government. His reign accordingly was a perpetual scene of destruction rival religious contending for the superiority, and often securing it by the commission of horrid crimes. Even during Henry's lifetime, the House of York resumed its ascendancy in the person of Duke Edward who was proclaimed king by the name of Edward IV. in 1461. He maintained his seat till 1470 when he was obliged to flee, and Henry was restored to nominal sovereignty. Factions however, still continued to rage, and the most barbarous atrocities were openly perpetrated. Henry's eldest son Edward, Prince of Wales was despatched by the dagger of Clarence and Gloucester and he himself a few days after met the same fate. Edward IV. was now again sole sovereign, and continued a course of cruelty and profligacy till his death in 1483. He left two sons, the elder called in history Edward

V, though he never reigned, 15 and the other 9 years of age. They were both murdered by Gloucester better known as Richard III; who in shape was scarcely a man, and in mind was less a man, than a demon. His possession of the throne, to which he had cut his way by a series of unparalleled atrocities, was short lived. In 1485 only two years after his usurpation, he was slain on the field of Bosworth. The victor was the Duke of Richmond who mounted the throne as Henry VII and by marrying the representative of the house of York, happily united the two roses, and terminated the feuds by which the kingdom had been torn asunder. After a long prosperous and peaceful reign during which the revenues of the kingdom were carefully husbanded, and its trade and commerce greatly extended, he died in 1509 and was succeeded by his son Henry VIII, then in his 18th year. His reign is distinguished by many events of importance, but the one which far eclipses all the rest is the Reformation. Very little of the merit of this great work can be claimed by the king. His own violent passions appear to have been his only law and it may readily be admitted, that in all the measures he took to free the kingdom from the thralldom of Rome, he followed anything rather than the dictates of a pure conscience. But this only proves him to have been an unscrupulous instrument in a higher hand, and throws no disparagement on the Reformation, which stands on its own merits and is not afraid to be judged by them. He died in 1547 leaving a son and two daughters who all successively mounted the throne. The son Edward VI succeeded in his 9th, and died in his 16th year after giving proof of talents and virtues which made his early death more deeply regretted. This regret was doubtless increased by the character of his successor whose atrocious bigotry and cruelty have transmitted her to posterity under the name of the bloody Mary. Like her father though not in the same way she was unconsciously a most important instrument in promoting the Reformation. The honour of completing it not as an unconscious or unwilling instrument, but from deep and enlightened conviction, belongs to her illustrious successor Elizabeth, whose reign, though not free from blunders, proved one of the ablest and most prosperous which the kingdom had till then enjoyed and is perhaps partly the cause of the prefection which Englishmen still continue to show for a female reign. Under her successor James VI of Scotland and I. of England the history of England begins to form part of that of the United Kingdom, and is accordingly contained in the article BRITAIN KENNER.

ENGLISH CHANNEL, the sea which separates Eng. land from France, extending on the English side, from Dover to the Lead's End and on the French, from Calais to the island of L'Islet. On the E it communicates with the German Ocean by the Strait of Dover 21 m. wide and on the W it opens into the Atlantic by an entrance about 100 m. wide. At its greatest breadth it is about 150 m. On the English side, off the coast of Hampshire, lies the beautiful Isle of Wight while Guernsey Jersey and the other Channel Islands are situated off the French coast. The pilotage, and mackerel and oyster fisheries in the Channel are very important.

ENGLISH HARBOR. See ARIZONA

ENGLISH RIVER, R. coast Africa. It is an estuary in Delagoa Bay into which three rivers discharge themselves, none of whose sources are believed to be above 80 or 60 m. distant. The shores of English river are an extensive mud-flat, covered with mangrove trees. The water is quite salt, and discoloured by mud, depth sufficient for ships of the largest size.

ENGUA Guaym m. l. Brazil prov. of, and about 80 m. S.E. São Paulo. It is quite close to the mainland, and has recently been connected with it by a road built upon piles. It is low and swampy and in consequence very unhealthy.

The town of Santos stands at its N. and that of São Vicente at its S.E. extremity. Its circumference, before the erection of these towns had made it look almost like part of the mainland was 24 m.

ENGUEBA a tn Spain, prov. of, and 88 m. S.W. by S. Valencia. It has narrow and irregular streets, a large parish church, chapel of ease convent, townhall, prison, fountains, seven schools and a cemetery. Manufactures—linen, and woollen fabrics soap, wine and oil Trade—grain, cattle, wool flax &c. Pop. 5243

ENKHUIZEN (Lath. Enckuise) a seaport tn. Holland prov. N. Holland 28 m. N.E. Amsterdam on a point projecting out into the Zuider Zee, from which it is protected by canals with all parts of the town. Enkhuisen is built with great regularity almost in form of a circle. It has an elegant townhouse a weigh house, and other important buildings several Reformed and two R. Catholic churches, and a small synagogue several benevolent institutions and schools Fishing is the chief occupation, besides which a good trade is done in cheese and seeds. There are three establishments for preparing herrings, two ship, and a two boat building yards, with saw-mills, ropewalk, &c. Enkhuisen once had a population of 40 000 a chamber of 19 East India Company and numerous other important establishments, and sent annually 400 to 500 boats to the herring fishing. It now only has six herring boats and its population is reduced to 5000.

ENKIRIK tn Rhineland Prussia, gov. of, and 38 m. S.W. Coblenz, at the confluence of the Groenbach with the Moselle. It contains a parish church, and has a trade in wine, and cattle slate quarries, and four annual fairs. Lead, copper and lignite are worked in the vicinity. Pop. 1971

ENKOPING a tn Sweden, l. n. Upsala, on a small stream, which about two miles below falls into lake Mälare 47 m. N.W. Stockholm. It is tolerably well built, and stands in a fertile district, in which a good deal of corn, garden vegetables, and potatoes, are grown. Pop. 1253.

ENMORF par Eng Somerset 1112 ac. Pop. 548.
ENVEDA or ENVEDA a vil and par Switzerland, cant. of, and 1 m. S.E. Glarus L. bank Linth, here crossed by a bridge at the foot of Mount Schin which has a height of above 6000 ft. It is generally well built, contains a handsome church and excellent school house, and is the residence of a number of retired merchants and others. Pop. 2129

ENNEREILY par Irel Wicklow 5214 ac. Pop. 426
ENNIS an island tn and par bar Ireland, co. Clare, on the Fergus crossed by four bridges 19 m. W. Limerick. It has a mean, straggling, and disorderly appearance but contains many n. at detached houses streets in general narrow crooked and irregular and not remarkable for cleanliness. The public buildings are the parish church, a R. Catholic chapel Methodist and Independent meeting-houses, a R. Catholic college an endowed and a national school the county court house, a fever hospital and infirmary a prison, a union work house, the townhall, market-house linen market, and a barnack. None of them however have to boast of any great architectural excellence. Adjoining the parish church are the ruins of an old Franciscan abbey founded in 1240. Some linen and flannel are manufactured in the town and there is a considerable trade in grain flour and other agricultural produce, which are conveyed in lighters for shipment to Clare, about 2½ m. farther down the river. Races are held annually in the neighbourhood. The harroth returns one member to the House of Commons registered electors (1850) 115. It is the head-quarters of a constabulary district. Fairs on April 22, and September 3. Markets on Saturdays. Pop. 7800

ENNISCOFFEY par Irel Westmeath 4467 ac. P 729
ENNISCOORTHY an island tn. Ireland, co. Wexford on the Slaney which is here crossed by a handsome stone bridge of three arches, 80 m. S.W. Dublin. In the centre of the town are many respectable houses but the suburbs consist of long lines of poor cabins. It has a parish church, a R. Catholic chapel, meeting-houses for Methodists and Friends; a courthouse market-house, union workhouse fever hospital and dispensary and a convent. Its ancient castle, a massive square building flanked at each corner with a round tower, is one of the earliest military structures of the Anglo-Norman settlers. It was built originally by Raymond de Groen, about

the end of the 12th century and at one period belonged, together with its manor to Spenser the poet, to whom it was granted by Queen Elizabeth. Ennscoorthy has some retail trade and traffic in corn, and other agricultural produce, which is sent in barges by the Slaney to Wexford, for shipment; whence coal, iron, lime, limestone, manure, &c. are brought up its return. There are here a woollen manufactory a large brewery a distillery tanyards, flour-mills, and a ropery. It is a constabulary station. Vinegar Hill from which the rebels were driven with great loss by the royal forces under Lord Lake on June 9 1798, is close by the town. The scenery in the vicinity is beautiful. Pop. 735.

ENNSKILLEN par. Incl. Meath and Cavan 80,810 ac. Pop. 7351.

ENNSKERRY a town in Ireland co. Wicklow 11 m. S. by E. Dublin consisting chiefly of tastefully built cottages, occupied by respectable families. The beautiful scenery in the neighbourhood and the mildness and purity of its air attract numerous visitors and it is valid. Pop. 390.

ENNSKERRY a number of small isles off the W coast of Ireland, co. Clare. Of these, the most important is Melton Island, about 1 m. from the shore. It contains about 210 ac. of excellent pasture land and some curious caves, formerly used by smugglers.

ENNSKILLEN a market tn. and par. in Ireland, co. Fermanagh, on an island in the river which contains the upper and lower sections of Lough Erne with suburbs on both sides of the adjoining mainland with which it communicates by two elegant bridges, 34 m. N. E. Billo. It is well built, cleanly and thrifty and has lately been lighted with gas, and in other respects greatly improved. It has a parish church R. Catholic chapel, and places of worship for Presbyterians, and Primitive and Wesleyan Methodists with a county court-house seven ordinary houses built several schools, a union work-house and two barracks, one of them for artillery. There are two small forts one at either end of the town and in the vicinity is the royal school of Portora, founded by Charles I. and one of the best endowed in the kingdom. Fort Hill at the E. entrance of the town has been tastefully laid out in walks for the recreation of the inhabitants and on its summit is a monument to General the Hon. Sir G. Lowry. Ennskillen has two tanneries a brewery a manufactory of leather and a small cutlery establishment and the female make straw hats and awnings. The retail trade is considerable and a great deal of corn is sent to Derry and Armagh. Live cattle and pigs are also sent to the former place. Timber, coal, and slate, are imported in barges from the lower lakes. Numerous fairs, and four weekly markets, are held. Ennskillen is the seat of county assizes, and of quarter and petty sessions, and the head-quarters of a constabulary district it returns a member to the House of Commons registered electors (18,042) 258; and gives the title of Earl, to the peerage of Ireland, to the noble family of Cole, proprietors of the town. Pop. 5949.—Local Correspondence.

ENNSKILL par. Incl. Kilkenny 136 ac. Pop. 505. ENNSKILL a town in Ireland, co. Clare, on the N. coast of Ireland, co. Donegal 7½ m. N. E. Malin Head. On it is a lighthouse with bright revolving lights visible in clear weather at a distance of about 19 m.

ENNSKILL a market tn. Ireland, co. Clare, on the Inagh, 15½ m. by S. Ennis. It is irregularly built, has a church R. Catholic chapel male and female free schools, and a dispensary. Weekly market, Saturday several fairs annually. 1 pop. 1729.

ENNS, [Latin Enns] a river Austria, which rises in the N. slope of a branch of the North Alps, in Salzburg, about 12 m. S. Radstadt flows nearly due N. to that town, then N. E. across the N. part of Styria, then easterly N. N. W. into the archbishopric of Austria, separating and giving name to the two great divisions of Austria above, and Austria below the Leitha, or Upper and Lower Austria, and finally joins R. Danube, a little below the town of Enns. Its principal affluents are the Thaya River on the right, and the Slavya on the left. Total course about 160 m. In the upper part of its course, it flows between parallel mountain ranges, through a so very rich in wild and romantic scenery in the lower part it becomes navigable, but its importance throughout is chiefly derived from its great amount of valuable water power.

ENNS [Latin Enns] a town, Upper Austria, circle, Traun, 1 bank Enns, here crossed by a bridge, near its confluence with the Danube, 11 m. S. E. Linz. It is walled; has a seminary, school two churches; manufactures of iron and steel, and a weekly market. It is one of the oldest towns in Austria. It is built on Roman foundations; is mentioned in the song of the Nibelungen, and in its vicinity is the castle of Koneck, belonging to the Asseberg family where numerous Roman remains have been dug up. Pop. 5640.

ENODER (8½) par. Eng. Cornwall 7037 ac. P. 1168. ENONTEKIL, a vil. Russia, Finland, 238 m. N. W. Uleaborg, R. bank, Mucio lat. 68° 50' 80" N. 1755 ft. above sea level. Mean temperature about 38; mean heat, January -8°; mean heat, July 82° Fahr. Pop. 800.

ENORE a vil. Hindostan, 8 m. N. by E. Madras, on a small salt water lake. It is composed chiefly of about 100 native, and a few European houses, and as the resort of pleasure parties from Madras, to enjoy bathing on the lake.

ENOS, a maritime tn. and golf European Turkey on N. coast, Grecian Archipelago. The town stands on a point of land at the entrance to the gulf S. side, 70 m. S. by W. Adrianople lat. 40° 45' N. lon. 26° 30' E. (N) It has a commodious, but shallow harbour and has a considerable traffic with the adjacent country. It is the port of Adrianople, with which it has some trade in raw wool made into leather saffron, silk, wax, and copper. Pop. 7000.—The gulf has a very narrow entrance, but is spacious within running into the land 14 or 15 m. with an average breadth of about 5 m. One of the mouths of the Mariza falls into the gulf and the main stream discharges a little to the W. of its entrance, where a considerable fishery is carried on.

ENOTAFISK a town in Russia, gov. of, and 80 m. N. W. Astrakhan in an elevated position on an arm of the Volga, and surrounded by barren plains of moving sand. It has a church and a fort in which a garrison is kept, and in its vicinity wandering Cossacks encamp both summer and winter. Pop. 2000.

ENSCHUDE, a tn. Holland prov. Overijssel, 41 m. S. E. Zwolle near the Prussian frontier. It has Reformed R. Catholic, and Baptist churches, a synagogue, elegant town-hall three schools and a spacious market-place a cotton spinning mill damask draper and bombazine manufactories; bleachers, print and dyeworks and it is altogether the busiest manufacturing place in the province. It has four annual fairs. 1 pop. 8709.

ENSLYADA, a tn. and bay La Plata, prov. of, and 80 m. S. E. Buenos Ayres, within the estuary of the Rio de la Plata lat. 34° 05' N. lon. 57° 50' W. It consists of but a few houses, and a fort.—The bay is narrow and deep, and was the port of the provinces of La Plata before Montevideo was built. Vessels that have to take coals to the E. Indies, repair here for them. Two small rivers, the San Borombon, and the Salado empty themselves into the bay.

ENSHAM par. Eng. Oxford 6060 ac. Pop. 1441. ENSHEIM or ENSHIM a town, France, dep. Haut-Rhin 10 m. S. by E. Colmar R. bank, 11 m. at the junction of the Neufbrach canal. It has a large and ancient Hotel de Ville, a Jesuit college now converted into a prison, a parochial church manufactures of calicoes and straw hats; and four annual fairs. It was formerly capital of Alsace, was fortified and three times taken during the Thirty Years War. Pop. 3650.

ENSWAL, a vil. and com. Belgium, prov. of, and 12 m. E. by S. Leige, on the Vesdre, and a station on the railway to Aix-la-Chapelle. It has manufactures of cloth soap tallow, and pottery several quarries, ironworks, breweries, and flour-mills. Pop. 2586.

ENSTONE, par. Eng. Oxford 61 ac. Pop. 1349. ENTLEBUCH or LUTTENBURG a vil. Switzerland, cant. of, and 12 m. S. W. Luzern, R. bank, Reussen 1280 ft. above sea level, cap. hill of same name. It has a picturesque situated church surrounded by the neatly built houses comprising the village. It has an important cattle-market. Pop. 7415.—The saw-tower consists of the upper portion of the valley of the Emmen, with some adjoining valleys area, 80 geo. sq. m. On either side of the valley lofty mountains rise, but do not reach the snow line. They are frequently cut by deep ravines and are partially covered with pine forests. Pop. 19 743.

ENTRAIGUES, several places, France, particularly a tn. dep. Aveyron, 21 m. N. Rodez, at the confluence of the Truyère with the Lot, which here becomes navigable. It lies between three hills, was formerly a strong place, and has manufactures of harness, and some trade in horn. Pop. 1068.

ENTRAQUE (Entrache) of **AVARAGE** a vil and com. kingdom of Italy Piedmont, prov. of, and 18 m. S. W. Cune. It has an elegant church a communal hall some charities, a seminary two schools, and an annual fair. Pop. 3280.

ENTRE-NAUX-MINE (Lann, Bumeré) a wine dist. France, dep. Gers, between the Dordogne and the Garonne. Large quantities of good common white wines are produced, the best of which are exported to Paris and the Baltic ports the remainder is made into brandy.

ENTRE-DUOMO-MIRNO a former prov. Portugal, now comprised in provs. Douro, and Minho.

ENTRE RIOS, a prov. (between the Rivers) Republic La Plata, lying between the Uruguay and the Paraná, the former constituting its E. the latter its W. and S. limits, the province of Corrientes bounding its N. Its area is estimated at 33,000 sq. m. The S. extremity is a low alluvial plain, subsiding to annual inundations; towards the N. the country has an undulating surface with an extensive swamp in the interior overgrown with low trees. There are however some large tracts covered with fine grass, which supplies good pasture for cattle and horses, from which all the articles of export—hides, horse tallow and jerked beef, are derived. It has numerous river affluents of the Uruguay and Paraná. Civilization is limited to a few places. The climate is moderate and healthy. The population, which amounts to about 80,000, is much scattered, and almost entirely occupied in the extensive cattle farms, in which the wealth of the province chiefly consists. The villa del Paraná or Bajada, is, undoubtedly the capital of the province.

ENTRINGEN a vil Württemberg circle Schwarzwald 15 m. S.E. Heersberg. It contains a Protestant church and has a number of looms employed in cotton-weaving. On a height above the town stands the castle of Hochentringen. Pop. 1844.

ENTRY INLAND—1 or **KARRO** A small isl. E. side Cook's Strait, New Zealand lat. 40° 4' S. lon. 174° 35' E. (i.e.) 15 to 1800 ft. high.—2 One of the Magdalen Islands, gulf of St. Lawrence lat. 47° 17' N. lon. 61° 42' W. (i.e.) It rises 480 ft. above sea level, and may be seen from 75 to 27 m. off in clear weather its red cliffs are magnificently beautiful rising at the N.E. point to 200 ft. and at the S. point to 400 ft.

ENVIE (Latin *in Villa* or *in villa*) a vil and com. Barcinensis, Piedmont division of and 23 m. N. W. Cune. 1 bank, Glandine. It was formerly surrounded by walls flanked with towers, of which only a small portion now remains contains a very ancient church several chapels, and an old castle, with a fine English garden and has a trade in corn, wine, butter and milk. Pop. 2470.

ENYED-NABY **EDENSTADT** or **STRASBURG**, a market in Austria, Transylvania, cap. on Nieder-Weissenburg on a small stream not far from the Maros, 19 m. N. N. E. Karlsburg. It possesses some good houses, but is for the most part very poorly built, consisting of a collection of wood or mud huts, detached with straw. It contains a E. Catholic a Greek United, a Lutheran, and a Calvinistic church, the two last formed out of an old castle at the centre of the market place a Protestant college, liberally endowed by Gabriel Bethlen, and attended by above 600 students a library Minorite cloister, hospital and cavalry barracks. The manufactures consist chiefly of hosiery paper and brandy and there is a weekly market, and three annual fairs.—The *maros* is fertile, and grows much wine. Pop. 5000.

ENYENG a vil Hungary co. of and about 10 m. from Veszprim in a somewhat sandy but still fertile district. It contains a Protestant, and a E. Catholic church. In the vicinity a tolerable wine is grown. Pop. 3117.

ENYICKLE, or **HAUTOMKA**, a market in Hungary Hither Thales co. Aya-Uj about 8 m. from Kaschau. It is situated in a plain and contains a parish church. Pop. 1060.

ENZ, a river Württemberg. It rises in the Black Forest, 2505 ft. above sea level 30 m. S. W. Stuttgart, flows

N. E. past Willbad Pforsheim, &c. receives the Nagold on the right bank and falls into the Neckar at Beighheim, 584 ft. above sea level, 16 m. N. Stuttgart. A considerable quantity of wood is floated down the Enz to the Neckar Total course, 62 m.

ENZBACH a vil Württemberg, circle, Neckar and 6 m. S. Maulbronn, near the Enz, on the frontiers of Baden. It contains a Protestant parish church and has a paper and several other mills. Some wine, and much fruit are grown in the vicinity. Pop. 1044.

ENZERSDORF several places, Austria, particularly—1 A vil Lower Austria, on the Pilsen, about 4 m. from Fuchsenmünd. It contains a parish church and a castle. Good wine is grown in the vicinity. Pop. 1050.—2 **Enzersdorf** Gross or **St. Peter Enzersdorf** a tn. Lower Austria, in front of the ist. of Lobau r bank, Danube 9 m. S. Vienna. It is surrounded with walls and churches, and contains a parish church and a military school. It was bombarded by the French, in 1809. Pop. 910.—3, **Enzersdorf** am Gebrü, a vil Lower Austria, about 5 m. from Vienna. It is the summer residence of many of the Viennese; contains a parish church, to which numerous pilgrimages are made a Franciscan monastery and the ruins of an old castle. The post Werners is buried here. Pop. 820.

ENZILLI a tn. Parma prov. Ghilian on the Caspian shore, at the extremity of a low spit of land which, with a corresponding point opposite called Kasan, forms a kind of bay or lagoon lat. 37° 2' N. lon. 49° 25' E. It is a miserable collection of scattered wood and reed houses, with three brick caravanserais all separated from each other by reed enclosures. Some low detached towers constitute its only defence. A narrow strait, about 500 yards broad, divides the tongue of land on which Enzilli is built from the opposite point its depth seldom exceeds 5 ft. The bay is about 30 m. long by 10 m. broad, and its water at some seasons of the year is so fresh as to be drinkable, there being it is said about 70 streams that discharge themselves into it. Pop. between 2000 and 3000.

EN/WHIMINGEN a vil Württemberg circle, Neckar 1 m. S.E. Vaihingen r bank. Enz, here crossed by a handsome stone bridge of four arches. It contains a Protestant parish church and the remains of an old castle, and has a paper mill. Pop. 1400.

ENIA **ENOA** or **MINORCA** **ISLAND** one of the Friendly isls. S. Pacific Ocean lat. 21° 24' S. lon. 174° 57' W. (i.e.) It is about 30 m. in circumference, rocky and high, rising to an elevation of 600 ft. above sea level. The earlier accounts of this island ascribe to it a degree of fertility and luxuriance of vegetation, that more recent accounts do not confirm. It was first discovered in 1643 by Tartan by whom it was called Middleburg. Pop. estimated at 200.

ENES (ALSO **ENAS** **Kis**, and **ENASO**) four nearly contiguous vil. Hungary co. Szabol, not far from Füzess, on the Platten See. The first contains a Protestant church, and grows good wine in its vicinity. Pop. 510.—The second contains a E. Catholic church, and from the number of antiquities found here it appears to have been a Roman station. Pop. 60.—The third, which consists only of nine houses has an adulterated spring.—And the fourth contains a Protestant, and a E. Catholic church, and a synagogue. In its vicinity an excellent wine is produced. Pop. 1287.

ENES-TUSA, a vil. Hungary co. Heves, about 6 m. from Tusa Füzess. In the vicinity are the traces of a Roman fort, near which many coins have been found. Pop. 1184.

EPA NOMERIA a tn. Isl. Santorin, Grecian Archipelago, singularly situated on the face of the cliffs of the N. W. promontory of the island. The houses are piled one over another from 15 to 20 deep, the whole surrounded by numerous windmills, perched on the very top of the cliff. Many of the dwellings are excavations in the rock others are built above them some with roched roofs, others flat, the lower full 400 ft. above the deep waters of the gulf; the strata below are perpendicular and of a bright red and black lava, much calcined and scum. The town is approached from the sea by a zigzag road cut into the cliffs and has a very striking appearance, the houses towering on high far above the main heads of the largest ships. At night the voyager would hardly be aware of the presence of a town, were it not for the twinkling lights along the face of the cliffs.

EPE or **Eer** a vil Holland, prov Gelderland, 28 in. N Arnhem. It has an elegant Reformed church, and a school a copper and nine paper-mills, and some other manufactures. Pop. including adjoining hamlets, 1300.

EPFEX a in France, dep. Somme, 10 m. N E. Peronne. It has manufactures of table linen, and various kinds of cotton goods. Pop. 2014.

EPERIES [Hungarian *Jepres*] a in Hungary, dep. co. Szarvas, in a beautiful district, on the Tura 183 m N E. Pesth. It is of an oblong shape, is surrounded with walls and consists of the inner town which is well built, and has one very fine main street, and of two larger suburbs, the streets of which are unpaved. It is the see of a bishop, the seat of a Protestant consistory with jurisdiction over the whole of Hungary included in Hisler Theam. It is also the seat of several courts and public offices. contains a Protestant and four R. Catholic churches, a townhouse, county buildings, bishop's palace, with a good library a Protestant college, and a R. Catholic gymnasium and high school and has manufactures of ordinary linen and damask, woollen cloth, flannel, coarse covers, felt ware, &c. and a considerable trade, particularly in linen. Three roads meet near Eperies, and form the great thoroughfares between Galicia and Hungary. Pop. 801.

ELBAY a in France, dep. Marne, at the opening of a rich valley whose sides are clothed with vines, yielding the finest champagne wines 20 m. N E. L. Chabon, 1 bank Marne, here crossed by a fine bridge of seven arches. The town is built of stone, brick, and timber and is kept clean and in its suburbs are numerous elegant villas, with extensive vaults attached to them, cut in the chalk, and belonging to the champagne wine merchants. It is the seat of a court of first resort, and of commerce. Its manufactures are for ever excellent pottery, woolsen thread, paper, ref. in drying, tanning, &c.; and besides wines there is a trade in building and fire wood sent down the Marne, to Paris Rouen and Le Havre. Pop. 5976.

EFFIG a in France, dep. Bas-Rhin 1 m N. Solschelt. It has manufactures of ribbons and the works. Pop. 1845.

EPHESUS, an ancient and celebrated city now in ruins, Asia Minor, pop. Antioch. cap. of Ionia and all Asia Minor 30 m. S. S. E. Smyrna lat. 37° 50' N. lon. 27° 28' E. 1 bank, Little Meander, or Mender, and Cayser, about 6 m. from its mouth in the gulf of Scutia Bay, Great Archipelago. It was, at one time, one of the most considerable of the Greek cities in Asia Minor but now presents few traces of human

whose honour it was built, Diana of the Ephesians. No traces of this temple, which occupied it is said, 240 years in building, now remain, even its site is unknown, though it is supposed to have stood between the town and the port. The original building was of the Ionic order 425 ft long, 900 ft broad with 127 pillars, each 60 ft high, and richly ornamented. This edifice, which contained innumerable statues and pictures of the most celebrated Greek masters, was burned down, A.D. 266, by Heracitus. Subsequently it was rebuilt with still greater splendour, was robbed of its treasures by here, and, A.D. 388 was destroyed by the Goths, after which it was never rebuilt. Amongst the ruins, in best preservation are those of the theatre, which appears to have been of the largest and most imposing dimensions, and those of a noble circus or stadium. Another object of no small interest is the marble quarry of Procon, from which large quantities of that material were taken for the construction of the public buildings of the city.

Ephesus, in mythical times called Ortigia or Pales, was probably built by Androclus, son of Codrus, though, by Piny its erection is attributed to the Amazons. It was included in the kingdom of Alexander after the battle of Granicus, and under the Romans, became capital of proconsular Asia. The Mahometans took it from Abasid Commagene, and from them it was wrested, A.D. 1204, by the Greeks, but, in 1268, it fell again into the hands of the Turks, and now its only representative is the miserable village of Anadoluk. The apostle Paul visited Ephesus, and addressed one of his epistles to its inhabitants.

EPIDAUROS, a port, Greece. See PHALIRO.

EPILA [anc. *Byzopolis*] a in Spain, Aragon prov. of and 19 m. W by S. Saragossa, r. bank, Jalon. It was formerly surrounded by walls, of which some remains still exist and has a church, chapel three convents, two schools, a town-hall, prison, cavalry barracks, two hospitals, a palace of the counts of Aranda, and, in the vicinity, an old Moorish castle. Occupations—agriculture goat and sheep raising. Pop. 2434.

EPINAC, a vil and com France, dep. Saône-et-Loire. The village on high ground 2½ m. W Chalon-sur-Saône, in a mining district, has remains of an ancient castle, manufactures of bottles and beet root sugar and iron forges, &c. In the environs are coal mines whose produce is sent by a small railway to the Canal de Bourgogne at Pont d'Ouche, about 18 m. distant. Pop. 2723.

EPINAL, a in France, dep. Vosges, situated on the Moselle, in a narrow valley among the W. roots of the Vosges,

and overlooked by the ruins of an old castle, 190 m. E. S. E. Paris lat. 46° 10' 24" N. lon. 6° 26' 25" E. The Moselle divides the town into three distinct parts—1 The Grande Ville on the r. bank—2 The Petite Ville on an island formed by the river and a canal R. joined to the foregoing by two bridges, one of stone, and the other of iron—3, The Faubourg des Capucines on the l. bank of the river. Epinal is well built, and rather handsome. Its streets are wide, badly paved, but clean and the quays upon the Moselle are spacious. There are an antique Gothic parish church, an hospital a theatre, a public library (20 000 volumes)—a museum, an abbey an orphan asylum, a communal college, and several model and other schools. The manufactures comprise works in iron and brass, pottery, cutlery, chemicals, &c. and there are oil and paper mills, marble yards, tanneries, and skinners, and, in the environs, quarries of freestone, and marble of various colours. Trade—in grain, wine, plank, paper, linen, horses and cattle. Epinal was formerly capital of a duchy in Lorraine, and the seat of great religious foundations, dependencies of the bishopric of Metz. It first came into French possession about the middle of the 16th century. It was then strongly fortified. As a town of independent Lorraine, it was taken by the French in 1670, and demolished. Pop. 5585.

EPPESTONK, [Eng. *Notz* 1890] a in France, dep. Saxony circle, Zwickau. It contains a large old church, and has the works, a worsted, and several other mills. Much fax is grown and there is a

We find little but scattered and mutilated remains of its ancient grandeur a demolition strikingly illustrated by Dr Chandler who visited the ruins in 1764. Its streets are overgrown and overgrown. A herd of goats was driven to it for shelter from the sun at noon, and a noisy flight of crows from the quagmires seemed to insult its silence. We heard the partridge-call in the area of the theatre and of the stadium. The classic celebrity of this city is chiefly owing to its famous temple, the seventh wonder of the world and the goddess in

silver mines in the neighbourhood Pop 1515.—3 A vil. in the territory and 4 m N Hamburg, r bank, Alster. It contains a church and three schools, and has a bathing establishment, supplied by mineral springs, a cattle-market, and annual fair. Pop 708.

EPFING a market tn. and par England co. Essex, the former pleasantly situated 18 m N N London. It consists of two parts, called Epfing Upland and Epfing Street, about 1½ m. apart, and contains an ancient church a chapel of ease, and places of worship for Independents and Friends. In Epfing Street the weekly market is held, and there are three annual fairs.—The **PARISH** is noted for the quality of its butter, pork, and swanage, and the famous royal forest of Epfing through much of it is now under cultivation still produces some fine woodland scenery. Area, 5381 ac. P 2565.

EPFINGEN a tn Baden, circle, Middle Rhine, reg. bail. of same name, on the Elsenz, 25 m E N E Karlsruhe. It is an ancient place, having had a church as early as the seventh century and early became a free imperial city. It contains two churches, and has a considerable trade, chiefly in cattle. Pop. of tn., 9237 of bail 14,718.

EPSON (Essex, Epsom), a market tn and par England, co. Surrey. The town, 15 m S W London, on a branch of the Brighton Railway is beautifully laid out, but contains a number of good houses, is lighted with gas, and has a church and two Independent chapels. Some brick-making, brewing and malting are carried on. In the vicinity is a celebrated mineral spring, from which the well-known Epson salts were at one time manufactured. After the discovery of this medicinal Spa, Epson became a fashionable watering-place, and rapidly increased in buildings and population but afterwards fell into decay. Another source of attraction, however has since arisen—the annual races, held on the Downs. These commence on Tuesday and continue to the end of the week preceding Whitstable. The Derby stakes are run for on Wednesday which is the principal day and the Oaks on Friday. They are fashionably and numerously attended, from 200 000 to 400 000 persons at it and visiting Epson during the race week. The grand stand on the race-course is a spacious and handsome building. Area of par 4389 ac. Pop. 4139.

EPTE (Latin, Eptis) a river France, which rises near Fougères, flows around, dep. Seine-Inférieure, flows S. between dep. Seine and Eure, on the r and dep. Oise and Seine-et-Oise on the l bank, and joins r bank Seine, above Vernon, after a course of about 50 m.

EPTINGEN a vil and par Switzerland can. Basel Landschaft, in a mountainous district, among precipices so steep that in winter the sun is visible only about mid day. 15 m E E Basel. It contains a large parish church, and has suburbs and steam springs, with a well frequented bathing establishment. Pop. 846.

EPWORTH a par and small market tn. England, co. Lincoln. Area, 8140 ac. The town which is situated in the Isle of Axholme, 23 m N N W Lincoln contains a Gothic church and several Dissenting chapels. The growing of hemp and fax which are grown in large quantities in the neighbourhood forms the principal occupation. Two annual fairs are held for the sale of cattle, fax and hemp. John Wesley founder of the Methodist body was born here, 1703 Pop. 1944.

EQUATOR, State S. America. See EQUADOR.

ERBA a tn kingdom of Italy, gov. Milan prov. of 7 m E by N Como near the r bank, Lodi on a hill slope, and possessing a church, convent, and a manufacture of silk fabrics. A large cattle fair is held in January. Pop. 1554.

ERBACH several places, Germany particularly.—1 A tn. Hesse-Darmstadt, prov. Starkenburg on the Mitting, 23 m S E Darmstadt. It stands in a narrow valley overhung by lofty rocks and contains a parish church and a castle of the Counts of Erbach, a handsome manor, and has many an interesting armory and other antiquities and has many features of walled and linen cloth, tile-works, a paper and several other mills and two annual wool and cattle fairs. ERDOD—1 A vil Austria, Slavonia, co. Virovaca dist. and 10 m. from Essek, beautifully situated on a height, covered with v. neyards near the junction of the Drava with the Danube. It contains a parish church, and the ruins of an old castle, on a promontory which projects into the river. Many of the inhabitants are fishermen.—2 A market in Hungary co. and about 10 m. S. Szathmar at the foot of lofty hills, forming distant ramifications of the mountains of Transylvania. It has a parish church and a castle seated on a height and has glassworks, extensive blackings, and an annual fair. Pop. 1670.

ERDOHLY a vil Hungary Thither Thence, on the White Körös, 8 m from Szatmar. It contains a Protestant and a Wallachian church. Pop. 1440.

ERDOVEGH or **ERDOWITZ** a market in Austria, Slavonia, co. Bymia, dist. of and 8 m from Hlek in a plain near the Babony. It contains a Greek church, and has numerous mills. Pop. 2430.

ERDRE, a river France, which rises in a hilly district on the W. of dep. Maine-et-Loire flows E. into dep. Loire-Inférieure, past St. Mari-la-Ville, and on reaching Jumeu begins to turn S. At Nort it communicates with the Nantes and Brest Canal, and is thereafter navigable to its junction with r bank, Loire at Nantes course about 60 m.

EREBUS volcano. See ANTARCTIC OCEAN.

EREE, or **ERIN** one of the South Sea Islands, Red Sea, lat. 18 10' N. lon. 28° 20' E.; about 4½ m long N to S of very irregular shape, low and sandy. On the E part are the ruins of the ancient Ptolemaeus Theron. The highest part is a mound of ruins which is visible from a distance of 3 m. Many tanks also are to be seen. A bay W side of the island has 5 and 4 fathoms water muddy bottom, the former depth being pretty close to the island.

EREKLI or **ERZANZ**—1 [anc. Heraclea] A tn and port, Asiatic Turkey S coast of the Black Sea 130 m. E. N. E.

Conestogople lat. 41° 15' 30" N lon 81° 30' E, consisting of an ancient and modern town. The latter stands at the head of a beautiful bay on the W. side, and near the extremity of Cape Bala. When viewed from the sea, its walls and towers form a conspicuous and pleasing feature in the general landscape. It contains several mosques, baths, and a Greek church. It has still a considerable trading trade, and some manufactures of red and yellow Morocco leather. The walls of the ancient town, which consists of about 250 houses, and 50 of Greek-Christianity, are now in a ruinous condition, and constructed chiefly of the remains of a former rampart. In that part which fronts the sea, and where there are remains of an outer as well as an inner wall still existing huge blocks of basalt and limestone are piled upon one another and intermingled with columns and fragments of Byzantine cornices and tablets, with sculptured crosses and Christian inscriptions. On a height overlooking the town are the ruins of an ancient castle. The ancient Harbola was founded by the Magyars, and was the port where the fleet of the Goths awaited the return of the second expedition that, in the time of Gaiseric, ravaged Bythynia and Mysia.—3 An inland town, Asiatic Turkey supposed to be the ancient Amhalla 90 m E by R. Koudyeh lat. 37° 32' N lon. 34° 6' E. agreeably situated among gardens full of fruit and forest trees. It is however but a poor place streets dirty small market and containing 800 to 1000 Turkish, and 50 Armenian houses. There are some remarkable hot springs a few miles N. from the town, and a large shallow lake a short distance W. of it.

ERFURT a gov Prussian Saxony bounded N. by Hanover and Brunswick N. E. and E. by Meissen principality of Schwarzburg-Sondershausen, and grand duchy of Saxe-Weimar. It has since grand duchy principality of Schwarzburg-Rudolstadt, duchy of Saxe-Coburg-Gotha, and duchy of Saxe-Meiningen and W. by Hesse-Cassel area. 908 sq. m. It does not form one compact whole but is extremely irregular and dislocated, consisting of a long narrow belt of nine narrow portions mixed up with other states. Its surface is very much diversified. In the S. and S. W. in the circles of Erfurt, Langensalza, and Weissenau it presents a large and fertile plain only occasionally broken by a few low ridges. In the circle of Nordhausen, on the S. slope of the Harz, and also in circle Mühlhausen, it becomes more hilly and higher up in the Harz, and in the Thüringen forest, it rises up into mountain ranges, many of which are black and bare, while others are densely wooded. The culminating point is the Beerberg 3000 ft. and next to it the Felsberg 3600 ft. the Eisenberg 2700 ft. the Adlersberg 2580 ft. and the Hailberg 2480 ft. At least four other summits exceed 2000 ft. It is watered by numerous streams which almost all take an E. direction, and belong to the basin of the Elbe. The principal exception is the Werra, which only traverses a small portion of the W. of the government, and belongs to the basin of the Weser. The minerals are both numerous and valuable including copper iron, silver cobalt, coal, lignite, limestone gypsum and potter's clay. In the fertile plain of Erfurt, Weissenau and Langensalza, heavy crops of wheat and pulse are grown and a considerable portion of surface is devoted to the culture of oil seeds, hemp, fax, fruit, and dye plants. In the more elevated arable districts, oats, and potatoes are the principal crops. Higher still the country where not absolutely bare or covered with forest, becomes entirely pastoral and feeds great numbers of cattle, sheep, and swine. Manufactures though still far behind those of the Rhenish provinces, have made considerable progress. They include all the ordinary tissues of wool, linen, and cotton ribbons, worsted leather, starch, silken, and sherry and particularly iron steel, and numerous articles of iron ware. The inhabitants, of whom nearly two-thirds are Protestants, are very industrious. For administrative purposes the government is divided into nine circles—Erfurt, the capital Hildesheim, Langensalza, Mühlhausen, Nordhausen, Schleusingen, Weissenau, Worbis, and Ziegenrück Pop. (1846) 243,617

ERFURT (Lettin, Erfordia, Ebyrtum) a town Prussian Saxony cap. gov. of same name, advantageously situated five hours from Thuringia, on the Gerz, the great thoroughfare through Germany, and the railway from Frankfurt to Dresden, 62 m. W. N. W. Leipzig. It is a town of considerable strength, being both surrounded by walls with the gates, and defended by two forts and other outworks, on which arse-

nals repairs and improvements have recently been made, and from its numerous towers presents at a distance, a very imposing appearance. It consists of the town proper and six suburbs, and covers a large extent of space, but is dull and uninteresting, exhibiting marks of decay. It has two principal squares—the great market, with a large obelisk in memory of the elector Frederick Charles Joseph, and the fish market, in which there is a statue of Roland. The most remarkable building is the dome or cathedral belonging to the R. Catholic, a fine gothic structure of the 14th century situated on a height, and surmounted by two stately towers. It was much injured by war but great sums have recently been expended on its improvement. It has a famous bell, called Grosses Bismarck, weighing nearly 14 tons. Its N. portal is much adorned and several of its altars are very elegant. Among its pictures are one, a Holy Family by L. Cranach, and another still older supposed to be by Van Eyck. The Severikirche, in the neighbourhood of the dome, is conspicuous by its three towers covered with copper, and has a good organ, and fine high altar. The orphan asylum called Martinshof, in honour of Luther was originally the Augustinian nunnery in which he was a monk. His cell has been preserved as nearly as possible in its original condition, and contains his portrait and Bible. The other buildings and institutions deserving of notice, are the churches of Luthertum, and All Saints (All Saints) the townhouse, library museum, college, gymnasium, normal industrial, and other schools, Ursulin nunnery public courts and offices asylum for the blind, deaf and dumb asylum, poorhouse, barracks and other military buildings, botanical garden, &c. The manufactures consist chiefly of woollen cotton and mixed goods leather shoes candle balls tannery of ox vinegar oilery brandy and liqueurs Erfurt is an ancient town, and has acquired considerable importance in the time of Charlemagne. It became one of the Hanse towns, and shared largely in the trade which passed through Germany between Italy and the Baltic. At that time it was the capital of Thuringia. Its university one of some celebrity was suppressed in 1616 Pop. (1846) 31,700 including 4500 military

ERL LAMIN (E) a vil Württemberg circle Schwarzburg, lat. 51° 10' N lon. 10° 10' W N. W. W. Rottenburg. It has a parish church manufactures of hosiery and pipe-bowls and several weaving mills Pop. 1028.

ERGHEV a river Central Asia, Turkestan Proper region, Thian-Shan Nankou rises in the Karakorum mountains, on the N. W. border of Little Tibet, under the name of the Yarkand and flows N. W. W. to lon. 75° E. when it bends round to the N. E. passes the town of Yarkand, and at lon. 80° 30' E. is joined by four large rivers, three from the left, one of which is the Kashgar and one from the right, the Khent. From this point it flows E. by S. under the name of the Tselin which it retains till it reaches about lon. 85° E. when it is called the Erghevo or Erghevo, and subsequently falls into the W. end of the lake called Lob Nor. Entire course about 700 m.

ERIBALL (Loch) a point of the sea, N. coast Scotland, co. Scottish, lat. 56° 10' N lon. 6° 10' W. It is a small bay, and has a pleasant harbour and affords good anchorage.

ERICEIRA, a town par Portugal prov. Extremadura, com. Torres Vedras on a small bay 23 m. N. W. Lisbon. It has an annual fair. Almost all the inhabitants are employed in fishing Pop. 5000

ERIE (Loch) —1 A lake, Scotland, co. Perth and Inverness, about 10 m. long by 1 broad. It lies N. E. and S. W. in one of the wildest and most inaccessible districts of Scotland and by the small stream Eribich from its N. end, sends its surplus waters to Loch Bannoch.—2 A river Scotland, in the N. E. of co. Perth formed by the union of the Rhine and the Aird. After a S. E. course of about 17 m., through a beautiful and romantic country it falls into the lake.

ERIE, a lake, N. America, the most S. of the Canadian lakes. It lies N. E. and S. W. between lat. 41° 30' and 42° 52' N; and lon. 78° 55' and 83° 30' W. It is about 285 m. long, 82½ m. broad at its centre, 650 m. in circumference, and from 40 to 45 fathoms deep at the deepest part. Its surface is 565 ft. above sea level, and 80 ft. below Lakes Huron, which is 45 m. W. from its N. end, and 20 m. above it within the territory of the U. States, and 20 m. within that of Upper Canada. It receives the waters of

Lakes Superior, Michigan, Huron, and St. Clair through the St. Clair and Detroit rivers, at its S.W. extremity, and discharges its waters into Lake Ontario, by the Niagara river at its N.E. end. Several small islands are scattered over the W. end of the lake; only one of which, Point Pelee Island, is inhabited. This is the most dangerous of all the lakes to navigate in stormy weather in consequence of the heavy ground swell proceeding from its shallowness. It has, however, a vast and increasing traffic, upwards of 50 steamers, and several hundred sailing vessels, navigate it, and find abundant employment. The boats vary in length: no portion of them however is above 100 ft. high. There are considerable quantities of red cedar on particular portions of the coast. The principal harbours on the Canadian side are Port Dover, Port Stanley and the Broad Sea shore on the U. States side are Buffalo, Erie and Cleveland. An engagement in the W. waters of Lake Erie, between the armed fleets of Great Britain and the U. States, ended to the advantage of the latter country.—(Smith's Canadian Gazetteer, Boncheste's Canadian U. States Gazetteer &c.)

ERIE, a town and port, U. States Pennsylvania, finely situated on Presque Isle Bay S. shore, Lake Erie 307 m. N. W. Philadelphia. It contains a court-house, a jail, seven churches, and several academies and schools. The harbour is one of the best on the lake, and the trade of the place is considerable. The value of the exports and imports in 1846, amounted to \$6,378,246 & 21,644,949. Pop. 3412.

ERISKAY an islet Scotland, Hebrides co. Argyll, immediately S. of S. Uist, about 2½ m. long by 1 m. medium breadth.

ERISWELL par Eng. Suffolk 6620 ac. Pop. 624.

ERITH par Eng. Kent 4595 ac. Pop. 2321.

ERIVAN a town in Asiatic Russia cap. gov. Armenia, formerly prov. Erivan, 1 hour, Eranga or Banga, a considerable river that flows from the lake Ghokols or Sevan to the Aras 88 m. N. E. from the foot of Mount Ararat, on the border of the great plain of the Aras lat. 40° N. lon. 44° 40' E. 3311 ft. above sea level. It stands partly on a hill, and partly on the margin of the stream, which is here crossed by a hand some stone bridge of several arches, and is very unhealthy during the summer heats. It is irregularly built, with narrow, dirty and ill-smelling streets, and is mean in appearance, the houses being built of boulders, and mortar made of clay and straw. It contains a large bazaar five mosques, five Armenian churches and several caravanserais. On the summit of the hill on which the town is partly built, there are some fortifications, which include the palace of Sardar with the houses of the public functionaries. Erivan being on the caravan route between Persia and Russia, has a considerable transit trade. It manufactures cottons, and has some potteries and tanneries. Pop. (1843) 12,310.

ERKE, par Ire. Kilkenny and Queen's co. 18,584 ac. Pop. 3549.

ERKELENZ a town in Prussia, gov. of and 24 m. N. N. E. Aix-la-Chapelle, cap. circle of same name in a plain. It is the seat of several courts and public offices. contains a R. Catholic parish church and a superior burger school and has manufactures of linen cloth, ribbons, hats, pins, and lace, a dye-works, flax-mill and several breweries, a trade in corn and flaxseed and three annual fairs. Pop. 2058.—The circle, area, 84 geo. sq. m. is for the most part, flat and well adapted for agriculture. Pop. 64,568.

ERKENE, a river European Turkey formed by several head streams that have their sources in the Little Balkan mountains, near Yana, about lat. 41° 30' N. lon. 28° 40' E. It flows first S. W. for about 18 or 20 m. then turns W. by N. and falls into the Maritsa at Dyer Erkene lat. 41° 30' N. lon. 26° 30' E. after a course of about 60 m.

ERKENEK a pass and vil. Asiatic Turkey path. Marsh 40 m. N. E. Samist, v. bank of the Euphrates. The pass occurs in Mount Taurus, where the Gok Su forces its way through the mountains.—The village, 3928 ft. above sea level, is beautifully situated in the ravine, where the river continually descending amidst rocks and precipices to the W. finally reaches a verdant and beautiful mountain scene. It is surrounded by gardens and trees, watered by innumerable springs.

ERLANGEN a town Bavaria, circle, Middle Franconia, in a plain not far from the Regnitz, 10 m. N. W. N. W. Nürnberg on the railway to Bamberg. The greater part of it having Vol. I.

been consumed by a fire in 1708 it has been rebuilt in a much improved form. It is nearly of a square shape, is entered by seven gates, and its streets cross each other at right angles. The buildings most deserving of notice are the French church, a massive structure, with a tower 180 ft. high; the town church, with a still taller tower the German Reformed church, the old castle and the townhouse, both forming part of the finest square which the town contains; the theatre, a spacious building, of an imposing appearance; and the university attended by about 250 students, provided with a good library and museum, and celebrated at present as a school of Protestant theology. In addition to the university the educational institutions include a gymnasium a Latin an agricultural and an industrial school the chief charitable establishments are an infirmary and a poorhouse. The main features, which are numerous and important, are their excellent and prosperity to the French emigrants who found an asylum here after the revocation of the Edict of Nantes. The leading articles are mirrors, tobacco, honory gloves, steel wares, gold and silver wire, musical instruments, paper hats, woollen and linen cloth, calico leather and gingerbread. There are also tile-works, potter-works, and a great number of breweries. The environs are laid out in gardens and fine walks. Pop. 10,680.

ERLÁN or *Erlos* [Latin *Agria*] a town Hungary cap. on Horys, in a beautiful and fertile valley on both sides of the Erz, a small affluent of the Theiss, 65 m. N. E. Pesth. It consists of the town proper surrounded by old walls, with six gates and of two suburbs. It is the seat of an archbishop, and of several courts and public offices has plain but generally well built houses. contains a cathedral a handsome modern structure, finely situated on a height six other churches, a castle, now ruins, but celebrated in early Hungarian history for its resistance to the Turks. an archbishop's palace, 15 rooms, in the buildings formerly occupied by a university a gymnasium library high school monastery hospital and court buildings and has manufactures of woollen and linen cloth, combs, hats, shoes, leather harness &c. There are here two thermal baths one on each side of the river and both well frequented. Erlas repeatedly distinguished itself by its valiant resistance to the Turks, but ultimately fell into their hands in 1595, and continued under their sway till 1687 when King Leopold I. wrested it from them. Pop. 15,400.

ERLENBACH or *Maxen* EXTRACT numerous in the place Germany particularly —1. A market in Bavaria, Middle Franconia, 16 m. N. W. Nürnberg. It contains a parish church, castle, and townhouse. Hops are extensively grown in the vicinity. Pop. 1211.—2. A market in Saxony circle, Zwickau bail. of and near Voigtburg. It consists of an upper and under village contains a parish church and has manufactures of musical instruments and wooden combs, a paper saw and four mills and two annual fairs. Pop. 617.

ERLENBACH a vil. Württemberg, circle, Neckar bail. of and near Neckarstein with a parish church and a market. Pop. 1053.

It contains a parish church and has manufactures of woollen and linen cloth hats, frieze, and flannel, a dyework, linen printfield, oil-mills, and a trade in cattle. The post Gleim was born here Pop 2388.

ERNE—1 (Lough) a lake, Ireland co. Fermanagh, which it intersects N W to S E 148 ft above sea level. It consists of two expanses of water connected by a narrow winding channel and called, respectively the Lower and Upper Loughs. The former the most N is about 16 m. in length, and about 5 m. in breadth at the broadest part, with a depth, in some places, of 225 ft. It contains nearly 28,000 ac, and embraces 100 islets, some of the larger varying from 10 to 150 ac. Its N shore consists of gentle slopes, the S of bold and picturesque acclivities, but towards the N or lower end, the margins on both sides become flat and boggy. The upper lake is about 17 m. in length and about 2 to 3 1/2 m. broad at the broadest part, depth nowhere exceeding 5 ft, but, generally not more than 20. Area, 9278 ac. The islands in this division are also numerous, amount not altogether to 90 but the greater part of them very small. The shores here are, in general, tame and marshy. There are several ruins of ancient castles along the margin, and on the island of Devenish is a round tower in good preservation. Several rivers empty themselves into the lake, which are navigable for boats from 2 to 3 m. up. The boats in use on the lake are flat bottomed on account of the numerous shoals and are chiefly employed in supplying the towns of Enniskillen with turf. Both lakes about 3 with trout salmon, pike perch, bream etc., etc. There is not a single village on the banks, and the country around is thinly peopled.

—2 A river which rises in Lough Goughan on Longford flows N traverses co. Cavan, and falls into the Upper Lough Erne. It appears again at the N end of the Lower Lake forming the outlet of both lakes, carrying their waters to Donaghry Bay below Ballinacorney a distance of about 8 m. A succession of falls occur from Ballac to Ballinacorney.

ERNEBACH a vil France, dep Mayenne 16 m. N W Laval agreeably situated on river of its own name. It is well built, has broad straight streets, bordered with good-looking houses and some trade in wine, brandy thread and linen. In the environs are iron mines and forges. Pop 357.

ERKLEHEN a vil Prussia, gov Magdeburg circle of and 10 m. S Neuhaudendorff. It contains a parish church castle and porchhouse and stone quarries, and several mills. Pop 1587.

ERZEBOON Eng-Nova or Amoorova a tn. Turkish Armenia, cap. push of some name 156 m. N N E. Durbek lat. 40° 5' N lon. 41° 40' E on a plain and 6114 ft. above the level of the Black Sea, from the S E. coast of which it is distant about 90 m. It is composed of a central portion, called the Ark or Citadel, surrounded by a wall and extensive suburbs stretching out on all sides. The streets are narrow and filthy and infested with savage dogs. They present however a lively and bustling appearance, being thronged with a motley assemblage of Kurds, Persians, Georgians, Armenians, and Turks exhibiting their various physical characteristics and different costumes. In the centre of the town stands the citadel now nearly in ruins it is surrounded by a double wall flanked by bastions, on which are a few brass guns. There are here several respectable houses, some clean and well attended baths, a large custom-house—said to be the largest in the empire—and no fewer than 85 khans, the latter an evidence of the extent of the trade of the town, or at least, of the number of visitors and numerous mosques and minarets many of them, however in ruins. Although an old town, Erzeroum boasts of but few antiquities; the most remarkable is the Church or Turkish Mosque, so called from its two lofty minarets, now in ruins. The architecture of this structure is a modification of Byzantine and Sassanide the minarets are composed of small coloured bricks and glazed tiles, and deeply fluted. It appears to have been originally a

church, but is now occupied as an arsenal. The principal manufactures of Erzeroum are Morocco leather, carpets, silk, and cotton fabrics, and articles in iron and in brass, the former comprising swords and horse shoes, the latter drinking cups and candlesticks. It has also an extensive transit trade, being

on the great line of travel between Constantinople and the Eastern portion of the empire. It has been estimated that 2500 000 worth of British goods pass through the town annually. On June 2 1859 a considerable portion of the town was destroyed by an earthquake. Pop. about 50 000.

ERZGEBIRGE.—From Giovanni's Expedition to the Euphrates.

The PARTIALIA includes a large portion of Armenia. It lies between lat. 38° 42' and 41° 7' N and lon. 39° 10' and 44° 30' E bounded N by pass. Trebzonde Akhalik, and Kars E. by Russian Armenia, and Persia S by pass. Van and Darbaki and W by Elvez. It is a lofty plateau very mountainous, with a long, cold winter accompanied with heavy falls of snow and a short, very hot summer and watered by the head streams of the Euphrates Aras, and Tchoruk. It is treeless, and has a poor soil but well cultivated in this respect presenting a favorable contrast to most other parts of the Ottoman empire, and has excellent pastures. It is divided into 12 districts.—(Bouligate Col Chesney Hamilton Fleming Voyage En Perse, &c.)

ERZGEBIRGE (see mountains).—1 A mountain range, Germany part of the Silesian chain and forming the boundary between Saxony on the N.W. and Bohemia on the S.E. From the narrow valley of the Elbe, which separates them from the Riesengebirge, they extend S.W. to the Fichtelgebirge in Bavaria lowering down considerably towards their S.W. extremity. Total length of the range nearly 100 m. On the Bohemian side the mountains are steep and abrupt, and send out few streams, and those small; but towards Saxony they sink gradually down and send forth numerous and important streams, including all those in Saxony W. of the Elbe to which river they all flow. They are composed of gneiss and granites porphyry and basalt appearing only as superficial or as isolated masses. In Saxony the granite is followed by clay slate, above which again are porphyry granite, and syenite. Towards Bohemia, brown coal and clay slate are developed over a considerable space. The Erzgebirge are well wooded and rich in silver, tin and cobalt. Copper and lead appearing only as accessories. The richest mines are those of Freyberg. The highest peaks are Schwarzwald, or Sonnenwibel 4154 ft., and the Little Fichtel, 3713 ft.—2 (Erzgebirge, or Erzgebirge) a district or circle, Saxony prior to the new division of the kingdom in 1855. It lay along the mountains of same name, and is now included chiefly in the circle or prov. of Zwickau, excepting small portions in the circles or provs. of Dresden and Leipzig.

ERZINGAN a tn. Asiatic Turkey pass of and 92 m S.W. Erzeroum, S bank of N branch, Euphrates, and at the W. extremity of the well cultivated and thickly peopled plain of Erzingan. It contains about 3000 houses and is noted for the excellent breed of sheep which is reared in the environs.

ESA (Latin, Isère) a vil. and com. France, département Alpes Maritimes, 6 m E.E.E. Nice on a lofty height, commanding a view of the sea and, in clear weather of the mountains of Corsica. It contains a parish church with

some paintings and the remains of an old castle. The olive thrives well, and is the chief product of the district.

ESCAIÀ a tn. and port, Esp. n. Catalonia prov. of and 19 m N.E. Girona, on the Mediterranean. It has a church convent, and customhouse and some trade in wine oil grain fruit, fish, barley, wool and linen. Many of the inhabitants are employed in agriculture, cattle-rearing and fishing. Pop. 2212.

It is the seat of a court of justice and has extensive valuable iron-works and rolling-mills, a large machine factory and manufactures of woollen cloth wax cloth, velvet and silk needles and ironware, lace, vases, vitrol and leather glass-works, and smelting furnaces. Calamine and lead are mined in the vicinity and at some distance are extensive coal works. Pop. 18460. 1865.

ESCONDIDO—1. A port, Yucatan, at the N. Y. and of Lake Terminal, lat. 19° N. lon. 91° W.—2. A harbour, Cuba, E. coast, 60 m. E. Santiago.—3. An inlet, New Granada, W. coast, Bay of Panama lat. 7° 40' N. lon. 78° W.—4. A harbour, Gulf of California lat. 25° 5' N. lon. 91° 5' W.

ESCUPIAL, a to. Pinar del Rio, prov. of and 32 m. S.E. Caceres, on the side of a hill. It is badly built, has irregular streets, and paved streets, a parish church town-house, prison, storehouse, and two schools. Agriculture, and the manufacture of linen being serge, &c. are the chief occupations. Pop. 2360.

ESCORIAL, or ESCORIAL, a small to. and celebrated palace and monastery Spain, New Castle, prov. of and 27 m. N.W. Madrid, 2700 ft. above sea level in a barren, rocky mountainous district. The town is well built and has a town-house, prison, seat theatre, two schools, a parish church, and two palaces, and is surrounded by fine walks and beautiful gardens. Pop. 1443.—The PALACE and MONASTERY properly designated El Real Sitio de San Lorenzo of real del Escorial, and formerly looked upon as the eighth wonder of the world, is a vast grey granite, chiefly dark, building, with side and ladder roofs, combining the purposes of a palace, monastery and manse, but its multitude of small windows impart to it much of the appearance of a huge factory in form. It is a rectangular parallelogram, measuring, N. to S. 744 ft. and E. to W. 880 ft. It was built by Philip II., in fulfillment of a vow made after the victory of St. Quentin, gained over the French, August 10 1557, and was dedicated to San Lorenzo. [St. Lawrence] who, according to tradition, suffered martyrdom by being broiled on a gridiron. In

commemoration of this event, the ground plan of the buildings represents that instrument of torture. The interior is divided into courts, which represent the interconnections of the bars of the gridiron, while the royal residence forms the handle, and towers at the four corners supply feet. The first stone was laid April 23, 1558, by Juan Bautista de Toledo, and the edifice was finished September 18 1604, by his great pupil Juan de Herrera.

The building comprises a convent, with cloisters, two col- leges, a royal palace, three chapels, three libraries, with about 30 000 volumes, and some valuable MSS.; five great halls, six dormitories, three halls in the hospital, with twenty-seven other halls for various purposes nine refec- tories and five infirmaries, with apartments for artisans and mechanics. There are altogether 1110 windows in the out- side of the building and 1578 within there are also sixty- three fountains twelve cloisters, eighty staircases, sixteen courts yards, and 3000 ft. of painted fresco. In the centre stands the church, the most remarkable part of the entire structure. It is in the form of a Greek cross, with three naves, 220 ft. long, 230 ft. wide, and 820 ft. high to the top of the cupola. It is gorgeously adorned with gold, silver and precious stones, and has altogether an air of extraordinary grandeur and magnificence. Eight of the compartments of the vaulted roof are painted in fresco. The high altar is adorned by a flight of red-veined marble steps. Many of the columns are of jasper with bronze pil- lars and capitals. In the apse are a number of pictures by the old masters. In 1802 it was sacked by the French and everything of value carried off. It was subsequently gradually going to decay, but grants of public money have been made for its restoration since the accession of the present sovereign Isabella II.—(Mador's *Descubrimiento de España*, Ford's *Hand-book of Spain*.)

ESCORIALZA, a to. Spain, prov. Guipuzcoa, 1 bank, Deva, in a deep valley among mountains, on the great road from Madrid to France, 30 m. S.W. St. Sebastian. It is well built, contains a parish church town-house, primary school, and the buildings of a magnificent hospital not now in use and has some manufactures of linen, a trade in cattle and hams, numerous mills, and some sulphurous springs. P. 1848.

ESCRIBIR par Eng. York (E. Riding) 0067 m. P. 901

ESCUDO, an isl. Caribbean Sea, about 8 m. from N. coast, Veragua lat. (W. point) 9° 34' N. lon. 81° 24' 30" W. (E.) It is low but covered with cocoa and other trees, and is surrounded on the E. and N. parts with various bays of a chalky clay also covered with shells. All the island and bays are surrounded by a shoal of sand and gravel which extends out 6 m. On the S. and S.W. parts there is an anchorage, well sheltered from the N. winds and W. on the landward, is a promontory of same name.

ESCUINTLA a to. Central America, state of, and 43 m. S.W. Guatemala with a fine parish church. Pop. 2500 mostly Indians.

ESSEN, a to. Hanover principality Arnsch on the Tief, 27 m. N.E. Embden, not far from the German Ocean. It contains a church, town-house, an orphan, and a widows hos- pital and has manufactures of linen, a brewery and distillery and a trade in agricultural produce. Pop. 2248.

ESQUEIRA a to. and par. Portugal prov. Douro, 30 m. N.W. Coimbra. It contains a Benedictine convent, said to be the oldest in the kingdom, an hospital and almshouse and has an annual fair. Pop. 1527.

ESHPER, a vil. and par. England, co. Surrey the former 15 m. S.W. London, and a station on the South-western Rail- way. The royal palace of Claremont, in this parish, was built by Lord Olive, and purchased for the Princess Charlotte and Prince Leopold, now King of the Belgians. Here her Royal Highness resided till her death. Louis Philippe took up his abode here, after his abdication of the French throne, in 1848. Esther Flax is another celebrated mention in this parish, once occupied by Cardinal Wolsey. Area, 2079 ac. Pop. 1441

ESLANO a vil. Isl. Sardinia, prov. Cagliari, in an exposed and rugged district on the elevated plateau of Finariga. It is poor irregularly built, and filthy in the extreme has a parish and two auxiliary churches, a primary school, and manufactures of woollens and thence, and some trade in wine, oil, and fruit. Pop. 1509.

ESLINE, a vil. and com. kingdom of Italy gov. Milan prov. Bergamo dist. of and 4 m. S. Brescia, in the Val Camonica,

1 bank, Ollie. It contains two churches, one ancient, and the other a handsome modern structure, with some good paintings and has several saw-mills, and a trade in wood, both for fuel and carpentry. On a rock above the town are the ruins of an old castle. Pop. 1811.

ESK.—1, A beautiful lake, Ireland eo of and 3 m N E. Donagh. —2, A mountain range, Ireland between co. Cork and Kerry. —3, A small river England co. Cumberland, which rises in the S. Wall and after a S.W. course of 30 m falls into the Irish Sea near Ravenglass. —4, A river Scotland, formed in co. Dumfries, by the junction of the Black and White Eaks; after forming for a short space the boundary between England and Scotland it enters Cumberland and falls into the Solway Firth about 2 m. from Berkefoot. Total course, about 24 m. —5, A river Scotland co. Edinburgh formed by the junction of the N and S. Eaks, which unite 14 m. N by E. Dalkeith. It flows N. and falls into the Firth of Forth at Musselburgh. —6, (H. Eak) A river Scotland co. Forth which rises among the Grampians, and after a S.E. course of about 32 m. during part of which it forms the boundary between the co. of Forth and Kinross, falls into the German Ocean 2 m N Montrose. The salmon fisheries on that river are of considerable value. —7 (or K. Eak) A river Scotland co. Forth which rises in the Grampians flows S.E. and E past the town of Brechin and falls into the German Ocean at Montrose, inland from which it forms a large basin. Its salmon fisheries are valuable but it is navigable for only a short distance from the sea.

ESKJALLA, a dist. Scotland co. Dumfries. It is the most E. part of the m. and is for the most part, rugged and mountainous.

ESKI HISSAR [old castle], a small tn Asiatic Turkey pass Anatolia 117 m S.E. L. Smyrna supposed to occupy the site of the ancient *Stratonicea*, which was founded by a colony of Macedonians, and there still exist here the ruins of a theater, pillars, columns, inscriptions and sepulchrs. Tobacco is grown in the vicinity.

ESKI ISAHUA, a tn. Turkey in Europe, on a S. slope of the Balkan mountains 170 to N.W. Adrianople. It has a manufacture of carpets and coarse linen, with some tanneries. In the environs roses are extensively cultivated and there are numerous orchards, with several well frequented mineral springs. Pop. 20 000

ESKI KIRKKE, a tn Asiatic Turkey pass Anatolia, 22 m. N E Konya, r. bank of an affluent of the Sakarra. It consists of two portions, one at the foot of a range of hills the other between two rivulets in the plain, where the market is held. It contains a khan and a manufactory of macramé and pipe-heads.

ESKI STAMBUK [old Constantinople], a maritime tn Asiatic Turkey about 18 m N from the S.W. entrance into the Dardanelles. Many remains of antiquity are to be met with in the vicinity.

ESKI TUNA, a tn. Sweden lks Nyköping 54 m. N by S. Stockholm intersected by the Eskilma or Hyndved, which flows from Lake Hjelmær to Lake Malar. It is a good looking place, and is the principal seat in the kingdom of the iron manufactures. It has copper and iron forges, a steel work, mills, and machine shops and in its vicinity is a fused factory of arms. Pop. 2486.

ESKIMOS. See ESQUIMAUX

ESLA, a river Spain, which rises in the N of prov. Leon near Valdebarca, in the S. slope of the mountains of Asturias, flows S.E.W. and joins r. bank Douro, about 15 m below Zamora, after a course of about 125 m. It receives a great number of small streams, and abounds with fish.

ESMERALDA [emerald], a missionary vil. S. America, Venezuela, r. bank, Orinoco, about 10 m S. from the base of the celebrated mountain Delida lat. 8 10' N lon 66° 5' W. It obtained its name from a mineralogical error which consisted in mistaking the rock crystals, and absorbing quantities of *Delida*, for diamonds and emeralds. It is extremely miserable, and the inhabitants, noted for their ability in the manufacture of wrougal points, are in great poverty, but the country around is extremely beautiful and fertile, and capable of producing in great abundance plantains, sugar and cacao.

ESMERELDAS, a maritime tn. Ecuador prov. Imbabura, 25 m. N.W. Quito, at the mouth of the Esmereldas lat. 1° N lon 79° 35' W (m.). It is one of the principal commercial ports in the republic. In its vicinity excellent cacao is produced and, from mines along the river esmeraldas are gathered, chiefly by Indians. The river formed by the junction of numerous streams about 40 m S.E. the port, has a N.W. course and is hindered by impenetrable forests.

ESNEH, or ESNA [Coptic *Ena*, Latin, *Lalopole*] a tn Upper Egypt 1 bank Nile, opposite to Tana which is hence called *Awil Lalopole* 28 m S.W. Thebes. The extensive mounds evidently covering the remains of ancient buildings, prove it to have been once a place of great extent and consequence but the only buildings exposed to view is the portico of a temple in the finest style of the time of the Pharaohs, and supported by columns, many of which are remarkable for elegance and massive grandeur. The number of the pillars is 24, each about 56 ft. in diameter and 40 ft. high. All their capitals are adorned with leaves of various kinds of trees and, being all formed on one plan harmonize with each other. The portico is 112 ft. long by 53 ft. broad. On its ceiling is a scodas similar to that of Dendera and on the

INTERIOR OF THE TEMPLE OF ESNEH
From Herodotus, *Thucydides* & *Strabo*

pillasters, on either side of the front row of columns, are several lines of hieroglyphs, containing the names of the Egyptian monarchs. Over the destination at the entrance, are the names of Thutmose, Claudius Caesar Germanicus, and Vespasian and written are those of Trajan, Adrian and Antoninus. This has led several distinguished antiquaries to maintain that the whole temple, or at least the portico, the only part of it exposed to view is not of the early date which its style would seem to indicate but was built in imitation of that style in the time of the Romans. The modern town of Esneh is a poor filthy place composed chiefly of mud huts, and a bazaar of similar construction. It is the place of banishment for all the Almoahs and other women of Cairo who offend against the rules of the police. At Esneh the Nile winds out into an extensive and well cultivated plain and is bounded, E. and W. by picturesque looking hills. Pop about 4000.

ESQ. an ad. Adriatic Sea, off the coast of Dalmatia lying parallel to, and nearly midway between the islands of Larga or Grossa, on the W and Ugluano on the E. greatest length, N N W to S S E 7 m. average breadth little more than 1 m.

ESQOAN a tn. Upper Egypt. See ASSUAN.

ESLAD a town and ca. 24 m. in Spain, Andalusia, prov. of and 50 m. N. of Jaen. It is tolerably well built, has two squares, and several streets, a parish church, three chapels, a warehouse, prison, stonehouse, fountain, and an extraordinary cemetery. Manufactures—cloth, linen and woollen fabrics, wine and oil. Trade in grain, cattle, and fruits. Pop. 4335.

ESLALION a tn. France, dep. Aveyron 17 m. N. E. Nodet, 1 bank, Lot, here crossed by a bridge; with some ruined Gothic castles crowning several neighbouring heights. It is well built and thriving in the seat of a sub-prefect, and has a communal college. It has manufactures of coarse woollens, leather, glue, &c., with wool-spinning and a traffic in timber and buckhorn wares. Pop. 2487.

ESPARDELLE, one of the Balearic Isles, Mediterranean a little N. of Formentera, and between that isl. and Iviza. lat. 38° 45' N. lon. 1° 25' E.

ESPARRAGOSA DE LARER, a tn. in Spain, Extremadura, prov. of and 80 m. E. Badajoz, 1 bank Guadalema. It has four squares, a church, four chapels, school, townhall, stonehouse, fountain, and the ruins of an ancient palace. Manufactures—linen. Trade—grain, fruits, and cattle. P. 2450.

ESPARRAGUEIRA a tn. in Spain, Catalonia, prov. of and 41 m. N. W. Barcelona. It consists chiefly of one street, about 1½ m. long and has a parish church, school, hospital, and stonehouse. Manufactures—linen, woollen, and cotton fabrics, paper, soap, wine, oil, &c. Pop. 6747.

ESPELJO a tn. Spain, Andalusia, prov. of and 20 m. N. E. O. rises on the slope of a hill. The streets in general are wide, regular and paved, the houses and frequently built. It has a townhouse and prison, a parish church, eight chapels, a convent, college, two schools, an hospital, stonehouse, cemetery and an ancient castle of the Duke of Medina Coll. Manufactures—linen, wool and hempen fabrics, earthenware, wine, and oil. Trade—grain, cattle, wool and hemp. P. 5284.

ESPERANCE a bay Australia, S. coast lat. 33° 38' S. lon. 121° 46' E. (a), about 1½ m. wide, and above 4 m. in extent, lies in a N. W. and afterwards in a S. W. and W. direction. The bay contains several islets, the principal of which, Labage, is half a mile long, and covered with trees. The coast is barren, consisting chiefly of sand hills, with low vegetation, mountains appear in the interior and there are salt lakes near the shore.

ESPERANCA a tn. See ADAMSON'S HARBOR.

ESPICHEL [see *Dortmund Promontorium*] a cape W. coast, Portugal, 21 m. S. by W. Lisbon lat. (light-house) 38° 24' 54" N. lon. 9° 13' W. (E). The coast, immediately N. is low and sandy but becomes lofty on approaching the cape, which rises perpendicularly out of the sea; is of a whitish color on the N., and reddish on the E. side and is crowned by a small chapel and light-house the latter 817 ft. above the sea.

ESPINARDO a tn. Spain, prov. of and 2 m. N. N. W. Murcia. It forms chiefly one long street along the high road to Albuera has a church, townhouse, two schools, a prison, stonehouse, two rural chapels and a palace of the Marquis of Espinardo with delightful gardens. Manufactures—bilk and linen fabrics, earthenware, and glass. P. 1887.

ESPINOSA DE LOS MONTEZUMA, a tn. Spain, Old Castile, prov. of, and 49 m. N. by E. Burgos, 1 bank, Trucena, at the base of a mountain. It is indifferently built, and has six churches, one chapel, a townhall, prison, school, three fountains and a stronghold belonging to the Comte Montard. Pop. (agricultural) 2298.

ESPIRITO (SANTO) a maritime prov. Brazil between lat. 18° and 21° 40' S. and lon. 39° 40' and 43° 40' W. length about 200 m.; breadth 120 m. area, 48,290 sq. m. bounded, N. by prov. Bahia W. by Minas-Geraes S. Rio-de-Janeiro, and E. the Atlantic. The N. frontier is formed by the Murcury the W. by the Grande and the Cordillera dos Almores and the S. by the Capangaba. The province, on the whole, is very impenetrably known. It is tolerably well peopled along the sea coast, where a number of small towns have been built, but the interior is covered with lofty mountains and impenetrable forests, is almost entirely in the hands of wild Indians, scattered

amid the ancient Aloures and Tupia, and now known by the name of Paria and Botocudo. The principal rivers are the Beversuere or Rerigita, Chapapana, Carabiba, Orizao, Dese, Grande Guarany, Itape Mirim, Jao, and Santa Maria. They all flow S. in courses nearly parallel, and fall into the Atlantic; and are frequented at their mouths, which are generally safe and deep, by coasting vessels, and in the interior by canoes, some of which ascend almost to their sources on the slopes of the Cordillera. The climate is in general healthy and the land fertile, but very little of the soil is under proper cultivation. Considerable attempts at improvement have recently been made, but as yet the exports are of little importance. They consist of unrefined sugar, rum, cotton, manioc, floor, rice, maize, timber and dyewoods, drugs and salt fish. The province is not yet properly divided into administrative districts, but nominates three candidates for the appointment of a senator and sends two deputies to the General Assembly, and 22 members to the Provincial Legislative Assembly, which holds its sittings in Victoria. Pop. 140,900.

ESPIRITO (SANTO) a tn. Brazil, easterly camp. of above prov. and at the S. entrance of the bay of same name. It is better known as Villa Velha, which it owes to the erection of Victoria, which is now the capital. Though once a place of importance, and visited by numerous vessels from all quarters, it has degenerated into a mere village, of about 40 thatched houses. Pop. of dist. about 1000.

ESPIRITU (SANTO) BRUNO SANCHEZ or HONORIS SANCHEZ, a tn. in Cuba, 202 m. E. S. E. Havana lat. 21° 57' N. lon. 79° 28' W. It is the centre of a thriving district, and was founded by Valdesquez. It has some trade in sugar, coffee, &c. Pop. in 1829 whites, 2732 free coloured and 7488 slaves pop. dist. 21,969 whites, 4958 free coloured, 5784 slaves.

ESPIRITU SANTO—1 A spacious bay U. States, W. coast, Florida, lat. 37° 50' N. lon. 83° 50' W. between the E. side, Hillsboro bay and at its N. extremity Tampa bay—2 A bay and inlet, Texas, on the Gulf of Mexico lat. (inlet) 28° N. lon. 97° 30' W. The bay is landlocked having the long narrow island of Matagorda between it and the open sea.

ESPLUGA DE FRANCOSA a tn. Spain, Catalonia, prov. of and 22 m. N. W. Tarragona, 1 bank, Francosé overlooked by the ruins of a spacious and once strong castle. It has a handsome Gothic church, four schools, an hospital, stonehouse, and cemetery. Manufactures—linen and cotton fabrics, brandy, soap, white wax, and dyes. Trade—manufactured goods, agricultural produce, hardware, and salt fish. Pop. 3702.—*ESPLUGA* with different affixes, is also the name of four small villages in Catalonia, and one in Aragon.

ESPORILLAS, a tn. Spain lat. Majorca, 6 m. N. W. by N. Palma, in an agreeable valley surrounded by hills. It is irregularly built has a parish church, two schools, a townhouse, prison, and cemetery and in its vicinity are some curious natural caverns. Manufactures—paper and earthenware. Pop. 1657.

ESPOZANDE a tn. and par. Portugal prov. Minho at the mouth of the Cavado, where it has a small harbor. It contains a church, hospital and almshouse. Pop. 3170.

ESPRIT (St.) a suburb of BATAVIA (which see).

ESPRIT (THE ST.) a group of small isls. China Sea, between Borneo and the S. E. extremity of the Malay peninsula, they extend about 12 m. W. by N. and E. by E., the body of them being in about lat. 0° 54' N. lon. 107° 10' E.

ESQUEBEE a vil. France, dep. Nord about 2 m. from Lille; with manufactures of ivory black, cotton thread, and paper, some bleaching grounds and oil mills. Pop. 1707.

ESQUILLAUD a small isl. Mediterranean, near the coast of France lat. 43° 5' N. lon. 6° 34' E.

ESQUIMAUX, or *ESKIMOS* (native of raw skin) the present inhabitants of Arctic America and Greenland, of Mongol origin and consisting of three principal tribes—the Kataliks, better known by the name of Greenlanders the Esquimaux proper, on the N. and E. coast of Labrador and the Western Esquimaux found along Hudson's Bay, the W. side of Baffin's Bay the polar shores of America, as far as the mouth of the Coppermine and Mackenzie rivers, and both on the American and Asiatic sides of Behring's Straits. This last locality gives them the remarkable peculiarity of being the only aboriginal race common to the Old and the New World. Their leading physical peculiarities are a stunted

stature, flattened nose, projecting cheek-bones, eyes often oblique, and yellow and brownish skin. The dress of the men consists chiefly of a cloak of seal-skin, which when they are at home they wear, but when they are out only a few minute points, often scarcely discernible. In summer they live in tents, covered with the skins of rein and bellow deer in winter they may be said to burrow beneath the snow. Vegetation being extremely stunted within the limits of their territories, their chief dependence for food is on fishing, particularly on that of the seal, which seems to be as essential to them as the tobacco to the Laplanders. Their weapons are bows and arrows, and spears or lances generally pointed with stones or bones, but sometimes also with copper. Their language consists of long compound words, and has regular though remarkable inflections. In grammatical structure, at least, it is American. In intellect they are by no means deficient, and show a some doubtful aptitude for instruction in manners they are kind and hospitable, love freedom and manifest a deep attachment to their homes and native land. Their religious ideas appear nearly but the natives who ultimately attended the labours of the Danish missionaries, after they had almost begun to despair of it, prove their capability of receiving Christianity of understanding its truths, and conforming to its precepts.

ESQUIMAUX an Isl and harbour N America, gulf of St. Lawrence, N or Labrador coast lat. 54° 35' N; lon. 56° 21' W (a) The island is 28 m. long and 18 broad and about 200 or 250 ft in height on the N side. The harbour is 10 m. N of the island and the mouth. The tide running through Esquimaux harbour seldom exceeds a mile the flood setting in from the E, and the ebb the contrary.

ESQUIPULAS, a tn central America, state, Guatemala, 18 m. S. by E Chiquimala. It is chiefly remarkable for a fair which continues for three days, commencing on January 15th, and is attended by a vast concourse of people from all quarters some attracted by the hope of gain, others by the prospect of amusement and dissipation, but the greater portion by religious motives, there being a celebrated image of the crucifixion in a handsome new church, about 1 m. from the town, a pilgrimage to which is deemed highly meritorious by faithful R. Catholics. Pop. 1800

ESROM a lake Denmark, lat. 56° 11 m. W. Eilat near area 8 sq m. from 80 to 36 ft deep in the centre with well wooded shores. A canal 6 m. long is used for floating timber from it to the small harbour of Dronningmølle, on the Kattegat. Near its N end is a small village of same name.

ESSELB. a vil Hanover gov. of 113 m. S. N. R. Omsbruck, with a parish church and an important market for fax. Pop. 833

ESSEN a tn. Rhineland Prussia, gov. of and 16 m. N. E. Düsseldorf, on the Rhine. It is surrounded by walls, is the seat of a court of law and several public offices contains two Protestant and two R. Catholic churches a synagogue, gymnasium, Capuchin monastery orphan and ordinary hospitals and has manufactures of woollen and linen cloth iron, and steel ware, leather and velvet a trade in colonial produce, draps, wine, and wool and seven annual fairs. Coal is worked in the neighbourhood. Pop. 7912

ESSKENDON par Eng. Hartford 2308 m. Pop. 789

ESSEQUIBO a dist. British Guiana (whale and)

ESSEQUIBO a large river British Guiana, formed by several head streams which rise in the mts. Arima or Acaary on the S. limits of the territory about lat. 1° 30' N. lon. 57° W. From this point it flows N. E. to lat. 4° N. when it proceeds due N. and falls into the Atlantic about lat. 7° N., lon. 56° 30' W. after a course of about 480 m. Its principal tributary is the Cayen, which rises in Venezuela, and joins the Essequibo about lat. 6° 20' N. The other tributaries of any note are the Maturai, Aramari, Siparuna, and Quitero from the left and the Ama from the right. This river has been ascended about 400 m. from its mouth. It is impeded by numerous falls and rapids which cease to occur only 50 m. from its mouth, to which the tides ascend. Five miles lower down it enters a plain where it is 1 m. wide, and it grows continually wider until at its mouth it forms an estuary 14 m. across. The entrance is very dangerous, and difficult even for small vessels, on account of the numerous banks of mud and sand. For a great part of its course the Essequibo flows through dense and magnificent forests, the

majestic trees of which are intertwined with convolvul and parasitical plants of every variety the flowers of which make the woods appear as if hung with garlands. The most remarkable fish met with in the Essequibo is the porpoise, 3 ft long its tooth and jaws are so strong that it cracks the shells of most nuts to feed on their kernels and is remarkable for its voracity. The electric eel is also an inhabitant of these waters, as is also the weasel or river otter which sometimes attains a weight of 32 cwt.

ESSEX a maritime co. England, E. coast, bounded N by Suffolk, S. by the Thames, W. by Hertford and Middlesex, and E. by the German Ocean; 60 m. in length, 5 W to N E. greatest breadth, about 45 m. Area 981 170 sq. of which about 15 000 are reckoned waste lands. The surface, though generally level, is not wholly so, being in many parts diversified by gentle hills and dales, especially towards the N W. where there is a continued inequality of surface. The most level tracts are those of the E. and E. hundreds, where there are extensive marshes, that give rise to fever and ague but the middle and S. districts are remarkably healthy. Agriculture is in a forward state here, the farmers of Essex being reckoned amongst the best in the kingdom. The soil is in general extremely fertile and particularly well adapted for the growth of corn, as the superiority of the Essex wheat sufficiently proves. Beans and peas also thrive uncommonly well, perhaps better than in any other land in England. The other principal productions are potatoes barley oats, turnips, tares, rape mustard ryegrass and trefoil. Hops are also raised to a considerable extent, and their cultivation is on the increase. The raising of cut-wary, comestible and (sax) is peculiar to this county. There is no particular breed of cattle here. Grazing is chiefly confined to the marsh lands, the principal stock fed on which is composed of Welsh and Scotch ruins. Lincolns Leicesters Southdowns, and most other breeds of sheep are met with but the Southdown is the most prevalent. A good many hogs are kept, chiefly of the Berkshire breed especially in the S. parts. In the N. there is greater variety. The suckling of calves, for which Essex is celebrated, is carried on to a great extent. They are fattened for about three months, when they are slaughtered for the London markets. The principal dairy farms are in the parish of Epping and vicinity and have been long famous for the excellence of their cream and butter. The axes of farms varies greatly but averages from 150 to 200 m. Fish are plentiful on the coast, and in its various creeks. Near Chelmsford and about the River Chelmer are some valuable oyster beds, the oysters from which are exported in considerable quantities. Above 30 docked boats, from 8 to 50 tons burden, belonging to the island of Jersey are engaged in this trade; but many more from different places may be seen on the fishing ground. It is calculated that 10 000 bushels are taken in a season, and that the capital employed in the trade is from 260 000 to 280 000. The manufactures of the county are not very extensive, with the exception, perhaps of the silk mills at Colchester and several cotton looms. The woollen manufacture was at one time of some importance, but is now extinct. Many of the industrious poor are employed in making straw plait for the London market. The principal rivers in the county are the Roding, Colne, Chelmer Blackwater Colne &c. It has also the Thames, Lea, and Stour as boundary rivers—the first on the S. the second on the W., and the third on the N. and it is traversed S. W. to N. E. by the Eastern Counties Railway. The chief towns are Chelmsford, the capital; Colchester Maldon and Harwich. Essex is divided into 14 hundreds 5 half hundreds, and a royal liberty and into 496 parishes. It returns 10 members to Parliament, namely four for the county and two each for the boroughs of Colchester Harwich and Maldon. Pop. (1841) 244,979; (1851) 269,315

ESSINGTON (Port) an inlet, V coast of Australia, Arnhem Land, on the N. side of the Coburg Peninsula, which projects N. W. from the mainland lat. 12 1/2° S., lon. 133 1/2° E. The approach to it is perfectly open and unobstructed by any danger whatever. At its entrance it is 7 m. wide and its general direction, which extends between 17 and 18 m. is S. E. by E., having a depth of water throughout of 9 1/2 and 5 fathoms; its average breadth is 5 m. and at the S. end it forms three spacious harbours, each of them extending inwards 2 m., with a width of about 2 m. the depth of water

being 5 fathoms. These harbours are sheltered from every wind, and afford excellent and secure anchorage. The shores of Port Eastington present a pleasing variety of little bays and sandy beaches, alternating with bold cliffs and steep clay banks, whilst, inland, continuous forests of macaroon dark green foliage spread over a great extent of country. The climate is extremely hot, often as high as 90° in the morning and 100° at noon, while low periodical draughts almost entirely quench vegetation during their continuance. In the rainy season, again, the rain falls in torrents, but seldom continues above two or three hours at a time. The soil in the vicinity is various but mostly of an indifferent quality. There are a few palms and pandanus trees on the coast. The animals and birds most numerous are kangaroos, bandicoots, iguanas, parrots, quails, curlews, wild geese, ducks, swamp pheasants, besides great varieties of paroquets, cockatoos, hawks, herons, cranes, and gulls. Fish and tramping are also abundant. A government settlement, called Victoria, was founded on the W. shores of Port Eastington in 1838, but, owing to the heat and unhealthiness of the climate, unproductiveness of the soil, and want of markets for such produce as might be raised, it gradually declined and was altogether abandoned in 1849 when the last unfortunate stationer there were removed by Captain Keppel.

ESSLINGEN is a Württemberg circle Neckar capital of same name, beautifully situated on the Neckar 7 m. S.E. Stuttgart, on the railway to Ulm. It is surrounded by walls flanked with towers and is divided into seven distinct portions, of which one is occupied by the castle and three are properly suburbs. It is the seat of a law court for the circle, and of several public offices. It contains two churches, one of which, the *Lutherauskirche*, is a handsome gothic structure built in 1440 and surrounded by a tower 230 ft. high. Two townhouses, one ancient and adorned with paintings and stuccoes, and another of modern construction an hospital theatre and the buildings of an old Dominican monastery and a large arsenal are articles in wool galls, and silver of cutlery, optical and philosophical instruments, diamonds &c. dyewoods, paper spinning and other mills, and a trade in the above articles and in wine, wood, vegetables, and fish. Esslingen is of Roman origin and was long a free imperial town. It came into the possession of Württemberg in 1802. Pop. in 1853 Area of bail 57 sq. m. P. 25,300.

ESSON is a river of France, which rises in around Pithiviers, dep. Loiret, flows circuitously N. N. E. past Malesherbes, into dep. Seine-et-Oise and joins the Seine at Corbeil, after a course of about 50 m. It has been proposed to employ the river in feeding a canal between Orleans and Corbeil using the Loire with it as a sea.

ESSONNES, a town of France, dep. Seine-et-Oise 10 m. S. by E. Paris, in a fertile valley near the junction of the Essonne and Seine. It is seat and pretty has several fine valleys around it and manufactures of wool-cards, lace, Indianas, linen, gingerbread, paper, copper &c. with cotton and wool spinners numerous mills and tanneries. Pop. 27,600.

ESTACA (PUNTA DE LA) a promontory on the N. of Galicia forming the most N. point of Spain lat. 43° 45' N. lon. 7° 45' W. It presents a steep and lofty front to the sea.

ESTAGEL, a town of France, dep. Pyrénées-Orientales, 12 m. N.W. Perpignan on the Agly. It is a handsome and prosperous place, finely situated amid vineyards and olive groves and has oil-works, distilleries, extensive bee-culture, and some quarries of grey marble, with a trade in wine, wax, and honey, brandy, wool and cattle. It is the birthplace of Arago, the astronomer and politician. Pop. 222.

ESTAIRES, a town of France, dep. du Nord 10 m. S.E. Hazebrouck, a bank of the Lys, which is here navigable. It has a commercial college, and considerable manufactures of linen, table-cloth, soap, starch, and made also flax-mills, bleacheries and large-bulked yards and well-frequented markets and fairs. Pop. 8207.

ESTANCIA is a town of Brazil prov. Sergipe about 30 m. S.W. São-Christóvão, on Sergipe del Rey 1 bank, Plantio which is a tributary of the Real and is here crossed by a bridge. It contains two handsome churches, and has a considerable trade chiefly in cotton and tobacco, exchanged against articles of European manufacture. Pop. 3000.

ESTARRIJA is a town and port Portugal, prov. Douro 1 bank, Azule 23 m. from Oporto 1 q. 2035.

ESTAVAYARIE-LAC, or STAVAY, a town and par. Switzerland, com. of, and 16 m. W. by N. Fribourg, beautifully situated on the B. shore, Lake Neuchâtel. It is well built, contains a parish church, an old castle, and a manufactory, and has manufactures of linen and a considerable transit trade. Pop. 1868.

ESTE (anc. *Adria*) a town Austria Italy gov. Venice, prov. of and 18 m. S.W. Padua, cap. dist. of same name, beautifully situated on the S. edge of the Euganean hills, and on the canal of Estera. It is an ancient place, with an unaltered Lombard aspect, most of the houses being supported by picturesque arches. Its principal buildings are a fine old castle, with a dome tower overhanging the town, and with its frowning embrasures and battlements presenting a very imposing appearance; and the dome or church of St. Martin, externally in the renaissance style, and surmounted by a campanile, which hangs over like the leaning tower of Pisa, but internally destroyed by having been completely modernized. The manufactures consist of silk goods, shawls, hats, and articles of earthenware and majolica, and there are numerous silk-mills and whistone quarries in the vicinity. The family of Este of which the castle here is the original family seat, is one of the oldest and most celebrated in Europe. Pop. 6600.

ESTEBAN DE-NOGALAS, a town Spain prov. of and 32 m. N. N. E. Leon, 1 bank Ebro; mainly built irregularly and unpaved streets. Pop. 730. — *Esteban* with various suffixes is the name of several other places in Spain.

ESTELLA (anc. *Alba*) a city Spain, prov. Navarra, 24 m. S.W. Pamplona, 1 bank, Ebro, crossed here by two fine bridges. It has clean, well paved streets several squares, of which the Plaza-de-la-Constitución is the largest, and surrounded by the finest buildings. It has six churches, that of San Juan being magnificent, and having a very lofty tower. A townhouse, prison, hospital college, several public schools, three convents, a bell ring, cemetery and ancient castle. In the environs are a variety of agreeable promenade and pleasure grounds. Manufactures — woollen and linen stuffs, brandy, earthenware, leather, wine, and oil. Trade — fruits, wool, hardware, grain, cattle. The Annual fair in November. Estella was long the head quarters of Don Carlos, who was proclaimed king here in November 1833. Pop. 2760.

ESTILPA (anc. *Atalpa*) a town Spain, Andalucía, prov. of and 50 m. S. by S. Seville, N. side of Mount San Francisco. It has three principal, and numerous smaller streets the former wide and level the latter in many cases, steep, but nearly all are paved. Of its four squares, only that one is noteworthy which contains the townhouse, and is used as a market place. Estilpa has two churches, Santa Maria and San Sebastian the former once a mosque, is a noble gothic edifice having three naves, and a tastefully decorated interior; several convents, five chapels, a college, and various public schools, an hospital orphan asylum, prison, storehouse, cemetery and some remains of the walls and towers of an old feudal fortress, once considered impregnable. Manufactures — coarse cloth, lace and oil. Trade — grain, fruits, oil, brandy, wool, and cattle. Several quarries of marble and building stone are wrought in the above named mountains. Pop. 7630.

ESTERONA a town and port, Spain, Andalucía, prov. Malaga, 25 m. N.E. Gibraltar on the Mediterranean lat. 36° 25' N. lon. 5° 59' W. (n) The streets are wide, clean, and well paved the houses regularly built, and there are seven squares all small, with the exception of the principal which contains the municipal buildings, prison, and other spacious and well-constructed edifices. Its parish church is a large and handsome structure, with three naves, a lofty tower and four bells. The other church belongs to the suppressed Franciscan convent, and also has three naves, and a bell tower. There are likewise, three hospitals a college and several public schools a custom-house, storehouse, hospital, cemetery and an ancient castle, called St. Lewis. Manufactures — leather, woollen-stuffs, pottery, tiles, wine, and oil. Many of the inhabitants are also engaged in fishing, and salted fish and in the vicinity mines of argentine lead are wrought. Trade — cattle, grain, fruits, hardware, lead, and colonial produce, but of no great extent. Pop. 5475.

ESTERHAZ, a village Hungary on the 14 m. S.E. E. Oedenburg, on the S. extremity of Lake Neusiedel. It gives

he name to the Estersky family whose original seat, though now deserted for that of Elnastad, is still deserving of notice. It is a huge structure, in the most florid Italian style, and though already uninhabited for nearly 80 years its marble halls are still brilliant with gold and paintings. The chamber in which the Empress Maria Theresa once reposed remains unchanged as when she occupied it, and the whole interior is so secure, that it might easily be rendered habitable. Haydn lived nearly 20 years with Count Esterházy as his master *di capella*, and his portrait is almost the only picture of interest which the palace contains. The possessions of the prince are said to have a territorial extent nearly equal to that of the kingdom of Wirtemberg.

ESTERNSOW par Irai Rosocomon 6467 sq. p. 1661
ESTHONIA, ESTHONIA, or NEVEL, a maritime gov. Russia, bounded N. by the Gulf of Finland, E. Estersburg, R.E. Lake Peipus, S. Lelund or Livonia, and W. the Baltic. Besides the mainland thus bounded, it includes several islands, of which the most important are Dagoo and Oesel, area, about 5290 sq. m. It is of an irregular oval shape, having the greater axis E. to W., and has for the most part, a flat or undulating surface. A few low heights occasionally appear but scarcely deserve the name of hills. The whole of the N. side, however, rises considerably above the sea, and presents to it ranges of hills, on which the waves often break with considerable violence. The air is somewhat moist, but the sky notwithstanding is generally clear and the climate healthy.

Winter lasts long and cold, with more or less violence, is almost incessant throughout the year. The Narva, which merely bounds the government on the N. is the only river of any importance, but minor streams as well as small lakes, are very numerous. The soil is by no means fertile, a great part of it, particularly in the N. is sandy and in other quarters it is often covered with boulders and gravel but fertile tracts of clay or chalky loam occur and the grain raised is said to equal the consumption. The crops include a little wheat, much barley and oats, and some flax, hops and tobacco. The breeds of domestic animals are very inferior, but improvement has commenced by the importation of better stock, and promises to make rapid progress. Very little fruit is grown. Wood, however chiefly pine birch and alder is abundant and the forests are well supplied with game. Fish abundant, both in the lakes and on the coast, and *salva* fisheries are carried on. The minerals are of no importance, and the manufactures, confined to coarse articles of primary necessity are almost entirely domestic. The only exception is branny which is made in numerous distilleries and partly exported. The only other exports of any importance are hides and salt fish. The chief imports are herrings and salt. The peasantry are almost all of Finnish origin, and speak a Finnish dialect, the vocabulary of which is described as scanty. The land is farmed chiefly by Germans and Danes, the prevailing religion is Lutheran, but education is miserably neglected, the proportion of persons at school being only 1 in 148. For administrative purposes Esthonia is under the governor-general of Riga, and consists of four districts—Rural the capital Haapsal, Wastenstien, and Woesenberg Pop. (1850) 517,000.

ESTRELLA.—1 (SERRA DA) a low chiefly calcareous mountain-range, Portugal, prov Beira, extending E. to the Serra de Gata, in Spain and W. to the N. limit of Portugal. Extremadura, where it joins the Serra Alveazera length about 90 m. mean breadth, 9 m. culminating peak, 958 ft. It is a continuation of the Spanish Sierra Guadarrama, and separates the valleys of the Tagus and Douro.—2 A river Central America, state Costa Rica which flows from the S.W. slope of the mountains in the centre of the state, and falls into the Pacific, near Quaypo, after a course of about 60 m.—3, A in New Granada, prov Antioquia, 5798 ft. above sea level Pop 632.

ESTREMADURA (Latin, *Extremadura* French, *Extrémadura*) a former region or prov. in the W. of Spain now divided into provs Badajoz and Cáceres. It lies between lat. 37° 54' and 40° 38' N. and lon. 4° 50' and 7° 24' W. It is bounded by Leon and Old Castile N. New Castile E. Andalusia S. and S. and Portugal W. from all of which it is separated by mountain-barriers, 150 m. in extreme length N. to S. greatest breadth about 150 m. mean breadth 90 m. Area, 31,467 sq. m. The N. and S. parts are mountainous and

another lofty range, a continuation of the mountains of Toledo in New Castile, intersects it in the centre from E. to W. and joins the Serra del Portalegre, on the frontiers of Portugal. The portion of the province N. of this range is called *Extremadura Alta* [Upper] that S. of it *Extremadura Baja* [Lower]. Extremadura consists chiefly of extensive plains, capable, from their fertility of yielding corn, wine, and oil in the greatest abundance, but which are left neglected and uncultivated some of the finest lands being used as sheep-walks while others are overrun with a low vegetation the result of a wretched government, of the insecurity of property, poverty and a liability to an arbitrary and ruinous taxation, which takes away all interest in the cultivation or improvement of the soil. The climate is hot in summer but not ungenial nor is the winter severe. With trifling exceptions occurring in the S. it belongs to the basin of the Tagus and Guadiana, which intersect it E. to W. the former passing through Alta and the latter through Baja Extremadura, and thus dividing it into it is nearly equal parts. It is well watered by the numerous affluents of these two important streams. Copious dews supply the place of rain, of which but little falls during the warm season. There are some extensive forests of oak, beech, chestnut, and pine trees in which numerous herds of some feed have been almost the only article in which anything like a brisk trade is carried on in the province. Game of every sort is plentiful and excellent honey and wax are also gathered the bees feeding on the odoriferous plants with which some of the most fertile districts are profusely covered. Immense flocks of sheep graze on the rich plains of this neglected country. They are of the Merino breed, the greater part of them being driven down annually from the highlands of the N. to the glooming and more mountainous provinces, by their own or without leave asked or obtained to quarter for the winter season on the warm, fertile lowlands of Extremadura.

The minerals, of which there are copper lead, iron, and silver are entirely neglected and there are no manufactures. The roads are miserable being chiefly made by sheep, and the men are of the most wretched description. The poor is [Extremadura] are simple, honest and kind hearted but being without any stimulus to industry are indolent and apathetic, although capable of exerting both energy and perseverance in a remarkable degree, when induced thereto by a sufficient motive, of which the achievements of Cortes, the two Pizarros, the Almagros all natives of the province, and other adventures, may be adduced as evidence. They are still y in their habits, living in common with it a swarm of swine they rear. The young pigs are the playmates of the children and young and old ones have free access to all parts of the house, to which they impart their own strong and peculiar odor.

The population was formerly much greater than it is now as is apparent from the number of ruined and deserted villages and the many traces of former cultivation which are so frequently to be met with. Pop. 501,124.

ESTREMADURA (Latin, *Extremadura* French, *Extrémadura*, Portuguese, *Extremadura*) a maritime prov. Portugal between lat. 38° 5' and 40° 15' N. and lon. 7° 50' and 9° 30' W. about 162 m. in length N. to S. and about 75 m. in breadth at the broadest parts bounded S. and E. by Beira E. and S. by Alentejo, and W. by the Atlantic Ocean. It is divided into two nearly equal parts by the Tagus of which the N. is the more mountainous, and includes the last slopes of the Serra de Estrella, from which the Serra Alveazera proceeds S. W. culminating in Mount Juncos, 2350 ft. forming the heights of Terra Vedra, and ending on the N. bank, and near the mouth of the Tagus. W. of this ridge the country is mostly flat and sandy especially towards the coast and S. E. of it, especially in the N. parts, it is more fertile. Wine (including those of Setúbal, Beja, and Carcavelos) and olives are the principal produce, but wheat, barley, maize, hemp, legumes, and fruits of all kinds including chestnut oranges, and lemons are grown; and from the forests amaranth and cork are obtained. Cattle-raising is little attended to, but swine are numerous. Minerals abound, but only salt is wrought. There are some woollen and linen manufactures, and some crystal is made at Leiria. The climate is generally healthy. The principal city is Lisbon, the metropolis of Portugal in which, and in Setúbal, the

most of the trade is concentrated. The province is divided into 126 cantons. Pop. between 600,000 and 700,000.

ESTREMERA a tn. in Spain, New Castile, prov. of and 24 m. S.E. of Madrid, near r. bank, Tagus. It has level and clean, though unpaved streets, two squares a townhouse, with a parterre supported by six stone arches a parish church, three chapels, two schools, a prison, storehouse, and cemetery. Esparto, cordage, and coarse cloth and oil are manufactured and there is some trade in grain, cattle, rice &c. Pop. 2996.

ESTREMEZ, or ESTREMEZ.—A fortified tn. Portugal prov. Alentejo, 22 m. W Alentejo, consisting of an upper and lower town the former on an eminence, the latter on the level ground below both indifferently built. It contains several churches and convents, and no hospital, and is now the seat of the Government authorities. Its fortifications, at one time formidable, are falling to decay. It has tanneries, some manufactures of pottery a small trade in hardware, an annual fair of five days, and in the vicinity are marble quarries. Pop. 6577—3, A. tn. Brazil prov. Rio-Grande-do-Norte, on the lake of Guajará, about 16 m. N Natal, and 18 m. from the sea. It is the seat of an electoral college, and contains a parish church and a primary school. The district consists generally of low sandy grounds, and the whole population does not exceed 1700.

ESSEK or ESSEX [anc. *Mæcen*, or *Mæcen*] a tn. Austria, Slavonia, cap. co. Veroc, r. bank, Drava, here crossed by a bridge, 65 m. W W Peterwardein. It stands in a marshy district, subject to frequent inundations and very unhealthy, and consists of the two proper partially fortified, and divided into the upper inner and lower town and of three suburbs. It is the seat of an appeal court, with jurisdictions over three counties, and of several public offices contains a handsome square, with a pillar in its centre, a Greek non-walled and three R. Catholic church as a townhouse, county buildings, gymnasium and normal school two convents, a burgher hospital and cavalry barracks. The manufactures are trifling, but there are some silk mills and four large annual fairs, chiefly for corn, cattle, and raw hides. A lofty enhancement, nearly 3 m. long, lines both banks of the Drava. Essex was originally a Roman colony founded by the Emperor Adrian under the name of *Mæcen*, and became the capital of Lower Transylvania. In 538, the Hunnians made it a bishop's seat, which was suppressed about two centuries after. In the 11th century shortly after the incorporation of Slavonia with Hungary it sunk into a mere village, but gradually rose into importance especially in the 17th century when it was fortified by Leopold I. P. 12,000.

ETABLES, a maritime tn. France, dep. Côtes du Nord 8 m. N N W Brème. It has a fine church with a neat square and some fisheries. Pop. 1018.

ETAIN [Latin, *Passus Veridicorum*] a tn. France dep. Meuse, 88 m. N E. Bar-le-duc 1 bank, Orne. It has a fine townhouse a parish church, of the 14th century and is generally well built and neat. It has a communal college, manufactures of cottons and thread oil works, tanneries, and lime-kilns and a trade in timber clo or and lucerne seeds, bacon, mutton, and game. Etain is an old town, and was once capital of the great plateau of the Meuse, and strongly fortified. Pop. 2981.

ETAMPES [anc. *Stampel*] a tn. France dep. Seine-et-Oise, 80 m. S. by W Paris, situated on the confluence of the Eure and Seine a station on the Paris and Orleans Rail way in a fertile and beautiful valley. Here is a communal college. It is well built and clean, with rows of trees skirting its outer promenade. Among the chief public buildings are the church of Notre Dame a remarkable pile of the 15th century with three other antique gothic churches the Hotel de Ville, of quiet architecture an immense stone granary recently built and some remains of a strong castle built by King Robert, and dismantled by Henry IV. There are numerous flour mills, some tanneries, silicene, and woollen bleacheries with extensive quarries of paving stones for the Paris streets. It is a great grain market, and has a considerable trade in flour sent chiefly to the capital and provinces wool for the manufacturers of Soles, Louviers, and Elbeuf. Pop. 672.

ETAPLES [anc. *Staples*] a maritime tn. France, dep. Pas-de-Calais, on St. Lancher, near its embouchure in the Strait of Dover 52 m. W N W Arras a station on the rail

way from Paris to Boulogne. It is a desolate-looking place, with some ruins of a castle, built in 1180, and has some coasting trade; but the inhabitants subsist chiefly by fishing. Some archaeologists think Etaples was the *Furcia Riva*, where Caesar embarked to invade Britain. Pop. 3030.

ETAWEH or ETAWAN a tn. and dist. N W Illinois. The town prov. of, and 70 m. S.E. Agria, 1 bank, Juma; lat. 36° 47' N lon. 78° 55' E. It is built on heights, and as it approaches the river is divided by deep ravines. Etawah was once a flourishing place, the abode of grandees of the Mogul empire, but is now a mass of ruins and decay. It still possesses a splendid giant, but is, on the whole, one of the most dreary and desolate places of residence in India. A few bungalows, scattered over a wide sandy plain, nearly destitute of trees, intermixed with other buildings of an inferior kind announce the presence of civil and military residents.—The *ETAWAN* one of the five into which province Agria is divided (area, 1265 sq. m.) lies chiefly between lat. 26° and 37° N and comprehends a large portion of the land between the Juma and the Ganges. It is intersected N W to S E by the Rinde. It is very bare of wood, has a variable, and frequently intensely hot climate, and cotton indigo, sugar-cane, millet, maize, &c. are grown and some coarse cloths are manufactured. The district is thinly peopled there being only 363 5 to the sq. m. in total pop. 468,610.

ETCHEMIN or ECHENIS a river Lower Canada, S. side of the St. Lawrence, flowing from a lake of the same name; lat. 46° 21' N lon. 70° 37' W. It pursues a N W course, and falls into the St. Lawrence between 8 and 4 m. above Quebec. Entire length, about 50 m. The margin of the stream generally consists of flat rock, with only a shallow covering of sand upon it but at some distances from the banks the land is good and in high cultivation.

ETCHINGHAM, par Eng. Essex 3760 ac. P. 950. ETED or ETZA a vil. Austria, Transylvania, Udvarhely Baekler-Stuhl on the Kisnod 26 m. S.E. Maros-Vasarehely. It contains a Protestant church and has an annual fair. Pop. 1288.

ETHEL BURGA (St) par Eng. Middlesex. Pop. 698.

ETHEL BURD (St) par Eng. Norfolk. Pop. 896.

ETHIOPIA (Greek, *Aethiops*) has been given by ancient geographers to the countries N of Egypt. It was wrongly applied to the whole S. part of Africa, from the Red Sea to the Atlantic but, in a more restricted sense it was confined to a definite region including the countries now known by the names of Nubia and Sennar and probably a part of Abyssinia. The government of this country was established at a very early period. It was monarchical but the monarch was subordinate to a priesthood, possessing greater power than even that of Egypt, which is believed by many to have been indebted to Ethiopia for her religion. Merus was the ancient capital of the kingdom.

ETIENNE (St) a tn. France, dep. Loire advantageously situated on both sides of the Ferrens, and in the centre of one of the most valuable coal fields of France, 43 m. S.W. Lyons. It has sprung up in recent times with almost unexampled rapidity in consequence of the manufactures which are carried on in it and though not regularly built, contains several spacious streets, formed of lofty and substantial houses of five storeys, originally white, but rendered dingy and black by the clouds of smoke which numerous public works are continually pouring forth. The finest street, lying in the line of the great public road from Paris to Marseilles, crosses the town almost centrally in hand with rows of trees, and divided into two parts by the Hotel de Ville a large but not handsome edifice, which includes, in addition to the townhouse, a courthouse, exchange, small library and museum. The only other building deserving of notice is the cathedral which furnishes an ancient specimen of romanticism. St. Etienne also possesses a court of first resort and commerce, a consulting chamber of manufacturers, a conseil de prud'hommes, a communal college, an evening school. The staple manufactures to which it owes all its prosperity, are hardware, making fire arms, and all kinds of cutlery which have earned for it the name of the French Birmingham and ribbons and other figured silks, equally admired for the excellence of their texture and the beauty of their design. The former of these two staples employs about 7000 workmen, and, in addition to other articles

produces annually in time of peace, 40,000 sterd of arms, but in a push might be able to produce nearly 200,000. The latter staple is the more important, and employs within the town, and in the adjoining districts about 40,000 persons. The number of looms is estimated at 20,000. To the abundance of coal, to which the prosperity of its manufactures is mainly owing, St. Etienne also owes the rather rare privilege, in France, of being well lighted with gas. The coal moreover besides meeting the consumption within the town forms a very important branch of trade, both furnishing the supplies of several blast furnaces and other extensive iron works, and a general export of about 500,000 tons. Two railways branch off from the town, the one connecting it with Moanay, and the other with Lyons. Pop 47,802.

ETIENNE (8r) the name of several small places France particularly—1 (*de Balgory*) A vil and com dep Basses-Pyrénées, on the Nive, 27 m. S S E Bayonne. It contains a parish church, and has in its vicinity mines of sphatose iron, and a copper mine, which from soils found in it, appears to have been worked by the Romans. Pop. 3268.—2 (*de Mont-Isad*) a vil and com. dep Loire-Inférieure at the foot of a slope, surrounded by verdant meadows, 8 m. S E. Saumur. It contains the remains of an old castle, and has two annual fairs. Fine porcelaine earth is found in the vicinity. P 4540.

ETIVE (Locm) an inlet of the sea, W coast, Scotland on Argyle dist. Lorn nearly 20 m long, of very unequal breadth, but broadest part about 1½ m. It has a narrow entrance, and contains numerous rocks, which afford safe anchorage in all weather. About 8 m. from the sea, where it is narrow a ridge of granite rocks crossing it causes a turbulent rapid, which at half tide forms a loud sounding cataract believed to be the Lora of Osian. The scenery of its shores is very beautiful.

ETNA (Latis, *Etna* Sicilian, *Mongibello* a corruption of the *Gibbet Utamat* or mountain of fire of the Saracens, a celebrated volcano, in the N E of Sicily near the coast, and within a short distance of Catania. The loftiest summit is in lat. 37° 43' N. lon. 15° E. and is 10,874 ft. above sea level. The base covers an area of nearly 90 m. in circumference and is pretty accurately defined by the rivers Alcantara and Giardetta, by which it is nearly encircled, the sea marking its limits on the E. The dimensions of the crater have been variously stated, the circumference from 2½ m. to 4 m., and the depth from 600 to 800 ft. but the height of the cone, the diameter of the crater and its depth are liable to constant change from eruptions. Although when viewed from a distance, Etna presents a very symmetrical cone, it is found on a nearer approach, and when examined more in detail to present an exceedingly diversified surface, and to be attended on its flanks by numerous minor cones or secondary volcanoes of considerable dimensions. These are altogether about eighty in number and the largest about 700 ft. m height. When viewed from above, they present one of the most striking scenes imaginable, being arranged in beautiful picturesque groups and richly clothed with wood. Those in the higher parts with lofty pines and those at lower elevations with chestnut oak, juniper, and holm. The great terminating cone, at the summit of which is the principal crater or opening, and which is continually throwing out sulphurous vapours, rises from an irregular plain 9 m. in circumference, and about 1100 ft. below the culminating point of the mountain. The interior of this crater as described by Captain Smyth is intersected with various coloured effluences of ammoniac, sulphur and mineral vitriolise salts to the depth of about 100 yards. The effluences of a beautiful orange yellow are the most prevalent. The bottom of the crater is plain, and tolerably hard, though, from being composed of loose cinders, the feet sink in some places. Near the centre are two mounds of scoria and ashes, each with a large aperture at the summit, and several fissures around from whence, at intervals, issue volumes of thick smoke with a rumbling noise and hissing sound. There is also a light thin vapour occasionally issuing from the bottom and sides of the huge amphitheatre, in every direction. I endeavoured adds Capt. Smyth, to look into the principal chasm, but the rapid descent of the sides, and the strong sulphurous vapours that issued, prevented me from attaining my object and indeed, I could not but feel apprehensive that a nearer approach, where the footing was so frail, might prove too

hazardous, besides which, the heat and smoke had increased so much a degree that it was high time to regain the summit. The cone is divided by nature into three distinct zones or regions, called respectively the fertile, the woody, and the desert. The first of these comprises the delightful country around the skirts of the mountain the superficies of which

THE CRATER OF ETNA.—From Light's Southern Scenery

is cultivated at nearly 700 m. It is well cultivated thickly inhabited, and covered with olive vines corn fruit trees, and aromatic herbs. Higher up, the woody region encircles the mountain an extensive forest composed of various species of trees, but chiefly chestnut, oak, and pine. The climate is here extremely mild and agreeable, the air cool and reviving, and every breeze surcharged with delicious odours. The area of this region on which forms a girdle of vivid green round the mountain is estimated at 140 sq m. Above is the desert or barren zone, a waste of black lava and scoria, where all vegetation disappears, and where cold war blasts sweep over a dreary expanse of snow and ice. Here sulphurous vapours are continually evolved sometimes so abundantly as to endanger life, and here is the source of dangerous torrents of melted snow nearly as destructive as those of burning lava. This fragrant zone is from 8 to 10 m. in extent and is in part occupied by the irregular plains already alluded to, from which the terminating snow rises to a further height of 1100 ft. Some authorities divide the cone into seven different zones, by subdividing those above enumerated in strict accordance with their botanical characteristics, and closing with the sterile region in which at terminates.

The E. side of Etna is broken by a deep valley or amphitheatre, called the Val del Bove, 4 or 5 m. in diameter and surrounded by nearly vertical precipices varying from 1000 to above 8000 ft. in height. The scenery here is of the most magnificent description but slow and desolate. The face of the precipices is broken in the most picturesque manner by the vertical walls of the lava which traverses them. These masses usually stand out in relief are exceedingly diversified in form, and are of immense altitude. When Lyall visited this valley in 1828 some years after the eruption of 1818, he saw hundreds of the white skeletons of trees, which had been stripped of their bark and leaves by the scorching heat of a flood of lava.

The symptoms which precede an eruption are generally irregular clouds of smoke, small or volcanic lightning, low indurations, and local earthquakes. These agitations increase until the vast auditions become surcharged with the fused minerals, when if the convulsion is not sufficiently powerful to raise it to the grand crater which, from its great altitude, requires a prodigious force, it is pressed through

the sides of the mountain where it is weakest. For a short moment it ceases the lava bursts forth in a state of fusion, and glides at first with an awful velocity but progressively decreases its rate as it cools. As it increases in density the sides begin to creak, and the surface becomes loaded with scoriae while falling over repeatedly in scaly waves with a crackling noise, retard the progress of the lava until its motion is so slackened as to be scarcely perceptible. The lava of Elaez consists of felspar, quartz, olivine, and tefal, and is of a dark alternating brown and black color, and is a rather plastic fluid. The first eruption was about 60 miles of Elaez recorded in history from the earliest to the present times. Among the more remarkable ones of later periods are those of 1792 1811 1819 and 1838. The eruption of 1792 continued for a whole year the streams of lava which flowed from the mountain on that occasion were often 80 ft. high while in their fluid state, and in their progress, overwhelmed numerous vineyards. In 1811 loud detonations from the great crater gave indication that a column of lava had issued from the summit of the mountain. This was followed by a violent explosion, and the lava burst forth from the side of the cone at no great distance from its foot. Other openings succeeded lower and lower down, and in the same line, giving rise to the belief that the pressure and intense heat of the internal column of lava had rent the mountain from top to bottom. The stream of lava which flowed from the mountain during the eruption of 1819 moved at the rate of 2 m. in the first 24 hours, and nearly as far in the succeeding day and night. Coured to a high and almost perpendicular precipice it poured on or it in a cascade and, being hardened in its descent, made an inconceivable crash as it was hurled against the bottom. But the phenomena which followed the upper part of the eruption were remarkable. On that occasion numerous fiery mouths opened on the sides of the mountain, from which, in the midst of violent explosions and other convulsions, accompanied by tremendous discharges of ash and cinders, streams of lava issued and, pouring down the declivities, overran cultivated fields, and threatened with destruction the town of Bresto, from which a great part of the inhabitants had fled but which it did not eventually reach. The stream of lava which inspired this terror was 12 m. in length 1 m. broad and 30 ft. in height and with which the progress of the lava Bresto are arrested by causing give rise sometimes to burning streams appearing in 1838 one of these burning streams appeared in the matter of the summit of the mountain at a height, and fell in a fiery cascade into the city a part of which it destroyed it however ultimately cool, and the solid lava may at it be seen curling over the top of the ruin part like a cascade in the act of falling

An opinion is entertained that Etna is rapidly exhausting its volcanic powers, and that it is far less active now and its eruptions much less formidable than they were in ancient times. This is inferred from the greater magnitude of the ancient beds of lava, and masses of basalt, and from the smaller quantity and number of vitrified substances ejected there being now none, many of the present products being scarcely altered by the heat.—*Monrath's Sicily*. Yrall's *Geology Somersville and a Physical Geography Hambsell's Commae* Hooker's *Italy* *Europe's Mountains*, &c.

PTOLE (piz to) of the Adriatic, Indian Ocean, lat. 5° 55' S. lon. 53° 4 E. (n.) about $\frac{1}{2}$ m. long low and covered with basins.

ETUILE, several places, France, particularly an anc. dep. Drôme, 7 m. S. Valence begins with partly ruinous walls. There was a strong feudal stronghold here, in which reposed Louis XI while in Dauphiny as also Diana of Poitiers, one of whose titles was Dame d'Etiole. A silk factory now occupies the site of the chateau. In the district much red wine is produced. Pop. 1008.

ETOLIA & Division. Greece. See ETOLIA.

ETON is a town and parish in the county of Buckingham, in a pleasant valley, 11 miles from London, on the Great Western Railway and 27 m. W. London. It consists principally of one narrow street, well paved, and lighted, and has of late years been much improved. It contains a chapel of ease, five daily schools and some almshouses. A neat iron bridge across the Thames connects Eton with Windsor, from which it is about 1 m. distant. Eton derives its

scholarship wholly from his college, founded by Henry VI. In 1444 under the name of the College of the Blessed Virgin Mary beside Windsor. The present collegiate edifice, a comprehensive and monumental Tudor building was erected at various periods. It contains in two quadrangles, the chapel the two schools, upper and lower the masters chambers, the provost's lodge, the private residences of the fellows, and the library. The scholars must be lawful children, born in England, and should be educated gratis, but 26 or 27 a year is charged for their instruction. They consist of fellows or scholars on the foundation admissible from the age of 8 to 16 who are lodged and boarded in the institution; and opidians or scholars, not on the foundation, who do not board in the institution and are, in every respect, stipendiary pupils of these last. The whole number is altogether about 600. There are various foundations or scholarships at Cambridge. Oxford has the most numerous and valuable. At present the income is about £7000 a year. The course of instruction is essentially classical, but of late years the study of French German, Italian, mathematics, and other branches of education, have been introduced. *Acad. of Ox.* 788 ac. Brm. 8795.

ETRETAT a maritime vil France, dep Seine-Inférieure
17 m N N E Havre. It is situated in a rock bounded
valley. It has a parish church a remarkable Gothic edifice
and near the shore are the remains of the ancient chapel of
St. Valéry. Inhabitants chiefly employed in fishing oyster-
dredging and mackerel kelp. Pop. 1518

ETRUSSIA n vii England, on. Simford, 1½ m N.E. Newcastle-under-Lyme (the residence, and the seat of the porcelain manufactures, still carried on, of J Wadsworth, father of the ceramic art in Great Britain who died here in 1795. It has a church, a small Episcopal chapel and places of worship for Wesleyans and New (secession) Methodists.

lake, and has an annual f. - Pop. 572

ETTILINGEN a tn. Northern circle, Middle Rhine, cap. of same name on the Alb, 5 m. S E. Carlsruhe, on the railway to Baden. It is entered by three gates, contains two public squares, a castle with gardens a church, townhouse, hospital, normal and superior burgher schools and has manufactures of linen and cotton goods, starch, leather, and paper.

a corn, two cotton, two gypsum, two oil and numerous other mills. Ettington is of Roman origin, and contains some Roman remains. Pop. 4350. Area of hall, 60 geo. sq m. Pop. 16584.

ETTON two pars. Eng.—1 Northampton 1270 as Pop. 144.—2 York (St. Riding) 8960 as. Pop. 498.

ETTRILK several places, Scotland.—1 A river rising in the S.W. portion of co. Belkirk, which it traverses in a N.E. direction. It falls into the Tyne, between Belkirk and Melrose, after a course of about 26 m. The Tyne is its principal affluent.—2 (Forrest) a beautiful pastoral dale, watered by the above river and its tributaries; so called, on account of having once formed a part of the great Caledonian Forest, although it is now almost entirely devastated of trees.—3, A par near the head waters of the Ettrick, 15 m. S.W. Belkirk, was the ancient seat of the Buccleuch family and was the birthplace, and for the greater portion of his life, the residence of James Hogg, the Ettrick Rhymer. Area, 43,908 ac. Pop. 477.—4, (How) a mountain 2200 ft. high near the source of the Ettrick.

ETTYEK, a vil Hungary Thaurer Daube co. Bihl weissenburg near the source of the Bie, about 12 m. from Martonvasar. It contains a Protestant and a R. Catholic church, and has a stone quarry. Pop. 1787.

ETWALL, par Eng Derby 8460 as. 1 pop. 766.

EU (Latin *Augur*, or *Augures*) an are, but denoted by France, dep. Seine-Inférieure, 17 m. N.E. Dieppe, 1 bank, Breuille 2 m. from its embouchure at Trepport, on the British Channel, and in a fine wooded valley surrounded by easy heights. It is the seat of a commercial (trading) and a commercial college. The town has few remarkable edifices, except its noble cathedral, the college church (four gothic) and an old embattled gate, said to be Roman. Outside are the apocryphal chateau and park of Eu from 1827 till the revolution the favourite summer residence of Louis Philippe, and in which he received Queen Victoria in 1848. The palace is built on the site of a stronghold of the Duke of Normandy, but the oldest existing buildings were founded by the Duke of Guise (de Balguy) in 1581. The whole pile is lofty and the exterior imposing; the interior is richly furnished and contains a fine gallery of historical portraits. The town has a little manufacturing of canvas lace, wax, soap &c. in or near it are brick and tile fields, lime-kilns, flax-mills saw-mills, breweries, &c. It has some trade in grain, hemp, flax, coarse linen, and timber. In 1446, Eu was burned, all but the churches and one or two public edifices, by order of Louis XI. but the English might who occupy it. This rebellion cut drove out the whole inhabitants, the city of whom never returned and the place seemed to have fallen into hopeless decay when the patronage of the Orleans family gave it a temporary importance, up to the time of their fall. Pop. 3740.

EU HO or YUE-LIAO a large river China, which rises in the S.E. part of prov. Shansee, from which it flows N.W. traversing the S. portion of prov. Petcheloo, and the N.W. margin of Shansee, when it again enters the prov. just named at lat. 37° 40' N. It subsequently falls into the Gulf of Petcheloo, in lat. 35° 59' N. lon. 117° 22' E.; whole course about 140 m. It has numerous large affluents, of which the principal is the Tohang-Ho the Ho to-Ho, the Hien Ho, and the Pei Ho, all from the left.

EUBA a vil Saxony ardie, Zwicken, near Thum containing a handsome church, and has manufactures of linen and hosiery a stone quarry three saw and several other mills. Pop. 1528.

EUBŒA MEGALOPOLIS or EUBŒA (Greek *Bo* sea; Latin, *Eubœa*, Italian, *Negropoli*) a long and narrow isl. Greece, the largest in the Archipelago, lying close to the N.E. coast of Attica, from which it is separated by a channel so narrow as one point as to be crossed by a bridge. The N. of this strait is called the Channel of Tarent, the S. the Channel of Egypt, or Negropoli. The island lies N.W. and S.E. is 100 m. long 36 broad in the centre, about 16 at either end, and as narrow as 5 at some intermediate points between both extremes and the centre; area, 1464 sq m. It is traversed in its whole length by a range of lofty mountains, whose culminating peaks are Delphi, near the centre of the island 8250 ft. Kandili, 4237 ft. Lithide, at the N. extremity 3099 ft.; and Ouba, or St. Elias, the S. extremity 8196 ft. They are mostly barren, and the summits covered with snow

during a great part of the year. The scenery is generally of the most magnificent description, presenting in some parts a resemblance to the most beautiful parks and forests imaginable, in others, wild and craggy heights covered with luxuriant woods, consisting principally of pines, oaks and holly under which are found, in more than usual beauty all those flowering shrubs which the soil of Greece so plentifully produces among which the cistus, arbutus, oleander and heath are conspicuous. The valleys and plains are singularly fertile producing grain, wheat, oil and fruits in great abundance, and especially fine cattle. Amongst the exports are cotton wool, grapes and turpentine but the quantities are small. There are mines of marble and copper in the island. The E. coast is rocky irregular precipitous and destitute of harbours but on the W. side there are several, and some of them very good. The roads throughout the island are in general bad, and the population scanty and poor. Several Englishmen, and other foreigners have recently purchased estates here, and are gradually improving the agriculture and the condition of the people. There are two principal ports, Negropoli or Chalcis, the capital and Karysto. The island forms the nucleus of the Euboea, and the duchies of Euboea and Karysto. In 1810 it was occupied by the Venetians, who had 800 villages, and 60 000 inhabitants it was taken from them in 1409 by Mahomet II. and remained in the hands of the Turks till the Greek insurrection in 1821. Pop. 40 368.

EUBERDORF a market in Bavaria, Lower Franconia, cap. dist. of same name, on the Saale, here crossed by a bridge 89 m. N.N.E. Weisburg. It contains a parish church and a courthouse, and has manufactures of segment a trade in corn wine, and cattle numerous mills and five annual fairs. Pop. 998. Area of dist. 53 geo. sq m. Pop. 11 060.

EUFEMIA (St.) several small places, Naples particularly a vil and com. prov. Calabria Licia 1, on a small stream 17 m. N.W. Reggio. Pop. 6439.

EULF two places Bohemia.—1 (*Eula*, *Elna*, or *Sider*) (Latin *Glossa*) A m. circle Kauran r. bank, Saxony, near intersection with the Moldau. It contains a parish church, chapel bathing establishment, and townhouse, with a belfry. In early times the gold-washings here were very productive, and small portions of gold are still obtained. Pop. 1462.—2 (*Eula*, or *Elna*) a market in circle, *Lusatia* about 12 m. from Aussig. It lies at the foot of the Schneberg on a small stream of same name, and contains a parish church and old castle. Pop. 647.

EULHABERG a market in Moravia circle of 18 m. N. Olmitz, in a mountainous district with a church, hanging bridge, and old Silesian castle. It has several mills and three annual fairs. Pop. 351.

FUPATARIA EUPATORIA JEFFATORIA formerly KOSLOV or KENLOV (and *Pompeopolis*) a maritima in Russia on the Black Sea, gov. Tavria, cap. dist. of same name. 45 m. N.W. Simferopol lat. 45° 9' N. lon. 33° 9' E. The town has an Asiatic rather than a European aspect, from its having long been possessed by the Tartars of the Crimea. It contains 13 mosques the chief being that of Devlet-Ghid Khan, built in 1562 a showy and rather remarkable edifice, a Tartar college custom-house government offices, &c. and an Artisan well, 460 ft. deep which supplies 130 000 gallons of water daily. The harbour has deep water and the roadstead good anchorage but is inconveniently exposed to all winds except those from the N. and N.W. The chief trade is in salt grain, and alum. In the environs, much salt is drawn from saline lakes and at Salt, in the neighbourhood, is a rich mine, worked for rheumatism, alumina, &c. The inhabitants, a wealthy commercial people, are chiefly Caraites Jews and Tartars. Pop. 12 000.

EUPEN (French *Nomen*) in a Prussian gov. of and 7 m. S.S.W. Aix-la-Chapelle cap. circle, of same name on the Werra, in a rich pastoral vale, near the frontiers of Holland. It is the seat of a court of law, and several public offices for the circle, contains four churches and chapels, customhouse, superior higher school, and orphan hospital; and has manufactures of woollen cloth, cassimere, hats, soap, leather carriages, silken and chemical products, paper, steel, and waxed mills, an important trade in linen and cattle, and seven annual fairs. Pop. 12 196.—The *crucis*, area, 51 geo. sq m. It is mountainous, being traversed by the Rhenish hills, contains several extensive swamps, and is ill adapted for agri-

culture, but is well wooded, and rears a large number of cattle. Pop. 21,023.

EUPHRATES, or El-Frat, a celebrated river of W Asia, is said to have its sources in central Armenia, at no great distance from the shores of the Euxine, and its embouchure in the Persian Gulf area of basin, 195,000 sq. m. direct length 500 geo. m. length including windings, 1492 geo. m. It is formed by the junction of two large streams, called, respectively the Kure-Su (black river) and the Mourad-Chis. The sources of the former are situated in the Anti-Taurus, 36 m. N. E. Erzurum, not more than 90 m. from the E. E. shores of the Black Sea, about lat. 40° N; lon. 41° 30' E. those of the latter or Mourad, the most southerly and largest branch, are in the same range, but 70 or 90 m. further E. or about lon. 42° 55' E. These two head streams unite near Kaban Maden, about lat. 38° 58' N lon. 38° 58' E. from which point the river now strictly the Euphrates, flows S. W. for 50 m., when it suddenly bends to the E., and, forming a meander, returns to a point more W. than that from which it had diverged. Here it approaches within about 90 m. of the Gulf of Iskenderon in the Medi- terranean, and continues to flow at nearly the same distance parallel to the shore of that sea, to lat. 35° 55' or for about 110 m., when it turns to the S. E. and continues in that direction generally till it falls into the Persian Gulf having been previously joined by the Tigris, after which it takes the name of the Shatt-el-Arab. The breadth of the Euphrates varies between 200 and 400 yards, but is occasionally much broader. A little below Kaban Maden, where its two head streams unite, it is 120 yards wide, while below the junction of the Tigris it is nearly half a mile. The general depth of the Lower Euphrates exceeds 9 ft. In point of current, it is for the most part a sluggish stream, for except on the height of the flooded season, when it approaches 5 m. an hour it varies from 2½ to 3½ with a much larger portion of its course under 8 than above. The upper portion of the river is enclosed between two parallel ranges of hills, covered for the most part with high brushwood and timber of moderate size having a succession of long narrow islands, on several of which are moderate sized towns. The scenery above Hitt (lat. 35° 43' N. lon. 43° 28' E.) is most very picturesque is greatly heightened by the frequent occurrence of ancient fragments and ruins of beautiful architecture. Below Hitt, the country becomes flatter with few hills the river winds less, and the banks are covered with Arab villages of mats or tents, and by numerous herds and flocks. Towards Lamlou or Lamloun (lat. 31° 45' N lon 44° 5' E.) the country is level and little elevated above the river irrigation is therefore easy in consequence both banks are covered with productive cultivation, and fringed with a dense and nearly continuous belt of luxuriant date-trees, extending down to the Persian Gulf. The Shatt-el-Arab, or last reach of the river from Korna, where it is joined by the Tigris, has a depth of from 3 to 5 fathoms, and presents banks covered with villages and cultivation. The permanent flooding of the Euphrates is caused by the melting of the snow in the mountains along the upper part of its course. This takes place about the beginning of March, and it increases gradually up to the end of May. The river continues high and its course very rapid for 30 or 40 days but, afterwards, there is a daily decrease, which becomes very small and regular towards autumn. From the middle of September to the middle of October the river is at its lowest. The quantity of water discharged by the united streams Euphrates and Tigris, through their common channel, the Shatt-el-Arab has been estimated at 336,907 cubic ft. per second, which is about 10,000 cubic ft. less per second than that discharged by the Danube. The increment of land about the delta has been found to be a mile in 80 years, about double the increase of any other delta. This phenomenon has been attributed, by Sir R. I. Meade, to the fact that by the circumference of the mud and sand carried down by the Euphrates and its associated streams, being derived in increasing volume from the slightly coherent tertiary formations through which these rivers flow for such enormous distances, and especially to this deluvial matter being deposited in so land-locked a body of water as the Persian Gulf, in which, aided by the loss of the tide, the sediment is poured back, instead of being swept out by a boisterous open sea. The length of the navigable part of the Euphrates reckoning from Hitt to

Bassora, is 143 m. The water is somewhat turbid, but, when purified, is pleasant and salubrious. Fish are abundant.—Col. Chesney's *Euphrates Expedition*, *Rep. Geo. Soc.*; Kitchin's *Cyclopedia of Biblical Literature*; *Atlasman*, April 26, 1851.

EURE a dep. France, bounded, N by dep. Seine-Inférieure, N. E. Oise, S. Eure-et-Loir S. W. Orne, and W. Calvados between lat. 48° 40' and 49° 30' N. and lon. 0° 30' and 1° 50' E. greatest length E. to W. 66 m. average breadth, about 50 m. area, 2248 sq. m. The surface consists of an extensive plain, subdivided by the river which water it, into a number of minor plains, which nowhere rise more than 800 ft. above the level of the sea. Thus, in the N. E. of the dep. one minor plain rises on bank Seine between tributaries Epine and Andelle, and forms the isolated arroy of Andelys. On bank Seine a second plain, entering this department from that of Seine-et-Oise, forms a comparatively narrow belt between the Seine and the Eure. A third plain lies between the Eure and the Ilon and terminates in a point at their confluence. A fourth plain of larger extent than any of those yet mentioned, is bounded on the E. by the Ilon and Eure and on the W. by the Rille, and slopes gently down towards a bank Seine. A fifth plain, nearly of a rectangular form lies between the Rille and the Charonneuse, and a sixth and last plain includes all the country between the Charonneuse and Rille, on the E. and the W. frontiers of the department. In all these plains the surface appears almost monotonously flat, except at their edges, where the descent to the streams which separate them is generally narrow and abrupt. The Seine, which, by its estuary bounds the N. W. portion of the department, traverses a considerable portion of it in a N. W. direction and receives all the other streams. The climate, though somewhat humid and variable is temperate, and not unhealthy. The prevailing wind is the S. W. which occurs so frequently as to give the trees which are exposed to it a visible inclination to the N. E. Almost the whole surface is profitably occupied, the waste not amounting to one-thirtieth of the whole. Nearly two-thirds are arable, and one-fifth under wood. The vine grows vigorously but the climate is not so genial as to allow the cultivation of it on a large scale for the purpose of making wine. Its place is found to be more profitably occupied by the plum, cherry, apple and pear. From the last two much excellent cider and perry made. The arable land generally consists of a good vegetable mould, capable of raising all the ordinary cereals in abundance. Occasionally the mould contains a considerable intermixture of clay which converts it into a heavy loam, well adapted for the growth of wheat and beans. In several districts the subsoil is chalk and the soil covering it so thin as to be almost incapable of profitable cultivation. From the whole, however, the turn raised is fully adequate to the consumption. In particular spots hemp and flax, of excellent quality are grown. The rearing of stock is well understood and attracts considerable attention. The horses in particular known by the name of the Norman breed have long been in great repute, and form a lucrative branch of trade. Both game and fish are abundant. The only metal of much consequence is iron which is raised in sufficient quantities to maintain 11 blast furnaces. The quarries produce building stone, mill stones and pavement, and there are good seams of fuller's earth and pottery clay. Manufacturers have made considerable progress. Among others may be mentioned fine woven cloth, linen and cotton fabrics, prints, cotton-hosiery, woollen covers, and carpets, rummeryonglans, leather, paper, glass, and Paris lace. The trade includes, in addition to these articles, older perry, cattle, horses, wool, flax, and hemp. For administrative purposes, the department is divided into six arrondissements—Evreux, the capital, Les Andelys, Bernay, Louviers and Pont-Audemer; subdivided into 36 cantons, and 703 communes. Pop. (1846) 428,247.

EURE-ET-LOIR, a dep. France, bounded, N. by Eure; W. Orne; S. W. Sarthe. S. Loire-et-Cher S. E. Loir, and N. E. Seine-et-Oise between lat. 47° 58' and 48° 57' N. and lon. 0° 45' and 1° 2' E. greatest length N. to S. 55 m.; central breadth, 44 m. area, 3127 sq. m. The surface may be regarded as forming an extensive plateau of considerable elevation, which in the E. presents an almost unbroken flat very recently watered, but in the W. is less monotonous, being both partially covered by hills and intersected by valleys, in which numerous streams flow. The principal watershed of

the department is formed by a ridge of no great height, which stretches across it from E. to W. and divides it into a N. and a S. basin, traversed by the two rivers which give the department its name—the Eure, which flows N. and carries its waters to the Seine, and the Loire which takes an opposite direction and ultimately flows the Loire. Each of these rivers receives several small tributaries, and there is also a considerable number of lakes, of which Duis Ballu is supplied by a series of enormous subterranean channels. The climate is variable and humid, but is considered healthy at all seasons except autumn, when intermittent fevers, caused apparently by the quantity of stagnant water allowed to collect round the farm offices and villages, become prevalent in many of the rural communities. The waste land is extremely limited, amounting to little more than one-hundredth part of the whole. Little more than one-tenth is occupied with wood. Almost all the rest is arable but a considerable extent is occupied by orchards and vineyards. The produce of the orchards is made into excellent cider but that of the vineyards affords a very inferior wine. The soil is in general excellent consisting of a heavy loam, admirably suited for wheat which is usually converted into flour within the department, by mills situated along the banks of the Eure, and after satisfying the home consumption, leaves a large surplus for export. In several districts the soil is of a lighter texture, and is better adapted for barley and oats. Vegetables also, particularly onions and turnips, are extensively grown. In some places hemp, flax, and meadow are principal crops. Artificial meadows are extensive, and the art of irrigation is well understood and generally practiced. The domestic animals include horses, cattle and sheep of good breeds. Great numbers of swine are reared and large supplies of poultry are sent to the Paris market. Game, particularly hare, rabbit, partridge, and plover, is very abundant. The only mineral of any consequence is iron which is worked at several spots, but not very extensively. The department being essentially agricultural has few manufactures. That of flour already mentioned is by far the most important. The only others which deserve mention are bookbinding, and dress-making. The leading branches of trade are corn, flax and wool. Eure-et-Loire is divided into four arrondissements—Chartres, the capital Châteaudun, Dreux, and Nogent-le-Rotrou—subdivided into 34 cantons, and 432 communes. Pop. (1846) 292,337.

EUROPA or BARBARA DA INDIA an Isl E African coast Mozambique Channel lat. 22° 23' 30" S. lon. 40 24 E. about 3 or 4 m. in diameter of circular form, with an indentation on the N. side it is highest at the N. part, with several small hummocks in other places and a sandy beach fringing the sea. It is of easy access and abundant in turtle. The N. end is covered with trees of small size, the other parts chiefly with brushwood.

EUROPE (Latin and German Europe) a principal division of the earth forms the N.W. portion of the old world. Though called a continent, it ought to more justly entitled a great peninsula, which is again characteristically divided into several smaller peninsulas. It is the least of the principal divisions of the earth, Australia excepted and yields to the others not only in extent, grandeur of soils, but also in its admirable gifts, noble rivers, luxuriant variety of vegetation and mineral treasures. Yet it is remarkable for its decided superiority in arms and industry and as the quarter whence civilization, almost constantly progressive, has hitherto attained its most perfect development. The sovereignty of European nations now extends into every quarter of the earth. The origin of this striking superiority will be found on examination to be attributable more or less to certain physiographical conditions, such as climate, position, natural resources, &c., more largely considered in Europe than elsewhere, and which, though they may escape attention, yet exercise a profound and inevitable influence on the early growth of human society. The natural characteristics, therefore, of Europe taken as a whole with the peculiar advantages or disadvantages of its several portions, well deserve to be carefully considered.

NAME.—As to the name of Europe which first occurs in one of the hymns attributed to Homer we may be sure that it signifies, the language is governed from the waste of social intercourse, and not from linguistic or far-fetched concepts. Its origin cannot now be traced, and the attempts to derive it

from Hebrew or Greek roots, deserve little attention. It cannot be expected that mythology and the mythic Europa, will throw any valuable light on such a question. Europe was probably a local name of Phrygian origin, for the country W. of the Hellespont. Herodotus is the only ancient writer who throws out a hint on this subject, worthy of some philology for he says that the word Europa signified the place of sunset and darkness. Thus we may infer that in the language of some people bordering on Greece, it signified, in effect, the West.

BOUNDARIES.—Europe is bounded on the W. by the Atlantic on the N. by the Arctic Ocean or N. Polar Sea. On the S. it is separated from Africa by the Mediterranean (the land) Sea, which is connected with the Sea of Marmara or Propontis by the strait called the Dardanelles or Hellespont and the Sea of Marmara, again, is joined on the E. N.E. by a similar strait—the Bosphorus—to the Black Sea or Euxine. The Dardanelles and Bosphorus with the intervening sea, divide Europe from the adjacent shores of Asia Minor. N.E. of the Black Sea is its shallow continuation, the Sea of Azov (Palus Mœotis) which covers the shores of inland waters on compassing the shores of Europe on the S. and S.E. From the head of the Sea of Azov the line which separates Europe from Asia, or in general terms, the E. boundary of Europe, is merely arbitrary and speculative; the practical and authoritative determination of it is neither prompted by any interest, nor facilitated by natural landmarks. Some geographers trace the boundary line from the Sea of Azov up the River Don, to the point where this river approaches nearest to the Volga thence up the latter river and its E. tributary the Kama, to the Uralian Mountains. Others prefer the line of lowest level which is partially marked by the River Manych between the Sea of Azov and the Caspian Sea, and then continue the boundary up the River Yalk or Ural, to the mountains. Others again carry the bounds of Europe and Asia further S. to Caucasus, where this mountain chain extends from the Black Sea to the Caspian in a W. N.W. E.S.E. direction. All agree in assuming the Uralian Mountains to form part of the natural boundary between Europe and Asia. The opinion, however, which is of modern origin—for the ancients considered Europe as extending indefinitely towards the N.E. and embracing the country now called N. Siberia—was founded merely on the apparent convenience of referring the demarcation of the two continents to a chain of mountains, supposed to run for 1200 m. nearly in the direction of the meridian. But the region of the Ural, which is still but imperfectly known, presents, to a great extent, only a moderate elevation attained by imperceptible degrees, and offering to the eye no landmark whatever. In fact the true E. boundary of Europe is a contested question which has called forth much futile discussion. Nature has drawn in the region referred to no decisive line of separation between the E. and W. neither has political power and the limit of jurisdiction—the line which separates Russia from Siberia—lies not in the Ural, but much further E. at the river Tobol.

POINTE, AZOV, &c.—The most N. point of Europe, on the mainland, is Cape Nordkyn in Lapland lat. 71° 51' N. Cape on the island of Haparland, lies about 4 m. further N. The most S. points of the continent are Punta de Tarifa lat. 36° 17' in the Strait of Gibraltar and Cape Matapan, lat. 36° 17' which terminates the Morea. The island of Genua reaches a little S. of 36°. On the W., Cape Finisterre (coast of Spain) is in lon. 9° 31' W.; Cape Roca (Portugal), in lon. 9° 25' W. while Ekaterinburg in the Uralian Mountains, lies in lon. 60° 36' E. Thus Europe may be said to extend, in round numbers through 25 degrees of latitude, and 70 of longitude. From Cape Matapan to N. Cape is a direct distance of 3400 m. from Cape St. Vincent to Ekaterinburg N.E. by E., 3400 m. But the area of the continent must not be deduced from these large numbers, which are indeed only the extreme dimensions of a very irregular and much broken figure. Europe will be seen at the first glance to be made up of the following parts, each, in some measure naturally independent of the rest, namely the Scandinavian Peninsula, Finland, and the Danish Islands, the British Islands, the Iberian Peninsula or Spain and Portugal the peninsula of Italy; and that of Greece. Iceland also, though not physically connected with Europe, has been always reckoned as part of it, because it was known to Europeans and colonized by them, long before the discovery

of America, to which it more properly belongs. Owing to this incompleteness of figure and separation into peninsulas, the area of the European continent, notwithstanding its considerable length and breadth, does not exceed 3,600,000 sq. m., or 3,600,000 of square miles taken at the S.E. limit towards Asia. Towards the E. it grows more compact, or in other words, it loses in Russia its characteristic peninsular features, and takes a transitional form before it commingles with Asia. But of Caucasus and the Russian territory there is hardly a spot in the European continent which is 300 m. distant from the sea.

The following Table is introduced for the purpose of showing by what States the continent is occupied and in what proportion they extend over its surface. Many changes have taken place

in the list of European states of late years. The cession of the Hapsburgs principalities to Prussia; the substitution of a united Kingdom of Italy for the Kingdoms of Sardinia and Naples, and the several dukies into which that country was subdivided; and the reversion of some of the smaller German states, such as the Anhalt to the representative of a surviving branch of the reigning families—these and similar changes and modifications, including the recent dismemberment of the Kingdom of Denmark, have obliterated several well-known names from the catalogue and altered the relative importance of some others. Besides the name and area, the Table shows the form of government in each state as indicated by its designation, the prevailing religion, the population, revenue, debt, army and navy and capital city—

AREA POPULATION, &c. OF ALL THE EUROPEAN STATES.

State.	Designation.	Religion.	Area of sq. m.	Population.	Revenue.	Debt.	Army.	Navy.	Capital.

See.—The Atlantic Ocean takes different names in the various portions of it which wash the W shores of Europe, thus between the N coast of Spain and the W coast of France, lies the Bay of Biscay where the ocean swell rolling into the region of variable and restless winds, makes a perpetually troubled sea. Further N between the coasts of France and those of the British Islands, the Sea of St. George's Channel is still more noted for variable and tempestuous weather. From the channel a branch running N between Great Britain and Ireland is named the Irish Sea. Here at one spot (lat. 53° 30') on the E. coast of Ireland, the streams of opposite tide from N and S are so exactly counterbalanced, that the sea remains always at its mean level, while in the British channel not far off the tides often rise 24 ft., and at St. Malo on the coast of Normandy 40 or even 50 ft. The sea between Great Britain and the Low Countries of Holland and Ger-

many, is named the German Ocean or North Sea. From this a great gulf or inland sea branches off to the E. S. N. and E. taking successively the names of Skagerrack (the Pass of Eoak) Kattegat (the Strait of the Cat) the Baltic (the Sea of the Baltic or Belts, that is narrow passes) called by the Scandinavians, and thence by the Germans also, the East Sea (Ostsee). In lat. 56° N. the Gulf of Finland branches off to the E. from the Baltic for a length of 250 m. From the same latitude extends W the Gulf of Bothnia, nearly 500 m. The whole length of the Baltic Sea, from the mouth of the Skagerrack to the head of the Gulf of Bothnia, cannot be less than 1200 m. There is no appreciable tide in the Baltic, and as this sea receives many rivers while it loses little by evaporation its waters are much less salt than those of the ocean and it is popularly believed that a continuance of W winds renders them quite fresh. N.E. of the Gulf of Finland, a depressed

tract of country with numerous lakes, separates that gulf from the White Sea, which is a deep inlet nearly 400 m. in length from the Arctic Ocean and extending from N.E. to S.W. between the shores of Lapland, Finland, and Russia. The shores of the White Sea are annually frozen up for some months. The Strait of Gibraltar in one place only 19 m. wide, forms the communication between the Atlantic Ocean and the Mediterranean Sea, which latter has an extension from W. to E. of 3500 m. with a general width perhaps of 500 m. but owing to its numerous shoals and deep indentations it stretches through 15 degrees of latitude. Its chief gulfs are the Adriatic Sea, above 600 m. in length N.W. to S.E., between Italy and Illyria, and the Archipelago (a name corrupted from *Aegean*, the *Aegean Sea*) which lies between the Grecian Peninsula and Asia Minor. The Black Sea which is connected with the Archipelago as described above, extends from W. to E. nearly 700 m., while its width is from 300 to 800 m. and here again, on the N. shores of this sea, even in lat. 45° N. we find the rivers and harbours frozen, and navigation prevented during five months of the year. The Mediterranean lying generally under a warm sky (lat. 30°-45°) is much exhausted by evaporation, and a constant current sets into it from the Atlantic on the one side, as well as from the Black Sea on the other. Hence its waters rather exceed in saltness those of the ocean. Owing to the great magnitude of the Mediterranean Sea, the phenomena of tides are perceptible in it. In the Black Sea there is no tide.

Mountains.—The mountains of Europe form several distinct groups or systems of very different geological dates, and capable of being considered as a whole, only from that point of view which discloses their combined influence on the climate, physical character and capabilities of the continent around them. Into the succinct account here about to be given of them, no particulars shall be admitted which have not their unity of bearing. The Scandinavian mountains, to which the great N. peninsula owes its form and in some respects its peculiar climate, extend through 13 degrees of latitude (56°-71°) or above 800 m. from the Polar Sea to the S. point of Norway. Their direction in the middle portion is E. & W. & S. W. towards the extremities N. & E. and S. & W. They bear many names in succession: first, descending from the N. we have the Lapland mountains, then on the borders of Sweden the Kioelen, then the Dovre, after which come the Sognefjeld and Hardangervidda. The highest summits of the chain are Skagstjölden, in Sognefjeld (lat. 61° 24' N.) 8128 ft. and Sneekhaten on the Dovre (lat. 59° 27' N.) 7650 ft. The highest part of the chain is from the middle, southwards, but there are many points in the V. part as Snälltunga, in Lapland (lat. 67° 5' N.) which have an elevation exceeding 6000 ft. The Scandinavian mountains nowhere form a narrow crest at their summits; but, on the contrary they extend into plains, fields or fields, often 80 or 40 m. wide. In the S. part of the chain, these elevated plains afford pasture during the summer to sheep and cattle; but towards the N., the bleak waste produces nothing but moss, which yields subsistence to scattered herds of reindeer. Towards the E., the mountain crests decline gradually, while on the W. it falls abruptly to the sea, which forms numerous deep inlets, or *fjords* along the coast of Norway. The traveller from the shores of the Baltic ascends to these highlands by such imperceptible degrees that he recognises the fact of his ascent only in the changed aspect of nature, the trees disappearing and then even the stunted brushwood, the grey moss alone clothing the Alpine plains, but on a sudden he finds himself on the brow of a rock overhanging at the height of some thousand ft. the waves of the W. Ocean. Behind him extends a monotonous valley and dreary plain in front, his eyes beneath him rocks and precipices, cascades, pine forests, and comfortable hamlets, creeks covered with the foam of the waves and coves where the fisherman's boat rides securely. The further N. we go in Norway the more closely do the mountains approach the sea, and we may reasonably infer that a deep ocean washes these precipitous shores.

In the British Islands as in the Scandinavian peninsula, the mountains rise chiefly on the W. and highest the older rocks in both cases seem to lie in parallel courses, so if they formed parts of one system. In the form of Scotland the direction of Glomere, of the nethermost of the Clyde and

Seymour, and in the deep bays on the S.W. coast of Ireland may be seen strong traces of parallelism with the Scandinavian range. But the mountains of the British group are neither so simple and uniform in their geological characters nor so elevated as those of Norway. Ben Nevis, in Inverness-shire, attains the height of 4530 ft. Ben Bulbin, in N. Wales 3654 ft. In Ireland the highest point is Carruntuil in Kerry 3412 ft. In Scandinavia, there are no traces of volcanic rocks, but on the W. side of Scotland and N. shores of Ireland, basins and trap-rocks are widely spread, and appear to have proceeded from a source lying between, perhaps uniting, the two countries, and now sunk in the ocean.

The mountains of France partly study the S. and E. departments for the N. and W. parts of that kingdom belong to the great plain of N. Europe. The mountains of Auvergne extend about 80 m. N. to S. between the sources of the Allier, Dordogne, and Lot, thus separating the basins of the Loire and Garonne. They form a table-land 8500 ft. high from which again rise some conical peaks, evidently the remains of extinct volcanoes, the Puy de Sancy or Mont d'Or attains the height of 6680 ft. Cantal, 8076 ft. E. and S. of this volcanic mass extend the Cévennes for about 300 m. to the N. portion of the chain running N. and S. with the Rhone on the E. while the S. portion bending to the S.W. approaches the Pyrenees from which it is separated by the depression through which passes the canal of Languedoc, uniting the Mediterranean Sea and Ocean. The Cévennes form the demarcation of the waters flowing into these two seas. Their general elevation is about 5600 ft., but a few points rise 7000 ft. high.

The Jura mountains, extending about 200 m. N. & S. and W. form a barrier between France and Switzerland. The parallel ridges chiefly limestone, of the Jura present steep ascents towards the S.E. gentle slopes in the opposite direction and are separated by longitudinal valleys of great length with few transverse breaks. The average height of the Jura is 5700 ft., but its highest point, the Moleson, reaches the elevation of 6560 ft. N. of the Jura the banks of the Rhine constitute mountainous ranges long way. On the W. of that river, between it and the Moselle, rise the Vosges, which form a chain 120 r. in length N. to R. with a mean height not exceeding 2650 ft. The dome-like summits of this chain have received the name of *Dalles* and the highest of them, the Ballon-de-Suiz, attains an elevation of 4680 ft. Granite predominates in the S. part of the Vosges, while sedimentary rocks of many kinds are found in the N. portion. From this brief sketch of the mountainous chains of France it may be easily understood why the chief rivers of that country (the Rhone excepted, flow generally to the N. and W.

Pyrenees.—On the S. France is divided from Spain by the Pyrenees, a narrow chain 250 m. long and hardly 50 m. in breadth extending in an E.S.E. W.N.W. direction from the shores of the Mediterranean Sea to those of the ocean, though some consider the mountains of Asturias and Galicia, which stretch above 800 m. W. as a continuation of the Pyrenees. The central line or axis of this chain is composed of granite, on which lies limestone; the latter rock, however, not being deposited in a line strictly parallel to the granitic axis, but inclining rather. The highest point in the chain is La Maladeta, or Mont Maundit, called also, in the provincial language the Pic de Netou, has an elevation of 11,430 ft. Several other points exceed 10,000 ft. and as the limits of perpetual congelation are found here at the heights of 8500 ft. and of 9100 ft. on the N. and S. slopes of the mountain respectively, it is evident that a large area in the Pyrenees must be covered by perpetual snow, but the glaciers of these mountains are few and of small extent, and never descend into the lower valleys. The Pyrenees are separated, on the S. by the valley of the Ebro, which flows into the Mediterranean from the elevated plain of the Spanish peninsula. This great plain, or table-land, the elevation of which varies from 2300 ft. to 2800 ft. has a superficial extent of not less than 80,000 sq. m. It descends gradually on the W. towards Portugal, but on the E., towards the province of Catalonia and Valencia, it presents an abrupt steep or line of cliffs with the characters of an ancient sea margin. This table-land is bounded N. and S. by chains of mountains running E. and W., and between which again lie three other chains, including from N.E. to S.W. The first, or northernmost of these chains, is in truth

a continuation of the Astartian chain, the highest point of which the Pénins de Europa probably reaches an elevation of 8600 ft. The serras de Taberna and del Sumido, also seem to approach the limits of perpetual snow. The second mountain chain of the Iberian table-land is the Guadarrama which separates the valleys of the Duero and the Tago. Towards the W. certainly it is better known as the sierra de Guadarrama. The highest point of these mountains, which are visible from Madrid, is the Peñalara, 8700 ft. high. On their sides stands the royal palace of El Escorial, at the absolute height of 3800 ft. Between the Tago and the Guadiana, comes the *serra* Guadalupe the fourth chain and between the valleys of the Guadiana and Guadalquivir the *serra* Morena, both lower than the preceding, the highest ridge of the former not exceeding 5100 ft. while the *Cumbre de Anacoza*, the culminating point of the latter on the borders of Andalusia, probably rises 5380 ft. above the sea. But the fifth chain of mountains, that of Granada, called also in its highest part, the *serra* Nevada, which bounds the table-land on the S. rises to a few points higher even than the Pirenees and the Cerro de Mulhacen, attains the height of 11 600 ft. Between the *serra Nevada*, and the sea on the S. extends the chain of the Alpearras, rising to a height of 9000 ft. at the utmost, richly clothed with vineyards to a height of even 8000 ft., and in some places descending abruptly in precipitous to the sea. The low country of the Iberian peninsula is of comparatively small extent embracing only the plains of Aragon and Catalonia, the maritime districts of Valencia and Andalusia, and the middle part of Portugal.

The Alps.—The Alps, the highest mountains in Europe extend uninterrupted from the mouth of the Elbe to the plains of Illyria through 4 degrees of latitude (44°–48° N.) and about 1° of longitude (5°–16° 30' E.). On the N. they are bounded by the valley of the Lo. on the W. by that of the Rhine and on the E. by the valley of the Danube and some of the offshoots of the Elbe. On the S., they meet the Iberian chain, and their elevation being decreased they lose their name also. With respect to direction the Alps are not uniform, but are divided by geologists into two distinct chains supposed to be of different ages. The maritime Alps, the most W. part of the system strike S.W. to N.N.E. The high Alps or principal chain stretch W.W. to E.N.E. It is at the point where these two chains cross each other that the Alps attain their greatest elevation and that Mont Blanc rises in snowy crest 15 782 ft. above the sea. Mont Rose, about 70 m. further E. rises to within 300 ft. of the same elevation, and the average height of the whole range between these two summits cannot be taken at less than 11 000 ft. The mean height of the Alps throughout their whole extent, is probably about 8000 ft. and many points reach an elevation exceeding 12 000 ft. These mountains are divided by longitudinal valleys of great extent in some of which are formed lakes, so that a chain of lakes extends along the foot of the Alps on both sides namely on the N., the lakes of Geneva, Lucerne, Thun, Luzern, Zürich, Constance, Reichen, on the S. the Lago Maggiore, the Lago di Lugano, di Isèo, di Garda &c. At the limit of perpetual snow lies but little above the mean height of the Alps being on the S. side, about 8 000 ft. above the sea while towards the N. side its elevation varies from 8500 ft. to 10 100 ft., it is manifest that an extensive area in this region must be covered with perpetual snow. From the snowy heights vast glaciers also descend along the valleys, till they reach, in some instances, the moderate elevation of 3000 ft. accumulating at their lowest edge, by their downward movement enormous banks of snow and gravel called moraines. The chief glaciers of the Alps are at the N.W. side of Mont Blanc, in the valley of Chamonix in the country of the Savoie, between the Spitzing and the valley of Engadin and in the Pirenees Alps between the sources of the Aar and Rhine. Here the snows and ice gathered round a group of towering summits, cover an area of perhaps 300 sq. m.; and the traveller who should ascend the glacier that stretches N., at the N.W. side of the Wetterhorn, then pass N. along the flanks of the St. Bernhard and turning W. between the Jungfrau and the Finsteraarhorn, should descend the Aletsch glacier to its termination would certainly in so doing have marched 90 m. at least at an continuous rate.

Apennines.—The Apennines, may be conveniently thought,

from the geological point of view not perhaps correctly considered as a branch of the Alps. After a winding course round the Gulf of Genoa, they turn to the S.E., and constitute the central ridge of the Italian peninsula. This chain has a length of 800 m. with a breadth varying from 20 m. to 60 m. In Puglia, it spreads into a wide table-land, about 1500 ft. high. The highest point of the Apennines is the Monte Corvo, in lat. 42° 3' the summit of the mountain, called Il Granasso d'Italia) 9519 ft. high. The loftiest ridges of the chain are not in the centre of the peninsula, but on the E. side, towards the Adriatic Sea. The prevalent and characteristic rock of the Apennines is a primitive limestone, without fossils. The Eugubian hills, near Padua the Albanian hills near Rome, and Vesuvius, at Naples, are all of volcanic origin and quite distinct from the Apennines. To the latter however belong the mountain groups which often attaining the height of 6000 ft. form the island of Sicily but have again the volcanic Etna, 10 874 ft. high, must be regarded not as a part of, but as an accident in, the system. At the foot of the crater of Etna, 9770 ft. above the sea, stands a small building called the English House probably the highest inhabited place in Europe. This house is covered with snow till the middle of June, and fresh snow falls on it again in August. At the level of the sea of Naples snow is rare and melts immediately.

The Dinaric or Illyrian Alps branch off from the high Alps at the head of the Adriatic Sea, in a direction parallel to that of the Apennines. They rise nowhere higher than 8000 ft. but overhauling the sea, and occasionally covered with fine forests they have a grand appearance. After continuing in the same direction for about 200 m., this chain merges in the Balkan the Rhaemus of the ancients, which extends to the Black Sea, but the character of which is little known in W. Europe. As the Pyrenees and Alps cut off the two W. peninsulas so the united chains of the Illyrian Alps and the Balkan separate that of Greece from the rest of Europe. Some of these and parallel to the Balkan runs the Dipsos-Dag the Rhodope of the ancients, the E. portion of which attains the height of 8000 ft. Still further S. Pindus strikes to the S.E. and forms the central ridge of the Grecian peninsula. It reaches 7000 ft. above the sea, at its highest point and Taygetus, in the Morea about 1000 ft. higher. The mountain range of Greece though covered deeply with snow during the winter nowhere reach the line of perpetual congelation.

German Mountains.—N. of the Alps, and extending E. there are several groups and chains of mountains which collectively separate the basin of the Danube on the N. from the basins of the rivers that flow into the North and Baltic Seas. At the sources of the Weiser we find the Harz and S. of this group, the Thuringerwald mountains the Brocken, in the former the Beerberg, in the latter attain the heights of 3660 and 3075 ft. respectively. Then come the Fichtelgebirge, the Fränkische and Thüringerwaldgebirge these last two chains diverging the former N.E. the latter S.E. so as to embrace Bohemia. After the Erzgebirge follow the Sudetes, the N. portion of which takes the name of Riesengebirge, and then the Riesengebirge, the highest mountain of Germany N. of the Danube, reaches the elevation of 5590 ft. Further to the E. the Krupatsh or Carpathian chain encloses the great plain of Hungary attaining in several places an elevation of 8000 or 8500 ft. The Ural Mountains which serve as a boundary between Europe and Asia, extend nearly in the meridian or from N. to S. through 18° of latitude, or from lat. 49° to 67° but N. of 60° they are not habitable by civilized man. The highest known summit of the Ural—the Kungurshokan in lat. 60°—reaches an absolute elevation of 5700 ft., but, generally speaking the chain is low and presents to the eye only a series of rounded hills. Towards the S. it spreads out into a fan-shaped group of low mountains, covered with thick forests and fine pastures, and therefore much frequented by the Bashkirs. In a line with the Irtys (lon. 80 E.) towards the N. the island of Novaya Zembla [Nova Zembla] 300 m. long, stretches N. to lat. 77° N.

Notes.—To complete the physical delineation of Europe, it remains only to describe briefly the places which together with the framework of mountains already sketched make up the Continent. The great plain of N. Europe commences at the W. foot of the Pyrenees comprehends W. France, W. and N. Belgium Holland and part of Denmark thence all

the N. provinces of Germany into Russia, where it expands and terminates in the E. only at the Ural. A large portion of this plain, beginning at the Scheldt, and extending through Holland, Bremen, Wismar, Stettin, and the N. provinces of Prussia, is a low sandy level, sometimes covered with heath and brushwood sometimes resembling a sandy desert, not infrequently also, below the level of the sea or rivers and protected from inundation only by means of strong dykes or if liable to be submerged then converted into marsh. Nearly the entire of European Russia is a plain diversified only by moderate undulations and that plain is, in superficial extent, equal to all the rest of Europe or in other words, it is half of Europe. Owing to its vast extent, it can sustain a considerable elevation by an ascent quite imperceptible and the ridge of Valdai, which separates the basins of the Volga and Dnieper flowing into the Caspian and Black Seas, from that of the Dwina, which runs into the Baltic, has an absolute height of nearly 1200 ft. Besides this great plain or series of plains, there are two others too important to be passed over in silence these are the plain of Bohemia, and the plain of Hungary the latter with an area of 40,000 sq. m. a great part of which is perfectly level.

Rivers.—With respect to the rivers of Europe, it is not necessary here to enter into details their general characteristics may be sufficiently explained in a few brief remarks. The various chains of mountains, from the Cevennes to the Carpathians, which divide the waters running into the Mediterranean from those flowing into the Atlantic Ocean, the Baltic, or the North Sea, form collectively a ridge which is parallel to the high Alps, or from W. S. W. to E. N. E. and consequently the streams flowing from its N. side, or through the plain all incline more or less to the W. and, owing to the breadth of the plain which they traverse with a moderate fall they are all navigable to a considerable extent. The Elbe at the S. foot of the Pyrenees, holds a course parallel to these mountains, but the other large rivers of the Spanish peninsula run like the mountain chains which confine it etc. basins, in a direction parallel to the high Alps. From these last named mountain descent, as might be expected some of the largest of the European rivers—the Danube, the Rhine, the Rhone, and the Po all have their source in the central chain. The first and greatest of these—the Danube—has a length of perhaps 1000 m. or about half of the estimated length of the Nile. It is remarkable that the Volga, which among European rivers, holds the first rank for length of course, having a run of nearly 1700 m. derives but a small proportion of its waters from the heights of the N. it is chief sources are little more than 1000 ft. above the sea, but on this very account, its basin is less confined and it drains an immense extent of country with so moderate a fall that its channel is always full. The lakes of Europe accompany the chief mountain systems, and may be divided into two groups—the Alpine and the Scandinavian. A chain of lakes runs along the N. side of the Alps through Switzerland and the Tyrol and, along the S. side through Lombardy and Rhaia. The Scandinavian lakes extend across Sweden, from W. to E., beginning at the S. termination of the mountains and go to the E. end of the Baltic a number of lakes stretching in the same direction across Finland on the borders of Russia mark the continuation of the line of depression.

Geology.—It may be convenient at times to consider the Pyrenean Alps, and Balkan as forming a single chain of mountains ramifying, on the one side through the Italian and Grecian peninsulas, and on the other into Germany and Hungary, but geologists acknowledge no such unity or simplicity of system. They discover in almost every group of mountains proofs of many distinct revolutions differing widely in age and in dynamic elements. Their reasonings, founded on the careful observation of many minute particulars, such as the mineral character of rocks or strata, their position more or less altered their relations to the adjacent strata, the relative age of the organic remains found in them, if they be fossiliferous etc. will not easily bear abridgment. Here it will be sufficient to state succinctly the deductions of geological science respecting the formation of Europe and perhaps a very general and rapid outline will afford all convey as correct a view as could be given by an elaborate picture filled in with details, since the deductions of geologists respect-

ing the age of rocks cannot yet claim the confidence due to exact truths. It seems to be admitted on all hands, that the first rank among European mountains, in respect of age as well as of extent, belongs to the Scandinavian range. It consists almost wholly of what were barstons called primary rocks and, on their flanks, the oldest deposited strata (Cambrian, Silurian Devonian) containing in their fossiliferous parts of relative age, lie horizontal and undisturbed, their formation having taken place subsequent to the upheaval of the mountains. In the W. of England and on the W. side of the Ural analogous strata are found distorted or raised vertically showing that the mountains on which they lie have risen since their deposition, but, at the same time, proving the antiquity of the frame-work of N. Europe, from its W. to its E. extremity. The several ridges or chains of mountains which arose successively at later dates, and are now distinguishable by the nature and position of the strata resting on them can not be here enumerated in their proper order. It will suffice for our present purpose to state, that the much great change, in the physical aspect of W. Europe, was produced by the raising of the Pyrenees, which chain, being comparatively recent, raised with it recent strata, such as chalk and the earlier tertiary formations and as the chalk the formation of which was arrested by the convulsion which raised the Pyrenees occupies but a small portion of Europe it is supposed that the effects of that convulsion were very widely felt, and that, in fact the emergence of a large proportion of the Continent, from the waters which then covered it, took place suddenly at the upheaval of the Pyrenees. The 11th great revolution was effected by the upheaval of the W. Alps the 12th by that of the High Alps so that these the greatest mountains of Europe, are also unquestionably the youngest with the exception of one inconceivable chain in Greece, the upheaval of which may be assigned to a volcanic action still partially surviving in Etna and Vesuvius. It is remarkable that the European land which first rose above the ocean, is that which still continues most constantly to rise for it is fully ascertained that the waters of the Baltic are retreating from the shores of Sweden at a normal rate, or in other words, the land is rising at the rate of about 3 ft. in a century. During the formation of the tertiary strata, nearly three-fourths of Europe—most of Russia, the basin of the Danube, N. Germany, Holland, part of France the E. shores of Sweden of England, of Italy etc.—were under water. The raising of the Pyrenees made Europe a continent the convulsion which separated England from France, is supposed to have been caused by the raising of the High Alps. Scotland and Ireland remained connected, probably till a much more recent period by volcanic formations, which have subsequently crumbled and sunk in the ocean. It is near the contact of the older sedimentary rocks with those of eruptive or volcanic origin, that the great metallic deposits are found. These lie chiefly in England, Sweden the Ural and in Etna from the Harz through the Erzgebirge to the Apennines.

Climate.—Europe enjoys the great advantage of lying almost wholly within the temperate zone. A small portion of it indeed comprising Lapland and the north of Iceland, does extend beyond the Arctic circle, but it nowhere reaches to the line of perpetual congelation. On the other hand the most S. point of Europe does not reach within 13° of the Tropic nor even attain a zone where now as a rare phenomenon. Another great advantage is the great extent of its maritime boundaries the European continent being as already stated, a great peninsula, again divided into several peninsulas. This frequent mixture of sea and land, tends to diffuse over the latter the equable temperature of the ocean. It is also the means of conveying to the land an immense quantity of vapour which, falling in rain, furnishes to the atmosphere an accession of heat. It is well known that W. winds are in general more warm and humid than those that blow from the E. Now this difference of climate is due wholly to the difference between the ruling winds. The W. or rather S.W. wind in our latitudes, is in reality the equatorial current of the atmosphere, which flowing at first due N. towards the pole continually inclines more and more towards the E. because the velocity of the earth's movement of rotation is greatest at the equator and diminishes towards the pole, and consequently that motion from W. to E. which is latent in the equatorial current at its first starting N., becomes apparent

as the circles of latitude become less and the wind from the intertropical regions describing a curve, arrives on our shores as a S.W. wind. A like train of reasoning, with an obvious inversion of circumstances will show that the N.E. wind is generally stronger than the polar current, bent from its regular E. course, because it falls short of the E. position of the lower curves. Now the equatorial current of the atmosphere, determined in its course by circumstances, the explanation of which belongs to physical geography flows N. with little interruption, over the Atlantic Ocean and inclining E. becomes a S.W. wind. This is the predominating wind of W. Europe. In Ireland the S.W. wind, warm and humid prevails during some months of the year on the Continent in duration, strength, and temperature, declines uniformly towards the E. At St. Petersburg it is still the prevalent wind but farther E. it gives way to the cold and dry N.E. wind, which thenceforth has the upper hand, and exercises a powerful influence on the climate. From this it will be evident, that the heat and moisture of the equatorial zone are continually flowing into the atmosphere of Europe. But this effect is greatly heightened by an oceanic current. The equatorial current of the ocean runs W. but being checked by the American continent it turns N. flows round the Gulf of Mexico, and then under the name of the Gulf Stream, runs as a little distance from the coast of the U. States, and passing N. of Newfoundland, falls with a relatively high temperature chiefly on the shores of Ireland, Scotland and Norway. At the same time, the N. shores of Europe are guarded from accumulation of ice by fortunate currents of structure. The great projection of the continent W. of the Obi and the position of Novaya Zembla, stretching forward to lat. 77° across Europe effectually from the sea formed on the N. shores of Siberia. This ice, when it breaks up, drifts to Greenland the E. coasts of which are never open while the W. shores of Norway in the same latitude are never closed. Thus it appears that many circumstances conspire to favour Europe generally with a peculiarly genial climate in which the vicissitudes of nature are felt without their violent and the luxuriance of season is so far subdued as not to overpower the virtues of industry.

The increase of temperature from N. to S. and from E. to W. as it takes place throughout Europe, will be found amply exhibited in the following table, which gives the mean the summer and winter temperatures in degrees of Fahrenheit's thermometer (fractions omitted) of the chief cities where those elements have been accurately determined.

	Latitude	Mean Temp.	Winter	Summer
North Cape	71	32.9	-10	4.9
Tromsø (Norway)	69	40	-	-
and (Norw.)	64	36	14	56
St. Petersburg	60	30	14	62

From this it will be manifest to what an extent the severity of winter is mitigated by the vicinity of the ocean. N. Cape has a colder winter and Tromsø even a better climate altogether than Koenigsberg, which is situated in a much lower latitude, in the same parallel indeed as Edinburgh. That the line of equal mean temperature declines S. as we go further E. is obvious from the comparison of Posen, Paris, Carlsruhe, Vienna, and Milan. It is also to be observed, that if the mean summer temperature be traced E., the difference of temperature of the sea will be found constantly increasing, the sum-

mer growing hotter the winter colder. Thus, compare Edinburgh and Hamburg, Dublin and Prague, Posen and Odes, Naples and Lisbon and it will be seen that equality in the character of the W. season is in some places, as the case for instance, which suffer little from the cold of winter but the successful cultivation of which depends chiefly on the summer heat. Very few ranges towards the E., or in other words, they flourish within limits which run to the N. of E., and thus make an angle with the line of constant mean temperature. The same advantages of mild and genial temperature, which W. has over E. Europe the continent collectively has over the rest of the earth. The diminution of mean temperature, as well as the intensity of the opposite seasons increase as we go E. across the old world. Peking in lat. 40° has as severe a winter as St. Petersburg. The hills near the sea on the E. of the Chinese Islands, lat. 30° are covered with snow four or five months in the year and the snow has hardly disappeared when the peach trees are in full blossom. The E. side of the American continent also exhibits the same relative defect as E. Asia, in respect of absolute and equable temperature and although the W. coast, at the mouth of the Columbia, has a much milder climate than the E., yet it is still much inferior to W. Europe, as will be seen from the following table:—

	Latitude	Mean Temp.	Winter	Summer
New York	41	50	30	60
N. lat.	44	41	21	50
London	51	40	39	70
Quebec	46	30	10	60
Quebec lat. 46 (Hubert's Bay)	44	20	10	50
Fort Vancouver (Columbia W. coast)	45	51	36	64
Fort George (Columbia)	46	48	37	61

As a large proportion of the rain which falls on Europe is borne to it by the S.W. wind the quantity of rain diminishes towards the E. but not with regularity. The precipitation of the aqueous vapour suspended in the atmosphere, being determined by great masses of high land, the heaviest rains fall as might be expected round the Alps, particularly on their E. side, and at the W. side of the Scandinavian range. The peninsulas of E. Europe, namely Spain, Italy and Greece all feel the effects of their exposure to the heated E. winds which come to them from the great African desert and they are little or no rain in summer. Some districts in Spain often without rain for nine months together. The Pyrenees, the Cevennes, the Alps, and the Carpathians, form a limit of climate between the dry region on the E. visited only by winter rains, and the humid region on which rain falls at all times of the year but chiefly in summer. Sweden, however on the E. side of the Scandinavian range, has but little summer rain exhibiting in this as in other particulars, a strong contrast with the maritime climate of Norway. At Bergen in the latter country the quantity of rain that falls within the year amounts to 80 inches at Stockholm, it is but 17½ inches. Ireland exposed to constant S.W. winds, completely saturated with vapour has 208 rainy days in the year but the rain is gentle though frequent, and probably does not amount to more than 62 inches. London has 178 days of rain and England collectively 81 inches, though, in the mountainous districts Cumberland especially the annual rain often exceeds 60 inches. The Alps, at their E. foot, have 60 inches. Primal, 100 inches. Palermo, 21 inches. Lisbon and Madrid, the one on the W. coast the other inland, on a plain have respectively 86 and 83 inches of rain. Going over the continent from W. to E. we find that Holland has 28 inches of annual rain and St. Petersburg 21 inches. W. France has 24 inches, (May 18 inches). The snow which covers the ground in Russia during five months, from October to April, amounts, when measured as rain, to only a very small quantity. The line of perpetual snow is found at N. Cape, at the height of 2300 ft. above the sea, on E. Norway at the height of 5500 ft. In the Alps the general height of this line may be taken at 9100 ft. but on the N. side and E. end of the chain it descends to 8500 ft. while on the S. face of Mont Blanc it rises to 10,000 ft. On the Pyrenees, the snow line occurs on the N. and S. sides respectively at heights of 8500 and 9100 ft. Thus it appears that the line of perpetual congelation falls lower on the Pyrenees than the Alps; though the latter mountain has 2° further N. than the former; but

this is the inevitable consequence of the vicinity of the ocean which diminishes the intensity of the summer heat.

Vegetation.—With respect to the vegetable kingdom Europe may be conveniently divided into four zones. The first, or most N. is that of fir and birch. This may be subdivided into the zones of birch, birch and fir. The tundras, or mossy plains of Scandinavia, do not equal in extent those of E. Russia. The helghe is inaccessible to other vegetation up to the borders of perpetual snow as occurred by lobes, the most valuable of which are the run-deer moss, and the Iceland moss. The birch reaches almost to N Cape; the fir ceases a degree further S. The cultivation of grain extends further in these rude latitudes, than might be at first supposed. Barley ripens even under the 70th parallel wheat ceases at 64° in Norway 62° in Sweden. In the country of the Samoyedes, in E. Russia, the limit of barley is at about 67°. Within this zone, the S. limit of which extends from lat. 64° in Norway to lat. 62° in Russia agriculture has little importance, its inhabitants being chiefly occupied with the care of rein-deer or cattle and in fishing. The next zone, which may be called that of the oak and beech, and cereal produce, extends from the limit above-mentioned to the 48th parallel. The Alps, though beyond the limit, by reason of their elevation belong to this zone, in the milder parts of which cattle husbandry has been brought to perfection. Next we find the zone of the chestnut and vine, occupying the space between the 48th parallel and the mountain chains of E. Europe. Here the oak still flourishes but the pine species become rare. Rye, which characterizes the preceding zone on the Continent, gives way to wheat, and in the S. portion of it, to maize also. The fourth zone, comprehending the S. peninsula, is that of the olive and evergreen woods. The orange flourishes in the S. portion of it, and rice is cultivated in a few spots, in N. Italy and E. Spain. The deciduous oak here gives place to the evergreen and cork oak, with which some which define the region favourable to the growth of each plant generally incline S. towards the E. but it is otherwise with the vine, olive and a few other plants within certain limits. The cultivation of the vine begins on the coast of France, in lat. 48° passes N. of Paris, in lat. 49° and goes still further N. in Germany where it reaches its N. limit it is still however carried on with success on the Volga, in lat. 50°.

Zoology.—The zoology of Europe offers little for remark. The rein-deer and polar bears are peculiar to the N. The N. alone has harts and serpents. In the forests of Poland and Lithuania, the urus or bison, a species of wild ox is still occasionally met with. Bears and wolves still inhabit the forests and mountains but in general cultivation and population have expelled wild animals. The domesticated animals are nearly the same throughout. The ox and mule lose their size and beauty N. of the Pyrenees and Alps. A few camels are bred in the neighbourhood of Sienna, in Italy in which country also buffaloes are used for draught. The Mediterranean sea has many species of fish, but no great fishery the N. seas, on the other hand are annually filled with countless shoals of a few species, chiefly the herring mackerel and salmon. The fisheries thus arising are intrinsically valuable and have unquestionably exercised a great influence on the early history and advancement of N. W. Europe.

Ethnography and Language.—Europe is occupied by many different races wholly distinct or very remotely connected. The Celts once possessed the W. of Europe, from the Alps to the British islands. The names, Alps and Albion, it may be observed are derived from the same Celtic root, alb, white. The only remnant of the pure Celtic language, at the present day is the Gaelic, or Erse spoken in some districts of Ireland the Scotch Highlands, and the Hebrides. The Welsh are the descendants of Belgic colonists, of mixed Celtic and German race. A portion of these Cambrians, or Kymry as they call themselves, fled from the attacks of the Anglo-Saxons, into Brittany where the people still speak a language resembling the Welsh. The Celts adopted the Anglo-Saxon writings, they also used the Ogden, which was a sacred but not an ancient, character. Their literary cultivation began with their conversion to Christianity and does not seem to have ever advanced far. From their comparative magnitude for maritime pursuits, it may be inferred that they were origin-

ally mountaineers. In Spain also they were driven to the W. side the E. shores the Pyrenees, and part of Aquitaine were held by the Iberians, of whom the Basques are now the representatives. Their language, the Euskara, has no discoverable affinity with any other and the Basques are the only European race who cannot be traced into Asia. Next to the Celts come the Teutonic race, who have long predominated and have supplanted everywhere except in Russia, the remaining families. Under these names are comprehended the Germanic and Scandinavian, the language of the former including Gothic, Lithuanian, Flemish, Frisian, Anglo-Saxon, &c. extended from Transylvania to N. Britain, and from the Alps to the Baltic Sea. The Scandinavians, Danes and Norwegians chiefly colonized Iceland, and the Faroe Islands, Shetland Orkney and others of the Scotch Islands and traces of their presence in Ireland may be discerned even in Ptolemy's map of that island, A. D. 150. The literature of this race goes back to pagan times, and is extremely abundant. To the E. in general of the Teutonic race though sometimes mixed with it, come the Slavonians that is, the Poles, the Chekes or Bohemians, Estonians, the Serians, Croats, about one-third of the population of Hungary and the Lithuanians. The Yends, or Veneds, formerly a powerful nation on the S. shores of the Baltic, but now absorbed in the German name, were of this race. An effect of the same stock penetrated to the bed of the Adriatic Sea and founded Venice. Among the Slavonians the great mass of the people were serfs, and subject to harsh treatment. Hence their national name (Slav) which means serfdom, has become, in W. Europe, the design upon of one deprived of liberty. Slavonians literature is all of modern date. In the S. and S. W. of Europe are the offspring of the Pelagian stock speaking the Greek and Latin which latter absorbed the Etruscan and other languages of ancient Italy. Greek was the language not merely of the Grecian peninsula, but of all the islands and Asiatic shores of the Aegean Sea. It was this language which vigorous and singularly persevering—at first gave expression to that pure taste, manly conception and perfect freedom of speculation which now form the distinct in Europe. Modern Greek is spoken within a comparatively limited range and differs from its ancient tongue, chiefly in having lost many grammatical inflections, hence it is called Ayle-Hellenic or Simple Greek. The Albanians on the W. side of the Grecian peninsula, are probably sprung from the mixed Celts and Danish population of the Illyria Mountains. At the present day the language of the Sphyraks (as they call themselves) is one-third Celtic, and contains much Slavonian. The Latin or Roman language was connected with the Greek through the most cultivated dialect of the latter—the Eolian and contained many words of W. origin. The Teutonic Slavonian, Greek, and Latin (with it modern tongues derived from them) all belong to what is called the Indo-European family of languages. They may be all traced from the Sanskrit, the ancient language of Upper India, and the Himalayas, though perhaps the Slavonians may be more conveniently referred to cognate tongue—the Zend or ancient Persian. The Cypriotes also speak a language of Indian origin and related to the Pali. The Celtic language has so much analogy with the Indo-European stock as to counterbalance the belief, that the Celts were but an older wave of the same great stream of emigration from the Highlands of Central Asia. From the neighbourhood of the Altai Mountains N. E. of the Himalayas, several wended another at still earlier. The Aryans tribes occupied the steppes N. of the Black Sea, probably at an early age. At present, the Bashkirs in the S. Ural, are of Turkish race, to which belong also the Tatars of Kasan those of the Krass and the Nogays on the Don. The Ottoman or Osman Turks (so named from their early Sultan, Osman or Osman) after being settled for ages in Asia Minor at length took Constantinople in 1453 and established their empire in Europe. Previous to this event, a body of Turcomans had forced their way into Macedonia, where their descendants still remain. The fishing and hunting tribes of N. Siberia, also took part in this W. movement, and the Finns, who came from the Old settled themselves in the countries now called Lapland and Finland. Higher up from the banks of the Irish other horde of the same nation mingled with and led by Turks and Mongols poured down on the valley of the Danube in the 7th century, and founded the kingdom of

Hungary The language of the Magyars, as the Hungarians call themselves has not yet lost all resemblance to that of the Onyaks on the Obi. The convenience arising from diversity of speech is much diminished in Europe by the great predominance of the languages of the Indo-European family which are spoken by nine-tenths of the whole population: the Teutonic, Slavonian, and Latin groups, each numbering about 50 millions.

The literary cultivation of Europe, considered in the aggregate, and apart from the separate national literatures of which it is composed, suggests a few important observations. It has proceeded altogether from ancient Greece. In poetry history and speculative philosophy the Greeks certainly excelled in their time but their original and peculiar merit, was that of laying the foundations of exact sciences, and of the solid and enduring edifice of human knowledge. Pythagoras, Hipparchus, Ptolemy and Euclid, were the forerunners of Copernicus, Kepler, Galileo Newton, Laplace, and Herschel and Aristotle broke the way for Locke and for Cuvier. It was fortunate that Christianity while spreading W raised in general consideration, the two languages which contained the seeds of civilization. When the Arabs, having overrun with great rapidity the N. of Africa, and part of Spain, laid aside their arms, and turned to cultivate the arts of peace they created, in the latter country particularly a literature which was as remarkable for its extreme copiousness, as for its superficial character and general worthlessness. Their example, however worked on the poets of Catalonia, Provence, and Italy and to them, probably was due the introduction of rhyme into European verse. It will be sufficient to mention here briefly as an epoch in the history of letters, and as a cause of European superiority the discovery of the art of printing which with the liberty of the press, wherever it is established, is sure to aid and advance the interests of humanity.

History.—The history of modern Europe starts from Rome, as its literature from Greece. In the early years of the Christian era, the Romans subdued all W and S Europe, as far as the Baltic. The Roman power was favourable to civilization. It increased the measure of general liberty and promoted intercourse, and the nations of Europe ought to be grateful to the Romans for the example of good roads, on a great scale and for the civil law. As the Roman empire declined the Northern and S nations adventurers of Ireland and Norway (including Vikings and Anglo-Saxons) rose into importance, and obtained at last a firm footing in England and W France. With these people rose into vogue the feudal system, which made the tenur 'land depend on the condition of military service. But the feudal system proved a failure as a military organization it created turbulent vassals, and not trained soldiers, and after experiencing in the 16th century the great superiority of the Ottoman troops in the field, European nations adopted the system of standing armies. Thus change, however was unfit obtainable to liberty to morals and to public economy and the gradual discovery of the immense power connected with a well-trained standing army prompted inordinate ambition. Hence the wars and revolutions of the last and present centuries. The extinction of ancient European dynasties however will hereafter be thought a matter of little importance, compared with the colonization which now proceeds from the westernmost part of Europe

to the whole earth, carrying with it a widely-spread and cultivated language, a type literature, useful arts and enlightened sentiments.—*Roos's Geographical Map of Europe*, Schöner's *Physical Geography of Europe*, 1855. *Crooke, A General Survey of the Power and Resources of the States of Europe* 1819. *Belli's Political Balance of the Globe* 1833. *Dupin The Commercial Power of Great Britain*, 1825. *Progress of France on Trade and Production*, 1827. *Jahob's View of the Agriculture, Manufactures, Politics, and State of Society of Germany and parts of Holland, France, &c.* 1850. *Tegoborski's Productive Power of Russia*, 1851.]

EUROTAS a river Greece, Meoia, rising in a mountain about 12 miles S. lat. 37° 15' N. lon. 23° 15' E. from which it flows N.E. and after having formed a junction with several other streams becomes the Basil, which falls into the Gulf of Kolokythi.

YUPUQI E, one of the nomads tribes of Asiatic Turkey inhabiting the country about the upper branches of the Jaxartes.

Irak, pers. Karamanli. They have no villages, but, like the Kurds, are truly nomadic, living on the produce of their flocks and herds, but generally in mountainous and wooded districts. They breed camels, and one of their principal occupations is burning charcoal. They live in tents made of black goat hair.

BURSTANIA, a dist. or diocese, Green name or prov of Eritrea and Aromania. Its cap. is Karpentini. Pop. (1833) 21,533.

LUSKIRCHEN a m. Prussia, gov. of and 16 m S S.W. Cologne, circle, same name. It is surrounded by walls in a very dilapidated state, flanked by three gates, contains three churches, and has manufactures of linen and woollen cloth, woollen covers, and potter, a trade in cattle, and four annual fairs. Lead, iron, and copper are worked in the vicinity. Pop. 8104.—The circums. area 607 sq. m. is partly hilly and partly flat does not contain much arable land, but has rich meadows along the Rhr. Pop. 29,710.

EUSTATIUS (St.) an isl. Dutch W India, 11 m N W St. Lucia; lat (N point) 17° 32' N lon 63° 5' W (n) It is oval-shaped, and scarcely 80 m in circumference area about 190 sq. m. There are two hills—the Punch Bowl and Signal Hill the former of which is an extinct volcano, broken in a deep valley forming the centre of the island. One side of the valley is precipitous the other slopes to the sea forming the flat ground on which the town of Eustatius is placed and at the same time, the only accessible part of the island, all the rest of the coast being abrupt and steep, though presenting several other bays. Climate said to be healthy but the people have no water except that supplied by rain. Hurricanes and earthquakes are frequent. The level parts are covered with cane-fields and provision grounds the latter are the chief lands attended to for only about 1000 barrels of sugar are per annum yearly in the island, and other vegetable products are little attended to. Cane is plentiful and exported to other islands. St. Eustatius, at one time, carried on extensive contraband traffic. It was plundered by Admiral Rodney in 181. The prosperity of the island is now gone and little commerce is carried on. The language of the people is English and they are mostly Methodists. Pop. (1780) 25,000 (1826) 23 3.—The town divided into the upper and lower town, lies on a level piece of ground, on a bay 4 W side of the island. It is irregularly arranged, and consists chiefly of shops and warehouses with the fort Hollanda in the centre. It has a Calvinistic and a Methodist church and a small hospital. The roadstead is open and unprotected, but has good anchorage in certain winds.

EUSTON par Eng. Suffol. 3780 ac. Pop. 256.

EUTIN a m. Germany Grand Duchy Oldenburg cap. municipality of Lübeck, in an agreeable district on a lake of same name, which partly belongs to Holstein 17 m N Lübeck. It is well built, is the seat of a superior court and several public offices, has a large square castle, surrounded by ditches, fine gardens, a handsome town church a library of 16,000 volumes, a townhouse, a normal industrial seminary and other schools, a savings-bank, poorhouse and hospital, and manufactures of leather stoves, and soap, dyewoods, a weekly market, and several annual fairs. The musician Weber was born here. Pop. 2818.

EUTINGEN two places, Germany.—1 A vil. Baden circle, Middle Rhine, half of and near Flossenheim on the Rheine. It contains a parish church, and has a sandstone quarry. In the vicinity are the remains of a Roman tower. Pop. 896.—2 A vil. Württemberg circle, Schwabmünd. (Black Forest) half of and 3 m N.E. Horb. It contains a parish church. Pop. 1191.

FUXINE (Twe) See BLACK SEA.

EVALL (Str.) par Eng. Cornwall 2886 ac. Pop. 826.

EVANGELIST ISLANDS, a group of rocky islets, S. America, off W coast, Patagonia, lat. (southernmost) 53° 34' S. lon. 75° 7' W (n.) consisting of four principal ones and some detached rocks and breakers. They are very rugged and barren, and suited only to afford a resting-place or bread-bait for seals and sea birds. There is landing on one of the islets, and anchorage round them. The lowest and highest may be seen in tolerably clear weather at a distance of upwards of 20 m. They form an excellent leading mark or the entrance of the Strait of Magellan, near which they are situated.

EVANTON a vil Scotland, co. Ross, 13 m. N N W Inverness. It is neat and well-built, contains a U Presbyterian church and school, and has two annual fairs. P 463

EVAUX an ancient vil France, co. Creuse, 33 m. S E of Guéret, on a high plateau, in a well cultivated district. It contains an antique church, and the remains of some Roman baths. Near it are 15 hot springs (between 80° and 140° Fah.) enclosed in three establishments, and well frequented. Pop. 1391

EVESHAM a pari bur and market to England co. of and 13 m. S.E. Worcester beautifully situated in the vale of Evesham on an acclivity rising from the Avon by which it is almost encircled and over which is a stone bridge of eight arches. It contains principally of four white and red streets with wall built houses, and is well paved and lighted with gas. Of the three churches that of St. Lawrence, lately rebuilt is the most elegant. There are also chapels for Baptists, Wesleyan Methodists, and Unitarians and a Friends meeting-house a free grammar-school several other seminaries, a mechanics institution, reading-rooms, and library. The abbey of Evesham founded in 709 and of which only a tower 110 ft. high and some outbuildings now remain, was at one time one of the most stately in the kingdom, and its tower is supposed to be the finest existing remains of the tower of Henry VIII. Parchment and stockings are manufactured here and many of the females are employed in sewing gloves for the Worcester trade. A considerable business is also done in hops and malt but gardening is the chief occupation of the inhabitants, who supply the markets of Cheltenham, Birmingham, Tewkesbury Worcester and even London with large quantities of fruit and vegetables. Evesham is a borough by prescription. It sends two members to the House of Commons. Registered electors, (1853) 302. Market-day Monday. Five annual fairs. In the immediate vicinity of Evesham was fought the decisive and sanguinary battle that reinstated Henry III on the throne, August 4 1265. Pop. (1861) 4905.—(Local Correspondent)

EVIAN (*Agnonay*), a in France dep Haute Savoie beautifully situated B. shore of Lake Geneva, 24 m. N E. Geneva. It was once surrounded by walls flanked with towers, of which part still remain, contains a public square, a gothic parish church, a Latin and a primary school two convents, and an hospital and has a trade in agricultural produce, a weekly market and three annual fairs. In the neighborhood are the chalybeate springs of Amphilion. Pop. 2084.

EVORA [also *Evora*, or *Liberdade* or *Evora*] a tn. Portugal cap. prov Alentejo, situated on a height in the middle of a fertile plain, 80 m. E. Lisbon. It is surrounded by a wall and defended by a citadel and two forts all alike ruinous. The houses are old and ill built, and the streets narrow and winding. The principal edifice is the cathedral which is

large and handsome four other churches several convents and hospitals, and several Roman antiquities of which the most important is a magnificent aqueduct by Sutorius called *Aqua da Fria*, or *Salve Water*. Evora is the see of an archbishop, and possesses an ecclesiastical seminary and a college. It has some manufactures of ironware and leather and a large annual fair. The Moors were defeated here in 1185, by Gerard, surnamed the Fearless. Pop. 9299

EVORA MONTE a tn Portugal prov Alentejo beautifully situated on the side and crest of a hill, 15 m. N N E Evora. It is surrounded by walls and defended by a castle. Here, in 1384 the Albigenses after being defeated at Rancun were forced to lay down their arms. Pop. 940

EVREUX (Roman, *Augusta Eboracorum*) an anc. city France, cap. dep. Eure, 57 m. W W V Paris, in a fertile valley on the Iton, which branching out, divides the city into three parts. It is well built but the streets rather narrow. The cathedral is a venerable pile, founded in the 7th century and in several styles of gothic architecture, richly sculptured both in the exterior and the interior and with a bold airy arch 206 ft. high. The church and cloisters of the abbey of St. Thaurin another fine gothic edifice, was founded in the 7th century. The Tour de l'Horloge is a lofty and handsome clock-tower built in 1417. The Hotel de Ville was once the palace of the Dukes of Bouillon. Evreux has a town library of 10 000 volumes, a botanic garden and a theatre an agricultural association and a literary society. It is the seat of a court of first resort, a prefect, a bishop outrager of the archbishops of Rouen a chamber and tribunal of commerce consist of prud'hommes, two theological seminaries a commercial college and a normal primary head school. Evreux has manufactures of book-binding and hosiery tanneries, blancheries dyeworks corn mills, fulling maw and flaxing mills some lineries and fields of wheat in grain seeds and timber with an important fair for horses and cattle. It was sacked by the Normans in 892 taken and pillaged in 1119 by Henry I of England. The English were finally expelled from it in 1441. Pop. 8137

EVYON a tn. France, dep. Mayenne 17 m. S E Laval situated in a fertile locality, best possessing some trade in the produce of the rich district, and in linens and woollens of local manufacture. It contains the buildings of a Benedictine abbey founded in the 7th century now occupied by sisters of charity. The conventual church and chapel are remarkable antique edifices. Pop. 2236.

EWANOWITZ, or **EWYANOWITZ**, a tn. Austrian Moravia, circle of and 34 m. E N E Rehim I burik, Hainau It contains an old castle, parish church chapel and hospice and has three annual fairs. Pop. 3006.

EXCELDUILL, an anc. tn. France dep. Dordogne, 30 m. N E Périgueux, on the Lona. It has two antique towers, with other remains of former defences and ruins of a monastery. Marshal Bugaud was born here in 1784. In the environs are iron mines, forges potteries, tanneries, &c. Pop. about 2000

EXE, or **EXE** (Latin *Esca*, *Esca*) a river England, which rises in Exmoor co. Somerset, and, after a S course of about 50 m. falls into the English Channel at Exmouth by an estuary, navigable for 8 m. to Topham. Its chief tributaries

are the Tye and Chit. The principal places on its banks are Exeter, Bampton, and Tiverton.

EXETER [Latin *Isca*, *Eborac*, *Uxela*] a city co. of itself, seaport and parli. bor. England co. Devon 1 bank, Eas 10 m N W from its outlet in the English Channel 159 m W N W London, on a branch of the Great Western Railway lat. 50° 44' N lon. 8° 33' W pleasantly situated on the summit and slopes of an activity rising from the river over which, at the W entrance to the city is a hand some stone bridge. Two principal streets cross each other at right angles, from which a number of smaller diverge; the latter extremely narrow and consisting chiefly of old houses. Though still presenting many indications of antiquity the city has been, for several years past, undergoing a process of renovation and can now boast of as handsome squares, terraced streets, and houses, all of modern erection, as any other in the kingdom. It is well paved and lighted amply supplied with water and kept, on the whole remarkably clean. The principal object of interest in the city is the cathedral, a noble edifice, of high antiquity. It is cruciform, 408 ft. in length and consists of a nave, with two side aisles, two short transepts formed out of two heavy Norman towers, each 130 ft. in height, a choir of the same width as the nave and 128 ft. in length 10 chapels or oratories, and a chapter-house. The W front is richly decorated presenting one of the most beautiful facades of any building in the kingdom perhaps in Europe. The tower is also magnificent. The other architectural antiquities are the remains of the castle of Rougemont on a high eminence N of the city, St. John's Hospital, now appropriated to a free grammar school &c. and the chapel of St. Wynard and St. Anne, and the chapel of the Lepers Hospital. The modern edifices worthy of notice are the theatre assembly or ball room, bridewell, jail, sessions house, cavalry and artillery barracks, guildhall

an eye infirmary a lying-in charity, a humane society for the recovery of the apparently drowned, a stranger's friend society &c. besides a number of minor charities. The scientific and literary institutions are—the Devon and Exeter Institution for the promotion of science, literature, and the arts, established in 1817 and containing about 10 000 volumes; the Athenaeum a literary institution established in 1835 a mechanics institute, established in 1835 a literary and philosophical society founded in 1836, &c. Woollen goods were formerly manufactured here to a great extent, but the trade is now all but extinct, being limited to small quantities of serge. The cottons and shawl manufacture, at one time considerable has entirely ceased. The principal market-day is Friday on which is held one of the greatest corn and provision markets of the W of England. There are markets also on Tuesday and Saturday. Notwithstanding the cessation of the woolen manufacture of this city the weekly meetings of the woolen manufacturers of Devon are still held here. There are several large breweries and iron foundries in the town and some tapestry and paper mills in the vicinity. The principal exports are serge and other woolen goods, paper and mangroose imports, general merchandise, timber, coals chiefly from Newcastle, and limestone. By means of a canal, 5 m. in length and 15 ft. in depth, vessels of 400 tons can now reach the city. A large floating basin has also been recently formed, extreme length 917 ft. width 110½ ft. at the entrance, 90 ft. depth 18 ft. On December 31 1850 the vessels registered at the port were 182 tons. 18 358,—entered outward, towards, in the same year 910 vessels, tonnage 8,938—outwards 613 tons 38,662 Colonial and foreign inwards 184 vessels tons 7654—outwards, 97 tons., 7654.

Exeter is said to have been one of the first cities that returned members to the House of Commons. It is at an early date, certain that it has done so since the time of Edward I. It is a place of remote antiquity having been a British settlement long prior to the arrival of the Romans by whom it was called *Isca Dumoniorum*, being spoken of by this name both by Antoninus and Ptolemy. A number of coins, small bronze statues some tessellated pavements, and other Roman antiquities have been found in the immediate vicinity of the city showing that it had been an important Roman station. The number of its religious establishments was at one time so great, that the houses called it *Monasterium*. Baldwin Archbishop of Canterbury Sir Thomas Bodley founder of the Bodleian library and several other persons of note were natives of the city. The Cecil family derive its titles of Earl and Marquis from Exeter. Pop. 40 688.

EXILI Pp., or Exilian Island, a small island and common of Italy, Piedmont prov. of, and 7 m. W S.W. Susa, in the valley of Ouz, 1 bank, Dona Ripara about 8000 ft. above the sea. It contains a fortress, on a lofty rock and commanding the pass from France to Italy over Mount Matrona; and a gothic parish church; and has manufactures of coarse woolens and wools, two foundries, and two annual fairs. There are several remarkable caverns in the limestone rocks of the vicinity. Pop. 1768.

EXIN or KIRIN, a town in Fennia, prov. Posen gov. of, and 24 m. W S.W. Bromberg, on a gentle height. It con-

THE GUILDHALL, HIGH STREET, EXETER.

baths, and the new markets. There are 24 churches and Episcopal chapels in the city and suburbs, besides two independent churches, two Baptist, a Presbyterian and several other places of worship for Methodists and Unitarians, a Friends meeting-house a R. Catholic chapel, and a synagogue. There are 56 day schools in the city several of which are endowed and 17 seminaries devoted to infant training. The seminary includes a free grammar-school, founded by the citizens in the time of Charles I. in which the sons of freemen are instructed gratuitously. It has sixteen exhibitions to either of the universities of Oxford or Cambridge. The charitable institutions of various kinds are numerous. Of these about 10 are devoted to education, of which the principal are St. Mary Arches school the Devon and Exeter Central school and the Exeter British school. The charitable institutions comprise the Devon and Exeter hospital for the sick and indigent, opened in 147 and containing 300 beds, supported partly by subscription, and partly from income derived from funded property; a dispensary a well-endowed infirmary for a deaf and dumb institution, a penitentiary for destitute females,

sists of the town proper and a suburb contains two churches, a synagogue, Carmelite monastery and hospital, and a house of industry with almshouses for poor widows, or aged unmarried women. It has no manufactures beyond a little lace-making by the poorer classes of females, the inhabitants being chiefly employed in agriculture. It is a borough by prescription, and sends a member to the House of Commons. Registered electors (1850) 851. Its earliest charter was granted in the reign of King John. Area of par 4320 ac. Pop. 2587.

EYTH, two pars. Eng.—1 Hereford 4307 ac. Pop. 766. —2 Northampton 2670 ac. Pop. 1442. EYTH, an old Indian Archipelago, the outermost island bounding the E side of the N entrance of Gilolo Passage lat. 0° 28' N. lon. 129° 59' E. It is small low and covered with trees.

EYEMOUTH a market tn. par and seaport, Scotland Barwickshire, in the bay at the mouth of the Eye a small stream which here falls into the N Sea, 44 m. E. by E Edinburgh lat. 55° 55' N. lon. 2° 5' W. It is well supplied with water lighted with gas and has altogether a respectable appearance. It has Established, Free, and U Presbyterian churches, a Methodist chapel five schools, a reading club, and library The harbour with 10 ft. at neap, and 16 ft. at spring tide being near the mouth of the Firth of Forth and easily accessible, is much frequented by vessels detained by contrary winds. Timber bones and rags, seals, slates, bricks, tiles, stones, and merchant goods, are imported and grain, oatmeal, flour, malt, and spirits, exported. Cod and haddock fishing is carried on, and large quantities of the latter cured and slightly smoked are sent out; the herring fishing has greatly fallen off. A weekly grain market on Tuesday, 14 fairs annually. Area of par 1½ sq. m. Pop. 1488.—(Local Correspondent.)

EYEO or KATCHOA a tn. N.W. Africa, kingdom, Yarbina, near r bank, Niger lat. 9° N. lon. 6° 15' E. It is surrounded by walls said to be 15 m. in circuit, built of clay 20 ft. high and having 10 gates. The markets are abundantly supplied with all sorts of provisions.

EYFORD par Eng. Gloucester 1380 ac. Pop. 48. **EYGUBRES** (anc. *Aquæ*) a tn. France, dep. Bouches-du-Rhône, 20 m. E. Tarascon. It consists of old well-built houses and has a manufacture of coarse woollens, with some trade in olives, wine, silk wool madder &c. In the environs are stone and lime quarries, and silkworms are reared. Pop. 3660.

FACHINGEN a vil Nassau dist. of and so close to, as to be properly a suburb of Dier, 1 bank, Lahn. It contains a parish church, and has a celebrated mineral spring. The water resembles that of Seltzer and is annually exported to the extent of half a million of bottles. It is of great efficacy particularly in bilious complaints.

FACONE a lake Japan Isl Nippon, 57 m. W S W Yedo. It is 13 m. long by 4 1/2 broad and gives rise to a small river of same name which falls into the Gulf of Yedo. The Japanese attach peculiar sanctity to this lake.

FACSETH two places, Hungary—1 (Nemet) a market in Thibet Thama, co. Krasso on the Bopa, 50 m. E N by Timosvar. It contains a R Catholic church, and a castle in ruins. Pop. 680—2 (Ola) a market vil nearly contiguous to Nemet Facset. It contains a parish church. Pop. 1190

FACTORY ISLAND one of the Isles de Los, W coast, Africa lat. 9° 25' N. lon. 13° 45' W. There is a small factory on the island, which keeps up a communication with the main, the natives thus procuring English goods for rice, wax, hides, a little ivory, bullocks, goats, fowls, and various kinds of vegetable products. Factory Island is well cleared of its woods like all the others of the group, it is of volcanic origin, being formed chiefly of hard blue and iron-coloured lava, with occasional masses of porphyritic hornstone, at different elevations. Of the vegetable productions the most remarkable are the palms, which furnish palm oil and wine and the silk cotton tree. The natives belong to the tribe named Basso or Baraka, who also occupy other islands along the coast.

FAED a vil Hungary Thibet Thama, and about 2 m. from Tolna, on the Danube. It contains a Protestant and a R Catholic church. Pop. 3831

FAEDIS a vil and par Austrian Italy gov Venice, prov. Friuli, 1 bank, Grivo 7 m. N E Udine. It is the seat of a court of law and several public offices contains a parish and three auxiliary churches, and has numerous mills. Pop. 3639

FAEMUND a lake, Norway prov Agderhus, ball Hedemark, a little W of the Swedish frontier. It forms a long, narrow and irregular expanse of water stretching N to S. about 42 m and not averaging above 3 m in breadth. It is fed by the outlets of a number of small lakes, and discharges itself at its S W extremity by a stream of its own name, which uniting with others, forms the Klar.

FAENZA (anc. *Faventia*) a tn. kingdom of Italy deleg. of and 19 m S W Ravenna, on the Lamone. It is well built in the form of a square, divided by four principal streets which meet in the Piazza Publica in the centre, a spacious area surrounded by arcades, and containing the townhall cathedral a lofty tower and in the centre some beautiful fountains. It is surrounded with walls, contains a number of churches and convents several of which contain valuable paintings. Among the more remarkable public buildings are some of the private palaces, the hospital and insane asylum and a Corinthian church belonging to the Dominicans. The cathedral, which is in the gothic style, is an indifferent extent, and in the vicinity of the town there is a large paper-mill. Faenza is connected with the Adriatic by the Cassell Canal which was opened in 1782. Within 4 m of the town are ferruginous and saline springs and baths, both held in high repute. In 1276 it was sacked, and 4000 of its inhabitants were put to death, by Sir John Hawkwood an Englishman in the service of Gregory XI. It is the birthplace of Torricelli, the inventor of the barometer. Pop. 19 753

FAERDER, an isl in the N of the Skager Rack, on the S E coast of Norway at the entrance of the bay of Christiansund. A lighthouse has been erected upon it.

FALA, a river England, co. Cornwall, which rises near the centre of the county and after a course, first S. and then S.W. of about 25 m. falls into the estuary which forms Falmouth harbour.

FALA and **SOUTHA**, a par Scotland, co. Edinburgh and Haddington; 6 m. by 3 1/2. Pop. 434

FALABA, a considerable *tn.* of W. Africa, about 210 m. N.E. Sierra Leone, dist. Bulamena lat. 9° 45' N. lon. 10° 25' W. at the base of the mountain Kinkobogor and on the river Falaba or Fala from which it derives its name. It stands on a gently rising eminence in the centre of a large plain is of an oblong form about 1 1/2 m. long by 1 m. in breadth and contains about 4000 circular houses or huts which, though built of clay and covered with pyramidal roofs of thatch are extremely neat and clean, and in many instances even elegant. The palaver or councilhouse stands on an open piece of ground towards the S. extremity of the town, and is a place of recreation as well as business. In the centre of the town another large space is left vacant for the purpose of exercise, of receiving strangers, and of holding great meetings. Falaba is more cleanly built than African towns generally and is surrounded by a strong thick stockade of hard wood, which is again encompassed by a ditch, 20 ft. deep by as much broad—(Loring's Travels in W. Africa.)

FALAISE (uno. Falera) a *tn.* France, dep. Calvados on an elevated but broken flat, bordering on a rocky precipice or *falaise*, whence its name 23 m. S.E. Caen. It consists of three distinct parts—the town proper almost completely surrounded by old walls, the suburbs of St. Laurent and Val d'Ance, extending into the narrow ravine below the

THE CASTLE OF FALAJE, from the Heights.—From Captain's Description of Norway

precipice on which the town stands and the suburbs of Gubny sometimes called the high town; and situated on a height about 1 m. S. The situation is very picturesque, but the streets are irregular the houses generally indifferent, and

the appearance of the town as a whole dull and lifeless. The churches of St. Laurent, St. Gertrude, and St. Gubray the townhouse, general hospital, Hotel Dies and public library are deserving of notice, but the great object of attraction is the castle the ancient seat of the Dukes of Normandy and the birthplace of William the Conqueror. It occupies a commanding position on a promontory connected with the plateau on which the town is built on only one side and isolated on the others by steep ravines, and before the invention of gun powder was a place of great strength. It is now only a grand and picturesque ruin. It covers nearly 4 ac., and is surrounded by ramparts, varying in height according to the nature of the ground, from 16 ft. to 50 ft. Immediately within the court and somewhat inconspicuously the communal college has been erected beyond, a grassy terrace along the ramparts leads to the donjon-keep, a large rectangular tower rising abruptly from the surrounding precipices, and propped by high and mossy buttresses. A small stone chamber within this tower is pointed out as William's birthplace. Beside this tower is another of loftier elevation and more architectural merit. It is round and smooth, and terminates with a machicolated rim. It bears the name of Talbot's Tower and is said to have been built by the English after the capture of Falaise, by Henry V. A colossal bronze equestrian statue of the Conqueror by Louis Roquet, was inaugurated here, October 20, 1881. The manufactures of the town consist of cotton heavy lace, woven goods, leather and paper and there are numerous cotton-mills, dyeworks, and bleachfields. The trade consists of the above articles of manufacture, and of wool, combs, and cattle, and is chiefly carried on at the fairs, which are six in number. One of them called the fair of Gubray from being held within that suburb, lasts 15 days, was at one time celebrated throughout Europe, and though greatly fallen off, still does business to the extent of about 2000 000. Falaise is the seat of a court of first resort and commerce. According to the *brochure Chronique*, it had risen to be a place of importance at the commencement of the 11th century. Pop. 6021.

FALASHAS a people of Abyssinia, who adhered to the Jewish religion when the rest of the kingdom embraced Christianity. They are found in all parts of Abyssinia, but chiefly on the banks of the Bahir el Jebel. The Falashas do not permit any one to enter their houses or to touch them or their clothes. In case of the former law being infringed, they desert the house and in the case of the latter they wash their whole persons and clothes in running water on which account their residences are always in the vicinity of some stream. They are mostly weavers, a few are smiths, and the women potters.

FALCES, a tn. in Spain, prov Navarra, 25 m. S. by W Pampeluna, near r. bank. Arga, crossed here by a stone bridge. It is situated on a declivity crowned by an ancient castle, is tolerably well built, and comprises a parish church, chapel, townhouse, prison, school hospital, and storehouse. Oil is manufactured here in large quantities. Trade—in grain, flax, hemp, cattle, and furs. Pop. 2500.

FALCUN a cape, forming the S. point of the island of Iviza one of the Balearic Islands. It projects far into the sea, and is lofty but lowers gradually towards its extremity. Off it are three small rocky islets. Cape Falcon on the W., and Fort Point on the E. enclose the deep bay of Cueva Larga, within which there is a wharf and some caissons of good water.

FALCONARA, a tn. Naples, prov Calabria Citra, 6 m. N.E. Paola, near the sea. Pop. 1600.

FALDINGWORTH par Eng. Lincoln; 1820 ac. P. 887.

FALMEER or **FALCER**, a river W. Africa, Senegal, the principal tributary of the Senegal into which it falls, 10 m. above Bakel; lat. 14° 48' N. lon. 12° 8' W. after a devious course of about 560 m. It has many tributaries, the chief of which is the Fannon-kotes, which reaches it on the right bank. Much of its lower course is navigable for vessels of small draught and it is 400 ft. broad at its mouth. The banks are very irregular; sometimes rocky and steeped up others so low as to be periodically submerged, the waters forming a kind of natural canal called *marigots*, usually abounding in fish. Gold is found in the sands of the Faldmer; the richest spots being between Tombourou, 18 m. below Faldmer, and 17° 44' N., and Lahandy about 40 m. higher

than the latter place. M. Raffinelli strongly advocates the navigation of this river for trading purposes, by means of flat-bottomed steamers and gives the following as the lowest depths of water taken from his own experience—From the mouth to Senou Debou, June 15 till October 20, 5 ft. at other times, 10 to 12 ft. At any time, never less than 4 ft. for 100 m. above the mouth. Between Senou Debou and Debou (about 200 m.) there is, indeed, a bar, but it is easily surmounted. 131½ of the river course has hitherto been explored.—(*Voyage dans l'Afrique Occidentale*, in 1843-4, par A. Raffinelli.)

FALKENAU a tn. Bohemia, circle, Elbogen; r. bank Eger 80 m. W. Prague. It contains a parish, and several other churches a Capuchin monastery hospital and a large castle, surrounded by a deep moat, entered by three bridges, and with a fine park and garden and has almshouses. Hops are extensively grown and seed is worked in the neighbourhood. Pop. 1800.

FALKENBERG—1 A tn. Prussia, gov. of and 16 m. W. Oppeln, cap. circle, of same name, l. bank Rhine, in the midst of marshes. It is surrounded with walls, is the seat of a law court, and several public offices, contains a parish church, two chapels, townhouse, courthouses, two hospices, a castle, once the residence of princes of that name and has glass-works, two distilleries and a weekly market. Pop. 1559.—2 The curia, area, 177 sq. m., is flat, well watered, well wooded and tolerably fertile. It has 25,000.—3 A resort in Sweden 12½ m. S. of 20 m. N. W. Halmstad; r. bank, Älva, at its mouth in the Kattegat. It is an old and unimportant place, and has a small harbour almost silted up, at which a little trade is carried on. The salmon fishing however is considerable. In the neighbourhood are the ruins of an old castle, supposed to have been destroyed in the 14th century. Pop. 619.

FALKENBURG a tn. Prussia, gov. of and 46 m. S.W. Kottbus on a gentle height above l. bank, Drage. It is an extensive flat with diluvial walls with three fens, and defended by a fort, contains a church, castle and hospital, and has manufactures of woollen and linen cloth a brewery and a distillery a trade in horses and cattle, and six annual fairs. Pop. 2560.

FALKENHAIN (Vreden, Mittern, and Ossen) a vil. Prussia gov. of and 18 m. S.W. Lutzna, It contains a castle, a Protestant, and a Catholic church and has two mills. Pop. 1431.

FALKENHAM par Eng. Suffolk; 1938 ac. Pop. 271. **FALKENSTEIN**—1 A tn. Saxony circle, Zwickau, 10 m. S. of and 10 m. E. E. E. Plauen, on a height near the White Goldsch. It contains a large old church with a tower and has manufactures of cotton, embroidery and sounding boards, a trade in cattle, and three annual fairs. A great deal of iron and the used to be smelted here, but the mines are almost abandoned. Pop. 3372.—2 A market in Lower Austria, in a beautiful valley at the foot of the Schlossberg 88 m. N. N. E. Vienna. It is irregularly built, contains an old gothic church with a crypt, an old castle, on a height above the church, and an hospital. It is surrounded by vineyards, in which the celebrated Falkenberg wine is produced. Pop. 641.

FALKINGHAM par Eng. Lincoln. 1861 ac. Pop. 268.

FALKIRK a market tn. parl. bor., and par Scotland co. Stirling. The town, 21½ m. W. by N. Edinburgh, is situated on a gentle eminence in a beautiful and fertile country and is a station on the Edinburgh and Glasgow railway. It consists of one long and somewhat irregular street, about ½ m. in length lying E. and W., with a number of narrow streets and lanes branching off to the N. and S. Many of the houses, though having little outward pretension, are good substantial buildings and large and well-stocked shops are numerous. It is lighted with gas, and supplied with water. The only public edifice of note are the parish church, the office of the Commercial Bank, and a handsome spire, 140 ft. in height. It has a Free, and three U. P. Presbyterian churches, and several other dissenting chapels a number of well-conducted, and well-attended schools; several public libraries, and religious and benevolent societies; with an agricultural and horticultural association. A school of arts was established in 1827 in which twenty lectures are delivered during the winter season and there are two public reading-rooms. The only manufactures of the town are leather shoes, brushes,

and coope-work. There are also a brewery and the usual amusements of a country town. In the vicinity are quarries, collieries, brick and tile-works; a saw-mill, corn-mills, and two pyrogonous acid works. There is, likewise, a large foundry called the town, and about 2 m. N. are the celebrated Carron Iron Works. The towns of Falkirk are the greatest cattle fairs in Scotland. They are held on a dry sandy level moor or heath, in the adjoining parish of Larbert, about 2 or 2½ m. N. from Falkirk, on the 24 Tuesday of August, September and October. At the first tryt there are generally about 4000 head of black cattle present, and about 400 horses and ponies; at each of the second and third tryts there are present about 17,000 black cattle, 20,000 sheep, and 700 horses and ponies. The larger portion of these cattle are bought up for the English market. The government of the burgh is vested in a provost, three bailies, a treasurer, and seven councillors. Falkirk is of great antiquity, and is associated with many interesting and remarkable historical events. Being near the boundary that separated the Romans and Caledonians it was the scene of many sanguinary conflicts between them. In one of these, fought in 415 a commander of the latter Robert Graham was slain from which event, it is supposed, the wall of Antonine, which passed near the town, obtained the name of Graham's Dyke, which it still bears. In July 1593 a battle was fought a little N. of the town, on the spot where the village of Grahamstown now stands, between the forces of Edward I., and those of Sir William Wallace in which the latter was defeated. In this battle Sir John Graham and Sir John Stewart, commanders in the Scottish army and noted warriors of the day were slain, and both interred in the churchyard, where their grave-stones are still to be seen. About 1 m. S.W. from the town a battle was fought on January 17 1746, between the Highlanders under Prince Charles, and the royal forces under General Hawley in which the former were victorious.

Falkirk unites with the burghs of Leithgow, Lanark, Hamilton, and Airdrie, in returning a member to the House of Commons. The Union Canal and the Clyde and Forth Canal, pass within ½ m. of the town. Pop. (1841) 8209 (1851) 8702. Area of par. 9 m. by 5 m. Pop. (1851) 18 488. **FALKLAND** an anc. bor. of regality and par. Scotland co. Fife. The town, 2½ m. N. Edinburgh, lies at the foot of the P. Leonard Hill, which rises so abruptly over it as to exclude the rays of the sun for many weeks together during winter. The town consists principally of a single street, many of the houses thatched, and of an ambiguous appearance. It has an Established a Free, and an Independent church. Falkland was long a favorite residence of the Scottish kings; and has, in consequence, obtained a prominent place in Scottish history. The only object of interest, however which it now possesses is its ancient palace, begun it has been supposed, by James II and completed by James V who died here in 1542. Falkland ceased to be a royal residence on the accession of James VI to the English throne but was visited subsequently by both Charles I and II. There was formerly an ancient castle here also, in which David Duke of Roxburgh eldest son of Robert III. was imprisoned, and starved to death, by order of his uncle, the Duke of Albany, but no trace of it now remains. Hand-loom weaving is carried on principally for the manufacturers in the neighbouring towns of Newburgh, Kettle, and Kirkcaldy. Seren markets, for horses and cattle, annually Falkland was created into a royal burgh by James II., in 1458. It gives the title of Viscount to the English family of Carey. Pop.

of burgh (1841) 1813. Area of par. 6 m. by 4 m. Pop. (1851) 8102.

FALKLAND ISLANDS (French, *Malouines*; Spanish, *Malenas*) an island group, S. Atlantic Ocean, belonging to Great Britain, consisting altogether of about 200 islands, large and small, 250 m. N. E. Tierra del Fuago, between lat. 51 and 58° S., and lon. 57 and 69° W. Only two of these islands are of any considerable size these are called respectively East and West Falkland, separated from each other by a sound (see FALKLAND SOUND) varying in breadth from 2½ to 18 m. East Falkland is about 85 m. in length, and about 53 in breadth, area, 8000 sq. m. West Falkland, 60 m. long by about 40 broad; area 2000 sq. m. The other islands vary from 18 m. in length by 8 broad, to mere islets of half a mile diameter. The whole group is indented in a remarkable manner by bays, harbours, and sounds two of the latter Cholesal and Grantham, penetrating so deeply into either side

of East Falkland as nearly to divide that island into two parts the intervening isthmus being little more than 2 m. broad. On the W coast of West Falkland the indentations are at once so spacious and numerous as to reduce the intervening land to a series of narrow peninsulas. These arms of the sea form excellent harbours, and, together with the varied outline of the mountains, constitute the principal relief to the general aspect of the scenery.

The general appearance of the islands is by no means attractive. Ridges of rocky hills, about 1000 ft. in height, are seen traversing extensive tracts of sombre-looking moorland, unsheltered by a tree, and limited seaward by a low rocky coast, on which the surf beats with great violence. On the N part of East Falkland the hills attain a considerable elevation, but the whole of the S. portion is so low that it cannot be seen from the deck of a vessel 5 m. distant. The principal range of hills are the Wickham Heights, stretching E to W and rising to a height of from 1400 to 2300 ft. The average height of the western island is greater than that of the eastern although the highest hills are in the latter. The more elevated parts of East Falkland are quartz rock; clay-slate prevails in the intermediate districts. Sandstone, on which are beautifully perfect impressions of shells, occurs in beds, within the slate formation, and upon the slate is a stratum of clay fit for making bricks. A peculiar feature in the geology of these islands is presented in streams of stones, which appear to flow down the sides of the hills. These streams are 20 or 30 ft. wide, spreading out in some places to even a quarter of a mile in width. The stones are of various sizes, from 1 to 4 or five ft. cube. Scarcely any view can be more dismal than that from the heights; moorland and black bog extend as far as eye can discern, intersected by innumerable streams, and pools of yellowish brown water. The soil of the islands, so

far as has been explored, is generally peat, although much of what seems to be a barren moor is solid sandy clay covered by a thin layer of vegetable mould on which grow shrubby bushes, and a coarse grass, affording ample nourishment to cattle. There are few rivers in the Falklands, so far as yet known. The largest is the San Carlos in East Falkland, W side, about 80 m long and suitable for boats for about 8 m. The only other stream of any note in this island is the Arroyo Malo or Matos which flows parallel to the Wishman Heights, and falls into Port San Salvador on the N.E. coast.

The climate is equable, and remarkably mild, there being no extremes of either heat or cold. The ordinary range of the thermometer is between 30° and 50° in winter and from 40° to 65° in summer. Rain and high winds are frequent, but lightning and thunder are rare.

A peculiar feature of the Falklands is the entire destitution of trees, but there are a great variety of erect-stemmed flowers, which, in November and December, nearly cover the ground. The tussock grass is the most useful and singular plant in the flora of these islands. It covers all the small islands of the group like a forest of miniature palms, and thrives best on the shores exposed to the spray of the sea. Each tussock is an isolated plant, occupying about 2 square yards of ground. Peculiar species of European genera are found here. Ferns and mosses are few but lichens are in great variety and abundance, among which are many identical with those in Britain. So far as yet tried, all the useful kinds of vegetables and green crops generally here thrive, but fruit has not been found to succeed, and it is doubtful whether corn would ripen.

The rearing of cattle and the cultivation of vegetables appear to form the natural resources of this country. In proof of the adaptation of the islands for cattle grazing it is stated that of the very few animals landed or grazed by the Buenos Ayreans, and others have gone on increasing in numbers, until in a state of nature, and still there are not according to various estimates reckoned at from 85,000 to 100,000 or more. They grow to a great size and are extremely fat. The wild horses of the islands of which there are several thousands are also highly thought of and although many of the districts are too moist and swampy for sheep still there is a sufficient quantity of land on which they could be kept advantageously. Hens and rabbits are also plentiful. The numerous creeks abound at particular seasons with a description of fish resembling a gray mullet, we bring up to 15 lbs, and which are caught in large quantities by the simplest means. Sea elephants and seal frequent the shores, and whales resort to the surrounding waters, though now in diminished numbers.

There are no reptiles of any kind in the Falkland Islands, and of the quadrupeds a peccary species of fox is the only animal indigenous to them. These animals are large, and remarkable for their ferocity and disregard of man. Of the feathered tribe there are numbers, but no great variety. The principal are geese, snipes, ducks, hawks, vultures, albatrosses, gulls, petrels, penguins, &c. and a very few land birds.

A British settlement has been recently founded in East Falkland, called Stanley situated at the head of Port William, on a point on the N.E. coast lat 51° 40' S. lon. 57° 49' W. It is a free port, and is said to possess peculiar advantages, being easily entered, well protected, and affording safe anchorage. Ships may here obtain fresh beef, vegetables, and water in abundance, and at very moderate charges.

The Falkland Islands were discovered by Davis, on the 14th August, 1692. They were afterwards visited (1690) by Strong, who gave them the name which they now bear. In 1710, a French vessel from St. Malo touched at them, and named them *Isles Malouines*. Settlements were afterwards formed on them by the French, Spaniards, and English alternately, but the latter have ultimately retained possession of them. The Falkland Islands were the subject of a controversy between Dr Johnson and James the former deprecating as much as the latter overrated them. The geographical position of these islands, together with the advantages they present for colonization render them of great importance, forming, as they do, a key to the Pacific and a convenient place of resort for the southern whalers. (Ross's *Antarctic Expedition Voyages of Adventure and Discovery*, 1831.)

FALKLAND SOUND a narrow strait, separating E. and W. Falkland Islands from each other. It extends 45 m.

in a N and S. direction, varying in breadth from 18 m. to 2½ m. In the S. end there are many flat islands, enclosed with tussock, and some shoals. The E. side of the Sound is low with gently undulating hills, seldom exceeding 150 ft. in height. The shore is indented with excellent harbours and creeks, affording good shelter to all western and southerly gale winds. The W. side again, is high and bold, forming a singular ridge varying from 800 ft. to 500 ft. in height. The tides, at both extremities, are strong, and between the islands but in the main stream they are moderate.

FALKONER, a small Isl. Grecian Archipelago, 45 m from the S.E. coast of the Moros, and 28 m N.W. Mile lat 36° 50' 54" N. lon. 23° 55' 45" E. (p.)

FALKÖPING a in Sweden, (on Ekensberg, in a fertile plain between the Mossberg and the Alleberg about 80 m. E. of Lake Wener. It is an old and insignificant place, contains a parish church, and has several annual fairs. In 1818, Margrete, Queen of Denmark and Norway announced the Seminars of the North here defeated Albrecht, King of Sweden and made both him and his son prisoners. P. 532

FALL, a river N. America, Oregon which rises about lat 43° S. flows N. and after a course of about 170 m. joins the Columbia, under the parallel of 45° 40' N. It receives numerous tributaries and, near its junction with the Columbia, falls occur from which it derives its name.

FALL RIVER a port, and large manufacturing vil., U States Massachusetts, on the river Taunton 49 m S. Boston. It contains several churches, an academy and various other schools 10 cotton-mills, a woolen-mill and two print-works. It has, besides, manufactures of leather boots, shoes, hats, nails machinery brass, tin and copper-ware &c. Several ships from this port are engaged in the whale fishery. Pop. 18,000 13,909.

FALLERLEBEN a in Hanover principally 1 fineburg, cap. hall of same name, 9 m S.E. Gifhorn. It is the seat of several public offices contains a church and town house, and has cloth-works and a mill. The post Hoffman was born here. Pop. 1414.

FALMER par Eng Sussex 4359 ac Pop. 637

FALMOUTH a small maritime in W India, S coast, Antigua 10 m S.E. St. John's. It is defended by two ports.

FALMOUTH a par bar and seaport to England, Cornwall, S. coast 45 m S.W. Plymouth, and 26 m N.F. the Land's End lat 50° 48' N. lon. 5° 2' 42" W. It stands on the N.W. side of the harbour on a steep acclivity and extends down to the water's edge. It consists of one principal street, nearly a mile in length from which several smaller streets at different points. The streets are generally very narrow but are straight and well kept. The houses are mostly modern, of stone, and well built. There are also some fine terraces at the N. and S. parts of the town. The latter is lighted with gas, and is well supplied with water. It has a parish church and chapel for Independents, Wesleyan and Primitive Methodists, Bible Christian, Baptists, Brynians, R. Catholics, Jews, and Unitarians and a Friends meeting-house. The means of education are sufficiently ample, there being, besides several good boarding and other private academies, five schools more or less of a public nature, the Falmouth classical school national British, and national infirm schools. There are several charitable institutions in the town including an almshouse an hospital for the relief and support of disabled seamen &c. a dispensary a benevolent society a lying-in hospital a humane society and other minor charities. There are also some literary and scientific institutions, both public and private a custom-house for the Cornish towns bonded warehouses, a jail townhall, and market-house. The harbour of Falmouth is one of the best in England and, since the lighthouse was erected on St. Anthony's Head, may be entered at any time. The light, which is 65 ft. above sea-level at high water, consists of a rapid succession of bright flashes appearing every 30 seconds, and which are visible from a distance of 4 leagues. The harbour is defended by Pendennis castle on the W. and the castle of St. Mawes on the E., both strongly fortified. The entrance is about 1 m. in width, the stretch of the bay between 6 and 7 m. It has always been a favourite resort of our fleets in time of war, and was a principal packet station for more than a century. The Spanish, Portuguese, West Indian and American mails having been despatched from it but steamers being

new employed for this purpose. It has no longer an exclusive enjoyment of that advantage, to the great loss of the port, which carried on, at the same time, an extensive trade with the places above-named. Its principal exports are the fish (salmon) and copper. Imports—timber, hemp, tallow, fruit, wine, rum, sugar and grain. Falmouth is the only landing port for tobacco, except Plymouth in the counties of Cornwall and Devon. It has a good retail trade, also some ropewalks, breweries, and shipbuilding yards of considerable extent, but the principal trade consists in furnishing supplies to the shipping frequenting the harbour of which there are frequently from 200 to 300 sail at one time, of all nations, and from all quarters, awaiting orders. With Penryn it returns two representatives to the House of Commons. Pop. 10,463. Area of par. 989 sq. Pop. 8161.

FALMOUTH, several places, U States, including—1. A vil. Virginia, 1 bank, Rappahannock, at the foot of the falls nearly opposite Fredericksburg 64 m N Richmond. It contains a church and four mills, producing 80,000 barrels annually. Pop. 500. —2. A township Maine 46 m N Augusta. It possesses considerable shipping engaged in the coasting trade and the fisheries. Pop. 2569. —3. A township, Massachusetts, on the S.W. point of Cape Cod between Buzzard's Bay and Vineyard Sound. It has extensive shipping and manufactures. Nearly 40,000 barrels of salt are produced annually. Pop. 4071.

FALOUR or **FALOR**, a tu Pundjab 6 m N W Ludnah, r bank, Sutlej. It is defended by a fort, and has a ferry across the river connecting the line of communication between Amritsar and Lahore.

FALSE BAY a spacious bay S Africa, formed by the Cape of Good Hope on the W side, and False Cape on the E. The entrance from cape to cape is about 30 m wide; its length N into the land about the same distance. The bay is large and open and of a square form. Across the entrance the depth of water is from 40 to 50 fathoms.

FALSE CALE, various headlands, including—1. A cape NW coast, Africa, lat. 26 25' N lon 14 12' W (n.)—2. (Llora) Tierra del Fuego W Cape Horn lat. 55° 43' S lon. 68° 6' W (n.)—3. On the coast of Central America, 82 m N W Cape Gracias a Dios, lat. 15° 18' N lon 83° 22' W (n.)—4. On the W coast, Africa Sierra Leone, lat. 8° 28' N lon 13 18' W (n.)—5. On the S. coast of Hayti lat. 17° 45' N lon 71° 40' W (n.)

FALSET a tn. Spain, Catalonia, prov. of and 22 m. N W Tarragona, on a plain at the foot of Mount Morral. It is indifferently built, surrounded by the ruins of its ancient Roman walls and castle, and has two squares, crooked, steep, and ill paved streets, a handsome parish church with a lofty tower, several chapels, a townhouse, prison, two schools, a hospital, barracks, three fountains, and an ancient ducal palace of Medinaceli. Manufactures—soap, hardware, chocolate, and brandy. Trade—wine, brandy, fruits, soap, wheat, oil, iron, hemp &c. Two annual fairs. Pop. 2995.

FALSTER (Latin *Falsterus*) an isl. Denmark, having N Zealand N E Misen W Lolland or Lolland, from which it is separated by Guldborg Sound and washed S W and E. by the Baltic. Its shape it resembles a triangle, the apex of which is to the S. The base, formed by the E coast is about 80 m and the sides, formed by the E and W coasts respectively 28 m. and 83 m. The greatest length across the island, from Ourewærd, its most N. to Skæderodde, its most S. point is 37 m. Its breadth varies from 5 to 14 m. area, 181 sq. m. The coast, on the N.E. consists of flat banks, covered with large boulders to such an extent, as to make landing difficult. The sea between it and Misen nowhere exceeds from 4 to 13 fathoms in depth, and the opposite shores so much resemble each other as to counteract the belief that they were at one time united and the Grimsund (Green Sound) between them is a passage which has at some period been formed by the sea. The E coast, in its N. front, consists of steep cliffs, about 40 ft high and often covered with wood on its S. front it becomes low and sandy. On turning round the S. extremity and proceeding northwards, the coast becomes steep and rocky and attains its greatest height, 70 ft. The N. coast is mostly low and has a great number of small bays, almost filled up with sand. The interior of the island is an extensive flat, the highest point of which does not exceed 100 ft. It is watered by numerous

small streams but its most remarkable hydrographical feature is the shallow lake or lagoon of 18000 Åker which occupies the greater part of the narrow portion of the island on the E., and is only separated from the sea, on the W and E. ends, by two sandy bays. The soil consists generally of a strong rich loam, occasionally containing a considerable mixture of sand. It produces great quantities of corn. The island is well wooded, and exports timber. It is divided into 23 parishes. Pop. 22,000.

FALSTERBO a small maritime tn. Sweden, 30 of and 17 m. S.W. Malmö on the promontory in which the S.W. extremity of Sweden terminates. It is an old and insignificant place with no proper harbour and almost no trade. A dangerous reef of the same name extends nearly 3 m. into the sea. Its position is shown by a beacon-light near it. Past numbers of swans frequent this part of the coast. Pop. 213.

FALSTONE, par. England Northumberland 37 700 sq. Pop. 502.

FALTN a tn. Moldavia, esp. dist. of same name, r bank Pruth 70 m. R.R. Jassy. From the extent of the ruins in the vicinity and the remains of walls and streets, it appears once to have been a place of great extent and importance but even the name of the ancient town is unknown, and the present town is very insignificant. An annual fair is held in it. In 1711 Peter the Great was here hummed in by the Turks and obliged to concede the treaty of Futh.

FALUN or **FALUN** a tn. Sweden, esp. lkn of same name, on both sides of the stream which unites the lake of Värn on the N. with that of Rön on the S. 150 m N W Stockholm. It is regularly built, consisting chiefly of two long and tolerably spacious streets, one on each side of the stream and parallel to it, and several small squares but the houses almost entirely of wood are low and the whole place has a dull and antiquated appearance. It is the residence of a governor and the seat of a mining directory contains two churches, a townhouse, a hospital and institute in which a complete course of mining, both scientific and practical is given and has manufactures of woollen and linen cloth silk ribbons tobacco, and spirits, worsted and cotton mills a trade in copper wire, grain and malt provisions and several large annual fairs. The district, at some distance from the town is beautiful but in its immediate vicinity is bleak in the extreme, not from any want of natural fertility but the destruction of vegetation and blackening of the grass by the fumes of the copper-works which are the most extensive in the kingdom. The mines are very productive, and the workings are carried on by numerous pits the deepest of which is about 100 fathoms. They are drained by water power of which there is here an almost unlimited supply. The smelting works, and establishments connected with them situated to the W of the town, are very complete. The output of ore has been estimated at 140,000 tons but the produce of pure copper does not exceed 4000 tons. Besides copper small quantities of gold, silver and lead are obtained from the ore. Pop. 4379.

FALLV or **STORAFORFALLAN**, a lkn or co. Sweden nearly corresponding to the former prov. Dalarna or Dale carlia, bounded N. by Örebro, E. Gefleborg S.E. Westerbotten, S. Örebro S.W. Carlstad, and W. Norway area, 9446 sq. m. The surface is very mountainous. In the E. three chains, under the names of Nup Lick Ha, Fala Fjell and Toonken, form three large valleys. In the E. E. the Dransnera, first forming the boundary between this province and Gefleborg and then stretching N. W. when they meet with other mountain chains, and form a central valley much of which is occupied by the large lake, Siljan which has an area of about 50 sq. m. The mountains are generally composed of gneiss, granite, and porphyry overlain occasionally by limestones and sandstones. The higher summits have a very rugged and sterile appearance the lower heights on the contrary are generally well wooded. The elevating point does not exceed 4000 ft. Almost the whole province belongs to the basin of the Dal which drains it directly by its two arms of the E. and W. Dal and also by numerous tributary streams. Drainage is confined to the valleys, which, however, from their rocky nature, and the number of stones which cover them are better adapted for pasture than for the plough. The soil is sometimes of a sandy texture, but more frequently consists of a good loam. In the S.E. is

particular much rye, barley and oats are grown. Potatoes grow well and are extensively cultivated. The rearing of cattle is much attended to, and considerable quantities of butter and cheese are made. But the chief riches of the province are in its wood, which furnishes excellent timber, fuel, both for domestic use and the blast furnace, potash and resin and in its minerals, which include valuable mines particularly of copper and iron, and quarries of slate, grimestone, granite and porphyry. The latter takes a fine polish and is made into numerous articles of great beauty. Both the lakes and rivers are well supplied with fish, and these add greatly to the means of subsistence. The principal manufacture is iron. Other branches of industry have made little progress. For administrative purposes, Falun is divided into seven fiefdoms. Pop. about 130,000.

FAMAGOSTA or **FAMAGOSTA** [Latin *Fama Augusta* French *Famagoste*] a seaport in E. Asia of Isl. Cyprus, lat. 35° 45' N. lon. 33° 57' 18" E. 10 m. N Cape Pella. It stands upon a rock, and is nearly two miles in circumference. It was at one time strongly fortified but both the works and the town itself are now in a state of decay the ancient streets of the latter being choked up, and its churches and public buildings in ruins. The harbour is narrow but in the middle beyond the town there is safe anchorage, in ten fms. and eight fathoms water. About 5 m. N E are the ruins of Constantia, a celebrated city under the reign of the Lusignan princes occupying the site of the ancient Salamis, once the chief city of the island but of which no trace now remains having been swept away by an inundation of the sea. The ruin of Famagosta, & that of the whole island in rapid progress through Turkish depredation and misgovernment was completed by an earthquake which occurred in 1735. The view is bleak and barren.

FAMBRIDGE, two par. England Essex—1 (North) 1 48 ac 1 p. 150.—2 (South), 1234 ac 1 p. 96.

FAMENNE, a small dist. Belgium prov. Luxembourg named from its inhabitants called by Comte Famenin or Famenin. Marche has always been esteemed its capital.

FAMINT (1000) Strait of Magalhães, E. coast, Brunswick Peninsula lat. 53° 59' S. lon. 10° 58' 15' W. Land may be almost always effected except in E gales on our side or the other. There is firewood in abundance on the beach, and wells containing excellent fresh water may be found in various places in the vicinity. Fish are plentiful particularly mullet and snail, which may be taken with the same great quantities. (See wild ducks, teal, and snipe, are to be found at a short distance inland now and then, woodcock. This port was formerly called San Felipe, having been settled by some Spanish colonists in 1582-83 all of whom excepting one man perished of hunger and attended disease. Hence its name port Famint.

FAMMAGH par. Ireld Kilbenny 322 ac 1 p. 82.

FAMMATZ, a tn. Japan, id. Nippon 136 m. W. S. W. Yedo, defended by a fort. The principal street is long and straight, and on a height are several temples. Pop. about 6000.

FAMAGORIA, a small Russian vil. and fortress, gov. Cosack of the Black Sea, on the Strait of Jemalik, near Tama. It is a miserable place, and supposed to occupy the site of the ancient Phamagora.

FANATE, a large vil. W. Africa, near 1 bank Senegal lat. 10° 24' N. lon. 15° 5' W. Its people are indolent, and have a break trade in millet, fish, and nutmeg. Its ruler is a marabout of Fouta.

FANCEKA, or **FANCOROVA** a vil. Hungary co. Ugocsa, in a large and beautiful plain on a small arm of the Theiss, 3 m. from Nagy-Szeben. It contains a Protestant and a Catholic church, and stands in a fertile and well-wooded district. Pop. 861.

FANE, a river Ireld 4, co. Armagh Monaghan, and Lough, rising in a number of lakes and falling into Dundalk Bay after a S. E. course of about 20 m.

FANGFORS par. Eng. York (E. Riding) 1854 ac. P. 188.

FANLOBBUS par. Ireld Cork 35 606 ac. Pop. 8754.

FANNICHER Loch, a lake Scotland, co. Ross, par. Contin 12 m. long, by 1 broad.

FANO —1 (see *Fano*, *Fano*, *Fano*) a seaport in kingdom of Italy dist. 1 rano, on the Adriatic 29 m. N. W. Ancona lat. 43° 50' N. lon. 13 E. It is situated in a rich and fertile

plain, is well built, and handsome, and is one of the most agreeable and interesting towns in Italy. The town walls were erected by Augustus, one of the gates is a triumphal arch of white marble, erected in honour of that emperor. The churches are numerous and handsome, and contain some valuable paintings and there is a fine old theatre. There are several convents, a college of Jesuits, a public school, and public library. Fano has manufactures of silk stuffs and twist, and some trade in corn, oil, &c. The port was once a well-known resort of the traders of the Adriatic but its commerce has declined, and the harbour is now choked up with sand. The first printing press known in Europe, with Arabic types, was established here by Pope Julius II. in 1514. The scenery of the neighbourhood is very beautiful, and numerous excellent roads communicate with all the great towns. Pop. 6860.—2 One of the smaller Ionian islands, 14 m. N. W. Corfu lat. (S. W. summit) 38° 50' 12" N. lon. 19° 20' E. (S. E.) Pop. 600.

FANØE, an Isl. Denmark, bell. Ribe, 1½ m. from W. coast, N. Jutland lat. (S. point) 55° 21' N. lon. 8° 50' E. It is about 10 m. long, by 2 to 3 broad and two-thirds of it are covered with sand and heath only one-third and that wholly on the E. being cultivated. There are two villages on it, North and Søndersø, and the inhabitants subsist by fishing and seafaring. Pop. 2800.

FANTEE, or **FANTI** a maritime dist. or country W. Africa in the Ashantee territories, about lat. 5° 30' N. lon. 1° W. having the state Agona on the E., Wassaw on the W., Amlin and Dablin on the N. and the ocean on the S. The soil is represented as fertile, the country populous and prosperous, owing to the protection afforded by Cape Coast Castle. The Fanties were formerly a powerful race, and their influence extended over a great extent of country but both have been greatly reduced, & not altogether annihilated by the Ashantes. The dress of both sexes consists of a piece of cloth wrapped loosely about the body. Both are particularly cleanly in their habits and persons. A Fantee is known from other Africans by small scarification on the upper part of the cheek bones, and on the back of the neck. Those on the sea-coast have large and bony joints head round rather than oval and rising to a great height. The face long and the chin protruding forward to an unusual extent nose flat lips thick and ears large. The skin brownish black, in many of them dry and inclined to be harsh, with little gloss. The females, though not much better featured, have generally a better appearance than the other sex. The Fanties are under the nominal dominion of chiefs or caboceers, and each of the different towns or towns has a pyramid or chief magistrate.

FAOUET a tn. France dep. Morbihan, 44 m. N. W. Vannes, on the EMG. It has manufactures of paper Prunian blue, and potato flour with a trade in cattle, tallow butter, wax honey and wax. Pop. 1474.

FABA a vil. and com. kingdom of Italy Piedmont, prov. of 11 m. N. W. Novara, beautifully situated on a hill crowned by a castle and studded over with fine villas. It contains a parish church, elegant chapel with good paintings and a superior oil mill and has a weekly market. Pop. 3000.

FABA IN GERA a villa and par. kingdom of Italy prov. Bergamo, 3 m. W. Treviglio, near L. bank Adde, in the road from Bergamo to Milan. It was once surrounded with walls and defended by a castle, of which, however, only some traces now remain, and its environs are laid out in orchards and gardens. It contains a parish church and four chapels, and luncheon and the works. Pop. 1841.

FABA SAN MARTINO, a vil. and com. Naples, prov. Abruzzo Ultra, 12 m. S. W. Lardano, r. bank, Arno. It contains several churches and has manufactures of fine cloth and other woollen stuffs. Pop. 2515.

FABADEERE, a tn. Tunis N. Africa near the sea coast, 30 m. S. Tunis. In the 16th century its inhabitants were the greatest pirates and the most skilled mariners in the country.

FABARHAD a tn. Persia, prov. Masanderan S. coast Caspian Sea, 75 m. N. Astrabad, lat. 36° 45' N. lon. 55° 5' E. at the mouth of the Tjrin. It carries on some trade in rice, salt, fish, and pottery. Sugar cotton, and silk are produced in the vicinity.

FABAHY, par. Ireld. Cork 5494 ac. Pop. 11564.

FARAJGHAN a vil. Kadrizian, on the S. slope of the Hindu Kohs near the source of the Tigris; lat. 35° 43' N lon. 70° 27' E, where the Aghs and the inhabitants of Kadrizian strive to better goods and in time of war hold a central ground.

FARALLONES, two groups of islets and rocks, N. Pacific, off the coast of New California, extending S.E. to N.W. and about 12 m. distant from one another lat. (S.E. group) 37° 42' N; lon. 122° 58' W. (N.) Several of these islets scarcely appear above water. The largest, which rises from 150 to 300 ft. belongs to the S.E. group. It is 25 m. distant from the S.E. at the entrance of the harbour of San Francisco near its N.W. part there is anchorage in 11 fathoms water with a rocky bottom.

FARAY an islet Scotland, co. Orkney E. of the Island of Hoy. Pop. 65

FAREHAM a market tn. and par. England, Hampshire on slightly elevated ground at the head of a short arm of the sea, off Portsmouth harbour 4½ m. N.W. Portsmouth. It has a rather handsome parish church, place of worship for Independents and Wesleyan Methodists, a free school, and a school for the children of the poor upon the national system and a hall for the philosophical institution recently erected Shipbuilding is carried on here to a considerable extent vessels of 200 tons being built and ships of 500 tons repaired in its floating dock. Earthenware and bricks are manufactured in large quantities great part of the latter are exported. The trade in corn, coal and timber is also considerable. The government is vested in a bailiff two justices and two aldermen. Market every alternate Monday a fair on June 29 Area of par. 6705 ac. Pop. 5842

FARESCOUR, or **FARSKER** a in Lower Egypt, prov. of and 8 m. W. Damietta, a bank Nile. Near this place Louis IX. of France was made prisoner, with all his army.

FARFELL, or **FARFELL** a par. Eng. Bedford 1049 ac. Pop. 189 **FARFELL** (Cape), lat. 5° 51' S lon. 14° 10' W. an island directly off the remote point of land in which Greenland terminates S. and which forms the E. side of the entrance to Davis Strait lat. 59° 49' N lon. 48° 54' W (N.) A strong current sets round this cape and continues N. along the E. coast of the strait as far as lat. 67° N.—2° New Zealand, Tava Pomanuau or Middle Island N.W. extremity lat. 40° 31' S. lon. 172° 42' E. A little N. from this cape are some rocks known by the name Farfwell Rocks.

FARFORTH a par. Eng. Lincoln 1940 ac. Pop. 105

FAROEAN (Fr.) a in France, dep. Yonne 26 m. S.E. Auxerre, agreeably situated on the Loing down which is situated the timber cut for the Paris market in the adjoining forests. Here are a fine old fortified castle, and spacious park, once the residence of Malesherbes Montpensier cousin of Louis XIV., built in the 14th century but now only partly habitable, having been much damaged by fire in 1763 Manufactures—leather. In the environs are iron forges, glass works, and potteries. Trade in firewood supplied to Paris. Pop. 1858

FARIGLIANO (Lat. Faralones) a vil. and com. kingdom of Italy Piedmont prov. Mondovì div. of 21 m. S.E. com. at the foot of a gentle slope, a bank, Tanaro, which here often commences great ravages by its inundations. It contains a very ancient parish church supposed to have been erected on the site of the temple of Diana, and a monastery and has a large silk mill, a trade in agricultural produce, and three annual fairs. Pop. 3069

FARINDOLA a vil. and com. Naples prov. Abruzzo Ultra I dist. of, and 6 m. W.S.W. Civita-di-Pezzo, L. bank, Saline. It has an important annual fair. Pop. 2660

FARINGDON par. Eng. Devon 2015 ac. Pop. 580

FARINGTON a vil. England, co. Lancaster 3 m. S. Preston consisting of four small straight and clean streets, the houses, chiefly cottages for labourers, all well built of brick. It has a handsome romanesque church, and two schools for boys and two for girls. Cotton spinning and weaving are carried on extensively, and a number of the inhabitants are employed in agricultural labour. There are several chalybeate springs in the neighbourhood. Pop. 1282

FARKAS a market tn. Hungary Huber Danube, co. of and 19 m. S.W. Neutra, t. bank, Wang. It contains a Protestant and a R. Catholic church. Pop. 8880

FARNE FRANK, or **FARNE ISLAND**, several small isls. Gorman Ocean N.E. coast, England, off N. part of co. Northumberland 2 m. E. by S. Darnborough Castle lat. 55° 07' N lon. 1° 39' 10' W (N.) separated from the mainland by a channel about 1½ m. broad called the Inner Furrow and from the group, named Staple Islands, on the N.E. by Staple Head, about ½ m. wide. The largest Farne Island is a rocky islet, about 100 paces over having two light-houses upon it. It is steep and lofty to the S.W., but sloping downwards to the N.E. The high light once is situated about 80 ft. from the S.W. cliff, the low light near the N.W. part of the island and can be seen only in a N. direction. At the N.E. part is a remarkable old square building, called St. Culbert's Tower whereon a light was formerly exhibited and at the N. end of the isle is a deep chasm, through which, in stormy weather, the sea forces its way with such violence as to form a jet of sea 60 ft. high called the Churn. On the 5th September 1838, the Portland steamer from Hull to Dundee, with 55 persons on board, was wrecked on the Farne Islands, when 36 people perished and 8 were saved by the heroic exertions of the Outer Farne light-keeper J. Darling, and his noble daughter Grace the small remainder swept by other means. A similar catastrophe occurred here July 20 1845, when the Pegasus steamer from Leith to Hull struck on the Inner Farne island, and went down, and upwards of 60 individuals perished.

FARNELL, par. Scot. Forfar 6 sq. m. Pop. 650

FARNHAM a market tn. and par. England, co. Surrey

The town 8½ m. S.W. London, on the Wye, consists of four principal streets, diverging nearly at right-angles from a central market-place, and of several subordinate streets, in differently paved; lighted with gas water abundant. The houses are in general well built and the town has a thriving and prepossessing appearance. It has a spacious and handsome public hall an independent chapel and a congregation of Bible Christians a free grammar-school, national and British schools, and almshouses for eight aged persons. The cloth manufacture, formerly extensive, is now extinct but making all-cloth, painted canvas, and floor-cloth are still made to a considerable extent, and also a kind of carpeting of Indian hemp but the staple article of the trade of Farnham is hops, for which it has been long celebrated. North of the town on a commanding ascent is a residence the Bishop of Winchester a fine structure, originally built by Henry de Blois, Bishop of Winchester and brother to King Stephen. It contains an extensive library and some good paintings. About 2 m. S. of the town stood the abbey of Waverley founded in 1128, by Gifford, Bishop of Winchester for monks of the Cistercian order. The remains of this noble structure extend in detached portions over an area of 8 or 4 ac. Market day, Thursday, several fairs annually in

1763, William Cobbett, the well-known political writer was born at Farnham, and he died in the vicinity in 1835. Area of par 9766 ac. Pop 7734.

It contains a chapel in connection with the Established church and a place of worship for Wesleyans. Many of the inhabitants are employed in the woolen manufacture. Pop 198.

FARNFIELD par Eng Notts 3990 ac. Pop 1140. FARO—1 A seaport city Portugal, 3 coast prov Algarve, on a fertile plain at the mouth of the Val de Farn, 65 m. S.E. Cape St. Vincent lat. 36° 59' 24" N. lon. 7° 50' 30" W. It is surrounded with walls, said to have been constructed by the Moors.—The town is well built, and the streets spacious. It is the see of a bishop and has a cathedral, a church, a college, an academy three hospitals, a house of charity a customhouse and a large square. It is the seat of a corregidor, a military governor and of various judicial courts.—The courts, defended by a small citadel, is not very commodious but good anchorage is to be obtained in the roads, formed by three small islands at the mouth of the river. The principal exports are oranges, dried fruits, shagreen, cork, articles of asphalt and of palm leaves. It has an active coasting and fishing trade, and two annual fairs, one of which lasts three days. Pop. 687.—2 A in Brazil, prov Para, on the N. extremity of Lake Jamunda, about 30 m. above the confluence of the Janduma with the Amazon and 50 m. W. Quidim. It contains a parish church, takes a great quantity of cocoa, makes a kind of butter from the eggs of the tortoise, and exports some cotton.

FARO (anc. Falorus) a promontory forming the S.E. extremity of Sicily at the entrance to the straits of Messina. lat. (lighthouse) 38° 18' 46" N. lon. 15° 40' 15" E. (s.) It is low and sandy and has a lighthouse upon it built upon the ruins of an ancient tower and 200 years old. The point is strongly fortified, being defended by two batteries and two mureto towers, and commanded by a redoubt, situated on a hill, about 1½ m. W. The village of Faro, a small dirty place, stands about 2 m. S.W. of the lighthouse. In the vicinity the famous Falorus wine is grown, and the adjacent country is very picturesque. Between the beach and the hills two lakes, called from their shape, the Round and Long Lakes, and united by a canal contain the best eels and cockles in Sicily.

FAROE a vil Denmark, lat. 56° 40' N. lon. 10° 10' E. and near the bay of Præstø, 34 m. S.S.W. Copenhagen on a limestone hill. It contains a church, which stands near 244 ft. above sea level. A good deal of limestone is shipped, the quarries of that mineral being very extensive.

FAROE, an Isl. Sweden, in the Baltic, on the N.E. of Isl. Gotland, from which it is separated by a channel of its own name lat. 58° N. lon. 19° 35' E. (s.) It is very irregular in shape, but bears some resemblance to a crescent. Measured on a line curving from its extremities through its centre, it is about 8 m. long its breadth scarcely averages 8 m. The surface consists generally of a plateau which rises nowhere more than 200 ft. above the sea. The prevailing aspect is limestone and the soil is tolerably fertile. Its coasts are much encumbered by shifting sands.

FAROE, or FARNO (Danish Færøerne German, Färöer, French Féroé Spanish, Fero) a group of isls. N Atlantic, belonging to Denmark, about 170 m. N.W. the Shetland Isles, between lat. 61° 20' and 63° 20' N. and intersected centrally by lon. 7° W. They are 22 in number but of these 17 only are inhabited. The whole group stretches about 65 m. N to S and 44 m. E to W forming something like a triangle with the apex to the S. The largest isle is Streymoy, in the centre of the group, area 164 sq. m. the other larger isles are Godoy, Sandoy, Vagar, and Borðoy; one is Grœnø, 16 sq. m. The islands generally present steep and lofty precipices to the sea, which in running bo-

atoms, often shows flocks and fays, in which good anchorage is found. The surface rises towards the interior and terminates in peaks. Of these, the culminating point, Klattur, in the island of Oestmø, has a height of 3000 ft. The climate, being insular, is much milder than the latitude might seem to indicate. Both sheep and horses can winter in the open air. The weather, however, is very variable, and mists are extremely prevalent. The longest summer day is 20 hours the shortest winter day 4 hours but the days

and twilights and the brilliancy of the aurora borealis considerably prolong the period of light. The soil has sometimes a depth of 4 ft. but for the most part is thin and does not exceed 6 inches. It is not naturally fertile but fertility is the only cereal that comes to maturity and even it often fails. Turnips and potatoes thrive well. There is no wood but the want of it is so far compensated by abundance of excellent turf. The minerals of the island include fine opal and, it is said also coal. The fashions of wild fowl form an important article of trade but the wealth of the inhabitants is derived chiefly from fishing and the feeding of sheep. The stock of these is estimated to amount to at least 80,000. Many individuals have flocks of 300 each. The horses are small, but strong hardy scrup, and sure-footed. The cattle are not very numerous. The want of a sufficiency of winter fodder has hitherto been the great obstacle to an increase of their numbers but, from a trial made in 1843, it appears that cows thrive well on the flesh of the maling whale (Dolphina Melas) cut into slices of two or three inches long and slightly boiled, and gave a large increase of milk, in which an deterioration of quality was perceptible. Should future experiments justify the hopes entertained of this food, exhaustless supplies of it may be obtained, and the number of cows greatly increased. The islands were originally peopled by Norwegians. In the Legation of Denmark they are represented by a deputy named by the king. Their chief magistrates are an ammann, who is also commandant, and a landvogn, who is also head of police. The capital is Thorshavn, in Streymoy. Pop (1855) 1160.

FARQUHAR'S GROUP an extensive range of shoals and islets, off N.E. coast, Australia. Several of them are covered with shrubs, and the whole surrounded by a reef the sea breaking high on its edge. Lat. (westernmost) 17° 39' S. lon 151° 25' E.

FARR, a par Scotland, Shetland 40 m by 20 m. Pop. 2708.

FARHAR, isla Red Sea, 64 m. off the coast of Arabia lat. (S. and) 19° 17' N; lon. 40° 40' E. They extend N W 18 m. and are low and sandy with a few bushes. **FARRINGTON**, or **FARRINGOY** (GHEAT) a marsh to. and par England, co. Berks.—The town 15 m. S.W. Oxford on a gentle eminence, in the vale of Whitehorse, is densely hags, well paved, amply supplied with water and lighted with gas. It has a large and handsome church in the Gothic style, of various periods, the spire of which was built down by the army of Cromwell; chapels for Independents, Baptists, Wesleyan, and Primitive Methodists, and a Friends meeting-house two national schools, a seminary for young gentlemen and two for young ladies. Trade in hogs and bacon, maiting and brewing; a well-attended oren market on Tuesday excellent monthly cattle and sheep markets; several annual fairs. Area of par 5910 ac Pop 86 6.—(Local Correspondent.)

FARRINGTON par Eng Hants; 2297 ac. Pop. 565 **FARRINGTON-GURNEY** par Eng Somerset 923 ac Pop 5 8.

FARS or **FARSHAN** [anc. Persia] a prov Persia, between lat. 37° 40' and 31° 45' N., and lon. 50° and 55° 30' E. having S. and W. the Persian Gulf, E. Kirman, S.E. Laristan W. Khuzistan, and N. Irak-Ajemi and Khorassan length, E to W about 800 m.; breadth, about 250 m. Although a great portion of this province is desert, occupying in part of tracts of arid sand, especially towards the E. and along the shores of the Persian Gulf, where the country is flat, there are yet many well-cultivated districts, and extensive vales covered with wood and verdure. The W. section bordering upon Irak and Khuzistan consists chiefly of rocky mountains, enclosing long narrow gleys, many of which afford excellent grazing. Several of the former attain an elevation of from 3500 to 4000 ft. A chain of high mountains also runs along the S.E. border, separating it from Laristan and towards the centre it is generally hilly but flat in the N and N.E. One of the more remarkable valleys is that of Shiraz in which the city of that name stands. It is 24 m in length, and 12 m in breadth, and is bounded by low hills, entirely destitute of vegetation. The oriental plane, the willow poplar and medlar tree grow luxuriantly here. There are several salt lakes in the province, the principal of which is Bakhtegan (which see) The chief rivers are the Bandamir or Araxes, and the Nihon. The former flowing S.E. to lake Bakhtegan, and the latter S.S.E. to the Persian Gulf. In the lower districts the climate is extremely hot and unhealthy; in the mountainous regions it is temperate and salubrious—here the spring season is delightful. Agr. culture was formerly in a more prosperous condition in Fars than at present, but it is still more attended to here than in any other part of Persia. Grain fruit, wine, oil cotton, and tobacco are raised in great quantities, and all of the finest quality the tobacco is particularly esteemed. Silk, cochineal, and sugar of reeds are also produced. The inhabitants of this province are reckoned the most industrious people in Persia. They manufacture woollen silk, and notion stuffs, and carry on an active trade with Hindoostan, to which they export wine, horses woollen manufactures, and various other articles. The government of Fars is confided to a prince of the blood-royal, under whom are the governors of districts, of which there are six. It is thinly peopled, in proportion to its extent. The principal cities are Shiraz, the cap. Bushra, Peromabad Derabder, and Kazeroun Fars is remarkable for the number of ancient ruins it contains. Pop. 1 700,000.

FARSAN, isla. Red Sea, E. side about lat 16° 30' N lon. 42° 45' E. They are two in number and are the largest all along this coast but may be considered as forming one island only, being connected by a sandy spit of shoal water across which camels frequently pass from one to the other. They are of very irregular shape. The westernmost, Farsan Kober is 31 m long, and the other Farsan Beggar about 18 m. The land is of considerable height, interspersed with some plains and valleys. The hilly parts are coral rock.

FARSIAN a prov Persia. See Fars.

FARSUND a seaport in Norway prov Christiania, half Mandal, 47 m. E by S. Christianstad, on the N Sea

lat 58° N lon. 7° 30' E. It exports dried smoked fish, herring and mackerel. Pop. 881.

FARTAGH or **FARTAGH**, a cape, E coast, Arabia; lat. 16° 38' N lon. 54° 20' E. It is a beautiful promontory very high and may be seen, in clear weather from a distance of nearly 80 m.

FASANO a to and com. Naples, prov of and 83 m. S.E. Bari, and 5 m. W. of the Adriatic, cap. circondario of same name. It contains three churches and a convent. Pop. circondario, 9974.

FATALLILA, or **FATOKKELLA**, a tn Spain Catalonia, prov of and 87 m. W.N.W. Terragona, in a mountainous district. It contains a parish church courthouse, prison and primary school, and has four mills and distilleries. P. 1468.

FATA' LINDA, a considerable tn. of W. Africa, bank, Gambia lat. 15° 22' N lon. 14° 10' W. The English African Company had a factory here, situated on a rock, and overlooking a fine country but were driven from it by the hostile conduct of a native prince.

FATCHIOU an isl Japan strait of Corea, in the Tsurushima group lat. (S. point) 34° 6' 30" N lon. 129° 16' E. (x.)

FATIGUCHI, a tn. Russia, gov. of and 88 m. N.W. Koursk, on a river of same name. It stands on a height in a beautiful district contains a church and has manufactures of cloth life-works and a little general trade. Around it are orchards and gardens. Pop. (1843), 3,775.

FATRA, or **FATRAH** [anc. Phasagiana] a seaport in Asia Turkey push Siras, on the Black Sea, 118 m. E. Trebizond lat. 41° N lon. 38° 39' E. It is now the scale or seaport of Niksar 50 m. S.S.W., and to which there is a difficult road over the mountains, through thick and luxuriant woods. It contains an old palace and a large khar and has still some trade. Close by the town is a small fort, near to which large ships of war are sometimes built. Two miles E. of Fatsa are the ruins of a city the site of the ancient Phasagiana.

FATHIZIO an isl Japan a dependency of prov Yamato Nippon, lat. 34° 6' N lon. 140° E (n.) It is 21 m. long by 14 m. broad and contains a town of same name. Its shores are steep, and almost inaccessible and extremely fertile, and well cultivated. State criminals are banished to it is island, and employed in manufacturing silk stuffs for the Court.

FATTECONDA a to of W. Africa kingdom, Bonduco, on E. bank of the Palend lat. 14° 20' N lon. 10° 20' W.

FAUCIGNY a dist. France formerly a div Savoy bounded, N by prov Chablais E by the Swiss canton of Valais and prov Aoste, S. by provs. Upper Savoy and the Genevoise, and W. by that part of the dukedom of Savoy which formed prov St. Julien; length, N to S., 88 m. breadth, 21 m. area, about 840 sq m. It is one of the loftiest districts in Europe being partly covered by the Princes Alps, in which its culminating point occurs. It belongs almost in its entirety to the basin of the Arve, which taking its rise in the glaciers of Mont Blanc, traverses the province diagonally S.E. to N.W. From the nature of the ground, the far greater part of it is necessarily waste and unfit either for the habitation of man or the sustenance of beast. According to an estimate which has been made, one-fifth of the province consists of bare rock, one-sixth of barren uncultivated ground, one-fourth of forests, chiefly of pine, and barely one-third of ground fit for culture. For administrative purposes, it is divided into ten mandamientos—Bonneville, the capital Annecy, Cluses, La Roche, Rignier St. Gervais, St. Jovite, Sallesches, Semnoz, and Falinges. Pop. 101 722.

FAUGHANVALE par Irel Londonderry 18,523 ac. Pop. 5751.

FAUGHAET par Irel Louth 2430 ac. Pop. 1532 **FAUGLIA** a vil. and par Tuscany in the Val di Terra, 11 m. E. Leghorn. It has a parish church finely situated on the top of a hill, and a trade in silk, maize, corn, and wine. Pop. 5422.

FAULHORN a lofty mountain, Switzerland, cant. Bern. It is situated between the valleys of Grindelwald and the lake of Brienz, and has a height of 9,140 ft. The extent and magnificence of the view and the comparative easiness of the ascent, induce numerous travellers to visit it. For their accommodation, an inn of considerable extent, and three stories high, has been erected of limestone quarried on the spot. It is within 800 ft. of the summit, and is more than 600 ft. higher than the Hospitium of St. Bernard. Travellers often pass the night here to witness the time of the sun.

FAULKBOURN par. Eng. Essex. 1151 ac. Pop. 184.
FAUBUSSE RIVIERE, a lake, U. States, Louisiana. It formed part of the bed of the Mississippi till about 1714, when the river took another course. Its banks are extremely fertile, and had out in the farms.

FAVAIE [Latin *Favos*, *Ligurum*] a vil. and com. king. dom of Italy prov. Chiavari dist. Genoa, in the valley of Fontanabona, almost surrounded by lofty precipices. It contains a parish church and has manufactures of cotton and linen, a trade in cattle, and an annual fair. Pop. 1598.

FAVAIOS [anc. *Pleuon*] a tn. and par. Portugal prov. Terceira do Monte, near Funchal, 61 m. E. by S. Braga. It is situated on the side of a hill composed of fine granitic corals, a large church and a fountain of excellent water and has a chalybeate spring. It is an ancient place and possesses several Roman antiquities. Pop. 1130.

FAYAKA a vil. and com. Setty prov. and 5 m. E. of L. Gurgens, in a mountainous district. Pop. 7088.

FAYFRONG [Lat. *Favreac*] a tn. in France, department Haute V. in the valley of Faverges, at the foot of the mountains of Tanné, near the lake, and 14 m. S.E. of the town of Amey. It contains an old castle now converted into a silk factory, a small church and an hospital, and has considerable manufactures of silk goods, which are largely exported, and of agricultural and other implements, a brass and iron foundry several smelting furnaces, a weekly market, and four annual fairs. Pop. 3512.

FAYFRHAM a bor. par. and seaport to England, co. Kent, 45 m. E.R.E. by R. London, near a branch of the Swale. It contains principally of four streets, spacious, well paved, and well lighted. In the centre is the townhall and market place. On the opposite bank of the river is a suburb called *Beard's town* consisting of a number of recently-built houses. There is another suburb called *Spring-street*. Faversham has a handsome church, with a light and elegant spire, chapels for Baptists, Independents, and Wesleyan Methodists, Bible Christians and Latter-day Saints, a free grammar school, a national, and three other schools, several well-supported almshouses, and other small charities, a theatre, and set of assembly-rooms. Market days Wednesday and Saturday. Two fairs in the year, 1st February and August. Vessels of 150 tons come up the Swale to the town at common tides. (In December 31, 1850 the number and tonnage of vessels belonging to the port was 289 tonnage, 11,999 and one steam-vessel of 19 tons burthen. The vessels, coastwise and foreign which entered in 1850, were 1435 vessels tonnage, 107,519 cleared, 1808 tonnage, 62,199. The principal exports are corn, hops, fruit, wool, and other produce imports—timber, iron, coal, tar, &c. Faversham has long been celebrated for the manufacture of gunpowder. Roman cement is also manufactured here, but the greater factory has now become the principal trade of the place. It is carried on by the company of free labourers and free dredgers of the hundred of Faversham, and employs between 200 and 300 persons. Area of par 2489 ac. Pop. 5057.—*Local Correspondent*.)

FAYIGNANA [anc. *Figne*, or *Æfigne*] an isl. Mediterranean, 8 m. off W. coast, Sicily lat. 57° 57' N. lon. 13° 45' E. It is about 5 m. long, by 2 to 3 broad. On its E. side is a good harbour with the town San Leonardo on one side, and a small fortress on the other. It is the residence of a military governor. The soil is fertile. Pop. 3000.

FAYOITA a vil. and beautiful country seat, Austrian Italy in the vicinity of Mantua, memorable as the scene of several severe contests between the French and Austrians, in which the former were victorious. One immediate result was the surrender of Mantua, with its garrison of 20,000 men.

FAYRIA [Latin *Fabrya*] a vil. and com. kingdom of Italy Piedmont, prov. of, and 19 m. N. Turin in a fertile plain. It contains a parish church, of modern and elegant

construction, another small church, a charitable endowment, and an old castle, and has a large spinning-mill and a trade in wine, which is extensively grown in the district. P. 3745.

FAWLEY par. Eng. Northampton. 1556 ac. Pop. 50.
FAWLETT a tn. Isl. Porto-Rico, E. coast, near the mouth of a small river of the same name. Pop. about 3000.

FAXÖE, a vil. Denmark, Isl. Seeland, half Frelse, 33 m. S.W. Copenhagen about 2 m. from the sea. It has noted quarries of building limestone, of a pale yellow colour and composed mainly of petrifactions of marine animals.

FAYAL, one of the Azores, or Western Isles, in the N. Atlantic Ocean lat. (W. pole) 38° 35' 36" N. lon. 28° 50' 30" W. (n. area), 37,530 sq. of which it is estimated that 10,020 ac. are under cultivation. The uncultivated portion however is not unproductive a great part of it serving for grazing land and the supply of firewood. The island produces annually about 13,000 quarters of Indian corn 4000 of wheat, 3000 of potatoes and onions, 200 pipes of wine, and 17,000 boxes of oranges. The principal exports are oranges and wine. The imports are manufactures, cotton twist, and flax, chiefly from England colonial produce from Brazil and Portugal tea, tobacco, and soap from the latter. Fayal has a considerable transit trade. About 170 American whalers touch at the island every year and land the oil of such fish as they have caught on their outward voyage. This oil is afterwards shipped for the American market, and amounts in value to between 210,000 and 250,000. Fayal has a good bay opposite to Fico. The common anchorage is opposite the town of Oria, in the bay of that name. It is the best anchorage in the Azores, but open to winds from the N. to N.E. and from S.E. to S.W. The chief town is Vila Oria, on the S.E. side of the island. Pop. (1840), 25,900.

FAYENCE [Latin, *Faventia*] a tn. France, dep. Var 13 m. N.E. Draguignan. It is a mean place, built on a high site, but has a fine climate. It has a gothic church of the 12th century some olive oil mills potteries tanneries and a glass-works. Pop. 1403.

FAYETTEVILLE, numerous places, U. States, particularly a tn. N. Carolina, 50 m. S. by W. Raleigh. It is regularly laid out with broad streets has a courthouse, several churches, and banks and is the seat of a considerable trade in grain flour tobacco, and naval stores. It also contains several schools, two printing offices, and two weekly newspapers. In 1831 this place was nearly destroyed by fire. Pop. 4180.

FAYOUM or **FAYOUM** a valley and prov. Central Egypt, between lat. 29° and 30° N. and lon. 30° and 31° E. It is of an oval form, about 40 m. in length, E. to W. and about 30 in breadth. It rises in the centre, but is altogether considerably lower than the valley of the Nile. In the N. part of the valley is the Birket el Karun (see Evyr) It is supplied with water from the Nile by the canal of Joseph (Bahr-Yousouf) a number of canals, of smaller dimensions, are also distributed through the valley for the purposes of irrigation.

The parts thus watered are extremely fertile and produce corn, cotton and immense quantities of fruit, including apricots, figs, grapes, and olives. Roses are also grown in great abundance, for making rose water which is sold at Cairo, and all over Egypt. Near Mahmed-el Fawou, the principal town of the province, are the remains of the celebrated labyrinth these now above ground consisting of several broken columns of fine red granite, in the old Egyptian style, with lotus-bud capitals. At the N. extremity of the area occupied by the labyrinth with which it was connected, is the pyramid of Howara, which, when entire, was 548 ft. square, but is now much reduced the bricks of which it was built having been carried off to erect new buildings.

FAYS BILLIOT or **FAYT BRILLON** a tn. France, dep. Haute-Marne, 80 m. S.E. Chaumont. It has five annual fairs. Pop. 2224.

FAZILPOOR, a small tn. of S.W. Hindostan 1 bnk, Indus, Bakawulpore; lat. 28° 30' N. lon. 69° 50' E. It is defended by a fort, which, with the town itself, is now greatly decayed.

FE (BANTU) a tn. and prov. La Plais. The prov. lies mostly between lat. 30° and 23° S. lon. 61 and 63° W.

bounded, N and W by desert, which separates it from Santiago and Cordoba; S. by Buenos Ayres, and E. by the Paraná, which separates it from Entre Ríos. It has no mountains, but contains a number of considerable lakes, and is intersected by several rivers, of which the Salado and the Tucumán are the most considerable. The plains are covered with grass and mimosa, and cattle and horses are reared in abundance. The principal places are Santa Fe, the capital; Rosario, and Espritu Santo. Pop. between 15,000 and 20,000.—The city of Santa Fe 1 leek, Salado, 6 m. N.W. Bajada, was formerly a place of considerable importance, forming the centre of communication between Buenos Ayres and Paraguay as also between the latter country and the province of Tucumán; but this property has passed away and the inhabitants are now reduced to great poverty. It has a church and three convents. Pop. about 4000.

FE (SANTA DE BOGOTA) See BOGOTA

FE (SANTA, DE SAN FRANCISCO) a to. U States esp. New Mexico lat. 35° 41' N lon. 106° W 15 m E. of the Rio del Norte, at the W base of a snow-capped mountain, on a beautiful stream. It is irregularly laid out, and most of the streets are little better than common highways traversing scattered settlements, which are interspersed with corn fields. Still fine clars of buildings, whose fronts are shaded, with corridors of the reddest possible description, stand around the public square, and comprise the governor's house, custom house, barracks, the consistory of the Alcaide, the military chapel houses several private residences, as well as most of the shops of the American traders. There are also two handsome churches several convents a college, and an hospital. It is the entrepot for the agricultural productions of the province. The vicinity is fertile in corn and rice and contains a silver mine. The rearing of horses, sheep, and swine is the chief occupation of the inhabitants. Pop. about 2800

FEADS and GOODMANN ISLANDS S Pacific Ocean E. from New Ireland lat. 3° 27' S. lon. 154° 45' E (A). They consist of an irregular chain of low isles and sandbanks, encircled by a reef extending nearly N.W. and S.E. 27 m. They abound with coconuts and some of them are inhabited.

FECCAMP, a maritime tn.

France, dep. Seine-Inférieure,

28 m. N.E. Havre lat. 49° 45' N; lon. 0° 22' 15' E (A). The

town is long and narrow lying in a hollow, occupied up between

two parallel ranges of hills, between which flows the small

river Fécaup. It is composed of but one considerable street,

nearly 2 m. long, and has a spacious port, the water deep, and the outer anchorage good. The only noteworthy edifice is the parish church, once the collegiate church of the famous abbey of Fécaup, refounded, in 986 by Richard I., Duke of Normandy. Fécaup is the seat of a tribunal of commerce; has a customs-house; a school of hydrography and a theatre; and is the residence of consuls from various countries. It manufactures cottons, plain and coloured linens, hosiery cordage, oil hooks, anchors, wool-cards, blankets, sailed meat, kelp, &c. and has cotton spinners, best-root sugar-works, grain and tan mills, tanneries, and coopers and shipbuilders yards. The articles of trade include colonials, tea, gin, Baltic timber salt, &c. The fishery of cod, herring, mackerel, &c. is carried on. The access to the port is easy at the proper time of the tide, except with gales from the S.W. or W.; and the harbour has been much improved of late years. A fine lighthouse tower on the Mont de la Vierge on the left of the harbour entrance, is 56 ft. above the ground, and 427 ft. above the sea's highest level. The people of Fécaup are noted for personal beauty. The district around produces abundance of wax and solas. Pop. 8737

FEELLE FUNI FAJI or FIJI ISLANDS, an isl group, S. Pacific ocean E. of the New Hebrides, between lat. 15° 30' and 19° 30' S. and lon. 177° E. and 178° W. The entire group, which comprises altogether 134 islands 65 of which are inhabited as subdivided into two minor groups, the Eastern and Western groups the latter forming the W. side of the Archipelago. There are numerous spacious outlets or passages, to and from the central space, enclosed by the group known as the Goro sea. Two of the islands only are of large size, namely Viti Levu and Fuaa or Sandelwood Island. The other principal islands are Vana, Kaitaka, Ovalau, Bau or Ambow Methuan and Goro some of the others though smaller are populous.

VALLEY OF OVAIA, IN THE ISLAND OF OVAIA.—From the United States, Engraving Reproduction.

They each contain from 5000 to 15,000 inhabitants. Most of the remainder are more idle. They are of volcanic origin, but no signs of volcanic heat have been met with, excepting at Sav-Sava, on the S. shore of the large island of

Form. Appearance of natives, however are frequent. The peaks are usually basaltic cones or needles, some of which rise to the height of several thousand ft. A luxuriant foliage covers these islands to their summits, giving them a singular pleasing and picturesque aspect. Some beautiful and fruitful valleys occur in many of them. That of Vooa, in the S. and of O. can, shown in the wood-cut in preceding page, is strikingly characteristic of this description of Feijer scenery. One of those almost inaccessible peaks, on which the natives locate their towns for safety is also conspicuous in this view. The soil of the Feijer consists of a deep loam of a yellowish colour with a large portion of decayed vegetable matter which, aided by a fine climate, and abundance of water is extremely productive. Fruits of various kinds abound, including the bread-fruit, of which there are nine different sorts, the banana, cocon, shaddock, papaw apple Tahiti chestnut, and a number of other fruits peculiar to the islands. Pumpkins, cucumbers, Cape gooseberry guava, pineapples, water melons, and large red capers also abound. But the chief food of the inhabitants is the yam of which they have five or six varieties. Sugar cane, turmeric, and tobacco are also cultivated by the natives. Sandalwood for which these islands were formerly noted, has wholly disappeared. Vegetation is exceedingly rapid here. According to a statement made by the horticulturist to the U. States Exploring Expedition, turmeric radish and mustard seed after being sown 24 hours, the cotyledon leaves were above the surface. Melons, cucumbers, and pumpkins sprang up in three days. Beans and peas made their appearance in four. In four weeks from the time of planting, radishes and lettuce were fit for use, and in five weeks, marrowfat peas. The climate is agreeable and healthful. The mean temperature at Orova, one of the most beautiful islands of the group about 8 m. long, by 1/2 broad during the six weeks that the observatory of the U. States Exploring Expedition was established there, was 77.81. The thermometer stood at 90.123 in. The lowest temperature was 62. the highest 96. The winds from April to November pre. all from the E. N. E. to S. E. at these blowing a fresh trade wind. From November to April, N winds are often experienced, and in the months of February and March heavy gales are frequent, and generally last for two or three days. The coasts abound with fish, including several of peculiar species. Crabs are also numerous amongst the mangrove bushes. The inhabitants of these islands are a barbarous and savage race, remarkable for cruelty, deceit, and cowardice. They are also extremely covetous and so addicted to lying that they prefer telling a falsehood even in cases where truth would have served their purpose better. They are generally above the middle height, complexion between that of the black and copper-coloured races. Faces long, with a large mouth, good and well-set teeth and a well-formed nose, eyes black and penetrating. Human sacrifices are frequent amongst them, and cannibalism common. The gradations of the latter propensity is not limited to enemies, or persons of a different tribe, or satisfying revenge; they will devour with equal avidity the flesh of their dearest relatives. When victims of this kind are selected they are often kept for a time to be fattened. When about to be sacrificed they are compelled to sit on the ground with their feet drawn under their thighs, in which posture they are tightly bound, thrust into an oven and roasted alive. Many however are killed prior to being roasted. Shipwrecked people are uniformly cited in no fulfillment of any religious duty as was at one time supposed but wholly from the extreme reluctance the natives have for human flesh. The Feijerians, however excel their neighbours in the useful arts, such as building large canoes, and the manufacture of native cloth and pottery and they are polite in their communications with those they respect. They are ruled by chiefs, to whom great deference is paid and who in turn appear to acknowledge the supremacy of the chief of Ambou who has recently assumed the title of Tai Vio, king of the Feijer. The missionaries have made great progress

in the windward group. The frames of Feijer houses are constructed of the bread-fruit tree, and are filled in with reeds, whilst the roof is covered with a thatch of the wild sugar cane. They are usually oblong in shape, and from 10 to 25 ft. in length. But the most remarkable structure is the native or spirit house, represented on the wood-cut. It is built on a raised and walled mound, and is of unusual proportions, being nearly twice as high as it is broad at its base, and has a singular sharp-peaked roof. In these structures certain deities

HAUSE, OR SPIRIT HOUSE.—From the United States Exploring Expedition

are worshipped by priests called ambets. Of such structures, each town has at least one, and often several. The towns are usually fortified with strong palisades, and have but two entrances, in which are gates, the passage being so narrow as to admit of only one person at a time. Pop. estimated at 183,890.—[U. States Exp. Exped. Capt. J. E. Endicott, F. N. in Jour. Res. Geo. Ass. 1851]

FEILLI a numerous tribe, Fveia, living compact and united in one region, and not dispersed like most of the others, in small detachments, in different parts. The tribe occupies altogether about 100 000 houses, on the W. side of the mountains of Laristan, the territory of Shetar and other places.

FEILLERS, a vil. France, dep. Ain, arrond. and 15 m. W. N.W. Bourg-en-Bresse. Pop. 3684.

FEJÖR, a small isl. Denmark off N coast, Lolland and about 2 m. W. the island of Fæbo, to which, as well as

Kragens, there is a ferry. Fairs unite with Skalle and Weide in forming a parish area 8 geo. sq. m. Pop. 1500.

FELSTRITZ, several places, Austria, particularly—1. A market in Styria, circle of, and 9 m. N. W. Gratz, on bank, silver and copper are worked and smelted in the neighbourhood. Pop. 460.—2. In *Wienau-Wietz* A. in Styria, circle of, and 18 m. N. E. Chul. on the *Festitz*. It has a church, townhouse, castle, and hospital. Six cattle markets, and four annual fairs. Pop. of town 517.

FEL-GYOGY or *Felső-Gyógy* *Alapista*, and *Felső-Gyógy* *Alapista* a vil. or rather series of scattered villa. Austria, Transylvania, co. Nöder Weissburg, about 8 m. from Tova. It contains a Greek united, and two Greek non-united parish churches and the ruins of an old castle and is inhabited by Wallachians.

FELADELPIA a vil and com. Naples, prov. Calabria Ultra II. 18 m. S. Nicotro, in a plain. It has two churches, and a number of other handsome edifices. Pop. 2227.

FELANITZ, or *Felanitz* (anc. *Casaca*) a tn. Spain, Isl. Majorca, 28 m. S. E. Palma, in a valley surrounded by mountains. It is well built, has six squares, wide and convenient streets, and a parish church, chapel, townhouse, prison, two schools, an hospital, cemetery and on the steep burning mountain of St. Salvador of Felanitx, an ancient castle, with subterranean vaults, constructed by the Moors. Manufactures—linen and woollen fabrics, brandy and ropes. Trade.—rice, coffee, sugar wine, brandy fruit, and cattle. The town is of great antiquity and among the hills hard by are numerous Moorish remains. Pop. 9763.

FELBACH a vil. Württemberg, circle, Nooker near Cannstatt about 6 m. N. E. Stuttgart. It is one of the richest villages in the kingdom, contains a parish church and has some trade in an excellent wine, the growth of the district. Pop. 2777.

FELBRIGG par Eng Norfolk 1651 ac. Pop. 123.

FELDA, a vil. Hesse-Darmstadt, Oberhessen, circle, Grumbach, near Ulrichstein. It contains a Protestant parish church and has a distillery brewery a trade in cattle and three cattle markets. Pop. 880.

FELDBACH a market in Austria, Styria, circle of, and 22 m. S. E. Gratz, on bank, East, here crossed by four bridges. It is partly built with walls and is divided into a townhouse, barracks, hospital, and posthouse, and four annual fairs. The inhabitants early embraced the Reformation, and were in consequence subjected to cruel persecution. Pop. 706.

FELDEBERG a market in Mecklenburg-Strelitz, cap. hall of same name, on a peninsula, formed by the Hase, 15 m. E. New Strelitz. It is irregularly built, and contains a court-house and church. Pop. 715.—The mar. area, 85 geo. sq. m. is well wooded, and contains numerous lakes. Pop. 7813.

FELDKIRCH or *Campo di St. Pietro* a tn. Austria, Tyrol, cap. dist. of same name, on the II and on the road over the Arlberg 20 m. S. W. Bregenz. It stands in a narrow but fertile valley, has spacious and handsome streets is the seat of a civil and criminal court, and of several public offices, contains six churches, one of them a handsome gothic structure, of 1478 a Capuchin monastery a massive tower with a large bell a gymnasium high school, industrial school of design an hospital, posthouse, and establishment for the cure of leprosy and has two large cotton mills a machine factory and factory of fire engines a bell foundry oil press, tile-works, manufacture of articles of wood and distilleries of cherry brandy. The old castle, on the site of a Roman fort, of which traces still remain was once the key of the Tyrol but is now only used as a barracks. Pop. in 1941 Area of district, 72 geo. sq. m. Pop. 19,844.

FELDKIRCHEN a market in Austria, Carinthia, circle of, and 14 m. N. E. Villach, on the *Töbelsbach*. It has a parish church, and manufacture of anythings and shawls. In the neighbourhood are two iron-mills, and a bathing establishment and at some distance a famous old castle, the original seat of the family of Princes Dietrichstein.

FELDSBERG or *Venzersberg* a tn. Lower Austria, in a valley near the frontiers of Moravia, 39 m. N. N. E. Vienna. It consists of the town proper and a suburb the former surrounded with old walls, with three gates is built with toler-

able regularity contains two churches one of them large and stately in the Ionic style surmounted with two towers and a dome, and possessed of fine paintings a townhouse, with a turret; a monastery and hospital. On a gentle height, E. of the town, stands the palace of the Prince of Liechtenstein a large and handsome edifice, with fine gardens and the magnificent park of *Demwaid*. Pop. 2343.

FELISTO [*Latia*, *Feliscus*] a vil and com. kingdom of Italy, Piedmont prov. of, and 14 m. N. N. E. Turin on the Orso. It contains a handsome square, with well built houses, lined by an arcade; and a parish church adorned with frescoes and paintings and has a trade in cattle, mules, and hemp a weekly market, and an annual fair. Pop. 1704.

FELICES DE BURLINA (San) a tn. Spain prov. of, and 14 m. S. E. Santander with a prison and two schools some mills, and an annual sheep fair. Pop. 1255.

FELICUDI (anc. *Phoeniceum*) an Isl. Mediterranean, off N. coast, Sicily belonging to the Lipari group and 10 m. W. Salina. It is 9 m. in circuit, and is evidently an extinct volcano with three lofty summits. The only trace of fire is in a hot sulphurous spring. The coasts are rugged and broken and exhibit everywhere bold masses of basaltic lava. On the W. side is a remarkable cavern, entered by a natural colonnade, which terminates in a spacious hall 195 ft long 120 broad and 50 ft high. Feliscudi is fertile and well cultivated. The inhabitants, who are hardy and industrious have a small church. Pop. 800.

FELIPE (San) a tn. Spain. See *JATIVA*.

FELIPE (San) a tn. Chili. See *ACONAGUA*.

FELIPE (San)—1. A tn. Yucatan, 28 m. S. W. the Gulf of Yucatan, and 185 m. W. by S. Camargo. The streets are spacious and regular. The soil in the vicinity is remarkably fertile producing cocoa, coffee, maize, rice, indigo and a little cotton, the cultivation of which forms the chief occupation of the inhabitants. Pop. 7000.—2. A tn. Mexican Confederation, dep. of, and 22 m. N. W. Guaymas nearly 7000 ft. above sea level. 1 pop. about 8000.

FELI 18-843 a tn. Brazil prov. of, and 280 m. N. N. E. Goyas, on a small auriferous river of same name, a tributary of the Maranhão. It contains three churches, one of which is very old. The inhabitants only cultivate the provisions necessary for their own consumption, but have some trade in hides. On a hill about 5 m. S. of the town are some remarkable caverns, and at a considerable distance S. E. are the thermal springs of *Caldas-de-Fel* *Belcaldi* in which the water is almost boiling hot.

FELISKIRK, or *FELISKIRK* par Eng York (N. Riding) 8881 ac. Pop. 900.

FELITTO a tn. Naples prov. Principato-Citra, 20 m. S. E. Campagna, on bank, Calore. Pop. 1,400.

FELIX a vil Spain Andalusia, prov. of, and 16 m. W. N. W. Almería at the foot of the *sierra de Almajaz*. It has wide paved streets, two squares, a parish church, a town house, two chapels, a prison, school storehouse, and cemetery. In the vicinity industry is still and lead was formerly wrought. Trade.—with Almería in cattle, grain, anatomy and rice. Pop. 2140.—*FELIX*, with various affixes, is the name of several small villages.

FELIX—1. An Isl. Pacific lat. 26 20' S. lon. 80° W. At its N. W. extremity is a remarkable rock, which in almost every point of view resembles a ship and is called *King William's Land*. Area, forming the N. point of *King William's Land* lat. 69° 56' N. lon. 98° 0' W. (a).—2. A harbour Arctic America. E. coast, Boothia Felix lat. 69° 56' 42" N. lon. 92° 1' W. (a). Captain Ross wintered here in 1818-20.

FELIXSTOW par Eng Suffolk 2828 ac. Pop. 551.

FELIZZANO [*Lat. Felisianus*] a tn. kingdom of Italy Piedmont, prov. of, and 9 m. W. Alessandria, cap. mandamento of same name, 1. bank, Tanaro, on the high road leading to Turin. It was formerly a place of considerable extent, but now consists principally of a small town, inclosed within the walls of its old castle, and of several suburbs. It contains two parish churches, a convent, and two chantries endowments. Pop. 2175.

FELKA or *FOLK VILKA* a tn. Hungary co. Zips, in a plain on the *Kalkbach*, 8 m. S. W. Kaszner. It contains a Protestant church and has manufactures of linen, several distilleries and mills, and a trade in cattle. Pop. 1523.

FELKIRK, par Eng York (W. Riding) 5878 ac. P. 1148.

FELTANS, FOULERS, or FULARS, a remarkable race of the negro type, the original locality of which is unknown, but which is now widely diffused throughout W. Africa, particularly Senegambia. Those of the negro family they differ widely in their physical characteristics from those now having neither their deep jet colour, crisped hair flat upon their heads. In person, they are decidedly handsome, and mostly of a light copper colour, features regular and good, mouths small, European lips, and noses inclining to aquiline, hair soft and silky, well-defined black eyebrows, long eyelashes, and fine black eyes; tall well proportioned and of erect and graceful figure. Some of the young women are very good looking and would be considered beautiful even in Europe. They are shrewd and intelligent, possess great influence in the districts where they reside, extremely active, polished, and interesting in their manners, and said to possess great bravery and perseverance. They are extensive and active traders, and industrious agriculturists, which is their chief and favourite employment. They have now many large commercial towns, large tracts of highly-cultivated lands and numerous schools, in which their children are carefully educated. They are mostly Mohammedans, to which religion they became converts about 400 years ago. They wear great numbers of greenish or amulet composed of paper of all sizes, upon which portions of the Koran are transcribed, and covered with silver copper or leather.

FELLETIN a. in France, dep. Creuse, 24 m. S.E. Guéret, a most and thriving place, on an agreeable hilly site, at the foot of which flows the river Creuse. It has a high school, and manufactures carpets, cottons, thread, and yarns, and has dye works, and paper-mills. Pop. 3850.

FELMAN a. in Russia, prov. Livonia on a river of same name 112 m. N.E. Riga. It is a poor place composed of wooden houses, contains a church and a school and has an annual fair. It was once defended by a strong castle, which makes some figure in the early history of the country but is now a mere ruin. Pop. (1849) 1,468.

FELLONKA a. vii. Austrian Italy prov. of and 28 m. S.E. by E. Mantua, a bank Po having a good church and a small handy distillery. Excellent grain and fruits are grown in the vicinity and in the rich meadows by the river side, numerous flocks and herds are pastured. Pop. 2301.

FELMERHAM par Eng. Bedford 2400 ac. Pop. 620.

FELMINGHAM par Eng. Norfolk 1886 ac. Pop. 413.

FELMOPS, an African people, inhabiting a maritime territory in Senegambia, between the rivers Gazulus and Casa manna, about 75 m. in length, W to E, and about 45 m. in breadth, with between 60 and 100 villages. The chief occupation of the natives is raising cattle and goats. Their colour is deep black skin rough features tolerably regular hair wavy but longer than that of negroes in general. Features small, but muscular. They are of mild and unwarlike disposition, and savage in their sentiments, but taciturn and when unprovoked. They are supposed to number about 50,000.

FELPHAM par Eng. Sussex 2254 ac. 1 op. 596.

FELSBURG a. in. Hesse Cassel prov. Niederhessen, cap. mail same name, 1 bank Lahn 14 m. S.W. Cassel. It contains an ancient parish church a chapel and the ruins of an old castle, now partly used as a powder magazine and has dye-works, and four annual fairs. Pop. 1333.

FENY or **FENY** a. vii. Hungary co. Torontal 15 m. from Temesvár. It contains a Greek non united church and stands in a fertile district. Pop. 1947.

FEOCK (Gr.) par Eng. Cornwall 8766 ac. Pop. 1994.

FEOODORA a. maritima to Russia. See KAVRA.

FEOU-LANG or **FOW-LANG** a. in China, prov. Kiang-su, 45 m. N.E. Yoo-choo.

FERAI KHOLM, an elevated dist. Afghanistan having E and S.E. the river Helmand, and W and N.W. the Koh-i-Baba range. Lat. 34° 20' N. lon. 67° 54' E. It is well cultivated, fertile, and populous.

FERRABE, a small town in Ireland, King's co. 12½ m. Tuilmore, on the Borne. It is mostly built, and contains an Established church, a St. Catholic chapel, Wesleyan and Baptist meeting-houses, a dispensary and a loan fund. Market-day, Thursday after August 2 and October 30. Pop. 659.

FERRA, three towns.—1 (Lo) [Latin Ferra] pop. 15, m. N.W. Leon, on an mt. in the Oiso. It is fortified, and has a large arsenal and an artillery school and manufactures of chocolate stuffs soap, linen, &c. It was taken by the Spaniards in 1596, and by the allies in 1814. After the battle of Waterloo, it was taken by the Prussians, after a resistance of several months. Pop. 3123.—2 (Champanese) pop. 3000, a town of 21 m. S. Epernay agreeably situated on the Pienrs. It has a manufactory of seeking &c., and some transit trade. The French imperial forces were defeated in the environs by the allies, March 25 1814. Pop. 1588.—3 (de Tardouze) pop. 4000, 35 m. S. by W. Leon on the Gironde. It has a manufactory of cotton and woollen thread and yarn, hosiery best-made woolen stuffs, &c. and a trade in grain wool wine, wood and flax. The town was once a stronghold, and a chief place of Tardouze. It was taken in 1567 by the Huguenots and in 1589 retaken by the League in 1652 it was pillaged by the Spaniards. Pop. 2218.

FERRIDJIK, PEKCHER or FERRA in Turkey in Europe, 56 m. S.W. Adrianople, agreeably situated on the declivity of a hill, r. bank, Maritima which is navigable to the town. It is surrounded by a low wall furnished with towers and contains a mosque and bath. The hill on which it stands is covered with vines, alternated with cultivated fields. In the vine is hot springs much frequented for their medicinal qualities. Pop. 8000.

FERRERINO [sic. Ferrerino] a town kingdom of Italy, 4 m. S. of Rome, on the Tiber. It was once a considerable town of the Romans, and is still surrounded by remains of old walls built of heavy stone without mortar. It is the seat of a bishop, and contains a cathedral several parish churches and three convents. Pop. 8000.

FERRÉ a town in Turkey. See FERRERINO.

FERRÉ a town in Spain, Murcia, prov. of and 40 m. S. by W. Albacete, on a gentle height in a mountainous district. It contains a parish church and a townhouse and has some trade in grain, wine, oil and cheese. Pop. 1336.

FERRIER, a river in Ireland co. Clare, which it traverses in a S.E. direction, past Ennis and Glenties, and after a course of about 27 m. enters the Shannon by a broad estuary navigable for vessels of considerable burthen.

FERRIA a town in Spain, Extremadura, prov. of and 85 m. S.E. Badajoz, on a lofty hill crowned by an ancient and ruinous castle near a bank, Guadajira. It has narrow steep, and badly-arranged streets a townhouse and prison, parish church, chapel, three schools seven fountains, and a cemetery. Manufactures—woollen and linen fabrics wax and oil. Trade—manufactured goods, cattle, fruit, hardware, earthenware, agricultural implements, &c. Pop. 2069.

FERRINGBAD a vil. Beloochistan agreeably situated 6 m. N.E. Mooring on the route thence to the Bolan Pass. The climate is delightful and the fertile country in the vicinity abounds in gardens and orchards. Pop. about 800.

FERRLACH, a town in Austria, Carinthia, circle of and 7 m. S. Klagenfurt, r. bank, Drave, in the Rosenthal. It is divided into Upper and Lower Ferlach and has numerous manufactures of fire-arms, bayonets, cutlery wares, steel and iron-ware, which furnish the materials of an extensive trade. Pop. 2000.

FERNANAGH an island co. Ireland prov. Ulster having N. Tyrone and Donegal S. Cavan E. Tyrone, and Monaghan. W. Cavan and Leitrim. Greatest length N.W. and S.E. 45 m. greatest breadth 36 m. area, 714 sq. m., or 417,735 ac. of which 289,228 are arable. The county is divided lengthways into two nearly equal portions by Lough Erne, which occupies 35,848 sq. of the surface. The country generally exhibits a succession of abrupt eminences of slight elevation, but is mountainous towards its W. boundary the

Vol. 2

highest summit here, called Cullinagh, on the borders of the county Cavan, attaining an altitude of 2198 ft. Few of the other elevations exceed 1000 ft. The soil is variable, and not remarkably fertile. Oats, barley, wheat, flax, and potatoes, are the principal crops. Considerable numbers of cattle are bred on the black grounds. Most of the farms are under 10 ac. The county is better wooded than most others in Ireland, there being about 8000 ac. appropriated to the growth of timber chiefly oak, ash, elm, beech, and fir. Coal and iron ore are found in small quantities, limestone in abundance. Manufactures unimportant, consisting chiefly of coarse linen for domestic use. The county is divided into 8 baronies—Clanawley Clankilly Coole Knockmoy Larg Magheraboy Magherastephens, and Kilmore and 23 par. Principal town, Enniskillen. It returns three members to the House of Commons, two for the county. Registered electors 1859) 852. Pop. (1841) 166,461 (1861) 116,007.

FERNANVILLE, a vil. France, dep. Manche, arrond. of, and about 9 m. from Cherbourg. It has extensive quarries of granite. Pop. 1163.

FERNINO a deleg. kingdom of Italy bounded N. and N.W. by deleg. Mantova W. Canavese S. Asolo and the Adriatic, greatest length, N. to S. 37 m. greatest breadth, 18 m. Area, about 370 sq. m. In the W. it is partly covered by ramifications of the Apennines, but has a general slope S. & W. and becomes flat as it approaches the coast. The principal streams are the Chienti which waters the N., and the Tenna and Aso which traverse it centrally. All these streams flow E. to the Adriatic. The soil is fertile, raising good crops of corn and maize, and rearing many cattle. Much attention is paid to the culture of bees and silk worms, and the fishery on the coast is very productive. It is 39 000.

FERNIO [sic. Ferris Paganus] a city Papal States, dep. deleg. of same name 4 m. from the Adriatic, and 80 m. S. E. Ancona. It stands on high ground, and is surrounded by old walls and ditches. It has a cathedral a number of other churches and contains a university attended, in 1841 by 235 students two collections of statuary and paintings and a prison, built by Jerome Bonaparte. It carries on some trade by means of the small neighbouring harbours of L. Porto, from which grain, silk and woollen cloth are exported. Ferris was founded by the Sabines before Rome existed. Pop. 6331.

FERMOSELLE a town Spain, Leon, prov. of, and 22 m. S.W. Zamora, on a hill slope, at the confluence of the Tormes with the Douro. It is commanded by an ancient castle and has clean wide streets, a parish church with a handsome square tower a chapel townhouse prison, two schools, an inn, and several fountains and a cemetery. Manufactures—linen fabrics, wine oil, and laundry. Trade—grain, oil, wine, fruit, tannery and wool. Pop. 2501.

FERMOY a town and par. Ireland co. Cork. The town one of the largest military establishments in Ireland is 18½ m. N. W. Cork, r. bank, Blackwater here crossed by a stone bridge of 13 arches. It has spacious and regular streets, houses, in general handsome and uniform an elegant painted gothic parish church, with a beautiful spire two R. Catholic chapels, three Presbyterian and four Wesleyan meeting-houses a small neat courthouse several schools a loan fund savings-bank, two lending libraries a newsroom, and a dispensary. The barracks, adapted for both cavalry and infantry have accommodation for about 3000 men and occupy an elevated situation on the l. bank of the river. There are some large flour-mills, and a brewery. Weekly market on Saturday three annual fairs. Pop. 5836. Area of par. 2461 ac. Pop. including town 8432.—(Local Correspondent).

FERNAN NUBIA, a town Spain, Andalusia, prov. of and 11 m. S. Cordoba in a fertile plain. It is well built has clean wide, and paved streets two squares, a parish church, several chapels two schools, a townhall prison, hospital, orphan asylum, three fountains, a cemetery and handsome doal palace. Manufactures—linen and woollen fabrics, earthenware, tiles wine, oil, and soap. Pop. 5562.

FERNANDEZ, [sic. Pacific Ocean]. See JUAN FERNANDEZ.

FERNANDO DE APURÚ a town in a Vicosuela, dep. Apurú r. bank, Apurú, near its junction with the Peruvian, 170 m. E. Yarinac or Bazarin. It carries on a considerable trade in the produce of the herds of cattle which pasture on the lowest parts of the Llano. Pop. 6000.

FERNANDO DE NORONHA a group of isls. belonging to Brazil consisting of one large and several smaller N. At length, about 210 m. N. E. Cape St. Roque, prov. Rio-Grande-do-Norte, Brazil. Extreme point of the principal island on the S.E. side, lat. $5^{\circ} 50' 24''$ S. lon. $32^{\circ} 28' 20''$ W. (N.). The group extends nearly 1 m. about S.W. and N.E. and is less than 2 m. broad. The shores are rocky and the surf frequently high at such times there is no safe landing. The large island is about .01 m. in circumference. Its most remarkable feature is a conical hill about 1000 ft. high the upper part of which is exceedingly steep, and on one side, overhangs its base. The rock is phonolite and is divided into irregular columns. The whole island is covered with wood but, from the dryness of the climate two years sometimes passing without rain, there is no appearance of luxuriance. A few ferns from the sea, Fernando-de-Noronha has a picturesque aspect, its lofty barren peak being conspicuous from every point, while at some elevation, great masses of the columnar rock, shaded by laurels and overtopped by a tree covered by fine pink flowers, like those of a fox-glove, but without a single leaf give a pleasing effect to the nearer parts of the scenery. There is good fishing round the island in which there are two harbours but not very safe in stormy weather. Fernando has long been a place of exile and imprisonment. The Portuguese had formerly no fewer than seven forts here. No woman is allowed to land on this island. There is aarrison for preventing the escape of criminals. — *Surveying voyage of the Adventure and Beagle*. Fitzhugh M. Gregg: *Properties of America*.

FERNANDO PO an Isl. light of Africa, W. Africa, about 20 m. from the mainland, between lat. $3^{\circ} 12'$ and $3^{\circ} 47'$ N. and lon. $8^{\circ} 26'$ and $8^{\circ} 47'$ E. It is of volcanic origin, and in form an oblong square, broadest at the S. extremity 30 m. long and 2 m. broad. A ridge of mountains traverses two-thirds of its length, 5 to N. terminating in a magnificent cone 11,040 ft. high called Llaneros Peak, the summit of which is almost constantly en clouded. It is doubtful whether this peak be yet perfectly extinct as smoke is said to be occasionally seen, but the highest part, composed of a variety of volcanic ashes, has been so decomposed that it is smothered with grass. There are numerous streams and brooks in the island, which are described as being remarkably pure but

150 ft. from the base to the first branch, and here, in the dry season, fountains of beautiful drinking plants pendant from the branches. The other trees are the gomm or merronia, a species of ebony a dark-coloured wood like mahogany and several species of shrubs. The sugar-cane also grows here wild, and in great abundance yams, likewise, are grown in great quantities, and are esteemed the finest in Africa. They form the chief article of food of the inhabitants. The animals are—monkeys and squirrels of various species, a kind of porcupine, antelope, bush rats land crabs and snakes the latter in great numbers, and very large. Birds are numerous, some of them rare, and of remarkable fine plumage. Fish are also abundant at certain seasons, particularly a species of albacore, about the size of an English sprat. An opinion at one time obtained that the climate of Fernando Po was more healthy than that of the contiguous mainland, but subsequent experience proved this to be an error most of the Europeans who attempted to settle in the island having been seized with fever from which few recovered. It was on this account abandoned as a military station in 1834 the detachment of British troops by which it was occupied having been then withdrawn. The rainy season commences about the latter end of May or beginning of June, and terminates about the middle or end of November.

The natives of Fernando Po called Edeeyahs are a peculiar race, and wholly different in their physical characteristics and language from their neighbours on the continent. Their appearance is by no means prepossessing at first, but, so far as acquaintance, they are found to be singularly amiable people generous, hospitable, and of the most humane and kindly dispositions, brave, yet forbearing and robust to spill the blood even of an enemy. In physical conformation they are for the most part, well made and muscular with an average height of 5 ft. 6 in. The hands and feet, especially of the females are smaller than in the generality of the African races. The face also is more inclined to be round, the cheek bones not so high, the nose less expanded the lips thinner and the mouth better formed than in these continental neighbours. The skin is not so black, hair silky rather than woolly countenance open good natured and agreeable and the eyes expressive of intelligence. Their habits are extremely rude being no log more than a coarse mat of palm leaves thrown over four uprights, and open to all the winds of heaven.

There are several harbours in the island, the most spacious of which is Maidstone Bay at the N.E. and where in a creek or cove is situated Clarence Town the principal English settlement, established in 1827. It is built on a rocky point of land about 100 ft. above sea level. There is but one principal street on each side of which the wooden houses, amounting to 180 are placed at irregular intervals. The population is between 800 and 900 a lady has had Africa from Sierra Leonea George's Bay on the W. side of the island is also a remarkably fine harbour surrounded by the most beautiful scenery but the water is too deep for anchorage, except close in shore. The island was discovered in 1471 by the Portuguese, who, in 1773 ceded it to Spain. In 1827 it was taken into the possession of England, by the latter country. — (Allen's *Niger Exped.* Note-let's Africa, &c.)

FERNANDO (BAR) a tn. Chill, prov. Conchagua, 80 m. S. Santiago, r bank Tinguirica. It contains two churches, one of which was built by the Jesuits, and is a beautiful structure a college, and a convent. This town was founded in 1741 Pop 7500.

FERNANDO (BAR), or ILLA DE LEON a tn. Spain, Andalusia, prov. of, and 7 m. S.E. Cadix, near the S.W. extremity of the Peninsula, on a flat, the Isla de San Pedro or Isla de Leon (see Plan of Cadix Harbour) where from the

CLARENCE DUVE, FERNANDO PO.—From recent Photo, after Engraving by M. Yule.

much infested with alligators, and consequently dangerous to bathe in. The whole appearance of this beautiful island is picturesque in the extreme, being covered to its highest elevations, on the N. part, with dense forests and luxuriant vegetation, while on the S. some fine park scenery compensates a comparative deficiency of trees. The latter consist chiefly of palms and the magnificent baobab or silk-cotton tree, looking to the distance, says Captain Allen, as like the white sails of vessels huddled down that one might almost have supposed they saw a numerous fleet with canvas loosened to dry. Many of these parts of the African forests resemble

stresses of any surrounding heights, it stands exposed to all winds, and in summer suffers much from excessive heat, which makes it very disagreeable. It is strongly fortified, both by nature and art. The intricacy of the channels, and the works which guard it, make a hostile approach by sea almost impossible. The saltness which surrounds it, when filled with water gives it the protection of a wet fosse of about 8 m. in length and the only approach by land is across a pavement about 80 yards wide, and the fine old bridge of Immo, built over the navigable channel of San Pedro, and defended by batteries of the most formidable description. The town is in general very indifferently built. Many of the houses are untenanted, and not a few of them are absolutely ruinous and the great majority of the streets are unpaved. The only street which can be considered handsome is the Calle Real, which is nearly $1\frac{1}{2}$ m. long and lined with substantial commodious, and elegant houses, generally three stories high. The squares are seven in number but none of them deserve notice except that of the Tree Cross which is finely planned and furnishes the only promenade and the Plaza de la Constitucion, in which the court-house prison and other official buildings are placed. There are on an insignificant scale, but remain undisturbed. The other edifices and establishments of any importance are, two parish churches, one of them a large and handsome structure, with three naves and two towers another church belonging to an old Carmelite monastery the buildings of which are now used as artillery barracks a nursery in which a girls school is kept, a large hospital a naval college, and an endowed school. To the district of San Fernando belong the arsenal and extensive establishments of La Carraca (which see). The manufactures consist of leather, starch and vermicelli and there are numerous flour-mills, and extensive salt-works. A great many of the inhabitants live by fishing. The trade is almost confined to salt and fish and at the annual fair which lasts 10 days, a great many articles chiefly of primary necessity are sold. Pop. 9729

FERRNE Is. England. See FARNY

FERRNEK, or **FERIKER** a frontier in France dep. Ain 6 m. S.E. Eng. 13 m. N Geneva, in a beautiful locality at the foot of the Jura, in a fertile country. It is small and its only manufactures are a few watches and some pottery. It is chiefly noted for having been the residence of a lazar, who in fact founded it, in 1759 and lived here mostly afterwards, till near the end of his career (left, Feb. 6 1778 died in Paris May 80 same year). The house in which he lived is still standing and the church with the inscription *l'heros de Voltaire*, is now a farmhouse. Pop. 1214

FERRA a vil and par. kingdom of Italy prov. of, at 12 m. N.W. M. has with a parish church. Pop. 2180

FERRNE, a par and decorty in Ireland on Wexford, area of par 10 415 ac. The town 17 m. N by W Wexford, although formerly a place of considerable importance and a bishop's see, embracing the whole of Wexford and united in 1835, with Osney is now little better than a mean village. It contains, however the ruins of an abbey a modern cathedral a R. Catholic chapel, and dispensary. Four fairs an yearly. Area, 10 415 ac. Pop. of par 2114.

FERRNE Is. England. See FARNY

FEROZABAD [the victorious residence] a tn. Hindoostan, prov. of and 34 m. E Agra.—2 A in Persia, prov. Fars, 64 m. S. Shiraz. It is surrounded by ancient walls, and has a large temple and other remains of antiquity.

FEROZPOOR, a tn. of N.W. Hindoostan 1 bank, and 8 m. from the Scilly 66 m. W Ludlow. It has a strongly fortified castle and good barracks, and is fast rising into importance under the protection of the British. In December 1845, the British here defeated the Sikhs.—2 A in Hindoostan prov. Agra, 5 m. S.E. W Delhi.

FEROZESHAH a vil. Hindoostan 10 m. E S E Ferozpoor where the British defeated the Sikhs, Nov 18 1845

FERRANDINA a tn. Italy Naples, prov. Basilicata 85 m. E S E Potenza near bank Ruvo. It contains a college several churches, a monastery three convents an hospital, and two charitable institutions. Two annual fairs. Good wine is produced in the vicinity. Pop. 6900

FERRARA a del. kingdom of Italy bounded, N by Austria Italy, W by duchy of Modena and del. Bologna, S by del. Ravenna, and E. by the Adriatic greatest length N to W 50 m. greatest breadth 42 m. area, 1200 sq m.

It is almost entirely composed of a delta, formed by branches of the Po, and by the Panaro and Primaro, and including within it the extensive marshes and lagoons of Comacina. These marshes are far too wet to admit of cultivation and the exhalations from them make the surrounding districts very unhealthy. The soil in general is remarkably fertile, and under a very imperfect system of agriculture, raises heavy crops of corn, hemp, and flax. Wine, fruit and oil are also produced in abundance. The pastures are numerous and excellent, and great numbers of cattle are reared. Both in the rivers and lagoons, and on the coasts active and productive fisheries are carried on. There are no manufactures of any consequence. The delegation includes the far greater part of what was formerly the duchy of Ferrara, and was long governed by princes of the house of Este. On the death of Alphonso II. without heirs, in 1598 Pope Clement VIII. succeeded in uniting it to the Papal States. It was discovered, in 1796, by the French and became one of the departments of the kingdom of Italy but re-annexed in 1814 with exception of the parts on the bank of the Po-R. Maestra and Po-Goro, now annexed to Austrian Italy. It is divided into two governmental districts, and 21 communes. Pop. 18350 210,885.

FERRARA a celebrated city kingdom of Italy cap. del. of same name 26 m. N E Bologna in a fertile but unhealthy plain, at a short distance from the N. branch of the Po. It is a large and well built town with spacious and regular streets, and is enclosed by a wall 7 m. in circuit. It is defended on the W side by a citadel regularly fortified. In the middle of the city is a castle, flanked with towers, and

THE CASTLE OF FERRARA.—From Sketch by F. Piranesi.

surrounded by wet ditches, which was once the residence of the dukes, and is now that of the legation. Ferrara, though still retaining many traces of its former grandeur has long been falling into decay. Its pavements are overgrown with grass and the staircases and balconies of many of its noble palaces are overgrown with ivy while others are without either doors or windows. The population has also fallen to one-fourth of its former amount. It has numerous cathedrals and churches most of which contain valuable paintings, together with some interesting specimens of sculpture. There are here a public gallery of paintings, called the Palazzo del Magnifico, containing many excellent works by the leading painters of the Ferrare school a school of medicine and jurisprudence, and a public library containing 80 000 volumes and 900 MSS. the latter including some of those of Ariosto and Tasso. The house in which Ariosto was educated, and that in which he lived during his latter years, and known by

the names respectively of the Casa degli Ariosti and the Casa d'Ariosto, are shown to strangers. The latter is now national property and is ranked among the national monuments. Another object of interest in the cell is the Hospital of St. Anna, in which Tasso was imprisoned. The house occupied by the author of the *Principe* is the Casa Guarana— is still inhabited by the surname of that name. The theatre is one of the finest in the Papal States. Ferrara is one of the eight archbishoprics of the latter. The bishopric dates from 661. Its archbishop was founded by Clement XII in 1735. It carries on some trade in corn and other produce of the soil. There are manufactures of silk & ribbons, wax candles, bronzes, stoneware, and various handicrafts and glassworks. Pop. 80,948.

FERRARA, or **FERRARA** (Lat. *Ferraria*) a city and capital of Italy Piedmont, prov. Alessandria, div. of and 4 m. from Novara, near the Albogno or Arbogno. It contains two small squares and a parish church, and has a large silk mill, and a trade in silk, corn and fruit. The climate is very moist, and the inhabitants are subject to intermittent fevers. Pop. 109°

FERRATO a cape, E.E. coast of Sardinia, about lat. 39° 17' 30" N., lon. 9° 40' E. It is *surrounded by the tower*

of Mount Ferro and behind it, inland, are several rugged peaks called the Serra Brothers, which are 2380 ft. above the sea, and form a good land mark.

FERRAVANO a in Naples, prov. Salerno, dist. of, and 2 m. S.E. of Naples. There are mines of iron and sulphur in the vicinity. P. 2400.

FERRERIA two places. Porto Cal.—1 A m. and par. prov. Porto Cal. com. Thonon, about 48 m. S.W. of Cumbes. Pop. 1735.—2 A m. and par. prov. Alghero, on a height, near L. bank, Saffre, 11 m. W. of the L. is defended by a strong castle. Pop. 1804.

FERRERIA a city and par. S. p. A. Andalusia, prov. of and about 26 m. S. Granada, at the foot of the Sierra Nevada. L. bank, about 48 m. S.W. of Cumbes. It contains a parish church, a hospital, a prison, and an old Moorish tower now used as a prison, and has numerous flour-mills. Pop. 1556.

FERREROS, two places, Portugal.—1 A m. and par. prov. Douro, 11 m. and 12 m. S.E. of Aveiro, near L. bank, Vouga. Pop. 1418.—

2 (see Zenda) A m. and par. Berra, com. of, and about 16 m. from Lavagna. Pop. 1644.

FERRERIE (*Ferraria Adesum*) a city and com. king. of Italy Piedmont, prov. of and 8 m. W. Asti. It contains the remains of an ancient castle, a parish church in the Tuscan style, and a beautiful palace finely situated on a height and has a trade in wine and silk. Pop. about 1600.

FERRERIA, a m., lat. Misocora, 19 m. W. Mahon in an unhealthy district. It contains a parish church, and several castles and has some trade in cattle and cheese. Pop. 1125.

FERRER (Cuz) a celebrated pass over the Pennine Alps, from the town of Orsieres in Switzerland, on the N., to that of Courmayeur in Piedmont, on the S., the ascent from the former direction being made by the Val d'Entremont, and that from the latter by the Val de Ferret, a continuation of the Alpe Blanche. The ascent on both sides is somewhat monotonous but from the Col which has a height of 7841 ft., and separates Mont Blanc on the W., both geographically and geologically from the chain on the E. of which Mont Velin is a dominating point, the view through Mont Blanc himself is but by the enormous masses of the Grand Jorane and the Cuz is one of the most magnificent in Switzerland, extending along a range of glaciers through the Val d'Entremont and the Alpe Blanche, to the Col de Beignes, a distance of 48 m.

FERRIN two parts. Esp.—1 (West), York (E. End) 6082 ac. Pop. 279. 2 (South) Lincoln 6245 ac. Pop. 660. **FERRIN** par. Veng. Savoy 1956 ac. Pop. 112.

FERRINTOSH a city and barony Scotland, forming a detached portion of co. Naism, par. Logie and Urquhart 14 m. S.E. Dingwall, formerly famed for the quality of its whiskey.

FERRIS or **FERRIS**, the most S.W. and smallest of the Canary Islands. lat. (W. extremity) 27° 50' 30" N. lon. 17° 55' W. (E. lat. (W. extremity or middle of Ferris) 27° 45' 30" N. lon. 18° 0' 42" W. (E. It is about 18 m. long, and 9 m. broad, presents on all sides a face of bold and craggy rocks, but in the interior the appearance of the country improves, and a great part of the island is miserably level and fruitful. Good wine and brandy are made, and a considerable portion of both exported to Tenerife. Figs abound and bees thrive exceedingly on account of the multitude of aromatic flowers, but water is scarce. This island having once been supposed the most W. point of the Old World was formerly employed by all geographers as their first meridian and the longitude reckoned from it.

FERRIS an island and cape, Algeria the latter also named **RAS HADID** lat. (map) 37° 5' 6" N. lon. 7° 10' E. (N.)

FERRIS, a city Spain, Galicia, prov. of, and 12 m. N. of Coruña, advantageously situated on the N. side of a fine island bay connected with the sea by a narrow channel of some

name. The bay forms one of the best natural harbors in Europe, and the channel which leads to it is so completely defended by strong batteries, on both its sides as to present formidable obstacles to any hostile attack by sea. The town itself also possesses great strength being both surrounded by strong walls and bulwarks and otherwise defended. It consists of three parts—Old Ferrol the New Town or Centro, and Estreito. Old Ferrol forming the W. part is, as its name implies, of ancient date and is in general both poorly and irregularly built, though from the removal of old, and the erection of new houses, considerable improvements have been made on its original form. Estreito, occupying the E. part, is much superior to Old Ferrol having several streets of hand some appearance, though many of them are narrow. By far the best part is the New Town, sometimes called Centro, from its standing in the middle between the other two, and sometimes New Ferrol or Magdalena, and consisting of a quadrangular space, laid out with the greatest regularity subdivided by seven longitudinal and nine cross streets, and forming at their points of intersection a series of squares, so uniform in size and appearance as to be almost monotonous, and to a stranger perplexing. The principal buildings are the town house, situated in the centre of the new town, a large and handsome structure, not confined to municipal purposes, but partly occupied by a Latin and other public schools the parish church, richly decorated within, adorned with a fine facade, and surrounded by two towers the old Franciscan monastery the general and military hospital the custom-

house, tax office and residences of the heads of the different departments, civil military and maritime. But by far the most remarkable sight in Ferral is the arsenal, an establishment almost without parallel and of magnitude which might well fill all Spanish walls with pride were it not counterbalanced by the humiliating thought that, instead of bearing testimony to a present, it is only the memorial of a past naval greatness. The manufactures consist chiefly of swords, general cutlery and military and naval equipments and there are monthly fairs chiefly for cattle and agricultural produce. The principal imports are steel, yarn, woolen and silk goods, ship timber, earthenware and colonial produce; the exports are salt meat, salt fish, vinegar, potatoes, garlic, onions, soap, and dried fruits. Pop. 16,441.

FERRY PORT-ON-CRAIG, a seaport, vill and par Scot-land, co. Fife. The village is 10½ m. N.E. by K. Cupar & bank, Firth of Tay and a station on the Edinburgh Perth and Dundee Railway. Nighted with gas and amply supplied with excellent water. It has a commodious parish church with a spire, handsome Free and U. Presbyterial churches, a Baptist meeting house, a well attended parochial school and various other educational establishments. Extensive works have recently been erected at the harbour in connection with the Edinburgh, Perth, and Dundee Railway to facilitate the embarking and disembarking of laden trains between this point and Broughty Ferry on the opposite side of the river. Coals and timber are imported and agricultural produce exported. Inhabitants chiefly seafaring, but some employed in hand-loom weaving for the Dundee manufacturers. Here are the remains of an old castle. Area of par 2568 ac. Pop. (1851) 2288.

• **PHIBFIELD** par Eng. Norfolk 1366 ac. P. m. 985.

• **PHITAGH** par Irei Kilkenny 6720 ac. Pop. 1917.

PIETTE several towns, France the principal of which are—1. *La Ferté Bernard*, dep. Sarthe on the Maine. 25 m. N. W. Le Mans. It is a neat old town with walls and towers has a large church of debased gothic about 300 years old a townhouse, once a ferial stronghold a handsome town-gate public square, and fountain a considerable manufacture of linen, some calico weaving, with apertures of fine wool several corn mills and a trade in cattle and sheep. Pop. 2559.—2. *La Ferté-Jouarre*, dep. Seine-et-Marne, 37 m. E. N. Paris, in a pretty valley and interested by the Marne. It is well built, has remains of an old castle, with the fine chateau of La Barre some manufactures of tiles and coarse pottery ultra marine snails work linen fine ovens paper leather &c. but the great article of produce in the locality is millstones of superior quality made to the number of 70,000 yearly many being exported to Great Britain and the United States. There is a trade hence by means of the Marne in timber firewood grain meal &c. for the supply of Paris. Here were born the Cardinal de Bourbon, and Madame de Pompadour. Pop. 3267.—3. *La Ferté Gaucher* [Latin, *Monsieur Gaucher*] dep. Seine-et-Marne, on the grand Morin 46 m. E. Paris. It is pleasantly situated in a narrow valley and has manufactures of serge, tile-works, tanneries numerous paper-mills, a trade in corn wool and cattle, and four annual fairs. Pop. 1914.—4. *La Ferté Macen*, dep. Aube, 15 m. N. W. Chateau-Thierry on the Oise on a slope and traversed by the river. It is walled and was further defended by a strong castle of the 13th century the ruins of which still exist. There are several bleaching-grounds in the vicinity and a depot for the wood and grain destined for Paris. The dramatist, Jean Racine, was born here, December 22 1639. Pop. about 3000.—5. *Ferté Macé* dep. Orne, 15 m. E. by N. Durtreuil. It has manufactures of cottons, prints, ginghams, calico, tape, box-wood combs and snuff boxes, lamp cottons, trimmings, &c. and distilleries, tanneries tile works, dye works, bleaching grounds, &c. Pop. 2694.—6. *La Ferté St. Aubin* or *Ferté-Sauveterre-Nobles* [Latin *Franca Nobilis*] dep. Loiret, 14 m. S. by E. Orleans, 1 bank, Cosson. It contains an old castle, partly ancient and partly modern, and has five annual fairs. Pop. 1553.

FERTIANA, par Irei Tipperary 8607 sq. Pop. 691.

FERTIT or **FERRIT** a little-known country or dist. of F. Africa, S. of Daefar and Kordofan watered by affluents of the Nahr-el-Ahmed, with a tu. of some name, in a hilly region, about lat. 9° 55' N; lon 26° 48' 18" E. Fertit is said to contain rich copper mines.

FERWERD a vil. Holland, prov. Friesland, 11 m. N. R. Leeuwarden. It is well built, and composed chiefly of a row of houses on either side of the highway and has an elegant overhouse, a handsome church a school and, in the vicinity shanty and grain mills. Pop. 1600.

FREESH a vil. Afghanistan. A fertile site in a beautiful and highly cultivated district of eastern Asia, 80 m. N. W. Ghool. The latter contains 13 villages and four forts. Pop. about 4600.

FESTENBERG or **TWARDOGORA** a tn. Prussia, gov. of and 20 m. N. E. Breslau. It contains two market-places two churches, a castle, hospital, a Jewish and other schools and has manufactures of cloth a large worsted mill tobacco factory a little trade, and four annual fairs. Pop. 2465.

FESTINGOG par Wales Merioneth 16,441 ac. P. 9460.

FETHAM par Eng. Surrey 123 ac. Pop. 389.

FETERNE [Lat. *Fortune*] a vil. and com. France dep. Haute Savoie, prov. Chablais near the Drance, 24 m. N. E. Geneva. It contains a parish church and the remains of an ancient castle and has a trade in wine and cattle and an annual fair. Mines of lignite are worked, and there are some fine alpine pastures in the vicinity. Pop. 1506.

FETHARD—1. A market tn. and par. Ireland on Tipperary. The town is beautifully situated on a gentle declivity 9 m. N. E. Clonmel consists of two main streets, quite straight, and well kept houses generally of stone. It has a very handsome ancient gothic church two E. Catholic chapels a very small Presbyterian meeting-house, several schools a dispensary for the poor and two flour-mills. Fethard was formerly a place of considerable strength and importance. Its walls are still standing and some of the gateways perfect. Weekly markets on Saturday unimportant four fairs annually for cattle. Pop. 2767. Area of par 1630 ac. Pop. 4080.—[Local Correspondent]—2. A seaport tn. and par. Ireland on Wexford. The town 21 m. S. W. Wexford, composed chiefly of neat and well built houses. Its harbour capable of accommodating a few small craft, has 12 ft. water at spring tides. Coals and timber are imported and cattle and pigs exported. The town and its neighbourhood are much resorted to during the sea-bathing season. Pop. 426. Area of par 8330 ac. Pop. 1943.

FETHIO an inlet or port, Greece. F. coast, at the entrance to the Gulf of Volo S. W. side; lat. 39° 8' N. lon 23° 0' E. 6 m. long and from 2 to 9 wide.

FETHLAF, one of the Shetland isles, separated from Unst on the N. and N. Yell on the W. by a sound of considerable breadth lat. (E. point) 60° 36' 12" N. lon. 0° 46' 1" W. (W. point) 60° 36' 12" N. lon. 0° 46' 1" W. It is irregular in form about 7 m. long by 4 broad and is indented by a number of bays, none of which are considered as safe harbours. Inhabitants are agriculturists and shepherds. Pop. 653.

FETHLAR or **NORTH Yell** par Scot. Shetland 4 m. by 4 m. Pop. 1608.

FETTA a vil. and par. Sw. Sweden on Gylene, 84 m. F. S. C. Ore. It stands amidst magnificent scenery nearly 5000 ft. above the level of the sea and is well built. It contains a parish church and has an excellent spring. The inhabitants speak Rumanian. Pop. 558.

FETTERHALL par Scot. Kincardine 13192 ac. Pop. 1741.

FEYLA, small is. W coast, Norway 32 m N W Bergen, at the S E entrance of the Fens Fjord.

FEX (*Kenouss* cr), once an independent state, now the most N section of the empire of Morocco bounded, N by the Mediterranean E by Algeria, S by the river Ou-el-hagh or Morhagh, which separates it from Morocco Proper, and by the Atlantic. It was conquered and united to Morocco in 1648.

FEX [Late, from Arabic, *Fes*] an important city Morocco, nominally the second, but in reality the principal city in the empire. lat 34° 6' 3" N, lon 5° 11' 13" W (p. 1) 100 m E. the Atlantic 85 m S. the Mediterranean, and 245 m N E. the city of Morocco. It is finely situated on the slope of several hills, which surround it on every side except on the N and N E, and whose acclivities are covered with orange groves, orchards, and gardens. It is divided into the New and Old City. Both are surrounded by walls now in a state of utter decay. The streets are narrow dark and extremely dirty especially in rainy weather. The houses are high, with a projection on the first floor which intercepts much of the light, an inconvenience increased by galleries or passages, with which their upper stories are connected. They have flat roofs, on which the families spread carpets in summer to enjoy the cool breezes of the evening. Many of them are so much decayed, as to require propping and almost all are without windows. Every trade or profession has a street or section of the town allotted to it. Provision markets are numerous and abundantly supplied. There are, it is said, upwards of 200 mosques in the city the principal of which is called El Carouah which contains 300 pillars, a number of gates, and two handsome fountains in the court. Within this mosque is a covered place for women who may choose to participate in the public prayers, an indulgence not allowed to the far sex in any other Mahometan place of worship, it being thought that, as the prophet has not assigned them any place in paradise, there was no occasion for them attending public devotions. The most frequented mosque is that of Sultan Muley Edrie, the founder of Fex, who is venerated as a saint, and whose remains are deposited here. The minaret of this temple is the finest and loftiest in S. M. This mosque is the most sacred sanctuary in all the country affording safety and protection to the most atrocious criminal. All the other mosques, with exception of that belonging to the palace of the Sultan, are small and mean. The only other remarkable building to be seen at Fex is the Sultan's palace situated on an elevation in the new city. It is composed of a great number of court-yards, some half-finished others going to decay. Its gates are always kept closed and are, besides, vigilantly guarded so persons but those particularly privileged being admitted. There is close by a common kitchen garden, belonging to the palace, with some trees and a few buildings for ornament. The city is well supplied with water from the river Fex. There are a great number of public baths, which are open all day and several hospitals one of which is very richly endowed, but is used only for the treatment of lunatics. There are nearly 200 *haras* or stables but the guest must find his own food and bedclothes, nothing being furnished him excepting water and a mat. The manufactures consist of woollen cloaks, shawls, silk handkerchiefs, shippers, the leather of which they have the art of tanning in fine perfumation and caps of felt, extensively used throughout the N of Africa, and from the place of manufacture, named *Fees* coarse hams, fine carpets, common earthenware, saddlery and copper utensils. The city is governed by a kadi or governor who, as the lieutenant of the sovereign, has the executive power the kadi is charged with the civil jurisdiction. A minister called *Al Motassam*, fixes the price of provisions, and decides all points that arise in this department of the public service. The climate of Fex is intensely hot in summer and is on the whole, unhealthy. Fex, founded in 795, by Muley Edrie, was capital of an independent state, and subsequently became so famous as a seat of Arabian learning, that its schools of philosophy and physical science were resorted to, not only from all the Mahometan states of Africa and Spain, but even from Christian countries. The remains of its

institutions still attract round them a number of Mahometan doctors, and the schools are frequented by a great many scholars; but the studies are confined to the Koran and its commentaries, with a slight distaste of grammar and logic, metaphysical alchemy and astrology. Fex is considered a holy town by the Western Arabs, and was also resorted to by them as a place of pilgrimage, when the way to Mecca was obstructed. After its conquest in 1548 by Morocco it commenced to decline, but recovered for a time after the fall of the kingdom of Cordova, and in consequence of edicts of Philip II against the Mahometans. Pop. estimated at 88,000 composed of Moors and Arabs, 65,000 Barbars, etc., 10,000 Jews, 5000 Negroes, 4000.

FEZMAH a mha. Algeria, 20 m. S. S. W. Bone. It is about 20 m. long and 24 broad, very shallow and abounds with flamingoes and wild fowl and its shores with crops and wild hore.

FEZZAN (anc. *Phazania*) a kingdom of N Africa, usually considered as lying between lat. 24 and 31 N and lon. 12 and 17 E being thus about 400 m. in length and about 200 m. in breadth although its limits have not been accurately defined. It is bounded by Tripoli on the N., and on all other sides by the Sahara or Great Desert. In the N. part are three ranges of mountains or rather hills, as none of their elevations exceed 1200 to 1500 ft. One of them, called the Sandeh or Black Mountains, is composed of basalt, nearly black with a shining or polished appearance. They are perfectly barren of irregular form occasionally broken into detached masses, and sometimes rising into conical peaks. To the S. of these ranges, the country consists of extensive sandy plains, destitute of vegetation alternating with ridges of low hills the valleys of which contain nearly all the cultivable soil in the territory. Dates are the principal produce, and form the chief food of the inhabitants, small quantities of maize and barley are also grown. Figs, pomegranates, lemons, and legumes are plentiful as are also pot herbs and garden vegetables. There are no rivers or brooks, and few natural springs but water is found in abundance at various depths, generally from 10 to 20 ft. There are a few small lakes, the surface of which are sometimes covered with a thin crust of carbonate of soda. In summer it is extremely hot, but in winter the cold is pretty severe. Early in 1860, snow fell at Soktra, and, too, the thickness of a man's finger was formed at Mourouk. Rain seldom falls in the Fezzan it does not rain for years together and but little at a time. With exception of goats few domestic animals are reared. In the S. parts some flocks of a peculiar kind of sheep are met with, and in the most fertile districts a few horned cattle. The wild animals, which are abundant, are lions, panthers, hyenas, jackals, tiger-cats, gazelles, and foxes. The birds of prey are vultures, falcons, the ostriches, and bustards. The lower classes of the people are industrious, and some of them work skilfully in gold, silver and from those who excel are held in great respect. The only means of commerce of the country are a little coarse linen and cotton cloth. But a considerable trade is carried on by caravans with Timbuctoo and Bornou; while Mourouk, the capital, is the rendezvous of caravans coming from Cairo, Bengasi, Tripoli, Ghadames, Tena, and Soudan. The natives of Fezzan are of a mixed race, between those of various African countries. They are of middle stature black complexion, with hair inclining to woolly high cheek bones, nose less depressed than in the negro small eyes. They are cheerful, fond of dancing and music obdurate to each other neither passionate nor revengeful but fraudulent, cowardly and sly. Their houses are mostly of mud. The principal towns are Mourouk towards the N. boundary; and Soktra, towards the S., distant from each other about 120 m. There are other eight or 10 towns, and a vast number of villages. Fezzan is governed by a chief who has the title, and exercises the power of a Sultan within his own territory but is dependent on the Pasha of Tripoli to whom he pays tribute. In time of war the Sultan is said to be able to bring from 15,000 to 20,000 men into the field. The pop. has been variously estimated at 75,000 and 150,000.

FIACCONE [anc. *Fiacco*] a kingdom of Italy div. 4 mna, prov. of, and 7 m. S. Novi, in a mountainous district. It contains two parish churches, an elementary school a charitable endowment and the remains of a very ancient fort.

Marumata. The chief manufacture of the county is linen of different kinds, such as damasks, diapars, checks, ticks, &c. The first two are made principally at Danderfina; the last two at Kirkcaldy. There are salmon fisheries on the Leven and Eden, and at Newburgh; and extensive herring fisheries along the N.E. E. and S. coasts. Cod, turbot, halibut, and other sea fish, are also taken in great quantities on the coasts. The number of towns and villages in this county is remarkable, the entire S. and E. coast being lined with them. The principal of the former are Danderfina, Kirkcaldy, Cupar, the county town, and Dyce. It contains 61 parishes, 13 royal burghs, and a university St. Andrews, the oldest in Scotland. It returns four members to the House of Commons for the county, and one for each of three districts of burghs. Pop. (1841) 149,140. (1851) 153,346.

FIGARI a cape, N.E. coast, of Sardinia forming the N. entrance of the gulf of Terra Nova. It stretches far out into the sea, and has, immediately to the S. of it, the high island of Figarale.

FIGARI-SIMA (Chinese, *Tung-tao*) an isl. Japan Geozo group, a little W. of Hainan, and belonging to the province of Fuen.

FIGUEAC a tn. France, dep. Lot, around Figueac, 32 m. N.E. of Cahors, exceedingly agreeable situate on a rounded hill slope, the foot of which is bathed by the Cèze in the midst of a hollow surrounded with an amphitheatre of wooded hills, dotted with villas, &c., and rich in vineyards, orchards, and gardens. The town itself however is generally mean, having narrow crooked streets and few good modern houses; many of the older are interesting for their quaint gables, among which are the townhouse, once a feudal keep, called the château of Baldeine the collegiate church of the abbey that long flourished here and the church Notre Dame du Fay. Two singular obelisks, named *4 guillets* still exist, one on the S. another on the W. and appear to have been used, in early times, to support lighthouses for the direction of travellers coming to the town through the extensive forests that once surrounded it. Figueac was a walled town and some remains of the old defences still exist. It has a commercial college, manufactures of linens and cottons, with some dye-works and tanneries and a trade in cattle. Lead is found in the environs. (Champlain, Jan. was born here in 1780 died, 1832. Pop. 5952)

FIGHELDEAN par. Eng. Wilt. 2779 ac. Pop. 227

FIGHIO or **FIGHIO** a tn. and dist. N. Africa, Morocco country of Sghemmes, 8 m. from the Atlas, 165 m. N.E. of Fez. A considerable trade is done with Fez, Tafielt, and Tount and it is a rendezvous for the Mecca and Timbuctoo caravans and the seat of a fine woolen cloth manufacture. The people are warlike, and adept in munging.

FIGHTING ISLAND an isl. Upper Canada, on the Detroit River 3 m. below Sandwich area, 1800 ac. of which 300 are arable. There is a good fishery here.

FIGLINE, or **FIGLINE** a tn. in Tasman prov. of 17 m. S.E. Florence, in a plain near a bank. Arno, here crossed by a stone bridge. It is of a rectangular shape, and enclosed by a wall, traversed by a handsome street, forming a continuation of the public road. It contains a large and elegant square, one side of which is occupied by a fine church and another by a well managed hospital in the east of a civil and criminal court, and has an important weekly market. Pop. 4004

FIGUIG tn. and dist. Morocco. See **FIGHIO**

FIGO (Chinese *Pai-How*) a prov. Japan Isl. Kiusiu bounded, N. by Takungo and Honggo, E. by Boungou and Boungou, S. by Saitouma, and W. by the bay of Sambara. It is more than 60 m. long, and includes the island of Amakusa. It is covered with mountains clothed with forests, and abounds in valleys; the valleys produce rice, millet, and cotton, and the coasts swarm with fish. It is divided into 14 districts. Chief towns, Kusanomoto.

FIGUEIRA a tn. and par. Portugal prov. Douro, chief place, com. of same name, 24 m. W.S.W. Coimbra; lat. 40° 5' N. lon. 7° 1' W. R. bank of the Douro at the mouth of the Mondego. The harbour defended by a fort, is safe, but of difficult access, particularly for large vessels. It has a consider-

able trade. Principal exports—salt, oil, wine, vinegar, dried fruits, oranges, &c. Pop. 4400.

FIGUEIRO par. Tránsis a tn. in Portugal, prov. Beira-Baixa, com. of and 94 m. N. of Coimbra in a deep valley in the midst of lofty mountains, 1 bank. Also an adjunct of the Zamora. It has two hospitals, two convents, a manufactory of iron utensils and implements, and a fair which lasts three days. Excellent wine is produced in the vicinity. Pop. 2180.

FIGUERAS, a tn. Spain, Catalonia, prov. of and 21 m. N.E. of Girona, in a plain between the rivers Muga and Manol. The streets, in general, are wide, straight, level and well paved, and the principal square contains the court-house and other spacious edifices. It also has a large and ancient parish church, several convents, two chapels, a college six schools, civil and military hospitals, a prison, urban asylum, one tombstone, cavalry barracks, theatre and public storehouse. Manufactures—linen and woolen fabrics, leather, soap, cork, brandy, wine, oil, &c. Some trade is carried on with France in grain and figs. On a hill N.W. of the town, is the castle of San Fernando considered one of the strongest fortresses in Europe. It is an irregular pentagon, and its approaches are everywhere commanded by batteries almost all its outer buildings are bomb-proof and its walls of immense strength are surrounded by wide and deep fosses. Throughout the whole are covered ways and mazes ramifying in every direction. The magazines, store-houses, stables, barracks, &c. are very extensive, the latter capable of accommodating nearly 20,000 men. The fortress is commanded by a military governor. Notwithstanding its strength this fortress was taken by the French in 1808, 1811 and 1823. P. 2552

FIGURINA an isl. Arctic Ocean being the most N. in the New Siberian Archipelago lat. 70° 15' N. lon. 140° 40' E. It is a low island, a little higher than the rest, and separated by a narrow lofty sandbank, from the sea, with which it communicates by a small stream. It is about 30 m. in circuit, greatest depth, 22 f. contains three small islands, and is well supplied with fish.

FINDHORN a vil and seaport, Scotland co. Elgin, on the Findhorn at its embouchure in the Moray Firth 26 m N.E. Inverness lat. 57° 40' N lon 3° 56' W. The harbour which is, in great part a natural one, forming a large bay or loch several miles in extent, is amongst the safest on the coast, and affords good accommodation for shipping but the entrance which is only about 3 m. wide, is rendered somewhat difficult by a shifting bar. The depth of water in the shallowest part of the channel is 104 ft. During the lowest neap tide. Iron tar and timber are brought from the Baltic and coals also salt and bone-dust, are also imported. The exports are fish, grain, eggs, and lumber the last chiefly from the neighbouring forests. But the principal business of the place is in taking and curing herring, cod, and ling, of which large quantities are annually exported. The site of the vil lags has been frequently changed in consequence of the encroachments of the sea. Pop. (1841) 806 (1851) 940.

FINDHORN a river Scotland rising in the Monachian mountains, co. Inverness, between Stratheden and Stratherrick, flowing N.E. through that co. and co. Cairn and Moray and, after a total course of about 40 m direct distance, falling into a harbour or loch looked by of same name in the Moray Firth. It has excellent salmon fishings. During the memorable Moray floods of August 1829 the Findhorn rose in some places 50 ft. above its ordinary level.

FINDON, an isl., W coast, Norway, forming one of a numerous group in the Bafra fiord, 15 m N.E. Stavanger. It contains a church, and a monument, said to commemorate a victory gained over the Scots. The Norwegian hero Thord is also said to be buried in it.

Vol. L.

FINDON or **FINDRA** a fishing vil. Scotland, co. Kincardine, on the sea-coast, 8 m S. Aberdeen, 10 m N. of the united barlocks. The smoking is effected by burning the green branches of fir which imparts a bright yellow colour and most agreeable flavour to the fish. Haddock, thus cured, are sent to all parts of the country. Pop. 190.

FINGOES, or **WANDERERS** a race of S. Africans belonging to various scattered tribes, originally from the E. coast N. from Kaffra, but now chiefly inhabiting a tract of country formerly called the central ground, between the Lower Kankassan and Great Fish River but now forming part of the prov. Victoria, to which they were brought, to the number of 1 000 and there settled under the auspices of the Colonial Government. The men of this tribe have woolly hair round noses, thickish lips, straight and muscular limbs and average 5 ft. 8 in. in height. They are active, brave, and in general extremely good-natured. Their clothing is a dressed or hide, worn with the hair inwards. They decorate themselves with ornaments of brass and wear rich mantles on their feet. Their huts are constructed of boughs covered with grass their food curried milk and millet. Previously to their removal to their present settlement, the Fingoes lived in a state of abject slavery under the Amakosa Kafir. Since that period, they have remained faithful to the British, and have recently distinguished themselves in the war at present (1852) raging in S. Africa.

FINGRINGHOE par Eng Essex; 8438 ac. Pop. 863.

FINISTÈRE or **FINISTÈRE** [Latin, *End*] a dep. France, so named from occupying its most W. extremity bounded, E. by dep. Côtes-du-Nord and Morbihan, and on all other sides by the sea. N. by the English Channel and W. and S. by the Atlantic. greatest length N. to S., 68 m. greatest breadth 56 m. area, 2516 sq. m. The coast line is bold and precipitous, composed almost throughout of lofty granite cliffs in which the violence of the waves has made numerous deep indentations, the two most important of which both on the W. form the extensive bay of Douarnenez, and the famous radeau of Brest. The interior is traversed by two chains of hills. The more V. called Mount Arde, entering on the E. from Côtes du Nord, stretches first W. N. W. then W. S. W. terminating in Mount Fou, in Brest road. It is about 88 m. long and rises to the height of 900 ft. above the sea. The other chain known by the name of the Montagnes Noires or Black Mountains, enters on the S.E. also from Côtes du Nord and proceeds N.W. for about 35 m. to the coast, where it forms the lofty tongue of land between Brest road and the Bay of Douarnenez. These chains send out numerous ramifications, which extend in all directions, and give the whole department a very hilly appearance. In some parts it looks black and desolate, as in arrondissement Chateaulin where are those extensive forests, almost barren known by the name of Landes but in many other parts the scenery is rich and beautifully diversified. The number of streams is very great. But the only navigable rivers are the Aulne, Ecluse, and Odet. An important addition to the water communication is the canal which connects Brest with Nantes. The climate is more equable than that of the interior of France the range of the thermometer being much more limited. In winter it seldom descends below

124

the freezing point and then only for short intervals, snow without fail, and in some years ice is never seen. On the other hand summer is often deficient in heat, and winters and rains are very frequent. Winds, more or less W blow during three-fourths of the year and often with great violence. Owing to the rocky nature of the surface, scarcely one-half of the whole is available for cultivation, and much more than one-third is waste. The arable land, however, is of good quality and well cultivated, and the grain raised, after satisfying the home consumption leaves a considerable surplus for export. The principal crops are wheat, rye, and oats. Potatoes and flax are also extensively grown and from the produce of the orchards a good deal of cider is made. The domestic animals are generally of good breeds. The horned cattle are rather small but the horses for draught are excellent and some, of a large size, are reared in great numbers. From 10,000 to 12,000 are annually disposed of to other departments. The fisheries on the coast are extensively carried on, and that of codfish is particularly valuable employing a great number of hands, and producing an annual value of about \$50,000. The minerals of the department are of considerable importance, including iron, zinc, blende, and lead. The mines of the last, at Poultonen and Huelgost, are considered the most productive in France. The manufactures consist chiefly of such ordinary linen, soap, oil candles, ropes, leather paper and tobacco. Shipbuilding also is carried on to a large extent. The trade greatly favoured both by internal communication and a number of good harbours, is extensive. The principal exports are grain, oil, brandy, mardane, sailcloth and tobacco (the imports, Dutch cheese and colonial produce). For administrative purposes the department is divided into five arrondissements—Quimper the capital, Brest, Chateaulin, Morlaix, Quimperic subdivided into 43 cantons, and 252 communes. Pop. (1846) 612,151.

FINISTERRE CAPE.—1 (see *Arctium Promontorium*) the most W headland of Spain, Galicia lat. 42° 4' N lon. 9° 21' W. It is of considerable elevation, w. of the last summit.—2 (Latin, *Promontorium Cithonium*) The most W headland in France, dep. Finistère (Britann), lat. 48° 30' N lon. 4° W.

FINLAND.—A small, fertile, and fertile, in the Elbe, belonging partly to Hamburg, and partly to Hanoverian territory of Harburg. It is protected by a surrounding wall 20 ft high and has two churches, and two schools. Its inhabitants are engaged in boat building and fishing and agriculture. Pop. 1,000.

FINLAND (GUARDIAN'S DICTIONARY OF LAIN FINE, *Finlandia*) a det. or gov. in the N.W. of Russia, bounded N. by Norway W. by Sweden and the Gulf of Bothnia, E. by the Gulf of Finland a corner of gov. Petersburg, and Lake Ladoga, and E. by gov. Olonets and Archangel. length N. to S. 650 m. breadth near the centre only 112 m. but toward the S. where it is greatest, 370 m. area, about 84,900 sq. m. The coast generally presents a face of bold and precipitous granite cliffs and is lined by numerous small islands and rocks which make the navigation extremely dangerous. The interior may be described as a vast table land, with an average height of 400 to 600 ft. above the sea. It is not, however, by any means a monotonous flat, but is much broken by hills and valleys and occasionally rises into mountains, of which a chain which at Mankala, in the N., has a height of nearly 4,000 ft. is continued S., though with several interruptions, and terminates in lofty cliffs in the Gulf of Bothnia. The great mass of the mountains is composed of red granite and vast quantities of the same rock lie in boulders on the lower grounds, and prove a very serious obstacle to their cultivation. Many of the heights are bare, but the greater part of those of moderate elevation are covered with forests, chiefly of pine-wood, and in combination with the vast number of lakes enclosed by their shores, form very remarkable scenery. These lakes, both by their number and individual extent furnish one of the most characteristic features of the country. The most important of them are Lake Ladoga, the greater part of which belongs to the grand duchy of Saima, Peltjärvi, all in the S. where the greater part of the surface is occupied by water the lake, near the centre, and the Enare, in the extreme N. These lakes form the chief basins of Finland, receiving the far greater part of its streams, in the first

instance, and afterwards discharging their waters into the sea by rivers generally of no great length but of much width and depth. The longest rivers are in the N., where the lakes are fewest. Among others may be mentioned the Tornel, forming a long stretch of the boundary between Finland and Sweden, the Kemi and the Ujo. The climate varies much, according to locality. In Lappland in the N. it is polar but somewhat modified. Further S. the winter begins in the middle of October and continues to the middle of May but even during the coldest season thaws of several days duration are not infrequent. Spring appears suddenly and continues for about a month, lasting only about four months for summer and harvest. The summer months are so hot and the weather so dry that the crops near the Gulf of Finland where the soil is of a sandy texture, often suffer from drought. The soil consists generally of a clayey or sandy loam, and must be of good natural fertility since, notwithstanding a very imperfect system of culture and the unfavourable circumstances in which the crops are reared, a considerable quantity of grain is exported from Finland when in possession of Sweden was regarded as its most important granary. The principal crops are wheat, rye, and oats. Owing to the nature of the surface and climate a great part of the land is fit only for pasture, but the number of stock is greatly limited by want of winter fodder. In the N. where vegetation is almost confined to the growth of moss and lichen other domestic animals are superadded by the remainder of which great herds are kept. The forests are very extensive, and furnish one of the chief sources of public revenue. In addition to timber chiefly large quantities of potash pitch and resin are obtained from them, and form the principal articles of export. The minerals are chiefly confined to iron, lead, sulphur, nitre, glass and granite. The first only is wrought to some extent and supplies several furnaces of the last, a great number of excellent quarries have been opened chiefly on the borders of the lake or on the coast, to secure the advantage of water carriage. From these, blocks of extraordinary magnitude and beauty are obtained, and employed both for architectural and artistic purposes. One of the finest specimens is furnished by the obelisk monument recently erected in St. Petersburg to the Emperor Alexander. In its rough state it was 12 ft. in diameter and 80 ft. long. Manufactures are insignificant, the principal articles of trade have already been incidentally mentioned. The inhabitants of the W. coast are of Swedish, and those of the S.E. of Russian origin but the far larger portion, amounting to nearly five-sixths of the whole are Finns, with a slight mixture of Laplanders. The latter in a pure state, are only to be found in a few very limited districts of the N. The Finns have been divided by ethnographers into two great families of W. and E. Finns, but they are so much intermixed and possess so many common features, that it seems impossible to decide between them. Up to the 12th century the Finns lived under their own sovereigns and were Pagans. Their conversion to Christianity took place about the middle of that century after their conquest by the Swedes. They are almost all Lutherans. They are somewhat pugnacious in their temperaments but patient, laborious, not without enterprise and very hospitable. Their prevailing vice is an excessive fondness for ardent spirits. In 1721 the part of Finland which formed prior to 1709 was ceded to Peter the Great by the treaty of Nystad. The remainder was conquered from the Swedes in 1809 and now forms a division of the Russian empire, under the name of a Grand Principality the emperor exercising his supremacy as Grand Prince. The states, composed of the representatives of four social orders, are convoked by him; and no new laws can be enacted nor new taxes imposed without their sanction. Some modification of this constitution has been made by the substitution of a senate for the states, but it still continues to be at least virtually recognised and the ordinary procedure of the courts of law is in accordance with the former in so far as Swedish rule. The proper seat of government is at Petersburg, but a governor-general representing the emperor resides in Helsingfors. Administratively Finland is subdivided into eight län or counties—Wilburg, St. Michael, Nyland, Tavastehus, Åbo, Birkoberg, Wm. Kuopio, and Uleåborg. It is sometimes also subdivided into the two leppenmarks of Kemi Tornel, and the dist. of Wilburg. Pop. (1850) 1,539,000.

FINLAND (*Gulf of*), a great arm of the Baltic, on the E. side, having Finland on the N and the Russian govts. Esthonia and St. Petersburg on the S. The length of the gulf, E. to W. is about 250 or 300 m. breadth at the entrance, or narrowest part, 40 m. towards the head, where it is widest, about 80 m. Its N shores are considerably serrated but present no very deep indentations. The S coast is still less marked. It receives but few rivers, and none of them, with exception of the Neva, of any great size. The latter enters the head of the gulf communicating with Lake Ladoga. The other rivers that may be mentioned are the Luga and Narva, which disengage within a short distance of each other near the head of the gulf, on the S. side. It contains numerous islands, of which Cronstadt is the largest. There are various towns of considerable importance along its shores, St. Petersburg occupying its E. extremity. Amongst them may be named Narva, Revel, Port Balise, Kholmogorsky, Frederikshamn, Helsingfors, and Wyborg or Viborg.

FINMARK (Danish and Swedish *Finnmark*), a baili, Norway prov. Formed forming the most N part of the kingdom, bounded, E. by Russia S. by Sweden and bail. Nordland, and on all other sides by the Arctic Ocean. It consists of a mountainous and usually sterile tract, stretching 140 m. N. E. to S. W. with an average breadth of about 40 m. its coast deeply indented by bays and lined by numerous islands. Both the severity of the climate and the general barrenness of the soil confine cultivation within very narrow limits. Where it is possible, the chief crops raised are barley and potatoes. The only trees are birch and pine, and occasionally willow and mountain-ash. The principal rivers are the Tana, forming the Russian boundary on the E. and the Alton. The valley of the latter is the finest part of the country and presents some fine Alpine and even rural scenery. The islands already mentioned. known by the general name of Lofodden form a long line of coast where important fisheries are established and give employment to the greater part of the population. The cod fishery alone employs 3916 boats and 10,824 men, and it produces an upwards of 16,000,000 of fish, 21,500 barrels of cod liver oil and 6000 barrels of roe. The inhabitants are Finns and Laplanders. Pop. (1845) 36,854.

FINMERE per Eng Oxford 1542 ac. Pop. 399.
FINNAN—1 A vil Scotland See *Finroo*—2 A small river Scotland, co. Inverness, which flows through the valley of Glenfinnan and falls into the E. extremity of Loch Shiel.
FINNINGHAM per Eng Suffolk 1242 ac. Pop. 671.
FINNINGLEY per Eng Notts 5970 ac. Pop. 676.
FINNOE per Ire Tipperry 5054 ac. Pop. 1045.

FINO or *Finno* Finro a promontory kingdom of Italy on the shore of the gulf, and 17 m. E. S. E. Genova. It is a large and lofty headland of a round shape rendered conspicuous from a distance at sea by the towers and square fort which crown its summit. There is deep water almost to its base and immediately E. of it are the town and harbour of some name.

FINO a vil and com. Italy Lombardy prov. of and 6 m. S. Como, on a gentle eminence at the foot of which the Sesveo rises. It is a cheerful-looking place, and contains a parish church, and the remains of an ancient castle. Pop. 1475.

FINSBURY a pari bar England co. Middlesex, forming the N part of London, having E. the Tower Hamlets, W. Marylebone, and S. the city of London and liberty of Westminster. It embraces Clerkwell Kilington and other parishes and near its S. E. extremity is a square church, and district of its own name. Within its limits are situated several important buildings and institutions including St. Bartholomew's and the Foundling Hospital the Charter-house Gray's Inn and the British Museum. Since the passing of the Reform Bill it has sent two members to the House of Commons. Registered electors (1850) 17,736. Pop. 625,773.

FINSTERWOLDE, a vil. Holland, prov. of and 28 m. E. by S. Groningen near the estuary of the Dollart. It is a western place, and has a new church, a school, and a poor-house. Inhabitants agriculturists. Pop. 1007.

FINTUNA, a market tn. Ireland co. Tyrone 7 m. S. Omagh. It has a parish church, places of worship for Free-Methodists, Methodists and R. Catholics two national schools and a dispensary. The linen manufacture, once extensively carried on here, has lately been revived. Spades, and other

agricultural implements, are made to a great extent; and considerable quantities of several metals work are done for Belfast and Glasgow houses. Weekly market on Friday monthly fairs. Pop. 1504.—(*Local Correspondent*).

FINTRAY per Scot Aberdeen 15 sq m. Pop. 1080.

FINTRY a vil and par Scotland, co. of and 12 m. W. S. W. Stirling. The village contains a neat parish church two endowed schools, and a cotton factory employing nearly 300 hands. Area of par 18,000 ac. Pop. 825.

FINUGL, par and tn Ire Kerry 8741 ac. Pop. 1209.

FINVOY per Ire Lond. 16,898 ac. Pop. 5298.

FIORANO (Lat. *Floriensis*) a vil and com. kingdom of Italy Piedmont, prov. of and 2 m. W. Ivrea, on the Dora. It contains a parish church a fine villa with English garden, and the remains of an old fort. and has a considerable trade in iron ore, mined in the valley of Ivrea and carried over into the valley of Aosta. Pop. 1040.

FIORENZUOLA—1 (Latn. *Floriensis*) a tn. Italy Parma, in a beautiful plain, on the Emilia, and r. bank Arda, here crossed by a handsome modern bridge, 15 m. S. E. Piacenza. It is well built, nearly in the form of a perfect square contains a collegiate church, richly decorated a convent, a palace, with the remains of an ancient theatre; a remarkable tower with chains hanging from it, to which criminals are said to have been bound an hospital, a primary a secondary and a Jewish school and has a weekly market and three annual fairs two of which last each three days. Pop. 3870.—2 A tn. Tuscany prov. of and 45 m. N. E. Florence at the bottom of a deep valley 1 bank Santeramo. It is situated in a mountainous district, known by the name of the Florentine Alps is the seat of a court of justice and contains a parish church, hospital and ecclesiastical seminary. It was once fortified and makes a figure in the early Italian wars. Pop. 679.

FIROA a small isl Red Sea, about 18 m. from the coast of Arabia lat. 17 13 N. lon. 41 30' E. celebrated for its pearl fisheries.

FIROO or *Fiuroo* a long and lofty isl Japan about 10 m. off N. W. coast of Kuma. It stretches F. N. E. and W. S. W., between lat. 33° 10' and 33° 25' N. while the N. E. end of same name is said to be in lon. 129° 37' E. The Dutch had their factory in this place from its first settlement in 1609 till its transference to Desima in 1641. The village lies on a bay in which is a vast round basin connected with the bay by a narrow channel. At low water however this basin is generally dry and the entrance is narrow and dangerous, but in the bay is good and safe anchorage.

FIROO a considerable tn. Japan isl of Nippon prov Yamato 45 m. S. S. E. Masao.

FIROO per Eng York (W. Riding) 1380 ac. P. 204.

FIRENZE, a tn Italy See *Florence*.

FIRLE (W. Ire) per Eng Sussex 3393 ac. Pop. 701.

FIRMANY a manufacturing tn. France, dep. Loire, 6 m. S. W. St. Etienne. Its chief manufactures are cast-iron castles, machine bellows, forge hammers, window glass, and bottles. Some ribbon weaving is carried on. There are several collieries in the vicinity. Pop. 2250.

FIRMOZABAD—1 (*Glasow or Oow*) a tn. Persia, prov Fars 60 m. S. E. Shiraz lat. 28° 54' N. lon. 52° 37' E. It contains many interesting ruins, and is famous for its other of roses, which is reckoned the finest made in Persia. It carries on a considerable trade in horses cotton and various agricultural products. Pop. estimated at 2000.—2 A tn. Hindostan prov Agra, 1 bank, Jumna, 58 m. N. by S. Gwalior.

FINSBY two pars. Eng Lancashire—1 910 ac. Pop. 232.—2 (Near) 2292 ac. Pop. 101.

FIRST ISLAND or *MURDER ISLAND*, a small isl. Mozambique Channel, S. W. coast of Madagascar from which it is distant about 3 m. lat. 22° 0' S. lon. 48° 45' E. named Murder Island by Captain Owen, in consequence of the murder there of two of his midshipmen by the natives.

FIRST and *STREVEN*, par Scotland, Orkney 9 sq m. Pop. 1387.

FISCHIA or *FENCHIA* (anc. *Apocynum*) a market to Lower Austria, r. bank, Fiuma, here crossed by a bridge, with an old massive tower at its junction with the Danube, 12 m. S. E. E. Vienna. It is an ancient place of Roman origin surrounded by hills on the W. and S. contains a castle, and

has manufacture of cotton a print-field, and a cotton-mill. The Tumpers had an establishment here. Pop. 1220.

FISCHIA, a river Lower Austria, which rises S. of Vienna, in the Raxenberg between the Pfander and Leitha, flows N.E. receiving the Pfander and the Raxenbach and passing the towns of Guttenbach Pfander, and Solmsen John r bank, Danube, at Fischamend 13 m. E.S.E. Vienna, after a course of 55 m.

FISCHBACH, a vil Prussia, prov. Silesia, gov. of, and about 30 m. S.S.W. Lagnitz. It stands in a beautiful district: contains a Protestant and a R. Catholic parish church and a castle, with fine gardens, belonging to Prince William of Prussia and has the works, a saw and two other mills. Pop. 1250.

FISCHENTHAL, a vil. and par. Switzerland, cant. of, and 18 m. E.S.E. Zürich, on the Ton. It stands in a valley of the same name, enclosed by lofty mountains of the range of Albhorn. It consists of a parish church, and a number of huts scattered through the valley. The inhabitants are not in comfortable circumstances, and have repeatedly been brought to the point of starvation, but the introduction of silk and cotton spinning has tended greatly to ameliorate their condition. Pop. 214.

FISCHHAUSEN a m. Prussia, prov. E. Prussia, gov. of, and 21 m. W. Königsberg cap. circle of same name on the Weich, a beautiful bay on the N. side of the Frische Haff. It is the seat of a court of law and several public offices has a church, manufactures of cloth, a bakery and four annual fairs. Pop. 1914.—The CIRCLES (area, 518 geo sq. m.) is flat, and well wooded, has a sandy soil. Pop. 26,573.

FISCHIANO a vil. Naples, prov. Principato Citra, 7 m. W. N. E. Salerno, with two parish churches and two convents. Pop. 1795.

FISIL RIVER [GREAT]—A. E. Africa, near the E. frontier of Cape Colony. It rises in about lat. 31° 30' S. lon. 25° E. flows N. and E. to about lon. 25° 45' E. where it takes a S. direction to lat. 22° 55' S. here it again turns to the E. and at lon. 20° 50' once more flows S. and S.E. till it falls into the sea, at lat. 23° 30' S. lon. 27° E. Its course like that of most of the rivers in this part of Africa, is strangely tortuous, rarely flowing more than 5 or 6 m. in one direction. Thus its entire length, in a straight line, may not much exceed, perhaps, 180 m. while, following its sinuousity, and the larger of these only it will extend to considerably upwards of 400 m. The Great Fish river traverses the countries Coudoo Somerset, and Albany and forms the boundary between the latter co. and that of Victoria to the E.—A river Drinnal N. America (see BACON'S RIVER).

FISHBOURNE (New) par. Eng. Sussex 61000 ac. P. 31.

FISHERMAN ISLAND a small isl. U. States, New York, 14 m. E. Long Island. It is 8 m. long by 1 m. broad, and contains a valuable dairy.

FISHER SOUND a channel, British N. America, W. coast, which separates Princess Royal Islands from the Continent, and forms the N. continuation of Fitzgibbon's Strait lat. 55° N. lon. 134° W. It was discovered by Vancouver 1799.

FISHERTON two par. Eng. Wilt. — 1 (Anger) 323 ac. Pop. 190. — 2 (De la Mer) 366 ac. Pop. 578.

FISHGUARD a seaport, m. and par. S. Wales, co. Pembroke. The town is beautifully situated 18½ m. N. Haverfordwest, at the mouth of the Gwynn, on Fishguard bay, for the most part, steep and irregular houses of different appearance water excellent and plentiful. Besides the parish church, there are places of worship for Baptists, Independents and Calvinistic Methodists; with a number of daily and Sunday schools. The port is one of the best in St. George's Channel. About 100 vessels belong to the port but its trade is inconsiderable exports, chiefly corn, butter and slaves imports, general goods, and such luxuries, and timber. The fisheries off the bay are also productive, and employ a considerable number of the inhabitants. In 1797 a French force, of about 1100 men, landed in the neighbourhood but were captured by the troops under Lord Cornwallis. Area of par. 4208 ac. Pop. (1841) 5018; (1851) 2816.

FISHLAKE, par. Eng. York (W. Riding) 6120 ac. Pop. 1226.

FISHLLEY par. Eng. Norfolk 476 ac. Pop. 4.

FISHITON par. Eng. Lincoln 5425 ac. Pop. 640.

FISKERTON, par. Eng. Lincoln 2043 ac. Pop. 463.

FISKESS [Latin Fines Reservoir] a th. France, dep. Maine, 10 m. N. W. Chateaux, once strongly fortified, one part of the defences still existing. It has manufactures of pottery tiles, and bricks and a liquor called vin-de-Maine, for colouring rose champagne. A church council was held here in 881 and another in 985. Pop. 2190.

FITATS [Chinese, Tehang-loo] a prov. Japan E. part of Isl. Nippon bounded, N. by Monte, E. by the Pacific, S. by Suimon, and W. by Mousai length nearly 100 m. It is mountainous watered by several large rivers, and has a fertile soil. A great trade is carried on in cattle and silk fabrics. It is divided into 11 districts and besides Mito its capital has a town of same name, on a small river near the coast. 106 m. E.N.E. Yedo.

FITERO a to. Spain, prov. Navarre, 15 m. S.W. Tudela, I bank Allama. In the older portion of the town the houses are ill built, and the streets narrow and badly kept but in the more modern part, the streets are good, the dwellings substantial and agreeably interspersed with gardens and olive plantations. It has a large monastery, fine gables parish church and two public schools, and, in the vicinity, thermal springs and baths, and geyser quarters. Linen and woollen fabrics, hampers, shoes, earthenware, soap, wine, and oil are manufactured. Pop. 2190.

FITFUL HEAD a promontory near the S. part of the mainland of Shetland W. of Quendal bay rising 929 ft. above the level of the sea. It has been rendered famous by Sir Walter Scott in his novel of the Pirate.

FITTLETON par. Eng. Wilt. 8175 ac. Pop. 880.

FITTLFORTH par. Eng. Sussex 2567 ac. Pop. 782.

FITZEE, or FUMON a lake, Central Africa, kingdom Waday or Bahr el Jebel, lat. 13° 45' N. lon. 30° 30' E. about 300 m. E. Lake Tchad. It is said to be four days journey in circumference during the dry season but in the wet season it ceases to double that extent, and is represented as having no outlet, although it receives a large river 400 yards wide at its embouchure. This lake is understood to be the same called Baga by Edrisi in the 11th century who asserts that it has a communication with the Niger.

FITZ, par. Eng. Devon 1512 ac. Pop. 773.

FITZABDING a beautiful and fertile district in the S.W. part of Abyssinia, prov. Gollam described by Dr. Beke as more resembling an English than an African landscape its rich and extensive pastures being interspersed with numerous trees, amongst which herds of cattle are seen grazing.

FITZHEAD par. Eng. Somerset 1208 ac. Pop. 366.

FITZROY an isl. near the N.E. coast of Australia, 8 m. N.E. Cape Grafton N. point 650 ft. high lat. 16° 55' S. lon. 146° E. (n.)

FILLINAR, or FLOMINAR, a vil., in Serbia, prov. of and 9 m. S.S.E. Sazani, near the Tamar, on a height open on all sides, and commanding a magnificent view. It contains an ancient parish church with three nave three other churches, and a primary school and has some trade in cattle, wine, fruit, and poultry and an annual fair. Pop. 2025.

FIUMARA in Mura, a vil. Naples, prov. Calabria Ultra I. dist. of and 7 m. N. Reggio. Pop. 1739.

FIUME [German, St. Veit am Flaum, Illyrian, Sava] a seaport in Austria cap. of the Hungarian Kingdom of Trieste, on the small river Fiumara, where it falls into the Gulf of Quarnero in the N.E. extremity of the Adriatic lat. (clock tower) 45° 19' 36" N. lon. 14° 26' 45" E. (n.) It consists of the old town built on a height and composed of very different houses and gloomy dirty winding, and ill-paved streets and of the new town, situated along the shore, and presenting a very marked contrast to the old town, by the number of its handsome buildings and the general spaciousness and regularity of its streets, provided not only with good central but also side pavement. The objects most deserving of notice are the old capitular or high church, Maria Himmelfahrt rich in marble, and adorned with a fine bust of the church of St. Veit, formerly belonging to the Jesuits, a handsome structure in the form of a rotunda, with a dome, and eight marble pillars, resembling the church of Maria della Salute, in Venice, the casino, an elegant edifice, the first story of which is used as a theatre; the governor's residence, barracks, warehouses, monasteries, &c. Fiume is the seat of a military governor a mercantile and commercial court, a maritime con-

embankment, sanitary district, custom-house, and bridgeway, and possesses a gymnasium, a high school and a burglar hospital. Its manufactures include linen, leather, crochets, red and green refined wax, tobacco and especially resins, but ship-building is the mainstay of the place, for which the splendid forests of the Julian Alps afford the greatest facilities. The harbour is very indifferent, and admits only small vessels but the roadstead has sufficient depth of water for vessels of any size, at a few hundred yards from the shore, and if not completely is at least well sheltered. The principal exports are corn, tobacco, wood, fruit, and salted provisions; the principal imports—sugar, rice, spices and salt. The commercial importance of Fiume was early perceived and easy communication with the interior has been secured by a magnificent road of 78 m. to Carlsbad, where the navigation of the Save and Culpas becomes available. Still the road being over the Julian Alps, is hilly and carriage and from the interior being wholly by land is expensive. The trade of the port is thus greatly limited; for being the only important outlet for the produce of Hungary it ought to be extensive yet, on an average of seven years, it exports from that country through Fiume only amounted to \$200,000 a year. Pop. (1846) 11,000—(Hafsløperger Paton's *Highlands of the Adriatic*).

FIUME FREDDO a tr. Naples prov. Circa Calabria, 10 m. S Paola, agreeably situated near the Tyrrhenian Sea. It has a handsome church, two monasteries and a summary; and an annual fair. Pop. 3814.

FIUMICELLO a vil. and com. Italy Lombardy prov. of and within 1 m. of Brescia of which it is properly a suburb. It is beautifully situated on a mountain slope, near the Mills, and contains a parish church, and a great number of handsome villas. Pop. 2183.

FIUMICINO a small seaport, Papal States, 16 m. S W Rome. It stands at the mouth of the right or W branch of the Tiber a channel artificially made by Trajan, and now the principal communication of the capital with the sea. It contains a line of well built houses, and a lofty square tower of five stories surmounted by a beacon, and a gate the entrance into the river which is difficult. An extensive fishery is carried on and furnishes a considerable supply of fish to Rome. Owing to its low site, Fiumicino requires the protection of strong embankments. It is much resorted to by the Romans as a holiday excursion.

FIVE ISLANDS.—1 A group of small isls. China Sea R. coast, China, prov. Quantonig lat. 21° 40' N lon. 119° 38' E. They are of moderate height, and most of them covered with trees. —2 A group in the Tasmanian or Morgan Archipelago 5 m. S E. Flinders Island about lat. 10° 20' N lon. 99° E —3 (Congo Islands) Bay of Bengal, off the S.E. and of British India one of the Adamanas lat. 11° 22' N lon. 92° 45' E.

FIVE MILE TOWN or **BLANCKENBURG** a small town in Ireland co. Tyrone, prov. Ulster lat. 55° 30' W by S. Clogher. It has a neat chapel of ease two Presbyterian meeting-houses, and a Methodist chapel. Market-day Friday several fairs annually. Pop. 703.

FIVEHILLS a vil. Eng. Somerset 1771 ac. Pop. 483.

FIVES, a vil. France dep. Nord, arrond. of and within 1 m. of Lille, with which it is so connected as to be properly its suburb. It has manufactures of chemical products glass, and galena, several beer-root sugar factories, and numerous oil-mills. Pop. 2749.

FIVIZZANO a tr. in Tuscany in a detached part of the duchy in the Val di Magra, 26 m. N N E Pisa. It is surrounded by walls, fountains, and towers in the seat of a court of law and as such public offices is well built and well served, contains a large and handsome square situated near the centre of the town, and adorned with a fine fountain, an elegant parish church, superior school and hospital and has two weekly markets and a trade in corn and oil. Pop. 3000.

FIZA, or **FIZAN**, a market to co. Hesse, on the Thale, 37 m. S.E. Erfurt. It contains a Protestant parish church. Pop. 4020.

FIZEN a prov. Japan, W part of Isl. Kiuin; bounded N by Takasaka and the Corea Channel, E by Takasaka, S.E. by the Gulf of Biore, and S.W. by the Yellow Sea. It includes 1016 islands and islets of which the Goto group and the isl. of Fierado are the most important. Fusan is of a

volcanic formation and exhibits evidences of former eruptions. It is famous for its beautiful porcelain manufactures. The method of preparing the clay for use is curious and interesting. A tree is hollowed in the form of a trough from 30 to 25 ft. long and 3 ft. thick at one end; this trough is placed on an axle, and properly balanced to the film and a heavy wooden hammer is attached made more weighty with iron water is poured into the thick end, causing it to sink, by which means the hammer is raised, till the water flowing out again at the lowered end, it falls with all its weight upon a mortar of marble or granite containing the porcelain slabs which it breaks without difficulty.

FLADBO, a vil. and par. Switland can. of and 15 m. N N E. Elrich, beautifully situated not far from the confluence of the Thur with the Rhine. It contains a parish church, a small castle and two schools. The wine made here is in high repute. Pop. 1003.

FLADHUR par. Eng. Worcester 7862 ac. Pop. 1640.

FLADSTRAND Denmark. See **FREDENSBURG**.

FLAGSTAD two isls. Norway. The one, on the W coast and belonging to the group of the Lofodens in lat. 68° N is about 15 m. long and forms a parish with 905 inhabitants the other off the S.E. coast 48 m. N E. Christiania and has a length of about 6 m.

FLAMANVILLE a vil. and com. France, dep. Manche, 13 m. S.W. Cherbourg with extensive granite quarries.

FLAMBOURGH a vil. and par. England, co. York (E. Riding). The village 4 m. N N E. Bridlington, on the centre of the celebrated promontory Flamborough Head, contains besides the parish church, places of worship for Unitarians and Wesleyan Methodists. It was formerly a place of some note, but is now merely a large fishing village. Area of par. 3578 ac. Pop. 1297.

FLAMBOURGH HEAD a remarkable headland, E coast England co. York lat. 54° 7' N lon. 0° 5' W (s.). It consists of a lofty range of chalk cliffs about 6 m. long and rising in many places to an elevation of 300 ft. perpen. disclivity from the sea. At the base of the rocks are several extensive terraces, and on the extreme point the promontory at a height of 214 ft. above sea level is a lighthouse with a revolving light, visible from a distance of 80 m. During the summer season the cliffs here are the resort of numerous numbers of sea fowl.

FLAMSFLEAD par. Eng. Hantsford 5299 ac. P. 180.

FLANDERS (Latin *Flandria* Spanish, *Flandes* Italian *Flandra* French, *Flandre* German and Flemish *Flandern* Dutch *Vlaanderen*) a former country or district, Europe, now included in Holland Belgium, and France. It stretched from the Scheldt, below Fort-Lillo, W along the Rhine or West Scheldt, and W N.W. along the German Ocean, to the entrance of the Strait of Dover near Gravel and was bounded E by the duchy of Brabant, S. Hainaut, and W the French provinces of Artois and Picardy. The origin of the name is unknown. It occurs for the first time, but in a very restricted sense, in the seventh century. The erection of the territory into a county took place in the ninth century and was made by Philip the Bold, king of France, in favour of his son-in-law, Baldwin, of the Iron Arm. It afterwards passed to the united houses of Spain and Austria, and ultimately to the latter but underwent considerable curtailment by the conquests of the French in the west, when part of it became French Flanders, and is now included in departments Nord and Ardennes and the conquests of the Dutch in the north who succeeded in including the most northerly portion of it in the province of Zealand. The remainder still retains its ancient name, and forms the modern provinces of East and West Flanders, in Belgium.

FLANDERS (East) (French, *Flandre Orientale*) a prov. Belgium bounded N by Holland, E. prov. Antwerp and Brabant, S. Hainaut, and W West Flanders length, N to S 84 m. central breadth, E to W 32 m. area, 1104 sq. m. The surface forms an extensive plain, sloping gently northwards. It wholly belongs to the basin of the Scheldt, while by itself, its tributaries, and canals connected with them, furnish ample water communication. Its soil partly of a sandy and partly of a clayey texture, is so industriously and skillfully cultivated that it has the appearance of a vast garden, and presents one of the richest rural landscapes which anywhere exists. The Pays de Waes, included almost wholly in the arrondissement

20 m long by 2 to 10 broad, with 5 to 12 fathoms water and 20 m N N W Shallowing lat. 54 48' 54" N lon. 8° 28' 12" E. (2) It is well built, and improving has several hand some streets, and three market squares, a high school and several others four churches, a hospital, a penitentiary and several charitable and useful institutions. The industry of the place comprises sugar-refining tobacco-spinning soap-making iron-founding, brewing distilling &c. In 1847 the port had 140 vessels of 14 606 total tonnage some of which traded to the West Indies. In 1848 705 vessels arrived in the port. Flensburg is the most populous and important town of the duchy of Schleswig and of ancient foundation. As early as the 13th century it was a wealthy place but it afterwards suffered greatly from wars and conflagrations. In the war with Britain in 1807 its commerce greatly suffered. In the war of 1848 the Germans took possession of Flensburg and its environs became the scene of hostile operations. Pop. 16,500.

FLERS, a tn. France dep. Orne 87 m N W Alençon. It contains the remains of a fine old castle, built of granite, in good preservation and has manufactures of linen, flannel, and particularly of ticking, which, in the town and neighbourhood, employs about 2000 hands, and of which from 1000 to 1300 pieces are sold weekly. Pop. 4068.

FLITCHING, par Eng Sussex 8488 ac Pop. 8007.

FLETON par Eng Huntingdon 780 ac Pop. 803.

FLEURANCE (Latin *Florance*) a tn. France, dep Gers. It is well built, has a fine public promenade, and a good trade in grain, legumes, wine and geese quills. Pop. 2230.

FLEURUS, a tn. and com. Belgium prov. Hainaut, 7 m N.E. Charleville. It has manufactures of coarse woollens and flax, with some ironworks and salt-works, and a trade in agricultural produce. In the vicinity August 30, 1823 the Spaniards, under Gassales, defeated the army commanded by Mansfeld July 1 1690 the French under Marshal Luxembourg defeated the Germans under Prince Waldeck June 26, 1794 the French republicans forces, under Marshal Jourdan, defeated the Austrian army and in June, 1815 the French gained a victory over the allies. Pop. 3544.

FLELDEN a vil. Home Cassel prov. of and 9 m S.W. Fuld. 1 bank. Friesland. It has a nucleus mills, and two annual fairs. Pop. 1738.

FLIMBY par Eng Cumberland 1842 ac Pop. 555.

FLIMA, a vil. and par Switzerland, can. Grisons. 11 m W Coira about 2700 ft. above sea level. It contains two churches one old, situated on a lofty eminence, the other new situated within the village. It is supposed to derive its name from the Latin *flumina*, on account of the number of streams which rise near it, and often cause damage by inundations. The inhabitants are Protestants and speak Romansh. Pop. 997.

FLINDERS.—1 A group of four is. off N.E. coast, Australia near Cape Flinders mouth of Bathurst Bay lat. 14 11 6 S. lon. 144 12 5' E. Two of the islands are each 8 m. long and they are high and rocky and are visible from a distance of 36 m. to 40 m.—2 W. Australia, co. Sussex, between Cape Leveque and Cape Beaufort lat. 24 30' S. There is no landing for a boat on its E. and N. shores.—3 A river N. Australia, flowing into the Gulf of Carpentaria. Discovered by Capt. Stirling (see AUSTRALIA).

FLINBERG a tn. Prussia, prov. Silesia, gov. of and 33 m. S.W. Legnica, about 1580 ft. above the sea. It contains a Protestant parish church and has a slate quarry and two glass-planting as well as several other mills. In the vicinity a mineral spring rises up near the source of the Ques. A bathing establishment has been erected over it, and is well frequented. Pop. 1584.

FLINT or *Flintshire* a maritime co. N. Wales, consisting of two separate portions, a larger and smaller, the former having the Dee on the E., the Irish Sea on the N., and the county of Denbigh on the S. and W. the latter which is distant 6 m. S.E. from the main portion and separated from it by the county of Denbigh has Cheshire on the N.E. and Shropshire on all other sides. Flintshire is the smallest county in Wales but the most populous in proportion to its extent. The larger portion is about 27 m. long with an average breadth of 8 or 7 m. the smaller 8 m. by about 5 m. broad area, 244 sq. m. A range of hills, of moderate elevation, in-

tersects the county lengthways, S.V. to N.E. There are numerous well-watered and fertile valleys, including a portion of the celebrated vale of Clwyd. The coast is in general low and skirted by sands, in some places nearly 4 m. wide, which are dry at low water. Agriculture has made considerable advances in this county of late years and the condition of the peasantry has much improved. The grains principally cultivated are wheat and rye. The breed of cattle is small, but they are excellent milkers. Butter and cheese are also made to a considerable extent. The county is rich in minerals, particularly lead, the mines of which are the most productive in Britain. Coal also abounds, and copper is obtained in considerable quantities. The principal smelting works are at Holywell and Mold. Flint returns two members to the House of Commons; one for the county and one for the county town of Flint and its contributory boroughs registered electors for the county 1850 2651. It is divided into five hundreds, and 28 parishes. The Clwyd and Holywell rail way crosses the N. extremity of this county. Pop. 1851 68 156.

FLINT a par. bor. and seaport in N. Wales, cap. co. Flint, S.W. shore estuary of the Dee 18 m S.W. Liverpool lat. 54 13' 8" N lon. 3 24' W at the foot of a steep hill houses tolerably well built, mostly of brick, covered with slate. It has a handsome church in the Gothic style, erected in 1648, and five chapels belonging to Baptists Calvinists, Methodists and Independents substantial guildhall and county jail and in all five schools, the most important of which are the national and British schools and several benevolent associations or societies. Shipbuilding is carried on to a considerable extent, as is also brickmaking and the manufacture of various articles from box and other woods there is also a saw-mill. In the vicinity are extensive lead and alkali works, a large forge for iron and steel and several extensive coal mines, which employ the greater number of the working population. The shipping trade of the port, which had greatly fallen off in consequence of the sanding up of the harbour has again revived since recent improvements were effected. The chief articles of export are coals, and manufactured lead imports, timber lead ore, slate pyrites for the alkali works pig iron and iron ore. A little N.E. the town, on the shore of the estuary stands the ancient castle of Flint, an object of some historical interest. Flint is a station on the Chester and Holyhead railway which passes through the town at a small elevation. A cemetery is in progress of formation here. Pop. 8396.

the slopes, in a narrow valley near the confluence of the Tarnes with the Tarn, 15 m. R. by E. Mende. It contains chiefly of a small square, and a single street, along which the high road passes. It contains a Protestant and a R. Catholic church, is the seat of a court of primary jurisdiction, possesses an agricultural society and has several mills, and seven annual fairs. At the village of Cransac, in the vicinity Pope Urban V. was born. Pop. 104.

FLOREDUN par Eng Norfolk 999 ac. Pop. 167.

FLORENCE, or **CONTRAMONTI** **FLORENTINO** a prov Tuscany consisting of four detached portions, enclosed by the Maritime States and the duchies of Parma, Lucca, and Modena, and of Florence proper bounded N. and E. by the Papal States, S. by the compartments of Siena and W. by the compartment of Pisa, and the duchy of Lucca area, including detached portions, about 5500 sq m. The surface is beautifully diversified by mountains, valleys, and plains. On the N. and N.E. it is covered by the N. Apennines, and on the E. by the central Apennines and the Tuscan sub-Apennines. Enclosed

by these mountains lies the beautiful valley of the Arno, watered by the river of that name, and opened into by numerous minor lateral valleys, each drained by its tributary stream. In the N.W. are some plains, in which the lakes of Fucine and Brindisi are situated. The climate is generally mild and healthy and the soil very fertile, producing wheat, maize, beans, and all kinds of leguminous crops. The vine, olive, orange, citron, and fig thrive well in the low grounds while the mountainous districts afford excellent pasture, admirably adapted for the rearing of sheep. The minerals include mines of copper, lead, and mercury and quarries of marble, alabaster and fine building stone. For administrative purposes, the Compartment of Florence is subdivided into 91 communes. Pop. (1862) 696,214.

FLORENCE (Italian *Firenze* or *Firenze* and *Firenze* *Flouren* *German* *Flouren*) a celebrated city Italy cap. Kingdom of Italy Tuscany 143 m. N.W. Rome and 50 m. E.N.E. from Leghorn lat. 43° 45' N; lon. 11° 35' E. (2) It is intersected by the Arno, which divides it into two unequal parts, the larger being on the N. side of the river. The latter varies here in width from about 100 to 150 yards, and is crossed by four bridges, one of these, the Ponte della

Santa Trinita, is of marble, and remarkable for its lightness and elegance; it is formed of three elliptic arches, and is adorned with statues. There are, besides, two suspension bridges. All these bridges are within a few hundred

THE PONTI SANTA TRINITA, IN FLORENCE.—From the Landscape Artists.

yards of each other. On either side of the Arno is a spacious quay called the Lungi Arno (along the Arno) a favourite lounge or promenade of the Florentines. The city is surrounded by an old wall, 4½ m. in circuit, in which there are seven gates. There are also two fortresses on the line of the walls, one on the S. and the other on the N. side of the city. These defences are now wholly useless for military purposes. The streets are generally narrow but are clean, and well paved with thick flagstones shelled into grooves to prevent the horses from slipping. The private dwellings are mostly handsome, and the palaces, of which there are a great many, are noble and impressive structures, though somewhat gloomy in consequence partly of a paucity of windows and of the lower floors of the latter being strongly guarded with iron bars, giving them in some instances the appearance rather of prisons than palaces. Many of these stately mansions are magnificently fitted up, and contain extensive libraries, and valuable collections of paintings, one of the choicest in Italy being in the Pitti palace, formerly the residence of I. van Pitti, the her-

THE PITTI PALACE, FLORENCE.—From F. de la Roche.

widable opponent of the Medici family once occupied by the grand dukes. The city contains numerous piazzas or squares, the most important of which, and the centre of public life, is the Piazza del Granduca, adorned with a marble fountain and

a bronze statue of Cosimo I by John of Bologna. Several of the other squares are of a considerable size, and many of them are named from the church they contain.

The most remarkable building in Florence, and perhaps the most remarkable of the kind in Europe, is the Duomo or cathedral of St. Maria del Fiore, situated in a spacious square nearly in the centre of the city. The dome of this stupendous building is the largest in the world, and is said to have excited at

profound host of Florence, however, in its grand gallery (Galleria Imperiale e Reale). It occupies the upper story of a fine building, called the Uffizi, erected by command of Cosimo I., after a design by Vasari. The prevailing order is the Italian or modern Doric. In its form it consists of three sides of a lengthened parallelogram, resting on a noble loggia. In this gallery are contained specimens of painting and statu-

ary by the greatest masters in these arts. In statuary among numerous sculptures may be specified the celebrated Yenus de Medici, and the group of Niobe and her children, and in painting there are works by Michael Angelo, Raphael, Titian, Guercino, Correggio, Guido, and numerous others of the first names in various schools.

The Laurentian Library a long and lofty gallery with beautiful windows of stained glass, contains upwards of 8000 ancient MSS., equalled in importance by no collection except the Vatican. The Magliabechian Library is the great repository of printed books as the Laurentian is of manuscripts. There is a third library called the Biblioteca Marciana composed of a large and excellent collection of books, bequeathed to the public by Alano Francesco Marcellini, who died in 1703. The Biblioteca Riccardiana is a fourth public library. It was founded in the end of the 15th century by Riccardo Remolo Riccardi and has recently been purchased by the Government. It contains 23 000 volumes and 25,000 MSS.; these last more especially belonging to the literature of the Middle Ages. As already mentioned (the private libraries of Florence are numerous and extensive) that of the grand dukes contains upwards of 60 000 volumes, and 1500 MSS. The charitable institutions of this superb city of palaces, squares, and fountains are numerous and important, some of them manifesting in a very remarkable manner the wide and active benevolence of the Italian character. Several of these institutions are of very ancient date. One of these called the Buonvicini

once the administration and emulation of Michael Angelo. Its walls are of brick interlarded with black and white marble, and its floors are paved with the same material, of various colours it is also adorned both within and without with marble statues, the works of the most eminent sculptors and its paintings are in general masterpieces of the art. The Duomo was begun at the end of the 13th century by Arnolfo di Lapo was continued by other successive architects, and completed in the 15th century by Brunelleschi who erected the vast dome. Opposite the gates of the cathedral is the small octagonal church of St. John (San Gioanni) now used as a general bath for the city the three bronze gates of which are celebrated as the most beautiful castings extant. One of them, the work of Ghiberti was said by Michael Angelo to be worthy of being the gate of paradise. None of the other churches the number of which is said to be 170 exhibit any remarkable architectural excellence, though in many instances, their interior decorations are sufficiently imposing. The church of St. Croce, the Westminster Abbey of Florence, contains, amongst other interesting tombs, those of Michael Angelo, Buonarroti (Ludovico Meccavelli) and Alfieri. The two market-places the Mercato Vecchio and the Mercato Nuovo, are deserving of notice the gallery (loggia) of the latter was built by Cosimo I. from designs by Vasari. These markets are supplied with merchandise and recreations of all sorts, and with a profusion of the most gorgeous flowers, on which, it has been and more money is spent in Florence than in any other part of the world. Immediately behind, and extending S.W. from the Palazzo Pitti, are the Boboli gardens, about 1½ m. in circumference, having the city wall for their boundary on the S. They were first planned in 1550 by V. Tribolo, under Cosimo I. They are laid out in long sun-bowered walks, to afford protection from the sun during the heat of the day and open glades for recreation in the mornings and evenings. Magnificent laurel cypresses, roses, &c. form the chief natural ornaments of these beautiful gardens the artificial consist of terraces, statues, and vases, including four unfinished figures by Michael Angelo, said to have been intended for the tomb of Pope Julius II. The

[good men] di San Martino, consists of a society of 80 gentlemen who collect and distribute alms among the poor who are assumed to beg unfortunate persons starving under a genteel appearance. This benevolent society has been in existence for 400 years. Another called the Misericordia, is diffused over Florence. At Florence it consists of 400 persons chosen promiscuously from every rank, who volunteer their services to the sick, the hurt, and the dead. It includes many noblemen who may be seen with aprons on, and ladies in their hands, dealing out soup to the sick at the hospital. It has existed for 500 years. Amongst those of recent creation is the Societa di San Giovanni Battista, chiefly for the purpose of adorning poor madonnas amongst whom between 25000 and 24000 are distributed annually in Florence alone. Schools, and other literary and educational establishments, are also numerous. The most eminent of these is the Accademia della Crusca, elsewhere alluded to in this article a society of Italian philologists who compiled the great dictionary of the Italian language, and which contained, under another name, to discuss and decide upon questions concerning that language, its grammatical rules and the choice, application, and etymology of its words, on all of which subjects it is considered by the Italians as the highest existing authority. It has also published very correct editions of several Italian classics. The society took its name, Crusca which means bran with a will for its device, to intimate that its purpose was to sift the good from the bad, the chaff from the corn. The manufactures of Florence have greatly fallen off, but still silk worms are reared to a considerable extent and woollens, silk, straw hats, porcelain mosaics and painted dyes, are manufactured, and likewise numerous objects in the fine arts but the chief dependence of the city is on the vices and temporary residence of foreigners, particularly the English. 'To half Florence, says a correspondent of the Westminster Review, vol. 46 p. 559 no English is equivalent to 'no bread' from the impoverished noble who lives on the road paid by an English family for the best floor of his ancestral palace, down to the ragamuffin, whose aspiration is to hold a 'maker's' horse or show him the way to the Uffizi.

Florence is altogether one of the most desirable places of residence in Italy. The climate is, in general, fine, though somewhat foggy in autumn; provisions abundant and moderate, excellent cooking-rooms profusely supplied with foreign publications; and, besides the beauty of the city itself, a delightful vicinity studded with villas, country houses, and gardens. Two railways enter the city one connecting it with Prato and Livorno the other with Liphorn, Pisa, and Siena.

Florence owes its origin to a colony of Roman soldiers, sent thither by Octavianus after the victory of Perugia, to whom he allotted part of the territory of the colony of Fiesole, established about 40 years before by Sylla. Little more is known of it under the empire, and hardly any remains exist of this period, except some ruins of an amphitheatre, and a few inscriptions. Christianity was established here in the third century and early in the fourth a bishop of Florence attended a council at Rome. In the beginning of the 11th century the city had risen into importance through the industry and enterprise of its inhabitants, who had now commercial establishments in the Levant, France, and other parts and had become money-changers, jewelers, and goldsmiths. In the latter end of the 14th century the wealthy family of the Albizzi became chief rulers in Florence. Though again overthrown, in 1434 by Cosmo de Medici, a popular citizen and princely merchant, who assumed the first place in the state. On the fall of the republic in the 16th century a member of a lateral branch of the Medici the line of Cosmo having become extinct, was placed by Charles V as Duke of Florence. The final dynasty of Medici continued to rule till the year 1537 when, becoming extinct, they were succeeded by Francis of Lorraine afterwards emperor of Germany. From this period the history of Florence merges into that of Tuscany until its amalgamation with the kingdom of Italy. In 1865 it was raised to the dignity of capital of the kingdom, the seat of government being transferred to it from Turin. Amongst the illustrious men it has produced, are Leo to Petrarch, Boccaccio, Fiesole, Lorenzo de Medici, Galileo, Michael Angelo, Leonardo da Vinci, Buonarroti, Cellini, Andrea del Sarto, Amerigo Vesputi, and others.

FLORENCE, numerous places. L. States particularly in Alabama, 112 m. N. by W Tusculum, r bank Tennessee. It is advantageously situated for trade, has a courthouse jail, two churches, and two female academies and in vicinity a large cotton factory. Pop. about 3000.

FLORENCE (Fr.) par Wales Pembroke 2490 ac. Pop. 355.

FLORENCE a la France dep. Herault. 14 m. E. N. E. of Nant. near the Herault. In a fertile territory abundant in vineyards. It has some brandy distilleries. Pop. 3465.

FLORENCE (Fr.)—1 A vil. France, dep. Cher on the Cher 9 m. S. W. Bourges. Pop. 1680—2 (in France) A maritime vil. France, in Corsica. In W Bastia, beautifully situated on a hill slope overlooking a gulf of same name and at the entrance of a rich valley. It is, however, a miserable and unhealthy place the inhabitants being annually decimated by the mephitic vapours exhaled from the neighbouring marshes. Pop. 475.

FLORENCE (Fr.)—3 A vil. France, dep. Yonne 14 m. N. E. Auxerre, agreeably situated on the Burgundy Canal at the confluence of the Armançon and Armançon. It is neatly and regularly built, with four principal gates each leading by a straight street, to the central place, where is the great public fountain to which water is brought for the supply of the town by a fine aqueduct. It has some trade in corn, hemp, charcoal, firewood, and leather. Pop. 2265.

FLORENCE, or FLORINA.—1 (Latin *Florinensis*) An Isl. N Atlantic Ocean the most W of the Azores Isl. (N. extremity) 59° 41' 30" N. lon. 31° 13' W. (s.) It is about 30 m. long and 9 m. broad. Its produce consists chiefly of wheat, pulchre, and poultry the last of which are highly esteemed. Cattle numerous but small. Principal towns—Santa Cruz and Lagena, on the E. coast. It obtained its name from the 1. crag, from the multitude of flowers with which it appeared to be adorned. It is hilly and contains an ancient crater filled with water of which a view is given in the article Azores p. 293—2 An Isl. S. America, entrance of the Rio de la Plata off the coast Uruguay lat 34° 56' S. lon. 65° 50' W. It extends nearly N. E. and S. W. having

a small hummock in the middle, and one at each end, that to the S. W. 30. ft. high. Between these the land is low and marshy and overgrown sometimes between the central and N. E. hummock. Seals and sea-lions also various aquatic birds resort to this small island and in the month of August and September great quantities of excellent eggs may be procured. There is good anchorage all round the island, which may be seen in clear weather from a distance of 15 or 18 m.—3 (Eldf. or *Mágnafel*) A large Isl. Indian Archipelago, one of the chain of islands extending E. from Java lat. (S. W. extremity) 8° 48' S. lon. 119° 54' E. (s.) It is upwards of 900 m. long and between 40 and 50 m. broad. It is mountainous, and has several volcanic peaks of which Loboteble, near its E. end, is 7200 ft. high. Little more is known of the interior than that it is mountainous and woody but more open towards the coast. Sandal wood was formerly obtained here in great abundance, but it is now scarce. Ende, situated near the middle of the S. coast although little known, is said to be the principal port of the island capable of holding any number of ships in safety—4 (*Floris Head* or *Iron Cape*) The most N. E. point of the island lat. 8° 1' S. lon. 122° 50' E. (s.)—5 (*Floris Strait*) The passage between the E. end of above Isl. and the islands of Soler and Adenara. It is about 3 m. broad at its narrowest part, between Flores and Adenara.—6 (*Floris Sea*) That part of the S. Pacific Ocean lying N. of the islands of Flores, and S. of the island of Celebes extending N. to S. upwards of 3° of latitude. It is interspersed with sun-ornate islets and coral reefs—7 An Isl. N. Pacific Ocean W coast, British N. America, on the coast and near the continent of Vancouver's Island lat. 49° 20' N. lon. 125° 45' W. It is 16 m. long from N. W. to S. E., and from 2 m. to 6 m. broad.

FIOPES, a vil. Brazil prov. of and 280 m. N. E. Goias, near r. bank, Parana. It is the seat of an electoral college, and contains two churches, and a primary school. The district is generally fertile but in some parts subject to intermittent fevers. Pop. 2400.

FLORIAN (Fr.) a market in Upper Austria, on a hill 11 m. N. by W Steyer near 1 bank Dan. It contains an old Benedictine monastery a magnificent structure with a library, museum, and picture gallery, and a church which possesses one of the finest organs in Germany. Pop. 900.

FLORIDA a peninsula, and state, N. America, U. States extending from lat. 24° 30' to 31° N. and from lon. 80° to 87° 30' W. having the States of Georgia and Alabama, N. the Gulf of Mexico, W. the Atlantic, E. and the Gulf of Florida. S. length N. W. to N. E. about 720 m. average breadth about 80 m. area, 57 000 sq. m. The surface is in general level rising little above the sea especially in the S. parts where it is almost one continued swamp or marsh. The portion is more broken and elevated but the whole coast is flat and skirted by low narrow islands of sand, which are parallel to the mainland and are separated from it by shallow unavigable lagoons. The principal river is the Apalachicola the next in importance are the Suwannee St. John's Ochlockonee &c., the first two affluents of the Gulf of Mexico the last two flowing to the Atlantic. The entrance to most of the rivers in this state has a bar that hinders them for the navigation of vessels drawing more water than they are all navigable to a considerable extent by steamers, and other vessels of light draught. There are a great many lakes throughout the peninsula, some of which are of extraordinary depth. The largest vary from 8 to 15 m. in length. Numerous islands are scattered along the whole coast, the most remarkable of which is a group called the Florida Keys or Keys, stretching out for more than 100 m. S. and W. of Cape Florida, and much dreaded by mariners. There are also several spacious bays, and many good harbours, the former from 15 to 40 m. long and from 4 to 7 m. in breadth they are mostly on the E. coast and include Christian Bay Charlotte Harbour Killebrew or Esperanza Bay or Tampa Bay and Vaccarum Bay on the peninsula, with the Bays of Apalachicola St. Joseph, St. Andrew Chocowatchee or St. Rosa, I. Escalante &c. on the mainland. Although there is comparatively little cultivable soil in this country what there is especially that on the banks of the rivers is of remarkable fertility and, aided by a favourable climate, produces tropical plants and fruits in great perfection especially oranges, which are not excelled by those of any other country

cotton olives pumpkins, and melons, also succeed well. In 1861 the crop of cotton amounted to 121 127 bales; tobacco also is grown in considerable quantities sugar maize potatoes &c. &c. being the other principal productions. The pine barrens produce grass on which immense numbers of cattle are reared. On the river coast, and higher swamps the trees and shrubs grow luxuriantly. The pine forests are of great extent, and the trees of extraordinary height and beauty. White cedar cypress, and live oak abound, the latter attaining great perfection. The cabbage palm is also common. The climate from October to June is generally salubrious but the months of July August, and September are extremely hot, and during this season fevers are prevalent. The only minerals yet found are coal and iron although it is said that manganese, ironstone, lapis lazuli and other precious stones, have been met with. The wild animals consist of wolves, wild cats panthers raccoons opossums and the common brown bear which is sometimes seen in the swamps. Rabbits and squirrels also abound birds are extremely numerous and various including vultures, hawks turkeys horons cranes cormorants pelicans, &c. The coasts rivers, and lakes swarm with fish, and in the latter two turtles also abound. The swamps, and other inland waters are infested with alligators and inhabited by multitudes of frogs. Snakes are numerous, but most of them are harmless. The native Indians of Florida are active and skilful expert hunters, fond of war and gay and joyous dispositions. Most of them subsist by rearing cattle. Neither the trade nor manufactures of the country are important the latter consisting chiefly of hats caps leather bracks carriages, and weapons. There are also several canneries a very little shipbuilding and a number of grist and saw mills. The principal exports are cotton sugar oranges, and lumber chiefly live-oak, to the Government navy yards. The internal and foreign trade were stopped by the civil war the state having seceded from the Union by an act of the Florida convention passed January 10 1861. The lower part of the state however including the important position of Key West and the forts on the Tortugas, did not throw off their allegiance, but, as well as Fort Pickens at Pensacola remained under the authority of the Federal government. As yet (1866) there are no statistics or other information respecting the revival of its trade and commerce.

The chief towns and seaports are Tallahassee, the capital and seat of Government St. Augustine, and Pensacola, a naval station of the U. States. Florida is divided into 9 counties. The governor is elected by the people for four years, and is ineligible for re-election until four years out of office the senate is elected for two years and the representatives annually. The General Assembly meets every two years.

Florida was discovered in 1497 by Sebastian Cabot, sailing under the English flag, explored in 1512 and 1516 by Ponce de Leon a Spanish adventurer and in 1589 overrun with an armed force by Hernandez de Soto, governor of Cuba. In 1568 the French attempted to establish a colony which occasioned contests between them and the Spaniards in which after alternate successes, the latter were victorious. Florida was ceded to Great Britain, by Spain in 1763 in exchange for Havana reconquered by the Spaniards in 1761 and confirmed to them at the peace of 1763. It was ceded to the U. States in 1819 and in 1845 was admitted into the Union. Pop. (1840) 64,477; (1850) 69,480 of whom 40,385 are slaves.

FLORIDA (Care) the most E. point of E. Florida, towards the extremity of the peninsula, in the Gulf of the same name; lat. 25 41 N; lon 80° 5' W (n.)

FLORIDA (Gulf of) a channel between the peninsula of Florida and the Bahama islands through which the Gulf stream, originating in the Gulf of Mexico discharges a passage N. At the N. end of this gulf, in the parallel of Cape Canaveral the stream attains a velocity of 5 m. an hour. On leaving from the strait or gulf the water is of a dark indigo blue colour and the line of separation between it and the green waters of the Atlantic is plainly visible for hundreds of miles.

FLORIDA KEYS. See **FLORIDA (State)**

FLORIDA (Rio) a vil Mexico, State of, and 180 m N by W Durango Pop. about 3000.

FLORIDIA a vil and com. Baile prov and 7 m N N W Syracuse pleasantly situated on a hill surrounded by orchards, and between two arms of the Anzaco. It is tolerably well built. Pop. 4180

FLORISDOFF a-c-r-r-t-a, a vil Lower Austria, on the Danube, about 4 m from Vienna. It is well built, and contains a parish church but suffers much from overflows of the river. Pop. 1060.

FLORSILM (Oxley) a tn Hesse Darmstadt, prov Rhein Hessen, 24 m S W Darmstadt. It is an ancient com-munality of the Teutonic order. Pop. 1061

FLORSUEIM a vil Nassau r bank Main E Mainz. It contains a parish church and has manufactures of linens, deltinware, and porcelain. The vine is extensively cultivated in the vicinity. Pop. 2515.

FLOTAY an Isl Scotland, Orkney, between Isls Farray and S. Ronaldshay. It is about 3 m long by 2 m broad. Pop. with some adjacent islets, 589

FLOTTE (La) a maritime tn France dep Charente Inférieure, 9 m W N W La Rochelle, N side of Isle Ré Bay of Biscay. Its harbour can receive vessels of 300 to 300 tons. Its exports are chiefly salt wine, and vinegar. P. 2727

FLOUKE (Str) [Latin *Isidoreum*] a tn France, dep. Ardennes, cap. arrond. of same name 36 m F by N Atrilles, on a steep basaltic plateau of the granitic formation of Auvergne. It is the seat of a sub-prefect, and of a bishop suffragan of Bourges, and has a tribunal of commerce, and a communal college. The houses have a straitened site, and the streets are narrow but there are a few remarkable edifices, including the cathedral an ancient priory, the Jacobite convent, founded in 1663 the Jesuits college, founded 1690 the convent of the Visitation, founded 1625 now an educational establishment the priory seminary with a fine garden episcopal palace, public hospital &c. The town possesses a large area, with a terrace, whence there is a fine view. The suburb, nearly 100 feet below the town with which it communicates by a winding way cut in the rock, is a seat of linen industry having manufactures of leather pottery wool glue, andbear lace copper wares &c. Trade in grain and wool. Pop. 4818.

FLOWTON par Eng Suffolk 496 ac Pop 178.

FLÜELEN a vil and par Switzerland cant. Uri in a marshy and unhealthy situation on the S. E. shore of the Lake of Lucerne near the influx of the Reuss. It contains a parish church and a small castle and being the port of Uri has a considerable trade. A steam boat from Lucerne touches daily. The most of the inhabitants are boatmen and fishermen. Goutre and rheumatism are very prevalent. Pop. 599

FLUMENORRA [anc *Flumen*] a river Isl Sardinia, which rises near the town of Orgoglio, on the E. slope of Mount Garganta, flows E through the valley formed by that range on the S, and that of Oghive on the W, and then turning gradually round, flows easterly S. E. to the S. E. coast where it falls into the sea by three mouths whose course about 48 m.

FLUMINI MAJORE a vil Isl Sardinia, div Cagliari prov and 10 m N W Iglesias. It stands in a mountainous district, on a slope above a river of same name, and contains a parish church chapel, and elementary school. The males are mostly employed in agriculture or feeding cattle, the females usually spin and weave wool and wax, and not only supply their domestic wants, but leave a surplus for sale. Pop. 1760.

FLUIMS a vil and par Switzerland, cant. of St. Gall near r bank, Reuss. It is a very ancient place, contains a parish church, and a townhouse remarkable for the peculiarity of its structure; and has a considerable trade in horses, cattle, and wood. It has often suffered severely by inundation. Pop. 3634.

FLUSINGH [Latin *Flavenga* Dutch *Flushing*; French *Flussing*] a fortified seaport tn Holland, prov Zealand, lat. Waburchen at the mouth of the Hond, or W. Scheldt, here between 2 and 3 m. broad, 50 m S W Rotterdam 36 m W N W Antwerp lat. 51 34' 34" N lon. 3 34' 45" E (n.) It is strongly fortified, and in connection with its outwork at Breken on the opposite side of the Scheldt, completely commands the river with which it communicates by two large, deep canals, by which the largest merchantmen enter the town, and unload at quays close to the warehouses. It has a Calvinist, an evangelical Lutheran, an English, a

Flashet, and a R. Catholic church, several benevolent and charitable institutions, a commercial, and several common schools, and five market places. The townships is a rowing suitable for the exchange in a simple building and near it is a statue erected in 1841 of Admiral de Ruyter born in Flashing in 1607. The inhabitants are chiefly engaged in oyster service and in the branches of industry incident to a seaport town. The manufactures, comprehending brewing soap-making, and tanning and millinery, are unimportant. Flashing has suffered several times from fire, water and war and in 1809 was bombarded by a British fleet, under Lord Clatham composing the unfortunate Whorens expedition when the beautiful townships, built in 1594, several churches, and other important buildings, and 800 inhabitants, were destroyed. Pop. 78 1

FLASHING a small seaport. England co Cornwall 1 m. N. Falmouth. It contains a district church, place of worship for Baptists, Wesleyans, Unitarians, and Dryans, and a national school, supported by subscription. Here are docks for shipbuilding and a dry dock, 180 ft. long with corresponding breadth and depth. On account of the mildness of its climate, the place is much resorted to by invalids.

FLYFORD two par. England Worcester — 1 (Flanch) 30 ac. Pop. 141 — 2 (Gresham) 1640 ac. Pop. 214.

FUATY or **FOTA** a small isl. Ireland, co. Cork, in Cork harbor 6 m. N. Queenstown, connected with the mainland and with Great Island by two handsome bridges.

FORBING par. Eng. Essex 2954 ac. Pop. 421

FOCA, a small isl. W. coast Africa, at the mouth of the Calabar river. It contains a town of the same name and furnishes supplies of wood water and provisions.

FOCHABERS, a vil. Scotland, co. Murray on an eminence on bank, 8 m. S. E. Elgin. The town consists of two principal streets that cross each other at right angles, with a square in the centre and contains altogether 200 houses of which nearly three-fourths are inhabited the others are slated. On one side of the square is the established church with a parson and neat spire. The town contains besides, a hand some R. Catholic and an Episcopal chapel and has several schools, and an educational fund of 100,000 dollars, bequeathed to the town by Alexander Mylne, merchant, New Orleans, a native of the place. In the immediate vicinity of the town is Gordon Castle, a superb mansion, formerly the residence of the noble family of Gordon but now the property of the Duke of Richmond. Pop. (1841) 1135

FODDERTY par. Scot. Ross 9 m. by 11 m. Pop. 2342

FÖDEMES NAOR a vil. Hungary Hither Danube, co. Honth, about 6 m. from Ipity-Saght. It contains a R. Catholic church. Excellent melons are raised in the vicinity. Pop. 1609

FOGARIA, or **FRAGOROMARCA** (Latin, Lagonicola, a market in Austria, Transylvania, esp. dist. of same name, on the Alt or Aluta, here crossed by a handsome bridge 82 m. W. W. Kromstadt. It is well built, contains an old castle which figures in the early wars of Hungary. A very handsome Protestant, a R. Catholic, and a Greek non-united church a gymnasium and northwards and has manufactures of morocco leather. Pop. 5100 — The district area, 500 m. is very mountainous, particularly in the S., where it is covered by a lofty mountain-chain, well wooded, abounds with game and fish, and has extensive pastures, on which great numbers of cattle are reared. Where the land is arable, it is of considerable fertility and yields good crops of rye, barley oats, flax and hemp. The minerals include gold, silver lead, and salt. Pop. 24,040.

FOGGIA a city Naples, cap. prov. Capitanata, 76 m. N. E. the city of Naples, in the midst of the Apulian plain and considered for wealth and importance, the second town in the kingdom. It is regularly built, with wide streets and has many handsome houses. The principal public buildings are, the residence of the governor a gothic cathedral, a number of other churches, a custom-house, and theatre. It has a gymnasium-school, several elementary schools, a school of agriculture and rural economy and a tribunal of commerce for the provinces of Apulia, established in 1818. It carries on

an extensive trade in corn, wool and cattle, cheese, wine oil and exports, and has numerous granaries under the streets and squares for storing corn. It is the chief island market for the agricultural produce of Apulia, and is also the residence of the provincial nobility and landholders. A great fair is held in the month of May. The climate is unwholesome in the summer months. Pop. 80,687

FOGLIA, a river Italy which rises in the E. slope of the Apennines, in Tuscany about 3 m. W. Sestino, shortly after enters the Papal States, and flowing S. N. E. through the delegation of Urbino-Pesaro falls into the Adriatic at the latter town, after a course of about 82 m.

FOGLIZZO (Latin, Focum) a vil. and com. kingdom of Italy Piedmont prov. of and 16 m. N. N. E. Turin 1 bank, Orco. It contains a handsome parish church castle, and communal school and has some trade in hemp, of excellent quality grown in the district. Pop. 2317

FOGLÖ, a small isl. Russia, Åland group, at the entrance of the Gulf of Bothnia lat. 60° N. lon. 20° 30' E. It contains a parish church and makes the best Åland cheese.

FOGO par. Scot. Berwick 4800 ac. Pop. 604

FOGO one of the Cape Verde islands. See FUSAO

FOHANAGIL, par. Irol Galway 8086 ac. Pop. 2004

FOHE, or **FOH** an isl. Denmark North Sea, the E. portion belonging to Schleswig and the W. to N. Jutland lat. (S. E. point) 54° 42' N. lon. 8° 34' E. It is about 8 m. long by 5 m. broad and about 5 m. from the coast of Schleswig. It is generally flat, marshy and barren though containing some little arable land the tilling of which rearing a few cattle, along with fishing, sea-farming and the catching of wild fowl especially ducks, employ the inhabitants who are all Friesians. There are several small villages in the island of which the chief is Viek or Wyck. Pop. 4760.

FOIX (Latin, Focum) a town in France, cap. dep. Ariege pretentiously situated across the mouth of a valley bounded in by lofty precipices, at the junction of the Ariege with the Arize, here crossed by a bridge of two arches. It is partly surrounded by ancient ramparts, and is very irregularly built having narrow ill-formed streets, and old, ill-built houses of which only a few are interesting from their antiquity. It

THE TOWN AND CASTLE OF FOIX — From Oliver's Sketches in the Province

contains an old castle, crowning an isolated rock on the W. side of the town, and of considerable historical celebrity though now only used as a jail. A handsome parish church with a semicircular choir and several fine chapels a prebendary, originally part of the abbey of St. Volonien a count house, an elegant building of the 15th century; a public library of 8000 volumes and bibles; and has manufactures of serge cottons, candles, and especially of articles in iron and steel; a trade in these articles, and in coarse woollens, leather cattle pitch turpentine, wax and seven annual fairs. Foix is the seat of a court of first resort, and possesses a consulting chamber of manufactures, a communal college, and a society of agriculture and arts. Foix is a very ancient place, was long capital of a county of same name, and distinguished itself in several sieges, particularly in 1210, when it maintained the cause of the Albigenses, and gallantly repulsed their infamous persecutor Simon de Montfort. Pop. 8414.

FOJANO a tn. and com. Tuscany occupying one of the highest points near the centre of Val di Chiana, between the canal and river of that name, 48 m. S. S. E. Florence. It is an ancient, but well-built, handsome town, surrounded by modern walls, and also containing the remains of a double wall and chain of towers which made it in early times a place of great strength. It is divided into three districts or *terre*, each forming a parish and adorned with a handsome parish church contains also a Benedictine convent, with an educational establishment, and a large hospital is the seat of a court of justice, and several public offices, and has a trade in corn and cattle, and an important weekly market. Pop. 7089.

FOKJEN a maritime prov. China, between lat. 28° 28' and 28° 38' N. lon. 115° 45' and 120° 40' E. bounded, N. by Che-Kiang N. W. and W. by Kiang-soo, S. by Quang-tung, and S. E. by the China Sea. Area, 55,490 sq. m. The coast is deeply indented with bays and studded with numerous islands, including Amoy, Quamoy and Ha-tan which, with the large island of Fomosa, are comprised in the province. The country is generally mountainous, and is drained by several rivers, of which the Min and its tributaries are the most important. The soil is turned to good account the higher mountains being covered with trees and the hills, cut in terraces, running down each other sometimes to the number of 30 or 40 and cultivated from the base to the summit. The agricultural products include rice, wheat, barley and sweet potatoes. Black tea, of superior quality is grown and the orange lemon and mulberry are abundant. Camphor sugar iron indigo tobacco, and alum are also produced and, along with porcelain and cloths of various kinds form the chief articles of export. Grains, drugs, fruits, and salted meats form the chief imports. Besides Foo-choo-foe the capital the province contains Amoy and other important commercial towns, with numerous villages. Pop. 14,777,410. See Foo-choo-foe, Amoy, and Fomosa.

FOKSCHEANI a tn. Wallachia, on the frontiers of Moldavia, 7 bank Miklov 92 m. N. E. Bucharest, with an upper district school. In 1780 it was devastated by the Russians and, after being rebuilt, it was in 1822 burnt by the Turks since which time it has been again partially restored. Pop. 1000. On the 1 bank of the Miklov in Moldavia, is a suburb of Fokschani. Pop. 3000.

FOLEDEAK, a vil. Hungary. Thaur Thaur, co. Cassel, about 12 m. from For Kozlos. It contains a R. Catholic parish church, and has a trade in horses and cattle. Good wine and tobacco are grown in the vicinity. Pop. 1649.

FOLDVAR, a market in Austria, Transylvania, on a hill, washed by the Hencorad about 12 m. from Kronstadt. It contains a castle a Protestant and a Greek non-nominal parish church. Pop. 2100.

FOLDVAR (DEVA) a market town Hungary Thaur Danube, co. Tolna capital of same name, 7 bank Danube 17 m. N. E. E. Simontornya. It is pleasantly situated, partly on the crest, and partly on the side of a hill, had once strong fortifications, of which some remains still exist; contains a R. Catholic and a Greek non-nominal church a high school barracks, and a Russian monastery and has an important sugar-cane factory. The district is fruitful both in corn and wine. Foldvar's steamboat station. Pop. 10,400.

FOLDVAR, or **MAKTERBURG** a vil. Austria, Transylvania, stadt of Hermannstadt, 7 bank Alt, about 12 m. from Fomulok. It consists chiefly of a spacious main street, and contains a united and a non-nominal parish church and the plotter sugar-cane runs of an old castle. The inhabitants are Wallachians. They suffer much from a deficiency of good water. Pop. 1100.

FOLDVAR TISZA a vil. Hungary Thaur Danube, co. Hecras, on the Tisza, 8 m. from Eszék. It contains a Protestant parish church, and has a trade in cattle. Much wine is produced in the vicinity. Pop. 8840.

FOLEMBAY a vil. and com. France, dep. Aisne, 15 m. W. Laon. Here are the royal glass-works of Fivier employ-

ing 800 workmen, and producing annually 6,000,000 bottles and 100,000 ball jars. Pop. 1067.

FOLGHEHILL, par. Eng. Warwick 2594 ac. P. 7810. **FOLGARIA** or **PHAZANET** a vil. and par. Austria, Tyrol circle of, and not far from Rovereto. It contains a parish church. The inhabitants speak Italian, but are of German origin. Pop. vil. 1490. Par. 4597.

FOLGEFONDEN FJELD an elevated plateau and mountain range Norway on the S. of prov. Bergenhus stretching N. to S. at no great distance from the W. coast. Its culminating point is 5790 ft. but its most remarkable feature is its glacier which is about 5000 ft. above the level of the sea, and 40 m. long by 30 m. broad. Its depth has been estimated at 500 ft. A stream, issuing from its base, forms a magnificent waterfall.

FOLIA a vil. Hungary co. Temes on the Oltus, 4 m. from Zebely. It contains a Greek non-nominal and a R. Catholic church and has a brewery. The district is only moderately fertile. Pop. 1809.

FOI IGNO [sic *Folignona*] a tn. Italy deleg. of an 30 m. S. E. Perugia, in a beautiful vale winding among the Apennines, 40 m. in length by about 10 m. in width watered by the Clitumnus. The town is large but indifferently built the inhabitants are active and industrious. The only public building worthy of notice are, the Cathedral and the Palazzo Comunale. The former dedicated to St. Felician, is unfinished without but neat within the latter is a handsome building, recently erected in the Ionic style. There are several other churches some of which contain good pictures. Foligno has a high reputation throughout the Papal States for its manufactures of woollens parchment and wax candles. Soap and playing cards are also made there are silk mills and tanneries, and it has some trade in cattle. The town was nearly destroyed by the earthquake of 1831 and 1839. It was enormously a place of some importance, being at the head of a confederacy of L. in 1791. In 1489 it was incorporated with the States of the Church by Cardinal Vitelleschi, on the extinction of the Truc family. Pop. (1833) 15,400.

FOLKEF par. Eng. Dorset 1722 ac. Pop. 830.

FOLKESTONE [Latin *Lepus populi*] a bor. seaport in and par. England co. Kent, 7 m. W. by S. Dover 84 m. S. E. by E. London. lat. 51° 4' 45" N. lon. 1° 11' E. on a station on the S. E. railway. It is built, partly on the level shore, and partly on the summit of a steep eminence immediately behind, topped by the church of St. Mary and St. Eans with a venerable pile of cruciform structure, with a tower in the centre. It consists chiefly of three rough rugged streets that run crookedly up a sharp hill, dirty narrow, and awkward

FOLKESTONE, seen from South Cliff, looking towards the Harbour.

ward while on either side of them, you see ever and anon a steep and lofty flight of steps, running up or down into an other street or passage. —(The Land we Live on.) It is said that the town could boast, formerly of five churches but that all of them, excepting that which now crowns the hill have been swept away by the sea. There are here two Method

let chapels, a Friends meeting house, and several schools and small churches. Amongst the schools is one built and partly endowed by Sir Elias Harvey nephew of the celebrated William Harvey the discoverer of the circulation of the blood, who was born here, April 1 1578 and after whom a literary institution lately founded, has been named. The harbour was first noted at an expense of 250 000, and has 12 ft. depth at high water. In the last century a large sailing and still larger smuggling trade was carried on here. On the suppression of the latter the town fell into decay, and its fish ing also declined. The prosperity of the place, however, has been restored by the having been converted by the S.E. Railway Company into a landing station for the steamers to Boulogne since which, a custom-house has been established, warehouses erected, a handsome hotel opened, and new streets laid down. Folkestone is a member of the cinque port of Dover. It unites with Hythe in returning a member to the House of Commons. Considerable numbers of sea bathers frequent the town in the summer season. Folkestone was a Roman station and the Saxons had a monastery and castle there. It was frequently ravaged by the Danes, and in more recent times visited by the Irish. There is now a strong battery on the heights and the coast is further defended by three martello towers. It gives the title of Viscount to the earls of Radnor. Area of par 4690 ac P p 7-4-3

a. Grana, prov of and c u. from Livorno on the Tora. It contains a parish and several auxiliary churches. Inhabitants mostly engaged in agriculture. Pop 22 6

FOLLIS (L) a vil and com Italy Lombardy prov Lod. dist. of and 9 m S.W. Codogno. It stands in a rich corn and grazing district contains a parish church and has a rice mill in 1776 the French here defeated the Austrians. Pop 1465

FONDETTE a vil and com France, dep. Indre et Loire, 4 m. N.W. Tours. It has manufactures of paving tiles and vermicelli a d in the vicinity good red wine is produced. Pop 24 1

FONDI (anc. Fand) a n. Naples, prov Terra di Lav. on the confines of the Papal States, 60 m. N.W. Naples, in a plain sheltered by hills, on the Via Appia, which here retains its ancient form. It consists of one principal street, and a few subordinate ones, all narrow and dirty. Houses mean, and most of them unglazed the whole presenting an extremely miserable and repulsive appearance. It contains a cathedral n. college, and two houses of charity. Close by is the ancient Lacus Flandanus or Amyclæus, a stagnant water from which, and from the marshes it occupies the most noxious exhalations arise. The dilapidated walls, by which the town is still partly surrounded are of Cyclopean structure. The tale on which Fondi is situated is as remarkable for its fertility as the latter is for its poverty. The wines produced in the vicinity were anciently in high repute, and are still in some request. Pop. 5600.

FONDO a market in Austria, Tyrol, at the confluence of the Wildbach and Novella, 23 m. N. Trent. Its streets are irregular but its houses well built. It contains a parish church, with a hand some portal and a tower covered with tile and has a trade in corn, cattle, wood and wine. Many of the inhabitants of the lower valley of the Adige make this their summer residence. Pop. 1425.

FONDON a vil Spain Andalusia, prov of and 28 m. N.W. Almería, in a valley between the sierras Nevada and de Osador. It has crooked but wide and generally paved streets and its principal square contains a handsome tribunal and a fine central fountain. It has a parish church, two chapels, a prison, storerooms, and cemetery. Its inhabitants engaged in the culture of land

and orchard and gymnasium wrought in the neighbouring mountains. Pop. 1961

FONGI or FONG-YANG a tn. China, prov Nanchow on a mountain, near the E bank of the Hsiao-ho, 486 m. S. by E Peking. It is the birthplace of the founder of the Ming dynasty.

FONNI a vil Isl. Sardinia prov of and 18 m. S. Nuoro. It stands on the E slope of Monte-pada. The streets are irregular narrow and dirty and most of the houses are very indifferent. It contains an ancient parish and four minor churches, a Franciscan convent, and an elementary school and has manufactures of linen and woollen cloth; a trade in cheese; and an annual fair which lasts five days, and is the best frequented in the island. Pop. 5150

FONNECA (JULY OF) 9 v f OYRAOI a FONSI the loftiest mountain in the empire of Japan, commonly called by the Japanese Fomiyama. It is situated in lat. 35° 15' N. lon 138° 35' E. in the prov of Soerenga, Isl. Nippon. Its height according to Siebold, is 19 440 ft. It stands in an isolated position in the centre of a boundless landscape of uncommon beauty. It is an ancient volcano, formerly the most active in all Japan but a century and a half have now elapsed since the last eruption and its crater is now filled with water. It is regarded with a superstitious reverence and in the month of August, Buddhist devotees make pilgrimages to its summit, to offer prayers to the deities which have been placed in the ravines of the rock by their ancestors. According to Japanese historians this mountain emerged from the bosom of the earth in the year 285 a.c. and a corresponding depression of the ground produced, in a single night, the great lake Misono, or as Siebold names it, Bawako. In 799 occurred an eruption which lasted 34 days and covered the whole base of the mountain with ash. Others followed in 800 863 and 864 preceded by earthquakes but the most violent one took place in 864 when for 30 m round the country was devastated. The last eruption occurred at the close of the year 1707. This mountain has been described as covered by perpetual snow but there is reason to believe the snow disappears for a month or two in the course of the year.

FONTAINE-LEVEQUE a tn Belgium prov Hainaut, 6 m N. Charleroi on the Beldone a tributary of the Sambre. It is a very ancient place, and has some remains of a fortified town and a church. The inhabitants are chiefly sailors but there are also some breweries, distilleries tanneries, oil and flour mills and in the vicinity are limestone quarries. Pop. 3100

FONTAINEBLEAU (Latin Fons Bleaudi) a tn France, dep Seine-et-Marne cap. arrond. and in the midst of the forest of same name, about 2 m from 1 bank, Seine and 57 (to S.E.E. Paris). It is well built, partly of stone, and partly of brick with spacious and regular streets. It is the seat of a

THE CHATEAU OF FONTAINEBLEAU. From Architectural Foundation.

court of first resort, and several public offices. It contains fine barracks, a communal college, school of design, public library of 28,000 volumes, public baths, and several hospitals and has manufactures of calico, porcelain, and stoneware. Quarries

of sanctuaries extensively used in paving the streets of Paris and the roads of the surrounding districts and a trade in wine, fruit, preserves, horses, and cattle. Pop 7810. The castle or palace of Fontainebleau from which the town derives its chief importance is one of the most magnificent in France. Many of its sovereigns have made it their favourite residence, and vied with each other in lavishing upon it all the embellishments that art could furnish, with out any limitation as to expense. Henry IV expended upon it about 2100,000 Louis d'Or above £200,000; Napoleon 4250,000 and Louis Philippe it is said still more than any of his predecessors. The park, laid out like a vast garden and adorned with statues, temples, fountains, lakes, and waterfalls corresponds to the magnificence of the palace. The forest, which has an area of 64 geo sq in abundance with all kinds of game.

FONTANA a vil Italy Lombardy prov and 1 in N Milan. It is well built and has a spacious and handsome church, an extensive bronze foundry, and a large cemetery in which are many fine specimens of monumental statuary. Grain, wine and fruits are raised in the vicinity. Pop 2682.

N N W Novara, in a beautiful and fertile district near the Agogna river crossed by a stone bridge. It contains a parish church of modern construction with a facade, adorned by several statues, and an old castle now converted to three large and handsome residences and has a trade in silk and wine and cattle. Pop 2,411.—2 (di Juvencio) A vil and com. prov of and 15 m. S. W. Verceil near r bank I. It contains a handsome parish church with three naves, and several fine sculptures, and has a trade in corn rice and fodder and two annual fairs. Pop 2284.

FONTARAILIA a in Spain See FOUNTARAILIA.

FONTOCONVERTE (Latin Fons Oportus) a vil and com France, dep. Basses Pyrenees, prov Moriana, 1 bank Arvan, here crossed by a wooden bridge about 8 m. W. S. W. R. Giovanni di Moriana. It stands in a mountainous district, contains a parish church and has a trade in cattle. Pop 1500.

FONTE, a in Austrian Italy gov Venice, prov of and 21 m. W. W. Treviso, near r bank Mason. It contains a parish church and several oratories. Pop 1680.

FONTECCHIO a vil Naples, prov Abruzzo Ultra II. 15 m. S. E. Aquila near r bank Aterno. It contains a collegiate church, and several convents, and has manufactures of tapestry, and an annual fair. Pop 968.

FONTENAY several localities France the chief of which are—1 (le Comte) A in dep Vendée near r bank Vendée, 23 m. S. E. Bourdon-Vendée cap around, and east of a communal college. It is built on a hill slope and presents an imposing aspect towards the surrounding rich country. In the centre of the older town rises the church of Notre Dame a fine pile of the purest Gothic with a spire 250 ft. high. The streets around this edifice are rather narrow and crooked but the newer quarters are open and airy. In the public

square is the antique fountain which gives name to the place, and hard by are the ruins of an old castle, once the chief of which in early times was further defended by walls. The college is a spacious building and there are four convents, and a handsome theatre. It has manufactures of linen and coarse cloths, some breccias and tanneries, and a local trade in timber and firewood, staves, cordage, and charcoal. It is an entrepot for the wines and produce of the south of France. Pop. 6425.—2 (Bour Bon) a vil dep. Seine 1 m. E. Vincennes, of which it is a dependency. The parish church is rather handsome, and there are several fine villas in the environs. Pop 1695.

FONTENOY a vil and com Belgium, prov Hainaut, 4 m. S. E. Tournai remarkable for the battle fought in 1745 between the French commanded by Marshal Saxe, and the allied army of British, Austrians, and Dutch, commanded by the Duke of Cumberland when the latter were defeated. Pop 765.

FONTENOY LE-CHATELAIN a in France, dep Vosges, 17 m. S. S. W. Epinal on the Concy. It has manufactures of iron wares, some breweries, a cherry brandy distillery and the remains of a strong old castle. Pop 1572.

FONTEL, a in and par Portugal prov Trás-os-Montes com, and about 15 m. W. Vila Real. Pop 1603.

FONTEVIVO a vil and com Italy duchy Parma, in a plain 8 m. W. W. Parma. It is supposed to owe its name to the fine perennial springs which it possesses. It contains a beautiful parish church of Gothic architecture, with a magnificent marble mausoleum of Ferdinand Duke of Bourbon who died here in 1802, and a college of Maria Louisa, the buildings of which are elegant. Pop 2630.

FONTEVIAULT (Latin, Fons Fervidus) a in France, dep. Maine-et-Loire 8 m. S. L. Saumur in a deep valley and surrounded by a wood. It owes its origin to the abbey of same name the finest and richest in France, and the only one of its kind in the world. The Abbey of Fontevault was the head of a singular order in which the men were made subject to the women. It was founded in 1099 by Robert d'Armaul a celebrated preacher in Brittany charged by Pope Urban II. to preach in favour of the second crusade. Of five churches the abbey contained only one and that the largest, now exists. In appearance it resembles a cathedral, but along with all the other remaining buildings, it has been transformed into a central prison for eleven departments. At Fontevault it is to be seen the cemetery of the kings of England, counts of Anjou. Four tombs though somewhat mutilated still resemble those of Henry II. Richard Cour de Lion II. his son and Eleanor of Guienne his queen etc. It has some manufactures of cloth and cordage, and some cotton printing. Pop 1400.

FONTHILL two par England Wilts.—1 (Thatch) 1735 ac. Pop 181.—2 (Gifford) 1981 ac. Pop 443.

FONFIVERGOS, a in Spain Old Cast. to prov of and 25 m. N. W. Avila. It stands in a plain, is regularly built, contains a public square, a parish church, court-house, prison, hospital, Lazo and primary school and has manufactures of cloth a flour-mill, and a trade in corn and fruit. Pop 694.

FONTMELL MAGRA par Eur Dorset 28.35 ac. Pop 532.

FONSTOWN par Irel Kildare 54.80 ac. Pop 865.

FONTVEILLE a in France, dep. Rouen in the Rhone arrond. of and 5 m. N. E. Arles near Rhodan. Here are quarries of Arles building stones and some oil works. Pop 1796.

FONZ, a in Spain Aragon prov of and 35 m. S. E. L. Huesca, near r bank, Ormaiz, on a hill slope. It is tolerably well built, and composed of a good square and several steep and poorly paved streets, and has a parish church, several chapels, a workhouse, prison, hospital two schools a fountain, and extramural cemetery. Manufactures—linen fabric, leather and hempen shoes soap, wine, and oil. Trade—cattle, grain, flax, hemp, and silk. Pop 2705.—(Madoz)

FONZANO a vil and par Austrian Italy gov Venice cap dist of same name, 22 m. W. S. W. Belluno. It is the seat of a court of law and other public offices, and contains a parish and two auxiliary churches. Pop. 1000.

FOO-CHOO-FOO or FOO-CHOO (Hany chi) a city China, prov and cap Szechuan, 1 bank, Min, 115 m. N. E. Anwei, lat 26° 2' N. lon 119° 25' E. It is one of the five ports of China which were by treaty of June 26 1842 thrown open for the resort and residence of British merchants. The city stands in a plain surrounded by hills, forming a vast

amphitheatre and is nearly 10 m. in circumference. The suburbs extend from the walls 5 m. to the banks of the river and stretch along both sides of it. They are connected with each other and a small inlet in the Mta. by a stone bridge 480 paces long, resting on 40 solid stone pillars on the N side, and on one similar one on the S. The bridge is lined with shops. Foo-Choo-Foo is surrounded with walls 30 ft. high and 12 m. at top and overgrown with grass. There are seven gates overlooked by high towers. Smaller guard-houses stand upon the walls at short intervals, in which a few soldiers lodge, and where two or three cannons indicate their object. Two square wild in, and fantastic-looking watch-towers upon the walls, large, regular built granaries, and a great number of *de*, *shale*, in pairs, before temples and offices, contribute to relieve the otherwise dull monotony of low tiled roofs, which is still further diversified by many large trees. Several look-out houses are placed over the streets, or upon the roofs of buildings, for the accommodation of watchmen one of which immediately attracts the attention of the visitor from its height, and its clock-dial with Roman letters. Few vacant spaces occur within the walls of the city which is everywhere equally well built. The streets, however, are exceedingly dirty, being full of all sorts of abominations for which the people seem to care very little. The shops are well stored with goods but for the most part, of a poor quality. The streets are crowded with craftsmen and hawkers and the shops thrown so widely open, display such a variety of articles, or expose the wares so plainly that the whole street seems to be rather the stalls of a market than the thoroughfare of a town. The official residences are numerous, the chief civil and military dignitaries of the province residing here. The Ching-hwang Miao is one of the largest religious edifices in the place and the temples of the goddess of mercy and god of war the most frequented. Near the E gate, called Yang Men, or Red Gate, there is a small square where are numerous public bath houses. Degraded the most loathsome aspect crowd the thoroughfares. There are no manufactures of any importance in the city excepting those of combs, screens, &c. The harbour is well frequented although the approach to it from the sea is bad and the navigation difficult. There is however a convenient anchorage at Pagoda Island 9 m. below the city. The coast area of this place has not fulfilled expectation. The chief exports are salt, particularly that of sea, produced in the N provinces, salt fish, bones, cotton, sugar, candy &c. Principal exports—timber, bamboo, drugs, tobacco, potash, oil-cakes, orange-peel. The whole imports from Britain a few years ago, were estimated at £45,000 and the exports at £40,000. One-half of the population of Foo-Choo-Foo is supposed to be addicted to the opium pipe on which £400,000 are annually spent. The river and a sheet of water on the W side of the city called Li-ho or West Lake, are covered with floating habitation, trading craft, ferry boats, fishing-boats, and fishing nets, presenting a very animated scene. Pop. estimated at upwards of 800,000. (Williams Chinese Empire Martin's China Parliamentary Papers)

FOO-KAN, a Chinese prov. Roman, on an affluent of the Hoai-ho, 45 m. S. Kiangtung
FOO-MIAO a Chinese prov. and 18 m. N. W. Yunan, on an affluent of the Yang-tse-kiang
FOULADOU a mountainous dist. of W. Africa, near the sources of the Senegal between long 6 and 10° W., and intersected by the 15th parallel of N lat. Park represents the scenery of this country and of the districts immediately adjoining on the E. and W. as singularly grand and sublime, and was much struck with the picturesque appearance of the villages, perched among precipices of many hundred ft. perpendicular height. Lions and wolves are numerous in the woods.

FOUTA, a territory of W. Africa Senegambia, E. of the Senegal extending from Dagana, on the N. W. to N. Guerey on the E. between lat. 15° and 16° 26' N. lon. 12° 35' and 10° 15' W. It is divided into three parts, of which that on the W. is called Fouta Tora, that in the centre Fouta (proper) and that on the E. Fouta Dama. The soil is fertile, well watered and well cultivated but the climate is so unhealthy that the principal productions are rice, and other cereals, cotton of excellent quality and tobacco. The forests, which are extensive, are the haunts of lions, tigers, and num-

erous troops of elephants, while the pasture-lands support large herds of cattle and sheep. There are also several iron mines in the district. The natives, who are mostly of the negro race, are active and industrious, and carry on a brisk trade with various places. The greater part of them are devoted to fishing and the cultivation of the soil, their only manufactures consisting of cotton cloth and several articles of pottery. They profess the Mahometan religion, but are extremely superstitious, believing in the power of pretended sorcerers to protect them from the attacks of enemies. The government is theocratic and elective but the *almamy* or chief must be chosen from certain privileged families, by a council of five persons. Under the *almamy* are three provincial chiefs, one for each of the three departments into which the country is divided. The power of the *almamy* is far from being absolute, he is controlled by the council of five, to whom he must constantly submit his acts, and who possess the right of reprimanding, deposing and even, in certain cases, of putting him to death.

FOUTA BORNEO, a name for BORNEO (which see)
FOUTA-JALLON a considerable dist. of W. Africa, Senegambia, intersected by lat. 13° N. and lon. 13° W. It is extremely mountainous, and remarkable for the romantic beauty of its scenery and is the source of the rivers Senegal, Gambra, and Senegal. During the rainy season the valleys, being inundated, are converted into lakes. Large herds and flocks are pastured in the highlands and the soil produces in abundance oranges and lemons, besides numerous palm trees, which furnish date wine, and oil. The inhabitants are faithful Mahometans, and pride themselves in their hatred of all infidels, except the whites, from whom they profess to be descended. They are governed by an elective chief. The capital Timboi lat. 10° 25' N. lon. 10° 40' W. contains a population of about 7000.

FOURIER, or FORTIS a fishing vil. Scotland, Aberdeenshire, forming a suburb of New Aberdeen, and immediately adjacent to the entrance of the harbour. The inhabitants who are a peculiar race, are supposed to have come originally from the opposite coast of Denmark and Sweden.

FORBACH a tn. France dep. Moselle 55 m. E. by N Metz near the frontiers of Rhénus Prussia, and in one of the principal routes to Germany. It is built in the form of an amphitheatre, on the W. side, of a hill crowned by the ruins of a stronghold and surrounded by extensive forests and sandy hills. Its streets are narrow and tortuous and it has manufactures of pipes, soap, and wire gauze, with tanneries and glass works. Pop. 3062.

FORBES, a market in Bahama, circle of, and 8 m. S.E. Bodwey. It is situated on a height not far from the Seronice, contains a castle and two churches, one of them ancient, and originally belonging to an Augustine monastery, and has a potash factory. In the neighbouring village of Trotman or Trotcow the celebrated Huetzel, John Ziska, was born. A chapel, which bears his name, stands near the spot. Pop. 780.

FORBES ISLANDS, B. Pacific Ocean N.E. coast, Australia lat. 15° 15' S. lon. 143° 27' E.

FORLADON (Iroquois) a river W. Africa Upper Guinea, falling into the Bight of Benue lat. 6° 22' N. lon. 6° 15' E. (s). The bar at its mouth, is 1 m. broad, 3 m. long and carries 13 ft. at low water. Forladon is considered the most accessible entry on the coast with a noble sound of smooth water 5 fathoms deep immediately within the bar. The course of the river is very winding, and its banks are covered with fine trees, they also produce a species of coloured stone, which the negroes use as beads. The coast, both to the N and S. of the Forladon, is extremely monotonous, consisting of dense forests and tangled jungles, rising from a narrow sandy beach. The natives here are of so treacherous a disposition as to prevent all trading intercourse.

FORCAIL, a tn. Spain, Valence, prov. of, and 48 m. N. Castellon-de-la-Plana, in a mountainous district, at the confluence of the Caldes and Cantarillas. It contains a parish church, townhouse, prison, school, and prison, and has manufactures of silk and several *Armenia*. Pop. 1337.

FORCALQUIER (Basses Pyrenes Colonnas) a tn. France, dep. Hautes-Alpes, 25 m. W. E. W. Digne, near the Lays. It is a mountainy place, with narrow streets but is interesting to the antiquary for the ivy-covered ancient re-

ruins in or near it, the capital of the Merial having been built on a conical hill which overlooks the present town. It has a communal college manufactures of serge, hats, caps, and pottery with silk and wool spinning mills and a trade in diamonds, seeds, honey and wax. Pop. 1968

FORCETT, par Eng. York (N Riding) 8816 ac. P. 817
FORCHILL, a tn. Inverurie, shire, Upper Fennoscandia, cap dist of same name, on the Lonsdale canal, and the railway between N. Kilmory and Ramberg, and at the confluence of the Wisent and Raginta, both here crossed by bridges, 20 m. S.W. Balnure. It is fortified but not strongly; is the seat of a court of justice and several public offices contains a castle, three churches two chapels a synagogue, townhouse Latin school, and hospital and has a mineral spring, with a bathing establishment manufactures of glass, soap leather paper potash, and saltpetre an iron, and numerous other mills and a trade in fat cattle, corn and fruit. Pop. of in 1834 dist. 14,747

FORCHTERAU or **FRANK-ALIVA** a market to Hlangary Thutur Danube, co. of 11 m. W. Oedenburg at the source of the Vukla. It contains a church and a Servite monastery and has an annual fair. The surrounding hills are covered with fine chestnut trees and, in the neighbourhood, on a bleak height, are the ruins of a castle, supposed to have been originally built by the Ostrogoths, in the sixth century. Pop. 729

FORCHTENBLERG a tn. Wurttemberg shire, Jaxt r bank, Kocher 40 m. N.N.E. Stuttgart. It contains a church, and is overlooked by a castle situated on a height. The vine is extensively cultivated in the vicinity. Pop. 1164

FORET (Flemish Vervet) a vil. and com. Belgium, prov 64, and 7 m. S.E. Liège, on the Vedre. It has manufactures of gun-barrel needles and worsted yarn spinning-mills, a fine sundry brick fields quarries of paving stones, and several lime-kilns. Pop. 2026

FORET (La) an anc. prov. France, formerly dependent on the Lyonnais, and now included in depts Loire, Haute-Loire, and Puy-de-Dôme. Its capital was Montbrison

FORFAR, or **ARVUD**, a maritime co. E. coast, Scotland, having N. sea of Aberdeen and Kincardine, the 5th of Tay E. the German Ocean and W. W. Perth. It is about 36 m. in length N.W. to S.E. and 30 m. in breadth area, 570,880 ac. The N.W. part of the county is wholly occupied by that portion of the Grampians called the Devenish Hills or Breas of Angus. 8 of these and running parallel to them, is the inferior ridge of the Sidlaw hills. Between these two ranges lies that portion of the great valley of Strathmore by which Forfarshire is intersected S.W. to N.E. 38 m. in length, and from 6 to 8 in breadth. The Grampians do not here attain any great elevation, their loftiest summit not exceeding 2611 ft. neither are they generally of a very bold or stern character though formidable prospects are of frequent occurrence. The Sidlaw Hills again are of still lower altitude, the highest peaks hang only from 1200 to 1400 ft. some of them are detached with conical summits, one of which is Devenish Hill, immortalised by Shakespeare. Between the Sidlaw Hills and the sea, the country comprising about 143,000 ac. is level fertile, and highly cultivated. But by far the finest and most productive part of the county is the valley of Strathmore which is beautifully diversified by gentle eminences, well cultivated fields, plantations, and country seats. Drainage is vigorously and judiciously prosecuted. Following is general in the low grounds which produce heavy crops of wheat. Oats, barley potatoes and turnips are also largely cultivated. All the most improved agricultural implements are in general use in the county and the farmers equal in skill those of any other part of Scotland. Breed of cattle various. Sheep originally small white-faced mountain-breed, but the black faced and Cheviots are now common although some of the original breed still remain in the Grampians. Sheep rearing however has become a secondary object, since the improvements in tillage have been introduced, although nearly every farmer has a flock more or less numerous. Limestones are abundant in various parts of the mountainous districts, slate also occurs along the declivities, but is not much wrought. There are no other minerals of any importance

Forfarshire is the chief seat of the coarse linen manufactures of Scotland. These are generally distributed through all the towns of the county but the grand centre is Dundee. There are some valuable salmon fisheries along the coast and in the rivers. The principal towns are Forfar the cap Dundee, Montrose, Arbroath, and Brechin. The county contains 56 parishes, and five royal burghs. It returns three members to Parliament—one for the county registered electors (1850) 2793; one for Dundee, and one for the Montrose district of burghs. Pop. (1841) 170,520 (1851) 191,364.

FORFAR, a pari. and royal bur. and par Scotland. The town, cap. of above co. situated in the valley of Strathmore 18 m. N. by E. Dundee, and a station on the railway from Perth to Aberdeen, consists of two principal and several smaller streets most of them irregular houses, in general well built and substantial, many of them of a superior description. It has an Established church and chapel two Free churches, a U. Presbyterian, Episcopal, and Congregational churches a handsome and commodious town and county hall, sheriff court-house, subscription newsroom and library a mechanics institute, a large infant school, and a number of other well conducted schools. The linen manufacture is extensively carried on the factories generally made being about

ings, vineyards, and doles, and a description of those called *forças*, are made in large quantities for exportation. Forfar has been, from time immemorial, the head burgh of the county and its castle, which stood on an eminence a little N of the town, was, in remote times, a royal residence, and the scene of some interesting historical events. It was destroyed in 1807 by Robert Bruce, by whom it was taken from the English. Forfar is one of the Montrose district of burghs, and is governed by a provost, two bailies, and 16 councillors. Pop. (1841) 6362 (1851) 9511. Area of par 6 sq. m. by 4 m. (Pop. 1851) 11,009.

FORGAN par Scot. Fife 6 m. by 2 m. Pop. 1125.

FORIA or FORMO, a seaport in Naples W above Isl. Ischia, lat. 40° 40' N lon. 13° 54' E. Streets narrow, but three churches, a good harbour and a considerable trade. In the vicinity are hot mineral springs and baths. Pop. 5000.

FORKE DIXON RIVER, a river U. States Tennessee, rising in the N. W. part of the State, and falling into the Mississippi 43 m. N. by E. Memphis after a S. W. course of about 100 m. for the greater part of which it is navigable.

FORKE HEAD a headland N. America Cape Breton, on the S. E. coast, between Fouchon harbour and Fortland cove.

FORKEILL, a small tn. and par. Ireland co. Armagh. The town 5 m. N. W. Derriluck contains a church and a Victorian meeting house, and has limited manufactures of linen and cotton, and four annual fairs. Area of par 12,550 ac. Pop. 5242.

FORLI a deleg. kingdom of Italy bounded N. by deleg. Ravenna W. by deleg. Urbino E. by deleg. Pesaro, and the small republics San Marino and E. the Adriatic. Greatest length E. to W., 45 m. greatest breadth 38 m. area about 900 sq. m. The surface in the W. is rather elevated being partially covered by low branches of the Apennines, but elsewhere becomes flat, particularly in the N. towards the coast, where extensive swamps prevail and make the air very unhealthy. The interior often suffers from excessive drought and earthquakes are not unfrequent. Much of the soil is well adapted for the growth of corn, hemp and flax. Madder, saffron and saue, are also cultivated, and much attention is paid to the rearing of bees and silk worms. The vine, olive, and various fruits are extensively cultivated. There is not much land in pasture and cattle are comparatively few. The fisheries on the coast are productive. The only mineral substance of any consequence is sulphur of which considerable quantities are obtained. Manufactures have made more progress than in other parts of the Papal States. Pop. 194,899.

FORLI (ana. *Forum Livii*) a tn. Italy cap. above deleg., 38 m. S. E. Bologna, at the foot of the Apennines, in a pleasant and fertile plain, watered by the Ronco and Montone. It is handsome and well built, with a spacious square, and contains many beautiful buildings, including an old palace, one of which, the Palazzo Guastaldi, is after the designs of Michael Angelo. It also has a cathedral and several other churches, most of which are adorned with fine paintings, by Cignani, Guadagni, and other masters. There are likewise numerous convents in the town. Forli is a bishop's see and the residence of the legate. It has a college, a public library and some literary societies. Manufactures of silk, blouse silk twist, oil cloth, woollen stuffs, wax, nitre, and refined sulphur, and a considerable trade in corn, wine, oil, hemp, and saffron. Pop. (1832) 16,000.
